Dismantle HAARP Immediately!

By Mary W Maxwell, PhD
6-21-11
http://rense.com/general94/delv.htm

Today marks 103 days since the people of Japan have been suffering under the triple calamity of earthquake, tsunami, and nuclear radiation. I shall argue, regrettably, that it is my nation, the United States, that has caused this, and since my nation is a democracy, it is I who have caused this. I and my 300 million compatriots are so unaware of what our military is doing that we have stupidly participated in this incredibly destructive action.

Who is really to blame? My motto is: "The buck stops everywhere." Just as I believe that every member of the species Homo sapiens who happens to get born is entitled to use the earth, so I also believe every one of those persons should take responsibility for what the whole species is doing. That's not the preferred way to live, but it has become necessary.

Let me preface this article, however, by saying that I do not support 'international law.' On no occasion would I ever expect some entity higher than an individual nation to be able to command people. A nation's government can call upon its citizens to do such-and-such, and back this request up with law. The said citizens are therefore bound. There is no comparable world-wide governing entity, nor can there ever be. I go along with Prof Alfred Rubin of Tufts who says there is no 'authority' up there. No 'there' there. Period.

This series of articles is entitled "Delenda est cabal" in the tradition of Cato's cry "Delenda est Carthago!" Destroy the enemy before he destroys you. I am sure we need to destroy the cabal of men who operate HAARP. Does that mean President Obama?

No, he is way, way down the pecking order. Correction: he is not even in the pecking order. Persons such as Henry Kissinger, Bill Gates, and David Rockefeller (born 1915) are in the pecking order, yet even they are not the top bosses. They are in thrall to those bosses! Poor boys.

As I do not know the names of the cabal members, I will hardly be able to destroy them personally. Yet I can exert my political weight within the context of the American military. Our Constitution very clearly shows that the legislative branch of government, i. e., Congress, has control of the decision as to when, or if, we go to war. My Congressman in Massachusetts is John Tierney. He did not vote for us to attack Japan on "3/11." No such vote was taken. Therefore what HAARP did that day is wholly illegal. It is criminal.

It has taken me 103 days to be able to articulate that. When I was in college, I was thrilled that Prof Richard Falk stated that the Vietnam War was 'illegal.' I hope readers may find it helpful that I am calling a spade a spade with regard to HAARP. And there is no time to waste in getting clear about this. We are all I grave danger. Japan was not the final target. Nor was Joplin Missouri. Nor was Chile with its volcanic eruption. We are all fair game.

PROVING THAT HAARP ATTACKED JAPAN ON 3/11

Can anyone ever prove something to everyone's complete satisfaction? Can you prove that you and your spouse are married? What would be the proof? A marriage certificate? Who signed it? Maybe it is a forged signature of the priest or rabbi. Or maybe your priest did actually sign it but if he did not graduate legitimately from the Catholic seminary, the state's grant of authority to him, to perform weddings, could perhaps be invalidated.

Nevertheless, you and spouse have been conjoined for years. Folks understand that you're married. There is a point at which reality outweighs all the if's, and's, and but's.

Was it HAARP that attacked Japan? I don't know for sure, as I have not personally inspected the capabilities of HAARP. Nor do I know if other countries, such as China, possess a similar Tesla-technology device. I don't even claim to understand how an 'ionospheric heater' really works. And how would I be able to discern if videos of clouds that are sent in to Youtube, by alleged amateurs, have in fact been photoshopped and are all part of an HG Wells 'War of the Worlds' type hoax?

Still, going on 'the weight of probability,' I tentatively accept the following: 1. Since at least 1907 a cabal of men, based in Germany, New York, and London, seized the federal government of the US in an unobtrusive way. (It only takes the control of numerous elected individuals to do this.) 2. They hold some way-out ideas, as their man H G Wells expressed in his 1930 book "The Open Conspiracy" (summarized in my

"Prosecution for Treason"). For instance, they want to destabilize the family and wreck civil society.

3. In 1905 a patent was registered for an ionospheric heater, and in the "International Geophysical Year, 1958, the US proudly proclaimed it had caused a nuclear explosion in the ionosphere. 4. Subsequently HAARP was built, reportedly by Raytheon, and now is run by the US Air Force. It is located in Alaska and has been implicated in weather war.

SOME HORSE'S-MOUTH EVIDENCE THAT I FIND PERSUASIVE

I do NOT set a lot of stock in the famous 1997 statement by Clinton's Secretary of Defense William Cohen that "There are some reports that some countries are engaging even in an eco-type of terrorism whereby they can alter the climate, set off earthquakes, volcanoes remotely through the use of electromagnetic waves."

Whilst I do think his words are correct, they were not an 'inadvertent leak.' If you look at the context of the 'Sam Nunn Policy Meeting' at which Cohen spoke, you will see that he answered softball questions. That is, the Q&A was scripted. The meeting was open to the public. I have to at least consider that Cohen was spreading disinformation or distracting us from even more amazing research. Thus it may be that one can "set off earthquakes and volcanoes" NOT by EM waves, but by explosions (as Prof Leech of new Zealand did).

I am fascinated by the fact that George Orwell's predictions in the 1949 novel "Nineteen Eighty Four" include a somewhat different picture. He said "Teams of experts are indefatigably at work. Some are concerned simply with planning the logistics of future wars; others explore even remoter possibilities such as focusing the sun's rays through lenses suspended thousands of kilometres away in space, or producing artificial earthquakes and tidal waves [i.e., tsunamis] by tapping the heat at the earth's centre." I guess it is conceivable that '3/11' was done by heat. (Note: in Iceland, many people heat their homes geothermally!)

Does Orwell deserve the designation 'horse's mouth'? Yes, as so many of his predictions have come true. I am certain that he was well-informed of the cabal's activities, and that they wanted him to produce his novel as a form of conditioning whereby people would get used to the new reality. His "1984" character, Winston, is excited by the work of 'Emanuel Goldstein' whose description of 'permanent war' is indistinguishable from US policy today.

Other horses' mouth evidence, or camera evidence, consists of Youtube videos that show very odd lighting in the sky just before earthquakes in Chile and China. Why would there be any sky involvement in something that is purportedly emerging from inside the earth? In Japan there was a massive grid-type pattern of clouds before the

quake.

INFORMATION RELAYED BY KEVIN GILMORE

I think I have come across persuasive evidence, in the form of a recent denial, at MIT, that the Japan quake was anything was other-than-natural. I remind the reader that I lack qualifications to understand technology. Still, I have a PhD in Politics and the point I am making about the MIT publication is political. I got this material from the Internet on the website of Kevin Gilmore. (Cannot tell if he is an honest broker.)

Gilmore tells us that in the journal "Technology Review," published by the Massachusetts Institute of Technology, "the findings are presented alongside a different theory called Lithosphere-Atmosphere-Ionosphere Coupling, which hypothesizes that the heating in the ionosphere may have been caused by the impending <http://www.naturalnews.com/earthquake.html>earthquake as the fault line released radioactive <http://www.naturalnews.com/radon.html>radon." (That is the bullcrap line, in other words.)

Gilmore then says, apparently based on his own knowledge: "Another explanation for this strange heating - and one that, upon analysis, seems much more likely - is that it was an indication that concentrated <http://www.naturalnews.com/energy.html>energy was used to induce the earthquake, and not the other way around. Numerous credible reports and scientific observations reveal that HAARP <http://www.naturalnews.com/technology.html>technology is fully capable of being used as a scalar weapon, meaning it can emit strong electromagnetic pulse bombs that can alter weather or trigger seismic fault lines."

I'll provide a bit more, in case this is useful to anyone, but it means nothing to me. I got it from Gilmore and he got it from <http://presscore.ca/2011/?p=1624>http://presscore.ca/2011/?p=1624:

"Readings from the HAARP Induction Magnetometer, which visualizes the frequency spectrum of signals detected in the earth's geomagnetic field, show that a steady, ultra-low frequency (ULF) of roughly 2.5 Hz was being broadcast days before the earthquake. The 2.5 Hz ULF happens to be the exact same frequency as the <http://www.naturalnews.com/natural.html>natural resonance produced by an earthquake - and since there were no constant earthquakes occurring on the days before the quake the logical conclusion is that the signal was being broadcast to induce the quake."

CIRCUMSTANTIAL EVIDENCE

On May 14, 2100 I published the following paragraph in an Internet article: "Did someone deliberately harm Japan? In my layman's opinion, yes. I think 'someone' -- likely the same party -- also harmed Haiti (and I wish I had been more vocal at the

time). One undisputed fact is that the US military -- which does not, in my opinion, work for the US!!! -- scheduled an exercise in Haiti for 'dealing with a quake,' just a few days before the need for that arose."

There is nothing wrong with circumstantial evidence. In criminal cases before a judge or jury, the verdict will depend on circumstantial evidence if there is an absence of direct e. g., eyewitness -- evidence. I imagine we could get direct evidence about HAARP by subpoenaing the personnel who work there. Since it is a US military operation, the Secretary of Defense. can be asked to testify. At this moment however, our government cannot be counted on to do the right thing; the cabal is pulling its puppet strings. So let's go for circumstantial evidence.

Right now my priority is to shorten this article -- this Part 3 of the "Delenda est cabal" series, in order to make the simple statement "We need to dismantle HAARP immediately." So let me offer just one important positive and one important negative piece of circumstantial evidence that the Japan earthquake was done by a weapon of 'weather war.' The positive item is that a movie, called the "Sinking of Japan," was produced in Japan in 2006 and contains scenes that are almost indistinguishable from the tsunami of 2011. Surely not coincidence. No way.

The negative evidence is abundant. I refer to Sherlock Holmes solving a mystery by the fact that the dog did not bark, when the dog would normally have barked. Many a dog has been silent ever since 3/11. Why are university science departments, and larger groups of scholars such as England's Royal Society, not holding emergency meetings to analyze the many odd weather phenomena happening today? Why hasn't the president gone on TV about it, as he did about the alleged capture and execution of Bin Laden?

Please, Americans, hold your own small meetings. That is ALL that needs to happen. As soon as the universities see someone taking over their function they will feel foolish. As for the HAARP people's getting called into line, it would be enough for them to know that they have been spotted. The situation will change rapidly.

Is there a risk that fear would then make them invoke their "Plan B" whatever that may consist of? Yes, of course. But can their Plan B be any worse than what they are doing every day, as we stand around gawking at these wonders?

Implied consent is a controversial form of consent which is not expressly granted by a person, but rather inferred from a person's actions and the facts and circumstances of a

particular situation (or in some cases, by a person's silence or inaction). The term is most commonly encountered in the context of United States drunk driving laws

Maximiliano - June 21, 2011 01:45 PM (GMT)

Uniforme Comercial Code (UCC)??? Sound like Maritime Admiralty Law to me. Notice that one of the principal drafters of the UCC was Grant Gilmore, wich was an authority of Admiralty Law.

http://en.m.wikipedia.org/wiki/Grant_Gilmore

Notice that in the article 9 of UCC that he drafted is specified a "vessel" in the commercial transactions.

My Webpagehttp://www.law.cornell.edu/ucc/9/article9.htm#s9-101

(2) " Account", except as used in "account for", means a right to payment of a monetary obligation, whether or not earned by performance, (i) for property that has been or is to be sold, leased, licensed, assigned, or otherwise disposed of, (ii) for services rendered or to be sold, leased, licensed, assigned, or otherwise disposed of, (ii) for services rendered or to be rendered, (iii) for a policy of insurance issued or to be issued, (iv) for a secondary obligation incurred or to be incurred, (v) for energy provided or to be provided, **(vi) for the use or hire of a vessel under a charter or other contract,** (vii) arising out of the use of a credit or charge card or information contained on or for use with the card, or (viii) as winnings in a lottery or other game of chance operated or sponsored by a or information contained on or for use with the card, or (viii) as winnings in a lottery or other game of chance operated or sponsored by a State, governmental unit of a State, or person icensed or authorized to operate the game by a State or governmental unit of a State. The term includes health-care-insurance receivables. The term does not include (i) rights to term includes payment evidenced by chattel paper or an instrument, (ii) commercial tort claims, (iii) deposit payment evidenced by chattel paper or an instrument, (ii) commercial tort claims, (iii) deposit accounts, (iv) investment property, (v) letter-of-credit rights or letters of credit, or (vi) rights to payment for money or funds advanced or sold, other than rights arising out of the use of a credit or charge card or information contained on or for use with the card.(3)

View Full Version: MORGELLONS : ALTERED BLOOD

Title: MORGELLONS : ALTERED BLOOD

TheUnhivedMind - June 20, 2011 04:27 PM (GMT)

MORGELLONS : ALTERED BLOOD

Clifford E Carnicom
June 17 2011
http://www.carnicom.com/bio2011-5.htm

Note: I am not offering any medical advice or diagnosis with the presentation of this information. I am acting solely as an independent researcher providing the results of extended observation and analysis of unusual biological conditions that are evident. Each individual must work with their own health professional to establish any appropriate course of action and any health related comments in this paper are solely for informational purposes and they are from my own perspective.

Analysis shows that the primary organism (or pathogen) characteristic of the "Morgellons" condition, as isolated and identified by this researcher, causes a signficant biochemical change in the nature of human blood in which it resides. The dramatic change in the character of the blood has also presented through visible observation for several years, but this change is now objectively and directly measurable through the use of spectral analysis. This change in the general character of human blood, as it has been measured from several individiuals, is regarded as highly significant and expressive of a potential fundamental change in the human condition. The representative change in the character of the spectrum is shown immediately below:

The above shows the nature of the change and of the problem. All matter reacts in a unique fashion to electromagnetic energy which, in this case, is visible light.

Hemoglobin, (the primary protein in human blood cells), has such a unique and characteristic spectrum over the visible light range. This expected, normal, or reference spectrum of hemoglobin is shown with the black line in the graph above1. This spectrum shows how a substance or element reacts to energy, and the locations of the peaks in the graph are where the hemoglobin absorbs the most energy in the visible range. In this case, this should be at approximately 414, 542 and 576 nanometers respectively. There are important variations to this expectation, and they pose serious problems that are to be confronted.

The red line in the graph shows the average hemoglobin spectrum as measured within a set of nine essentially random individuals, ranging from approximately 23 to 70 years of age. The sample size may be increased further in the future but statistical significance is nevertheless already attained. Such a monumental change in the basic nature and character of a fundamental and crucial protein within the human body is a manifestation of significant biochemical changes within that same body. By no measure of a "normal" state of health would such a change be regarded as within "acceptable" or "expected" boundaries. The fundamental nature of the protein, i.e., blood, has been changed in the case presented. This researcher continues to contend that state of the blood of an individual is one of the most reliable, if not the most reliable, indicators of the existence and severity of the so-called "Morgellons" condition.

Future work and papers will focus on the interpretation of the nature of this change, and the development of a spectral method to indicate those individuals that may be subject to greater risk of existence of the condition or of more dramatic changes in the blood of the individual. No medical inferences are to be made from this research, and it is considered to be of analytical utility only. The medical community is invited to share in the collaboration or examination of this research as it perceived to be of benefit or not. The spectral methods under development are anticipated to be of value in the monitoring or measurement of change of the condition in a non-invasive manner.

The graphs below will provide further insight into the spectral development process, and they are provided as a supplement to the primary finding reported above.

One of the ironies of the current research is that establishing a reference spectrum for hemoglobin, from current human blood samples, is problematic. At this point none of the human blood samples studied are able to reproduce the expected spectrum of hemoglobin. Each sample examined thus far demonstrates significant deviation from this expectation, as will also be described further below. This finding, now from a spectral perspective, is actually in line with the concerns expressed by this researcher some time past, and this is that the general population appears to be subject to the so-called "Morgellons" condition to varying degree. The heart of this research, then and now, is upon a particular organism repeatedly identified in the blood of all samples observed, along with oral filament samples that are also characteristic of the condition. As such, it has actually been necessary to develop the "reference" hemoglobin spectrum from the literature, as no "pure" or live case is available to me at this time. The graph above is such a set of reference spectrums that have been developed from the literature on the subject2. The concentration of a substance can also affects its spectrum, and thus a process has been generalized to determine an appropriate spectrum for various concentration levels.

The graphs is an example of how concentration can affect the spectrum of a substance; this set of graphs shows the spectrum of the cultured organism over a

fairly broad range of concentrations. It has been discovered that low concentration levels of the culture (sodium hydroxide and heat preparation, as described earlier) do not sufficiently portray the more dramatic spectral characteristics of the organism. This deeper examination itself was prompted by the appearance of an additional prominent peak and additional spectral influences observed within more concentrated blood samples. The important relationships between the spectra of the culture shown immediately above and its impact upon the blood will become more apparent to us as further research is described. In the interim, readers are invited to examine the patterns implicit between the reference hemoglobin spectrum, the spectra of the cultures, and the average spectrum of blood as it is being reported at the onset of this article. The graph to follow at the end of this paper will show the consolidation of these influences.

At an introductory level, this graph reveals the summary effect of the culture organism upon the blood. Shown above is what is proving itself to be a representative sample of a human blood spectrum under various concentration levels. Important insights may be gained by looking at this graph and how the character of the spectrum varies with respect to the concentration of the blood. It will be found to be equally insightful to examine how the spectrum of the cultured organism (as shown in the prior graph) also varies with respect to concentration levels. The greatest insight will be gained by combining both studies.

It will be observed, in general, that the greater the concentration of the organism within the blood, the more significant the impact is upon the hemoglobin, or blood of the individual. This is, of course, a perfectly logical statement, but spectral analysis now provides us with a tool to more quantitatively assess that impact. This will also, of course, be one of the major benefits of the spectral analysis of the condition that is now underway.

http://www.carnicom.com/images/alteredblood/Picture%2075.jpg

The photographs above revert to the alternative method of investigating the nature of the problem, and this is by direct observation of the blood. This has been the historical basis for most of the work on this site until recent assistance to the Carnicom Institute (much gratitude is extended) permitted the appropriation of helpful instrumentation. The larger structures are red blood cells, at approximately 5000x magnification. What is essentially being recorded here is the saturation of the surrounding blood plasma with the organism that is under study and as it has been repeatedly described on this site. This organism is at the sub-micron level and it is responsible for the culture spectra that have been shown in this report. At this stage both observational and instrumental techniques are available to study the nature of the "Morgellons" condition, and all information indicates a consistent and significant alteration of the basic nature, biochemical properties, and physical condition of the human blood.

View Full Version: Electromagnetic Pulse Waves

Title: Electromagnetic Pulse Waves

TheUnhivedMind - June 20, 2011 03:02 AM (GMT)

Electromagnetic Pulse Waves

By Jim Kirwan
6-18-11
http://rense.com/general94/elecm.htm

"An EMP is a burst of electromagnetic radiation from an explosion (especially a nuclear explosion) or a suddenly fluctuating magnetic field. The resulting electric and magnetic fields may couple with electrical/electronic systems to produce damaging current and voltage surges. The sun is known for creating these pulses in solar flares."

Perhaps we won't have to wait for the outcome of this war upon the world to run its course. Nature might just intervene and take us all back to a time before electricity, before communications, before greed and avarice began to take control over human-progress and global acquisitions. We have bombs now that can create EMP bursts over large sections of the planet, but if these electromagnetic waves were to be emitted from the sun; then life here would be reduced to pre-medieval times and that would be the end of most of the human activity on this planet.

"Nuclear bombs also release massive electro-magnetic pulses. EMP weapons were first feared in the late 1990's called theBlackout Scenario in which a nuclear bomb is detonated at altitude causing a massive EMP wave to spread out and destroy all electrical equipment including common electronics, cars, planes and power plant facilities." (1)

Part of our real problem is that we have forgotten our own history. In reality we have not had electronics or global communications for very long, much less everything else that has come from these innovations. Telephones, television, cameras, flight up to and including preliminary space-flight, and the whole range of things that science and the expansion of the human-imagination have made possible.

Politically the planet has only just begun to try to balance the human condition, between the sexes, the races and the various religions; against the thousands of years of slavery, submission and tyranny into which most people, before the advent of communications, were born into. Lately we seem to have become ensnared in a global net of razor-wire that has been cast over billions of people to force them to surrender unconditionally to a more complex breed of sociopathic killers and psychopathic would-be-owners; in what was once thought to be a world where people could actually live with laws to control the monsters while protecting the growth of human growth and prosperity: It's clear that this idea has almost completely failed-because too many have chosen not to fight to keep their freedoms any longer. Instead we have apparently chosen to believe the myths and the fantasy's of the non-existent "Shining Cityon the Hill" that beacon of Democracy that was and still is nothing but a Lie! (2)

If the planet were to be hit with EMP radiation from the sun, then we will be stuck with the worst of everything that we have already done to this place.

In fact we would be marooned amid the garbage, the ruins, and the useless lands that we have poisoned, the water we have polluted, the air that is now filled with nuclear and toxic wastes of all kinds. Because we have allowed the very, very few to own the plants and trees, the forests and the fields, as well as most of the human DNA; while we have tried to kill nature and her ability to renew herself; to keep providing all the natural wonder in the world that also just happens to give us everything that think we created by ourselves. All those buildings and cities that we've created will just crumble back into the earth from which we took the things that we used to build them in the first place.

With just that one wave of EMP, everyone might well be reduced to nothing that involves any kind of engine, or any type of transportation that involves anything more powerful than horses or human beings. In the cities the fires would be left to burn because every road would be clogged with vehicles that could not move and between the chaos and the gangs, the cities as such would be nothing but ruins within a month. Suburbs would also be dead probably even sooner, or as the stored provisions are consumed, but since water is necessary every day, most would probably die of thirst; and no one else would ever know what happened.

Just one solar blast of EMP could change everything here forever-in terms of our lifetimes-which are of course the only thing that matters to those that have tried to reshape the entire world to fit within their very tiny view that means the end of four-fifths

of the human race!

So where are all those of billions of 'potential-victims' in this these final hours, while the elites continue with their plan to shut-down the human-race? Well, apparently they're still far too busy with their games and their food and their shows to bother with anything as minor as whether or not there will be a tomorrow in their pathetic and apparently throw-away-lives.

How is it that a population cannot fight a government that has stolen their money, their jobs their homes and their way of life; not to mention their children and their dreams? What's next people! At the beginning of this month I was in a coffee shop in Tenderloin district of San Francisco, where I could not help overhearing a number of Social-Security recipients screaming about the $15 dollars that the government had suddenly taken from their social-security checks this month.

Apparently there had been no notice, no warning and there was no explanation. I tried to check this out on the web and discovered that yes nineteen-percent of some Social Security checks had been taken by the government. Apparently the AARP, the one group that was supposed to represent the retirement-age group, has screwed their own population again!

AARP ought to be charged with consumer and criminal-fraud!

"The Wall Street Journal on Friday reported that the powerful lobbying group for retirees was "dropping its longstanding opposition to cutting Social Security benefits."

The article ignited a firestorm. In statements and an interview with CNNMoney, AARP said the story was misleading.

"It's AARP's belief that at the end of the day there will be a package that affects both the benefit and the revenue side," David Certner, the group's legislative policy director, told CNNMoney.

And, he said, AARP wants to make sure any final package "does as much as possible to maintain benefits" and gives people enough lead time to adjust to any changes. Social Security to run short sooner than expected In the past, the AARP has opposed specific cuts to change the entitlement program. For example, it has been against progressive indexing, which would adjust the formula that determines retirees' initial benefit, resulting in lower payments for higher-income beneficiaries, and possibly some more middle-income earners as well. When asked what benefit cuts the AARP would

now support Certner said the organization doesn't support any in particular "because there's been no consensus" among its members. Indeed, he said, there's no cut that most people favor. AARP in a statement reaffirmed its opposition to privatization, which would allow people to direct some of their contributions to an investment account with stocks and bonds.

It did not comment on proposals to raise the retirement age at which retirees would be eligible for full Social Security benefits.

AARP surveys show broad support for raising the amount of income subject to the payroll tax that funds Social Security. The change would affect the highest income earners, since currently only the first $107,000 of income is subject to the Social Security tax.

Some, however, say that it was significant that the AARP earlier this year did not join forces with 200 or so advocacy groups that have been lobbying President Obama and Democrats to exclude Social Security from any debt-reduction talks. The AARP maintained Friday it still does not want Social Security reform to be included in such talks, including those being led by Vice President Biden to strike a deal on the debt ceiling.But representatives of some of those advocacy groups in a conference call Friday were very unhappy. "We're extremely disappointed," said Max Richtman, acting CEO of the National Committee to Preserve Social Security and Medicare." (3)

The explanation above is pure crap; just another government lie! When this piece of Double-Speak happens to my check I will personally demand that Nancy Pelosi (my 'representative') reimburse me, with penalties and interest for any money that the government decides not to pay me, for whatever reason-as their debt to me is on-going and was earned over the entirety of my working life. Pelosi lives about a mile or so from me and I think I might be able to get some Gray Panthers and a whole lot of others that have already been shorted to accompany me to 'Nancy's House' to see how she plans to compensate her constituents for her failure to represent us?

Of course such protests are now illegal in San Francisco as it is illegal for more than two people to come together anywhere, at anytime (terrorism is everywhere, you know so we can't be too careful). Still I think that we might just be able to mount something of a small group that might be willing to demonstrate their disgust with Pelosi and government at the same time. . .

ES Corporation – The Power of Being Globalist GeoEngineers

Posted by J Mahurin
Thursday, May 26th, 2011
http://aircrap.org/aes-corporation-power-b...gineers/331507/

I have a friend ("M") who was taking photos of her skies one day and she observed low hanging, smoke-like clouds of various unnatural, iridescent colors mixed in with a completely reflective "sky" backdrop. While taking photos from an elevated vantage point near her home in California, M noticed something unusual about the smoke being released from a petroleum/natural gas fueled power plant in her area. On several occasions she observed that the "smoke" being released from the plant forms into clouds and cloud cover that has many similarities to and characteristics of the clouds I had documented from geoengineering.

[dohtml]<object width="640" height="390"><param name="movie" value="http://www.youtube.com/v/mttYu_l04os&rel=0&hl=en_US&feature=player_embedded&version=3"></param><param name="allowFullScreen" value="true"></param><param name="allowScriptAccess" value="always"></param><embed src="http://www.youtube.com/v/mttYu_l04os&rel=0&hl=en_US&feature=player_embedded&version=3" type="application/x-shockwave-flash" allowfullscreen="true" allowScriptAccess="always" width="640" height="390"></embed></object>[/dohtml]

When M realized that the power plant was contributing to the cloud and weather formations that she had been observing and documenting around her area, she took numerous photos and several videos of the plant, the smoke, and the resultant "clouds" in the sky. In addition, M did some initial research on the plant. She then sent the

photos (some of which appear below), the above video, and her research results to a few friends asking for assistance.

I have documented ongoing geoengineering operations in several states for over two years. M's new find was intriguing to me so I agreed to do additional research and documentation on the power plant in question. I was able to find that the plant is owned and operated by AES Corporation. AES received emergency authorization from the California Energy Commission to rehab and rebuild the generators with upgrades for maximum efficiency and reduced emissions.

AES appears to be buying distressed power plants for a bargain prices and getting emergency federal funding that bypasses environmental impact studies and any community opposition. The following paragraphs contain research information on AES Corporation that we were able to find on the internet, but I am afraid that we have only scratched the surface.

AES Corporation has been linked to the following:
Government loan programs for upgrading and retrofitting old power generating plants
Fracking practices for natural gas powered generating plants
The development of power storage systems utilizing lithium batteries
Alternative energy such as solar and wind farms
Toxic waste disposal violation lawsuits
Climate manipulation and weather modification
HAARP
Smart technology including "smart meters"
Wireless mesh communications
Nano-technology
The Council on Foreign Relations, Trilateral Commission, and the Bilderberg Group

The AES Corporation

According to Wikipedia, "The AES Corporation is a fortune 500 company that generates and distributes electrical power. AES Corporation is one of the world's leading power companies, generating and distributing power in 31 countries and employing 27,000 people worldwide. AES headquarters is located in Arlington, Virginia."

The first power plant that AES constructed was in Texas in 1985. Today in North America, AES owns and operates 34 power plants, more than 1000 MW of wind farms, and owns and operates Indiana Power and Light (IPL) along with a number of subsidiary companies.

AES states on their website that they offer “climate solutions” by developing projects and technologies that reduce or “offset” greenhouse gas emissions. They do this primarily by capturing and destroying methane in a variety of forms before it reaches the atmosphere.

AES operates various types of electrical power generating plants around the world, including hydroelectric plants, plants fired with coal, petroleum and natural gas, and plants that can use a combination of fuels including biomass.

AES is eligible for US Department of Energy loan programs. For example, the Department of energy offered AES Energy Storage LLC, a conditional commitment for a 17.1 million dollar guarantee to build a 20 MW energy storage system in Johnson City, New York.

Subsidiary Technologies

AES has a number of subsidiaries: AES Intellinet, AES Solar, AES Security, AES Technical Services, AES Alternative Energy (Wind Generation), AES Storage and many more.

The AES Control System website for the UK talks about the distribution of “smart meters”. It states, “AES Energy provide bespoke systems from individual meters to fully networked smart meters which are analyzed through sophisticated software such as AES Energy Tracker.” Smart meters are another whole subject in and of themselves, with a whole list of very valid concerns that go with them.

The AES technical FAQs answers questions about AES Inlellinet, a long-range 2-way wireless mesh network. In response to the question, “How does it work?”, the FAQ answer is: “A Smart Subscriber Transceiver (SST) an intelligent device that acts as a transmitter, receiver, repeater and router, links each remote site to the Central Receiver. In a mesh network every SST is capable of sending and receiving data from another SST or the Central Receiver and sending it to its final destination. Data is transmitted directly to the central station if the SST is within radio range, or if not, is relayed through one or more SSTs”. In addition, the response provided to the question “Does AES have patents on AES Intellinet technology?” is as follows: ”Yes, AES Corp. holds the two basic patents that relate to wireless mesh communications, Patent #5455569 and Patent #5974236″.

HAARP and Weather Modification

The HAARP section of the eastlundscience.com website contains the following:

"HAARP (High Frequency Active Auroral Research Program) is a large phased array electromagnetic wave generator located in Alaska. The involvement of Dr. Bernard Eastlund in its creation has been well documented in books and in magazine articles and newspapers. During the period in which many of the books and articles were written, Dr. Eastlund was under a 15 year confidentiality agreement with ARCO (The Atlantic Richfield Company). That confidentiality agreement has now matured. This web site will present information regarding the development of the ARCO patents and the founding of APTI. APTI is now owned by AES Corporation. AES is the corporation currently managing the Alaskan HAARP facility. (The ARCO patents referred to in this web site are three patents that Dr. Eastlund assigned to ARCO because he was a consultant. They are U. S. Patent #4,686,605, #4,712,155 and #5,038,664."

In the HAARP WEATHER section of eastlundscience.com, it states, "Weather modification is possible by, for example, altering upper atmosphere wind patterns or altering solar absorption patterns by constructing one or more plumes of atmospheric particles which will act as a lens or focusing device."

Note: Be sure and check out all the links at the end of this article, under "Works Cited," related to weather modification.

On the official NASA website there is an article titled Changing Our Weather One Smokestack at a Time. Contained within that article is the following: "For the past six years, Daniel Rosenfeld and a team of scientists from the Hebrew University of Israel used NASA satellites and remote sensing techniques to track how man-made aerosols change clouds. They recently discovered that aerosol particles from factories and power plants increase the number of droplets in clouds they pollute. In doing so, the pollutants create brighter clouds that retain their water and do not produce rain. These results put to rest a decades-long debate about human-generated pollutants and biomass burning as well as verify that our manufacturing processes and our need for energy are changing the global climate and local weather systems."

What happens when one massive corporation that operates the HAARP facility in Alaska, as well as other arrays, can openly pollute the air from any number of stationary power plants around the world, which are then combined with stratospheric particulates and other geoengineering operations around the world? When was the last time you looked at your skies?
Petroleum and Natural Gas Powered Generating Plants

In an article on the Proactive Investors UK website titled Clean Global Energy Making Major Energy Moves With Oklahoma UCG project With AES Corporation, it states: "Clean Global linked a $6 capital raising via placement and underwritten rights issue at $0.07 per share to progress its UCG project in Oklahoma USA. Over the last 120 days significant progress has been made. Progress includes identifying a site for Clean Global's UCG plant, identifying various routes for a pipeline between the UCG plant and

the AES Shady Point Power Station in the US. "
AES Corporation has been linked to current and ongoing fracking techniques via investments and political contributions. A February 9, 2011 article titled Investors Target 'Fracking', Political Contributions and Network Neutrality This Proxy Season, states: "Natural gas hydraulic fracturing is the subject of resolutions at 9 oil and gas companies including ExxonMobil, Chevron, Cabot and Southwestern. The resolutions call for the disclosure of plans for managing water pollution, litigation and regulatory risks, and were coordinated by the Investor Environmental Health Network and Green Century Capital Management with assistance from Ceres."

The article goes on to say, "Investors involved are Domini, As You Sow, Trillium and Miller/Howard. New York CityComptroller John Liu and the city's pension funds have called on 6 companies to disclose their political contributions, including Charles Schwab, Coventry Health, DTE Energy and Sprint. These companies in particular were unresponsive during the 2010 proxy season, while AES Corp, Altria, Humana and Norfolk Southern agreed to be more transparent."

Forbes Magazine published an article on May 9, 2011, titled, Gas Fracking Linked With Water Contamination. The article states, "A team of researchers at Duke University led by Robert Jackson, an environmental chemist, and Stephen Osborn, a post-doctoral fellow, analyzed groundwater samples from more than 60 private wells in Pennsylvania and upstate New York. The findings: Methane concentrations were found to be 17 times higher on average in areas with active drilling and extraction than in non active areas, with some drinking water wells having concentrations of methane well above the 'immediate action' hazard level. The research team found that 85 percent of the wells tested in Pennsylvania and upstate New York had some amount of methane. Within about 3,000 feet of a drilling site, the concentration of methane in well water rose precipitously."

In an April, 2009 article by ProPublica, titled, EPA: Chemicals Found In Wyoming Drinking Water Might Be From Fracking, it states: "Federal environment officials investigating drinking water contamination near the ranching town of Pavillion, Wyo., have found that at least three water wells contain a chemical used in the natural gas drilling process of hydraulic fracturing. Scientists also found traces of other contaminants, including oil, gas or metals, in 11 of 39 wells tested there since March. The study, which is being conducted under the Environmental Protection Agency's Superfund program, is the first time the EPA has undertaken its own water analysis in response to complaints of contamination in drilling areas, and it could be pivotal in the national debate over the role of natural gas in America's energy policy."

Coal Combustion plants

A number of the power plants that AES owns and operates are supposedly “clean coal burning” power generating plants, in the US and abroad. Ash ponds and ash mounds near AES plants in Oklahoma, Kentucky, and the Caribbean have been cited by residents as causing health issues.

Coal fired plants are fast becoming a source of energy for households across the United States. The US governments Energy Information Administration (EIA) lists 617 facilities that burn coal for energy in 2007. The EIA’s energy outlook for 2009 forecast a 19 percent increase in coal fire power plants by 2030, which will generate 47 percent of the energy produced.

More coal plants would mean more carbon combustion residues (CCRs). CCRs are the material left over after burning coal. Such as fly ash, bed ash, flu gas etc. According to the American Coal Ash Association, in 2007 the United States produced 131 million tons of CCRs. They state that 43 percent was used beneficially and over 75 million tons were disposed of through landfills. The majority of the waste are either dumped in a landfill or dumped in large ponds. Enormous amounts of these wastes are generated each and every day by coal-fired electric generating plants. Kentucky has multiple fly ash ponds, including several in Northern Kentucky.

An abstract on the Science Direct website titled Formation and Use of Coal Combustion Residues from Three Types of Power Plants Burning Illinois Coals, concerning supposed beneficial uses of CCRs, states: “Coal, ash, and limestone samples from a fluidized bed combustion (FBC) plant, a pulverized coal combustion (PC) plant, and a cyclone (CYC) plant in Illinois were analyzed to determine the combustion behavior of mineral matter, and to propose beneficial uses for the power plant ashes. Pyrite and marcasite in coal were converted during combustion to glass, hematite and magnetite. Calcite was converted to lime and anhydrite. The clay minerals were altered to mullite and glass. Quartz was partially altered to glass. Trace elements in coal were partially mobilized during combustion and, as a result, emitted into the atmosphere or adsorbed on fly ash or on hardware on the cool side of the power plants. Overall, the mobilities of 15 trace elements investigated were lower at the FBC plant than at the other plants. Only F and Mn at the FBC plant, F, Hg, and Se at the PC plant and Be, F, Hg, and Se at the CYC plant had over 50% of their concentrations mobilized. Se and Ge could be commercially recovered from some of the combustion ashes. The FBC ashes could be used as acid neutralizing agents in agriculture and waste treatment, and to produce sulfate fertilizers, gypsum wall boards, concrete, and cement. The PC and CYC fly ashes can potentially be used in the production of cement, concrete, ceramics, and zeolites. The PC and CYC bottom ashes could be used in stabilized road bases, as frits in roof shingles, and perhaps in manufacturing amber glass.”

In an article published by News9.com in December 2010, titled Bokoshe Residents Say Senator Inhofe, Congressman Boren Flip Flopping on Fly Ash Issue, states that “fly ash

is toxic and it's killing them. A giant mound of fly ash sits about a mile from the town of Bokoshe, Oklahoma. A nearby power plant is supplying the site with load after load of the coal byproduct, which is full of heavy metals like lead, arsenic and selenium… The Oklahoma Impact team discovered the power company, AES Shady Point, donated more money to Senator Inhofe than to any other lawmaker or candidate.

A news release on PR Newswire, titled Illegally Dumping one Million Pounds of Toxic Coal Ash Waste Onto a Pristine Dominican Republic Beach, US Power Corporation Created A Genetic Time Bomb, Mass Tort Alleges in First of its Kind Lawsuit, contains the following regarding a lawsuit against AES: "One of the world's largest power generating companies, caused horrendous birth defects, lung injury and other acute and chronic medical problems by illegally dumping one million pounds of toxic coal ash onto a pristine Caribbean beach front, according to a ground breaking mass tort lawsuit late November 4th, against Arlington, Virginia based AES Corporation. The eight count lawsuit on behalf of 11 plaintiffs, living and dead, from the small rural village of Arroyo, Barril in the Dominican Republic, was filed in Delaware Superior Court. Two of the children died after birth from catastrophic birth defects. Two boys survived: one with no arms; the other, born with his stomach outside his body, had to endure several surgeries. Another child was found — in utero — to have massive cranial defects and had to be aborted."

The news release goes on to say, "In 2006, AES was sued in the eastern district of Virginia by the government of the Dominican Republic. The matter settled, but the injured residents across Arroyo Barril, Samana region, were not compensated since the case has been brought by the Dominican Republic government for illegally dumping on the island nation's beach. The case is believed to have been settled for approximately 6 million dollars and remains under seal."

In a follow-up article regarding the 2006 lawsuit against AES published by Dominican Today in April 2007 titled Dominican Republic Asks for Extradition in Rockash Case, it states: "With $6 million in hand from their settlement against AES Corporation for dumping rockash in Samaná and Montecristi provinces, Dominican officials are now working to persuade the U.S. court system and the State Department to extradite contractor Roger Fina so he can face bribery charges in a political corruption scandal", said Susan Burke, a Philadelphia attorney who represented the country in the civil lawsuit. 'He is still being pursued on a criminal basis,' she said. Although Fina, 51, was named in the civil lawsuit and accused of dumping 82,000 tons of coal ash on beaches in Manzanillo and the port town of Arroyo Barril, the $6 million settlement didn't come from his pocket."

The information presented above is only a fraction of documentation available via the internet on atrocities and concerns regarding coal fired power plants owned by AES Corporation. For example, see the article on the Center for Biological Diversity website titled AES Corporation Participating in the Demise of the Ngobe Tribe of Panama and

La Amistad Biosphere Reserve.

This battery system supplies eight megawatts of power to the grid in upstate New York to maintain a steady frequency. It will be expanded to 20 megawatts later this year. (Credit: AES Energy Storage)
Lithium

AES offers energy storage that they define on their website as “advanced storage projects that provide emissions free capacity to improve the performance and reliability of today’s power grid. Emissions free capacity is a fast and flexible power system resource, combining patented software, dynamic power control and storage technology.” AES storage includes giant lithium powered batteries that are used when demand exceeds supply on the grid. The batteries provide a burst of energy for a few seconds to maintain an even flow of energy at all times.

According to Wikipedia under the section titled Production of Lithium: “Deposits of lithium are found in South America throughout the Andes mountain chain. Chile is the leading lithium producer, followed by Argentina. Both countries recover the lithium from brine pools. In the United States lithium is recovered from brine pools in Nevada. Nearly half the world’s known reserves are located in Bolivia, a nation sitting along the central eastern slope of the Andes. According to the US Geological Survey, Bolivia’s Uyuni Desert has 5.4 million tons of lithium.”

An article on Next Energy News talks a lot about AES Corporation, nano-technologies, and lithium powered batteries. In an article titled Altair Nano Successfully Tests Utility Scale 2MW Lithium Battery, it quotes Terry Copeland, President and CEO for Altair Nanotechnologies, as saying, “The positive AES results validate the immense opportunities in the utility sector. Our patented lithium titanate battery technology represents a significant advancement in frequency regulation and can provide utilities and generating companies with a valuable tool and resource in the growing challenge of grid management.” It also quotes Chris Shelton, Director of Energy Storage Development at AES, as saying, “We are pleased with the results of the Altairnano units. This two megawatt validation project is one of the final steps in our move towards commercial deployment of grid-scale energy storage”.

In a March 2011 article on the FavStocks website, titled The Strange Connection between Plug-ins, Libya and Bolivia, it states that, ”While many in the lithium mining industry claim that lithium mining can be carried out pollution-free with new nano-technologies, for instance, these ‘promises’ sound exactly like the ‘promises’ many in the natural gas industry claim regarding fracking pollution.” The article goes on to state, “More importantly, places like Bolivia don’t believe lithium-mining will be pollution free. It is also going to generate pollution, not just from fossil fuels but also from lithium plants, which produce sulphur dioxide. This isn’t a magic solution.”

Climate Loopholes and Impacts

A July, 2009 editorial published by the New York Times titled Climate Loopholes (in the Waxman-Markey climate change bill) states that there is ”a very real danger with some of the offsets in the House bill. For instance, the bill would allow polluters to meet their requirements not by paying farmers to put new conservation techniques in place but by paying them to keep doing things they were already doing. The result is that money changes hands, but the atmosphere is no better off. Offsets must be real and verifiable, or the integrity of the entire scheme is at risk.”

An article published in April, 2011, titled EPA to Sanction Utah for Illegal Clean Air Loophole, states: “At issue is an exemption in Utah’s air quality regulations that allows polluters to avoid compliance with any and all state and federal clean air laws and regulations, regardless of threats to public health and welfare, in the event of ‘breakdowns.’ As early as 1979, the EPA stated that the Utah exemption was illegal.”

The headline for a special report on the USA Today website titled The Smokestack Effect, Toxic Air and America’s Schools states: “USA Today used an EPA model to track the path of industrial pollution and map the location of 128,000 schools, to determine the levels of toxic chemicals outside. The potential problems that emerged were widespread, insidious and largely unaddressed.” Please visit USA Today website for numerous related stories.

A May 13, 2011 Washington Examiner article titled AES and GE imitate Enron on Coal and Climate contains the following: “Virginia-based AES Corp. has partnered with General Electric Co. in peddling greenhouse gas offsets while lobbying for policies to make those offsets valuable — the same buy-low, lobby-hard, sell-high strategy tried by Enron. AES simultaneous expansion of coal-fired power in Asia, South America and Africa, however, highlights how environmental regulations can yield profit without necessarily yielding environmental gains.

Before it collapsed in late 2001, Enron was the leading corporate lobbyist for restrictions on greenhouse gas emissions. Former Chief Executive Officer Ken Lay called on both the Clinton and Bush White Houses to ratify the Kyoto Protocol on Climate Change, which one intracompany e-mail declared would be “good for Enron stock.” The company hoped to be the premier dealer in emissions credits that would be required after climate change legislation. Further, Enron’s natural gas pipelines would see increased demand as coal and oil would be made more costly.

When Enron died, its assets were scattered. Two heirs — taking up both Enron’s power generation and its climate change entrepreneurship — were General Electric and AES. GE got the windmills, and AES got floating coal-fired power plants off Nigeria’s shores.”

Connecting the Dots

Reuters.com lists the company officers for AES Corporation. On the top of list is Philip Odeen, who has been Chairman of the Board of AES since 2008. Listed directly under Odeen is Paul Hanrahan, who has been the President, Chief Executive Officer, and Director since 2002. And, further down the list of AES officers, you will find Philip Lader, who has been an Independent Director since 2001.

Both Odeen and Lader are current members of the Council on Foreign Relations (CFR) according to the CFR website.

That would be the same CFR that runs the world according to a former president, Winston Lord, and tells Hillary Clinton what to do and how to think. For more on the CFR, see the May 11, 2011 article on aircrap.org titled Millions Spent to Confuse Public About Geoengineering.

Odeen is a suspected 9/11 criminal conspirator and Lader is non-executive Chairman of WPP Group, which reportedly performs public relation duties for Evergreen International Aviation. In addition, Lader is a director of UC Rusal, the largest Aluminum producer in the world. For more on Lader and Evergreen Air, see the see the January 19, 2011 article on aircrap.org titled Loose Lips Sink Ships and 747s Too.

Hanrahan is a member of the Business Roundtable. Regarding the Business Roundtable, an article on the whitewraithe.wordpress.com blog titled Exposing Our Enemy – Meet the Economic Elite, states: “Most Americans have never heard of the Business Roundtable. However, in my analysis, it is the most influential and powerful Economic Elite organization. “The Business Roundtable joined the Business Council at the heart of both the corporate community and the policy-formation network and now has the most powerful role…. The Roundtable’s interlocks with other policy groups and with think tanks are presented… The Business Roundtable is the most powerful activist organization in the United States. Their leaders regularly lobby members of Congress behind closed doors and often meet privately with the President and his administration. Any legislation that affects Roundtable members has almost zero possibility of passing without their support.”

Billionaire Roger W Sant co-founded AES in 1981 and served as the company’s Chairman of the Board from 1981 through May 2003. He also held the position of president and chief executive officer from 1981 through 1986 and chief executive officer through May 1993. On bilderbergbook.com, a website about the book titled The True Story of the Bilderberg Group by Daniel Estulin, Sant is listed as a participant in a Bilderberg meeting that was held in Ottawa, Canada, in June 2006. Bilderbook.com also contains numerous articles about the Bilderberg Group.

An article on shadowpress.org, titled OPUS DEI: Deliver Us From Evil!, says the following about Richard Darman, a former chairman of AES: “The former master chairman of AES, recently deceased, was Richard G. Darman, former director of the U. S. Office of Management and Budget; former Deputy Secretary of the U.S. Treasury; former Assistant U.S. Secretary of Commerce; and member of the Council on Foreign Relations and the Trilateral Commission. A director of AES from July 2002; Darman was elected Chairman of the Board on May 1, 2003. In addition to his service as Chairman of AES, Darman was a Partner and Managing Director of the Carlyle Group, joining Carlyle in February 1993, after serving in the cabinet of the first Bush administration.”

Conclusions

I had no idea when I started researching a power plant in California, whose emissions form into clouds and cloud banks resembling geoengineering characteristics that have been openly discussed and theorized as possible ways to manipulate the weather, that I would find a rabbit hole that runs so deep. It is my opinion that the emissions coming from the majority of power generating plants supplement the aerial spraying campaigns in support of geoengineering projects worldwide.

I have only scratched the surface on the topic of power generating plants and the roles played by AES. I encourage everyone to research the emissions coming from power plants in your area and document your findings. Also, look for connections to AES and the various corporations and groups that control them, including investors, officers, partners, subsidiaries, customers and owners.

We have found AES connections with Evergreen Air, CFR, Trilateral Commission, Bilderberg Group, Rothschild’s, Rockefeller, Carlyle Group, Opus Dei, the royal family, Soros, biotech, particle colliders, multiple HAARP-like facilities, foreign governments (with China owning a huge stake), the US military complex, and other globalist organizations. So, we encourage people to research the various connections and post your findings.

You don’t have to be an environmental scientist to see what is happening right in front of you if you open your eyes.

http://aircrap.org/how-to-deal-with-a-chem...ebunker/331562/

Attention Activists! Please feel free to copy and paste this when you are debunked by a Chemtrail Debunker!

Hello Mr. or Mrs. _____ (debunkers name)

I appreciate your questions and will do my best to address them.

1. I have never said “The physics of the atmosphere is vague.”. The results of a soil samples and tests that Pat McReynolds of CBS and other reports handed over to me were “vague”, and that the EPA reports were vague, and they clearly are not only vague, they are lies.

2. I have reviewed, studied, and asked many biologists, investigators, and scientists about persistent contrails, and there is absolutely NO MYSTERY to me whatsoever, so I am unclear as to why you are assuming such.

3.) The schooling that I would wish to attempt is geoengineering. Hence, I do not use the term DEATH DUMPS. (But, I understand why some folks do.) I do however consider it somewhat of an insult that the USA and it’s governing agencies require the American Public to back engineer the technology of ‘cloud seeding’ and global warming schemes in order to even come close to getting a representative to listen, never mind the mainstream media. That same American Public who is trying to raise a family, who has just lost there American Dream (which is just another social control over the enslaved masses) working 2 jobs, and simply trying to put food on the table…they

deserve to rest when there kids go to bed, but instead they are having to pull out miles of data and read through it just to comprehend one aspect of what seems to be a very big lie.

Sorry, I digressed.

At the end of this post, I will make available to you my website and my Youtube channel, and you can view the footage that you are seeking.

Here is suggested studying for you “Thor”. It may clear up some of the questions that you have.

1.) Inventor David B. Chang from Los Alamos & Assignee Hughes AIRCRAFT applied for a patent in April of 1992 which was approved by the US Patent office in March of 1991 under the number 5,003,86. Name of the Patent is WELSBACH -Stratospheric seeding for the Reduction of Global Warming.

2.) Getting to the point here, Paragraph 12, line 30 of the Welsbach Patent explains in more detail that “Aluminum Oxide is one metal oxide suitable for the purpose which is relatively inexpensive” (Patent is referencing Cloud Seeding).**” cloud seeding with metals for the purpose of trapping the long wave length black body radiation released by the earth.

*It is presently believed that particle sizes in the ten to one hundred micron range (otherwise known as NANO particles) and dispersed via Jet fuel through jet airliners at while the jet is at cruising altitude, and WELSBACH PATENT specifies 10 Kilometers should be the injection range.

10 Kilometers= 6.2 Miles = 32, 736 feet.

So isn’t it interesting that “chemtrail” debunkers continually distract researches with the idea that “Persistent contrails happen at 33K feet and form ice crystals due to freezing temps in the upper atmosphere. Then they usually “encourage” me (by means of the obvious and generally a berating tone) to go to school or educate myself in these specific areas of science, etc. They always misquote me, and there intent is to distract me, disprove me, discredit me, minimize me, and trap me in an obsolete one way conversation that I refer to as the black hole.

Sorry did I digress again? No I think I am making a fairly reasonable observation along with millions of others in the human race.

The disinfo agents are at a great loss. There attempts are purely in vain, and there attacks are useless.

Roxy Lopez is a part of a large movement across the world, so when you speak to me,

you speak to the movement.

For more information on WELSBACH and other specific patents in relationship to WEATHER Modification, GEOENGINEERING, Stratospheric Aerosol Spraying, Weather Modification, and more, please visit my video log on my website.

http://www.thetruthdenied.com/

Lifespan of aerosols — Tropospheric sulfur aerosols are short lived.[18] Delivery of particles into the lower stratosphere will typically ensure that they remain aloft only for a few weeks or months.[19] To ensure endurance, high-level delivery is needed, ensuring a typical endurance of several years. Further, sizing of particles is crucial to their endurance.

Aerosol delivery — Even discounting the challenges of lifting, there are still significant challenges in designing a delivery system that is capable of delivering the precursor gases in the right manner to encourage effective aerosol formation. For example, it is unclear whether aerial shells should be designed to leak slowly or burst suddenly. The size of aerosol particles is also crucial, and efforts must be made to ensure optimal delivery.[20]

Distribution — It is logistically difficult to deliver aerosols evenly around the globe. Challenges therefore exist in creating a network of delivery points sufficient to allow viable geoengineering from a limited number of launching sites.

TheUnhivedMind - June 20, 2011 12:51 AM (GMT)

Morgellons Victim Jumps to Death in Germany

Posted by Brian Andrews
Saturday, April 23rd, 2011
http://aircrap.org/morgellons-victim-jumps...germany/331357/

Morgellons Victim, Monika B., jumps from a balloon from 500 feet in Egling, Germany.

Source: LymeBuster. A woman in Germany jumped to her death from a hot air balloon. Monica B. had Morgellons. She chose this spectacular method of suicide to publicize the plight of those with this illness. She left a note about having Morgellons and not receiving any help . Here is the German article from the Munich newspaper (you may be able to translate with Google translater):
http://www.tz-online.de/aktuelles/muench….-tz-878295.html

This has produced a storm of publicity about Morgellons in Germany. The backlash went to Marc Neumann. He had been contacted to help Monica B., but before he could get through to her she committed suicide. I just talked to him and he feels threatened. His German site was being attacked as we spoke. His site has been suddenly visited by numerous government agencies. And most notably by those companies that produce pesticides containing bioinsecticides made with fungus', nemotodes, bacteria and other living materials. The biggest of those companies is Bayer which was on his site just today.

Marc Neumann went to see a lawyer about suing the pesticide companies that are causing widespread environmental hazards. Now he is actually in fear for his life because he has spoken out about a multimillion business. If he decides to sue these companies he might be in danger. I for one would help him any way I could, including a defense fund, if needed. Or, if he could actually sue these companies, I would like to

contribute to shut them down. This includes the evil Monsanto.

[dohtml]<object width="640" height="390"><param name="movie" value="http://www.youtube.com/v/y8iKb4KX9i8&rel=0&hl=en_US&feature=player_embedded&version=3"></param><param name="allowFullScreen" value="true"></param><param name="allowScriptAccess" value="always"></param><embed src="http://www.youtube.com/v/y8iKb4KX9i8&rel=0&hl=en_US&feature=player_embedded&version=3" type="application/x-shockwave-flash" allowfullscreen="true" allowScriptAccess="always" width="640" height="390"></embed></object>[/dohtml]

Journalist, filmmaker and political activist Michael J. Murphy talked about new evidence for chemtrail spraying and geo-engineering. The very weird weather patterns we've recently been experiencing could be related to climate control, geo-engineering, and chemtrail spraying, he suggested. Weather modification is nothing new, and was used for military purposes by the US as far back as in Viet Nam, he noted. Project HAARP has the ability to heat up over 200 square miles of the sky with metal particulates, creating high & low pressure systems, and actually steering storms, he stated.

According to meteorologist Scott Stevens, heavy spraying is taking place about 1,000 miles ahead of storms, Murphy reported. Testing of rain has revealed high levels of aluminum oxide that has vastly increased over the last seven years, he continued, adding that such toxic aluminum exposure could be connected to the rise in Alzheimer's. Further, blood testing of some Arizona residents revealed toxic levels of barium and aluminum (said to be components of chemtrails). For more, visit The

Coalition Against Geo-Engineering.

View Full Version: Proof of Chemtrails in 1971! [Vd]

Title: Proof of Chemtrails in 1971! [Vd]

TheUnhivedMind - June 8, 2011 03:31 AM (GMT)

Proof of Chemtrails in 1971!

June 6, 2011 by Gary Rea
http://ppjg.wordpress.com/2011/06/06/proof...trails-in-1971/

When I first saw chemtrails with my own eyes, in January 2008, it was after some nine months of having researched the subject, seeing hundreds of videos and still images by others, some of them proving the existence of chemtrails in the 1990s. So I knew that, even though I had never seen them then, millions of others had.

This prompted me to conclude that there must be some form of mass-electromagnetic mind control at work, which prevents most people from even seeing them, let alone realizing what they are. I had no other means of explaining how I could have sworn they were never there before and that I had seen normal skies for most of my life, until 2008.

Recently, this nagging question has prompted me to actively seek out photographic evidence of chemtrails in past decades. The earliest year I had been able to document chemtrails in, some months ago, was 1992, as revealed by a brief glimpse of a single chemtrail in a scene from the movie “White Sands ,” starring Willem Dafoe and Mickey Rourke.

Then, only weeks ago, I stumbled upon a chemtrail sky in a 1985 music video by Simple Minds, for their release of the song “Alive and Kicking .”

Just when I was about to conclude that I could probably not find anything earlier, I had the earliest, yet, drop into my lap when I wasn’t even looking for it. I was watching the 1971 Steven Spielberg movie, “Duel,” which I’d seen many times before, when, all of a sudden, there was Dennis Weaver against a chemtrail sky.

What I find even more striking about these scenes is that the shots are predominately

low-angle shots that are deliberately composed so as to take in large expanses of the sky. This didn't happen by accident, folks. Hollywood movies are shot from storyboards and locations for outdoor shooting are selected well in advance and a typical location shoot can take quite a while to set up for. Given this, it is glaringly apparent that Spielberg and crew not only had foreknowledge of the chemtrail spraying, but were there when it occurred, probably not more than two hours prior to the shooting of these scenes, judging by how much the trails have been blown by the wind.

Fox is Marketing 'X-Men: First Class' By Writing Giant X's in the Sky!

May 30, 2011
by Alex Billington
http://www.firstshowing.net/2011/fox-is-ma...-xs-in-the-sky/

If you live in Southern California and were outside BBQing this fine Memorial Day and just so happened to notice a giant smokey "X" in a circle in the sky, you weren't dreaming, it was actually there. 20th Century Fox, in what I might call a genius/amusing marketing move, has hired planes to fly around and make giant X-Men X's in the sky promoting X-Men: First Class - because they know they can get comic book geeks excited by doing so. And its worked. I've seen tweets and Facebooks and more, all from various people going nuts over a giant X-Men X up in the sky. There's even a YouTube video if you want to watch it. More below!

Click on a photo to see more photos. If you haven't seen the last trailer for X-Men: First Class, watch here.

I've included a few of the photos I've found around the web. They come from places like Facebook, Bleeding Cool and Cinema Blend. If you live in California, look up in the sky this week! There's a huge gallery here.

X-Men: First Class is directed by British director Matthew Vaughn, of Layer Cake, Stardust and Kick-Ass. Bryan Singer, director of X-Men 1 and 2, is producing and wrote the story. The screenplay was written by quite a few writers, including Josh Schwartz ("Gossip Girl" & "Chuck"), Jamie Moss (Street Kings), Ashley Miller ("Fringe", Thor), Zack Stentz, and finally Jane Goldman (Kick-Ass). Marv Films & 20th Century Fox will be bringing X-Men: First Class to theaters everywhere starting on June 3rd this week. Who's seeing it?

Secret Presidential Chemtrail Budget Uncovered, Congress Exceeds Billions To Spray Populace Like Roaches

The Budget Obama Didn't Want You To Know About

Shepard Ambellas & Avalon
March 30, 2011
http://theintelhub.com/2011/03/30/secret-p...s-like-roaches/

Geoengineering has now been defined as: "the deliberate large-scale manipulation of the planetary environment to counteract anthropogenic climate change." – The Royal Society 2009

Recently, the question has been asked, What In the World Are They Spraying? The documentary with the same name answers many of those questions.

The question the world is now asking is "Who in the World Is Spraying Us?"
The World is Now Demanding Answers and Accountability…

As an introduction to this article, we will first cover information to familiarize the uninformed readers as to the core facts and information so that a more complete understanding is possible, given this complex issue.

A recent report by CBS Atlanta detailed how some local citizens are outraged that such “crimes against humanity” are being carried out right before our eyes in secret.

In the report Sen. Johnny Isakson was interviewed on the subject of chemtrails saying quote:

“That is a theory that some people have, but there is no evidence this is happening. This is not happening.”

It looks as if members of the government’s upper echelon and even members of the Senate will go to extreme lengths to suppress this vital information from reaching the American people.

Not to mention they signed off on the multi-billion dollar per year budgets in an economic crisis, with little to no transparency to the public.

Support The Intel Hub – Berkey Light Water Filters, Storable Food, and More(Ad)

In regards to aerosol spraying into the earth’s atmosphere, a recent update to data assembled by The Carnicom Institute reveals the chemicals used and their respective levels of concentration. The toxic levels that are being used in these aerosols goes beyond shocking – it would appear that these levels are indeed criminal by EPA Standards.

QUOTE

An Updated Look at Aerosol Toxins – Part 1
By Dr. Ilya Sandra Perlingieri –
Copyright © 2011 – All Rights Reserved
February 3, 2011

(Excerpt from Report)

A new preliminary draft report by ArizonaSkyWatch shows dramatic increases in heavy metals that simply do not belong in our air. NOTE: The level of Manganese is so shockingly high that ArizonaSkyWatch also included additional information about it (see below). This report will be posted online shortly.

This is only a preliminary overview of Arizona Air Particulates.

2010 Air Particulates
These figures indicate how many times they are over the allowable toxic limit:

Aluminum: 15.8

Antimony: 63.3

Arsenic: 418

Barium: 5.3

Cadmium: 6.0

Chromium: 6.4

Copper: 9.0

Iron: 43.5

Lead: 15.7

Manganese: 513.8

Nickel: 10.7

Zinc: 7.5

Additional Research & Videos are at the CaliforniaSkyWatch.com & theAgricultureDefenseCoalition.org.

Interestingly enough, Monsanto has just released an Aluminum Resistant Seed which is Genetically Modified to tolerate Aluminum in high levels in the soil. Is this a coincidence, or do they know something?

QUOTE

"Control oil and you control nations; control food and you control the people." – Henry Kissinger

See also: Henry Kissinger National Security Study Memorandum 200

QUOTE

"The common enemy of humanity is man. In searching for a new enemy to unite us, we came up with the idea that pollution, the threat of global warming, water shortages, famine and the like would fit the bill. All these dangers are caused by human intervention, and it is only through changed attitudes and behavior that they can be overcome. The real enemy then, is humanity itself." – Richard Haass- Club of Rome

Another famous quote;

QUOTE

When the people fear their government, there is tyranny; when the government fears the people, there is liberty. Whenever the people are well-informed, they can be trusted with their own government. - Thomas Jefferson

LINKS FOR CURRENT SOURCES

David Keith GeoEngineering

Fund for Innovative Climate and Energy Research (FICER)
Purpose

The Fund for Innovative Climate and Energy Research (FICER) exists to accelerate the innovative development and evaluation of science and technology to address carbon dioxide and other greenhouse gas emissions and their environmental consequences.

The non-profit research fund focuses on early-stage innovative research where relatively small and timely grants can significantly advance understanding, especially of the viability and scalability of proposals to address global warming.

Funded research projects are intended to produce peer-reviewed scholarly articles in recognized professional scientific and technical journals. Any intellectual property that may be generated in the course of such research resides with the researchers or their institutions.

QUOTE

Grants for research are provided to the University of Calgary from gifts made by Mr. Bill Gates from his personal funds.

The activities of the Fund for Innovative Climate and Energy Research fall outside the scope of activities of the Bill & Melinda Gates Foundation. FICER is not a Foundation project and has no relationship with it.

The fund has supported research in a wide range of areas. Some examples include:

• understanding carbon dioxide emissions associated with international trade in goods and services;

• developing technologies to capture carbon dioxide out of the air; and

• climate modeling to understand possible environmental consequences of solar radiation management.

Image: Lawrence Livermore National Library

Report On GeoEngineering

A select group of diabolic oligarch globalists and their puppet cronies embedded within the United States government are now involved in what some would say are crimes against humanity. These tyrants will stop at nothing to usher their hush, hush global aerosol agenda into full swing.

According to a report prepared for the Air Force titled “Weather as a Force Multiplier: Owning the WeatherBy 2025” the U.S. Air Force wants to fully control the weather on earth by the year 2025.

Far surpassing even the most horrific act of terror (real or staged), posing as literal gods, these globalists will stop at nothing to control the world by not only controlling the fraudulent banking systems but by owning the weather through a process (blanket term) calledGeoengineering.

According to globalist sponsored reports, our planet is in a constant state of threat and is being bombarded with radioactive solar rays increasing planetary temperatures due to human carbon emissions.

However, vast bodies of research now show that that is not the case and that global warming is a another globalist myth, a ponzi scheme to collect a Carbon Tax worldwide, benefitting the very same group behind the curtain.

The myth the global warming “Carbon Tax” pushers have been spouting apparently can only be fixed by spraying deadly toxins in an aerosol particulate form into the earths atmosphere via large sprayer converted aircraft specifically assigned to perform Geoengineering tasks.

> **QUOTE**
>
> Aerosol sprays (slang: Chemtrails) are filled with a variety of chemical and metal compounds and are known to be very hazardous to human, plant, and animal health worldwide. This danger to plant and human and animal health has been documented in films such as “What In the World Are They Spraying” by Michael Murphy & G. Edward Griffin, who have also appeared on the Intel Hub Radio Show with Shepard Ambellas.

Ultimately, this issue was originally a matter for the EPA to rule over considering that they have the authority to sanction geoengineering activities under the National Environmental Policy ACT of 1969. However, documents such as the report to the chairman, Committee of Science and Technology, House of Representatives – “Climate Change” – Sept. 2010, U.S. Gov. Accountability Office which was submitted to all members of congress in 2010 attempt to put control into the hands of even a smaller group of people.

This report clearly is slanted and leans to take control away from the EPA along with other regulatory provisions such as; the Endangered Species ACT, and the Conformity Provision in the Clean Air ACT – total Geoengineering dis-info submitted to members of the Congress and other government branches alike.

Global Change Research Program

January 2011

Members of Congress:

On behalf of the National Science and Technology Council, I am transmitting a copy of *Our Changing Planet: The U.S. Global Change Research Program for Fiscal Year 2011*. The report describes the activities and plans of the U.S. Global Change Research Program (USGCRP) established under the Global Change Research Act (GCRA) of 1990. The USGCRP coordinates and integrates scientific research on climate and global change and is supported by 13 participating departments and agencies of the U.S. government. This Fiscal Year 2011 edition of *Our Changing Planet* highlights recent advances and progress made by participating agencies and includes budget information on each agency's contribution.

This report describes a program in transition. In accordance with the GCRA, the USGCRP agencies requested guidance from the National Research Council on how to best meet the changing needs of the nation to understand climate change and respond to its impacts, and the NRC responded with a 2009 report entitled "Restructuring Federal Climate Research to Meet the Challenges of Climate Change". In accord with that report's recommendations, the USGCRP is undergoing a strategic realignment that will ensure that the science produced is maximally useful for decision makers at all scales.

As described in the new edition of *Our Changing Planet*, the program going forward will place greater emphasis on impacts, vulnerabilities, and on understanding the options for adapting to the changing climate. The program will also continue its long-standing support for activities that contribute to a better understanding of the Earth system, including observations, research, and predictive modeling. All of these focuses will be reflected in the USGCRP's new strategic plan and in National Climate Assessment.

The USGCRP is committed to its mission to build a knowledge base that informs human responses to global change through coordinated and integrated federal programs of research, education, communication, and decision support. I appreciate the close cooperation of the participating agencies, and I look forward to working with the Congress in the continued development and implementation of this essential national program.

Sincerely,

John P. Holdren
Director, Office of Science and Technology Policy
Assistant to the President for Science and Technology

The source of most of the dis-info is Obama’s White House Science Czar John P. Holdren. The following was written on USGCRP letterhead;

> **QUOTE**

"January 2011,

Members of Congress:

On behalf of the National Science and Technology Council, I am transmitting a copy of Our Changing Planet: The U.S. Global Change Research Program for Fiscal Year 2011. The report describes the activities and plans of the U.S. Global Change Research Program (USGCRP) established under the Global Change Research Act (GCRA) of 1990. The USGCRP coordinates and integrates scientific research on climate and global change and is supported by 13 participating departments and agencies of the U.S. government. This Fiscal Year 2011 edition of Our Changing Planet highlights recent advances and progress made by participating agencies and includes budget information on each agency's contribution.

This report describes a program in transition. In accordance with the GCRA, the USGCRP agencies requested guidance from the National Research Council on how to best meet the changing needs of the nation to understand climate change and respond to its impacts, and the NRC responded with a 2009 report entitled "Restructuring Federal Climate Research to Meet the Challenges of Climate Change". In accord with that report's recommendations, the USGCRP is undergoing a strategic realignment that will ensure that the science produced is maximally useful for decision makers at all scales. As described in the new edition of Our Changing Planet, the program going forward will place greater emphasis on impacts, vulnerabilities, and on understanding the options for adapting to the changing climate. The program will also continue its long-standing support for activities that contribute to a better understanding of the Earth system, including observations, research, and predictive modeling.

All of these focuses will be reflected in the USGCRP's new strategic plan and its National Climate Assessment.

The USGCRP is committed to its mission to build a knowledge base that informs human responses to global change through coordinated and integrated federal programs of research, education, communication, and decision support. I appreciate the close cooperation of the participating agencies, and I look forward to working with the Congress in the continued development and implementation of this essential national program.

Sincerely,

John P. Holdren Director, Office of Science and Technology Policy Assistant to the President for Science and Technology" – Our Changing Planet

Even more disturbing then that is the fact that your so called representatives have been approving yearly geoengineering budgets in the upwards of billions of dollars per year (as outlined in the document "Our Changing Planet – The US Global Change Research Program for the Fiscal Year of 2011, which is a supplement to the Presidents Budget for 2011, much of which is unaccounted for and not even included in the budget possible signifying even a more nefarious plot involving some black budget.

Back tracking to the year 2001, President elect George W. Bush established the (CCRI) Climate Change Research Initiative. A year later it was made public that the USGCRP or United States Global Change Research program and the CCRI both would become what is known as the (CCSP) Climate Change Science Program. Now, under the Obama Administration the legacy continues to move forward as the USGCRP.

Geoengineering Regions

A report entitled "Global Climate Change Impacts in the United States" released in 2009, documents how the USGCRP divided the US into nine regions similar to FEMA regions. Also tucked into the report was the statement "A central finding of the report was that the vast majority of climate scientists agree that global warming is unequivocal and primarily human induced" – Source: Our Changing Planet.

The document goes on to mention the devastating effects of climate change, including the effect on crops, human health and livestock.

But the most startling fact in the document is the actual budget itself, a mere 2.7 billion for 2011 alone (not

including many costs) 24% higher than 2010's budget.

The Global Change Research ACT of 1990, SEC. 102, Committee on Earth and Environmental Sciences states;

QUOTE

a) ESTABLISHMENT.–The President, through the Council, shall establish a Committee on Earth and Environmental Sciences. The Committee shall carry out Council functions under section 401 of the National Science and Technology Policy, Organization, and Priorities Act of 1976 (42 U.S.C. 6651) relating to global change research, for the purpose of increasing the overall effectiveness and productivity of Federal global change research efforts.

(B) MEMBERSHIP.–The Committee shall consist of at least one representative from–

1. the National Science Foundation;

2. the National Aeronautics and Space Administration;

3. the National Oceanic and Atmospheric Administration of the Department of Commerce;

4. the Environmental Protection Agency;

5. the Department of Energy;

6. the Department of State;

7. the Department of Defense;

8. the Department of the Interior;

9. the Department of Agriculture;

10. the Department of Transportation;

11. the Office of Management and Budget;

12. the Office of Science and Technology Policy;

13. the Council on Environmental Quality;

14. the National Institute of Environmental Health Sciences of the National Institutes of Health; and

15. such other agencies and departments of the United States as the President or the Chairman of the Council considers appropriate.

Such representatives shall be high ranking officials of their agency or department, wherever possible the head of the portion of that agency or department that is most relevant to the purpose of the title described in section 101(B).

© CHAIRPERSON.–The Chairman of the Council, in consultation with the Committee, biennially shall select one of the Committee members to serve as Chairperson. The Chairperson shall be knowledgeable and experienced with regard to the administration of scientific research programs, and shall be a representative of an agency that contributes substantially, in terms of scientific research capability and budget, to the Program.

(d) SUPPORT PERSONNEL.–An Executive Secretary shall be appointed by the Chairperson of the

Committee, with the approval of the Committee. The Executive Secretary shall be a permanent employee of one of the agencies or departments represented on the Committee, and shall remain in the employ of such agency or department. The Chairman of the Council shall have the authority to make personnel decisions regarding any employees detailed to the Council for purposes of working on business of the Committee pursuant to section 401 of the National Science and Technology Policy, Organization, and Priorities Act of 1976 (42 U.S.C. 6651).

(e) FUNCTIONS RELATIVE TO GLOBAL CHANGE.–The Council, through the Committee, shall be responsible for planning and coordinating the Program. In carrying out this responsibility, the Committee shall–

1. serve as the forum for developing the Plan and for overseeing its implementation;

2. improve cooperation among Federal agencies and departments with respect to global change research activities;

3. provide budgetary advice as specified in section 105;

4. work with academic, State, industry, and other groups conducting global change research, to

provide for periodic public and peer review of the Program;

5. cooperate with the Secretary of State in– (A) providing representation at international meetings and conferences on global change research in which the United States participates; and

(B) coordinating the Federal activities of the United States with programs of other nations and with international global change research activities such as the International Geosphere-Biosphere Program;

6. consult with actual and potential users of the results of the Program to ensure that such results are useful in developing national and international policy responses to global change; and

7. report at least annually to the President and the Congress, through the Chairman of the Council, on Federal global change research priorities, policies, and programs."

The following is a list of the members included in the Subcommittee on Global Change Research;

SUBCOMMITTEE ON GLOBAL CHANGE RESEARCH

Made up of the following members:

QUOTE

Thomas Karl -Department of Commerce Chair

Thomas Armstrong - Department of the Interior Vice Chair, Adaptation Research

Mike Freilich - National Aeronautics and Space Administration Vice Chair, Integrated Observations

Timothy Killeen - National Science Foundation Vice Chair, Strategic Planning

William Breed -U.S. Agency for International Development

John Balbus - Department of Health and Human Services

William Hohenstein - Department of Agriculture

Jack Kaye - National Aeronautics and Space Administration

Chester Koblinsky - Department of Commerce

Linda Lawson - Department of Transportation

Leonard Hirsch - Smithsonian Institution

Anna Palmisano - Department of Energy

A description of the subcommittee on (p.2) Our Changing Planet Reads;

QUOTE

"The USGCRP is directed by the Subcommittee for Global Change Research (SGCR), which falls under the National Science and Technology Council. The SGCR comprises representatives from 13 departments and agencies and is led by a Chair from one of the participating agencies (currently from the Department of Commerce, National Oceanic and Atmospheric Administration [NOAA]). In order to align the program's governance with the needs, Vice- Chairs have been identified for Strategic Planning, Integrated Observations, and Adaptation Research. Additional vice-chairs will be identified as needed. The program is supported by the USGCRP Integration and Coordination Office and conducts many of its activities through interagency working groups that plan and implement research and crosscutting activities, such as communications, decision support, and information and data concerns. The Office of Science and Technology Policy (OSTP) and Office of Management and Budget (OMB) work closely with the SGCR, the Integration and Coordination Office, and the interagency working groups to establish research priorities and funding plans to ensure that the program is aligned with national priorities, reflects agency planning, and meets the requirements of the GCRA. "

The Subcommittee in question has now supplied the President with a supplement to the fiscal budget for 2011, which was presented to members of congress in January of 2011 on behalf of the National Science and Technology Policy – Assistant to the President for Science and Technology, John P. Holdren.

The (USGCRP) brings together a total of 13 different agencies and merges them into one single agency program that has been in the works science 1988 or prior.

In 1990 the USGCRP received generous congressional support under (GCRA P.L. 101-606). It is no mystery that aerosol spraying operations have been ongoing since the early 1990's. Prior to 1990 one could enjoy a true clear blue sky, a figment of the past in 2011 – where none are to be found.

Airship Proposed for Chemtrail Spraying

So just how deep does the geoengineering/terraforming rabbit hole go? The Intel Hub was able to obtain a copy of the final report prepared by the University of Calgary under contract by Aurora Flight Sciences titled "Geoengineering cost analysis."

In the report there is smoking gun evidence of the entire geoengineering saga from the secret bases, to the payload, to what type of aircraft or "airship" will be the most cost effective to spread toxic particulates throughout the earths atmosphere.

The final report also included budgets for different applications for aerosol dispersal within the atmosphere.

> **QUOTE**
>
> "Existing aircraft are evaluated based on cost of acquisition and operations. An in-depth new aircraft design study and cost analysis was conducted to determine the cost of developing and operating a dedicated geoengineering airplane type. Similarly, an airship design study and cost analysis was conducted. Finally a survey of non-aircraft systems was conducted to determine how their costs compare to aircraft and airships.
>
> Yearly costs of 1M tonne geoengineering operations for all the systems examined are presented in Figure 2. Some systems are easily written off due to extremely high costs. Rocket based systems are not cost competitive due to the large number of launches required and the impact of occasional rocket failures on required fleet size. A system based on 16Σ" naval Mark 7 guns was analyzed and compared to previous work by the National Research Council.4 This system requires large numbers of shots increasing projectile costs and driving yearly costs over $100B. Gun costs become more competitive if the projectile payload fraction can be increased from about 10% for a standard shell to 50%. With this and a few improvements over the 1940-era Mark 7 gun yearly costs are still in the $20B range….The primary vehicles examined to lift particulate to stratospheric altitudes and disperse them at a predetermined release rate are airplanes and airships; rockets and other non- aircraft methods such as guns and suspended pipes are also surveyed." –Aurora Flight Sciences: Geoengineering Final Report (p.5)

> **QUOTE**

"Geoengineering may provide a means to create a time buffer against catastrophic cli- mate change while long-term emissions reduction actions take effect. One approach is to disperse sulfur compounds at high altitude to reduce the effective solar flux entering the atmosphere. This report will evaluate the means of delivering sufficient mass of this or similar material to affect climate change on a global scale. The goal of this study is to use engineering design and cost analysis to determine the feasibility and cost of a delivering material to the stratosphere for solar radiation management (SRM). This study does notexamine effectiveness or risks of injecting material into the stratosphere for SRM. Its goal is simply to compare a range of delivery systems on a single cost basis." – Aurora Flight Sciences: Geoengineering Final Report (p.6)

Table 2: Comparable commercial airline operations costs. Costs are normalized based on yearly tonne-kilometers flown per year.

	CargoLux	Alaska Airlines	Southwest	Mesa Air	JetBlue
Load Carried (mt)	0.70	1.90	9.75	1.81	2.48
Avg Segment (km)	10895	1575	1023	621	1820
Millions of ton-km per year	7659.0	2991.6	9977.3	1122.3	4508.1
Scaling Ratio:	1.00	0.11	0.03	0.30	0.07
	Cost / Day	**Cost / Day**	**Cost / Day**	**Cost / Day**	**Cost / Day**
Cost Fuel,oil	$ 2,559,000	$ 356,000	$ 233,000	$ 423,000	$ 275,000
Cost crew	$ 391,000	$ 151,000	$ 197,000	$ 198,000	$ 94,000
Cost maint,parts	$ 279,000	$ 46,000	$ 57,000	$ 214,000	$ 26,000
Total Yearly Cost:	**$ 1,178,485,000**	**$ 201,854,000**	**$ 177,349,000**	**$ 304,935,000**	**$ 143,961,000**

**** Geoengineering millions of tonne-km per year: 335***

Operational Costs – Not Including Payload

The report mentions how payload costs are not included in the estimate nor are the base/facility costs and continues on (p.8) to say;

QUOTE

"This study focuses on airplane and airship operations to the stratosphere to release a geoengineering payload with the goal of reducing incoming solar flux. Airships are also considered for this mission. To provide a comparison to conventional aircraft operations, more exotic concepts such as rockets, guns, and suspended pipes are also examined….For maximum cooling impact, the particulate payloads are best placed near the equator. This study assumes that the payload is released within latitudes 30°N and 30°S, though North-South basing location had minimal effect on cost. Transit operations, flying East- West between equally spaced bases around the equator, were examined as a method to ensure adequate dispersal of the payload around the equator. Global winds aid in East-West dispersal so a smaller number of bases and shorter range systems (referred to as Regional operations) can be employed with minimal impact on dispersal. Region- al operations allow the dispersal leg length to be dictated by the desired release rate of 0.03kg/m flown. This means the airplanes fly no further than they have to, on the order of 300-800 km, and fuel costs are minimized." – Aurora Flight Sciences: Geoengineering Final report Yearly cost estimates from different dispersal methods ranged from over 1 billion dollars a year all the way up to rocket dispersed aerosol in the upper atmosphere at the cost of over 100 billion dollars per year.

Figure 42 shows 11 potential basing locations. A survey of satellite photos for the various locations allowed verification that these sites have ample space for any required infrastructure improvement to accommodate a large geoengineering fleet.

Henry Kissinger's 1974 Plan for Food Control Genocide

Food Sovereignty

Today Americans would be outraged if U.N. troops entered Los Angeles to restore order; tomorrow they will be grateful! This is especially true if they were told there was an outside threat from beyond whether real or promulgated, that threatened our very existence. It is then that all peoples of the world will pledge with world leaders to deliver them from this evil. The one thing every man fears is the unknown. When presented with this scenario, individual rights will be willingly relinquished for the guarantee of their well being granted to them by their world government." – Henry Kissinger in an address to the Bilderbergers at Evian, France, May 21, 1992.

UPDATE – March 31st, 2011

• Aluminum resistant gene patent # 7582809

• Patent granted on September 1, 2009

• Patent developed at the Robert W. Holley Center for Agricultural Health at Cornell University in Ithaca, NY.

• Leon Kochian and Jurandir Vieira de Magallhaes are the primary inventors/ researchers

• Patent assigned to US Department of Agriculture and Brazilian Enterprise for Agricultural Research

• According to Cornell University Chronicle Online, the research project was supported in part by the McKnight Foundation Collaborative Crop Research Program, the Generation Challenge Program, the National Science Foundation and the USDA.

The Bill and Melinda Gates Foundation is a contributor to both the McKnight Foundation and the Generation Challenge Program.

View Full Version: Dementia is an emerging epidemic

Title: Dementia is an emerging epidemic

TheUnhivedMind - May 19, 2011 12:18 AM (GMT)

This is coming by both air, food and water and it stems from damage to the Kidneys and Spleen. The aerosol programs damage the Spleen and quickly damage the Kidneys which leads to Brain problems. The Spleen goes out leading to an influx of filth in the body and of course this dysfunction of both Kidney/Spleen takes out the Liver and well you've had it by now. Then on top of this you have the vegetable oils and soy just ruining health whilst the brain sees virtually no DHA Omega 3 fatty acids etc. Then the sheep will top all their troubles off with monosodium glucamate and aspartame and well theres no hope.

QUOTE

Dementia is an emerging epidemic

May 18, 2011 - 1:04PM
http://news.smh.com.au/breaking-news-natio...0518-1eseh.html

Almost a million Australians will have dementia by 2050 unless there are significant medical breakthroughs, a conference in Brisbane has been told.

Dementia, along with diabetes, is an emerging epidemic in Australia, the federal Minister for Mental Health and Ageing, Mark Butler, told the 14th annual conference of Alzheimer's Australia.

About 270,000 Australians currently live with dementia and another 1500 are diagnosed weekly.
Advertisement: Story continues below

However most Australians' understanding of the condition doesn't extend much beyond Ruth Cracknell's comedy role in the ABC's Mother and Son, Mr Butler said.

"We need to reinforce that dementia is an incredibly serious health condition," Mr Butler said.

The conference was given added tension after Alzheimer's Australia president Ita Buttrose criticised the federal government for ignoring dementia.

Ms Buttrose said the recent federal health and aged-care reforms unveiled in the budget did not address any of Alzheimer's Australia's main concerns.

"Alzheimer's Australia put forward proposals for a comprehensive plan which have not been considered or taken up by the government in any of the review processes over the past two years," Ms Buttrose said.

Mr Butler admitted the problem and said he is concerned at the lack of funding for dementia compared with spending on cancer, cardiovascular disease, diabetes and other conditions.

Last week he had announced a strategic review of medical research and he hoped that would lead to a re-ordering of funding priorities.

He said the newly-established Preventative Health Agency should have the response to dementia central to its work.

Aged care reform is central to the government's agenda, Mr Butler said.

"Aged care nowadays is largely about dementia care," he said.

"An aged care reform response that doesn't have at its heart a dementia response will not be an aged care response at all," the minister said to loud applause.

Earlier, Governor-General Quentin Bryce had described dementia as "a creeping thing" without a starting point.

Ms Bryce said there is a need to break down the stigma of Alzheimer's.

"We must talk about difference and disability with openness, honesty, integrity," she said.

Ms Bryce particularly recommended Alzheimer's Australia's dementia risk reduction program Mind your Mind.

TheUnhivedMind - January 12, 2011 11:44 PM (GMT)

Govt defends $10m grant for untested rain-making technology

The World Today - Wednesday, 24 October , 2007 12:36:00
Reporter: Tanya Nolan
http://www.abc.net.au/worldtoday/content/2007/s2069159.htm

ELEANOR HALL: The Federal Government is defending its decision to award $10-million to a company to trial rain-making technology.

The Environment Minister Malcolm Turnbull has announced the grant to the Australian Rain Corporation, a company part-owned by Rupert Murdoch's nephew, Matt Handbury.

But researchers commissioned by the National Water Commission to investigate the technology have questioned whether the $10-million grant should have been awarded now, saying a more careful evaluation of the science is needed first.

Mr Handbury himself agrees the science is in no way conclusive, but denies his family connections have helped him secure the federal money.

Tanya Nolan has our report.

TANYA NOLAN: It's a technique developed in Russia in the last decade, and it involves sending electrical charges into the atmosphere to make clouds and ultimately rain.

But the problem with it, says Neville Fletcher, a visiting fellow at ANU and emeritus professor of physics at the University of New England, is that it hasn't ever been examined in a thorough scientific way, nor has it been peer reviewed.

NEVILLE FLETCHER: I haven't seen yet enough evidence to say that I'm persuaded that it's going to work. The measurements in Queensland showed that there was more rain in

the catchment area than there usually was when the equipment was running. But there was a lot more rain in that part of Queensland at that time as well. So it's a little bit hard to say. It didn't show that the equipment worked, but there was nothing to indicate that it didn't work. So it was a possible.

TANYA NOLAN: Professor Fletcher's conclusions are contained in a report released in August, prepared in conjunction with Ken McCracken from the CSIRO and commissioned by the Government's National Water Commission.

The report warned the commission not to go ahead with any trials of the technology until the science behind it could be more thoroughly tested. But it did say that if it could be done "at no great expense" a trial could be "worthwhile".

The report was produced after a small-scale trial of the technology was conducted in May in conjunction with the University of Queensland, which concluded there was an increase in rainfall at the time and recommended more scientific testing be done.

Environment Minister Malcolm Turnbull has now awarded $10-million to the Australian Rain Corporation, which owns the technology, to conduct a full scientific trial of it.

MALCOLM TURNBULL: The report commissioned by the National Water Commission recommended a further scientific trial. The University of Queensland went a lot further than that and recommended a very substantial long-term operational trial as well, which would have cost a great deal more than $10-million.

What I've endeavoured to do is to ensure that we do, we have both a meaningful operational trial and a scientific assessment so that we can investigate this technology in a timely fashion.

TANYA NOLAN: Professor Fletcher says the money would be better spent in stages, rather than funding all the stages simultaneously as the Government is doing.

NEVILLE FLETCHER: My preference would have been first to spend a smaller amount of money doing a careful evaluation of the science, and then, if that looked reasonable, to go onto a field trial. The trouble with jumping in immediately with a field trial in parallel with the science is that the science may turn up things which indicate the field trial ought to be done in a different way.

TANYA NOLAN: Professor Fletcher's view is supported by the water commissioner, Peter Cullen, who is quoted in the News Limited press as saying he is surprised the full $10-million has been awarded before the first step is taken of seriously evaluating the technology.

Chairman of Australian Rain Corporation Matt Handbury says he appreciates that argument, and agrees there are some holes in the science.

MATT HANDBURY: I can understand that logic, but as I said, even when you've worked out

the science, how it works, we still wouldn't have demonstrated that it works, and the need for water supplies is so critical in Australia.

TANYA NOLAN: You're name has come up in connection with your uncle, Rupert Murdoch, as possibly a reason why you might be getting all this money at once without the rigorous scientific testing?

MATT HANDBURY: Oh, I haven't heard that Tanya. I think I don't seem to be able to get my name in the paper without my family connections, which I'm proud of and delighted in, but I don't see how… Rupert's aware of this, he's pretty interested in the environment and climate change at the moment, and very interested, but he has no direct involvement, and…

TANYA NOLAN: You don't think your family connection may have precipitated this $10-million windfall for your technology?

MATT HANDBURY: Not in the slightest. I think that… not in the slightest, I can't see the connection.

ELEANOR HALL: The chairman of the Australian Rain Corporation, also the nephew of Rupert Murdoch, Matt Handbury, speaking to Tanya Nolan.

Phazon - April 23, 2011 01:49 AM (GMT)

Last night my family and I witnessed a large cloud that appeared to be making huge flashes like lightening, except the problem is it was totally silent, there was absolutely no thunder and the cloud was lighting up as if electricity was being pumped into it. I tried to get footage of it, but it didn't come out very well because it was too dark for the camera and you can't see anything, except when they make the cloud flash. You really had to be there to see it, we were all totally confidant that this was an artificial cloud. It was really surreal.

QUOTE

It was "member for Goldman Sachs" Merchant Banker & Roman Catholic convert Malcolm Turnbull who granted $10 million to Murdoch's nephew Matt Handbury to trial this technology that was used to murder my fellow Australians.

That operation was done from the University of Queensland.

They're also using this technology to heat up the ionosphere and then Turnbull is trying to tell us that we must pay a "carbon tax", due to "global warming" when he's the one responsible for any warming.

TheUnhivedMind - May 17, 2011 05:58 PM (GMT)

Toxic Levels Of Barium And Aluminum Found In Several Mohave County Arizona Residents

By Alex Thomas
May 16th, 2011
http://theintelhub.com/2011/05/17/toxic-le...zona-residents/

Mohave County citizens, angered by outright toxic chemtrail operations, have had their blood tested for barium and aluminum with startling results.

The existence of a large scale Geoengineering operation over the skies of America, and the world for that matter, has, at this point, been heavily documented.

In the last year alone the Chemtrail issue has been taken to a whole new level with millions of people demanding that governments around the world STOP spraying.

Mike Murphy has released the documentary, “What In The World Are They Spraying” which has brought the truth to millions of otherwise clueless citizens.

In late February, The Intel Hub released an article covering the connection between the supposed need to combat man made global warming and the large scale manipulation of our planet through aerosol spraying.

Now, citizens in Mohave County Arizona have had their blood tested for barium and aluminum and what they found should be an awakening for all the people of the world.

“Just three months after Golden Valley resident Gianluca Zanna encouraged others to get blood tests, more than a dozen people have tested positive for toxic levels of barium and aluminum,” wrote Bridget Lewison.

Join The Intel Hub News Alerts Mailing List(Ad)

Gianluca Zanna, of MohaveCountyConstitution.com who himself tested positive for high levels of barium, put together the tests which were taken by 17 different people.

A total of 13 people have tested at high levels with most testing at least 1,000 percent over the normal level.

Normal levels are between 2 and 10 mcg/L for barium according to Labcorp and Quest Labs.
1 Alan Golden Valley Barium 150
2 Bridget L. Golden Valley Barium 190
3 Luca Zanna Golden Valley Barium 130
4 Patty Kingman Barium 160
5 Patty's sister in Texas Barium 140
6 Nancy Golden Valley Barium 250!!!!
7 Mike B. Kingman No Barium but Aluminum 21 (max is 7)
8 Kenny Golden Valley Barium 190
9 Janna Golden Valley Barium 150
10 Bridget C. Phoenix Barium 140
11 Mike C. Phoenix Barium 130 Aluminum 11 (max is 7)
12 Bridget L. Bullhead City No Barium but Uranium Extremely elevated
13 Ilenia Golden Valley Barium 70
14 Chuck Golden Valley no Barium but elevated Aluminum levels
15 Connie Golden Valley No barium
16 Maggie Kingman No Barium
17 Jim Golden Valley No barium

"None of them works in an at-risk industrial environment, and most spend their time indoors," said Zanna, who, along with his wife and another area resident, tested positive for toxic levels of barium earlier this year.

Three of the people tested also tested positive for toxic levels of aluminum. As Monsanto prepares its aluminum resistant seeds,(patent # 7582809) the people of the world, who aren't genetically engineered to handle aluminum, continue to get sick.

Zanna has sent the tests to local Arizona officials and is awaiting their response.

These tests directly coincide with the hundreds of rain water tests that have already been documented and put together by GeoEngineeringWatch.org which also show high levels of barium.

The people of the America and the world must demand our governments stop this toxic spraying operation before it has an irreversible long term effect.

Chemtrails are Now a deadly Fact (Opinion)

Posted by Brian Andrews
Friday, March 11th, 2011
http://aircrap.org/chemtrails-deadly-fact/331077/

(By Christopher Gussa) Many people are absolutely convinced that the job description of the government as it stands today is to simply round us up and dumb us down. One of the best examples of government abuse that would fit this statement (Other than the FDA) is chemtrails. We've all seen them; if not, just look up to the sky. This attack on the very air we breathe is most likely the largest attack on mankind that was ever devised and it is being purposely ignored by the media. Ron Paul knows about all of this, just ask him.

These chemtrails are all under the watch of ARM which stands for Atmospheric Radiation Measurement. This is the branch of government responsible for measuring the aerosol particle scattering campaigns we call chemtrails. Their site can be found here: (http://acrf-campaign.arm.gov/isdac/) The reason this dot-gov site exists is simply to appease the public due to the Freedom of Information Act. Remember ARM makes it hard to see the fact they are measuring dangerous chemicals scattered into the atmosphere, but you will see that they do admit it if you probe deeply into their site. (They also admit they monitor who views their site).

These chemtrails are always full of barium and aluminum as well as sulfur dioxide, and they often contain newly invented viral strains. However, most any flu or viral outbreaks from these chemtrails can be eradicated with a formula similar to the one found here: (http://www.naturalnews.com/023322_herbs_cure_anti-viral.html)

Put in a Google search on chemtrails. Granted, many of the small private websites are somewhat ignorant in their ideas and conclusions, but these are common people with

some very legitimate questions like: “What are they doing to us and who are they”?

A good video can be seen here:

[dohtml]<object width="640" height="390"><param name="movie" value="http://www.youtube.com/v/3P0OaWjv--U&rel=0&hl=en_US&feature=player_embedded&version=3"></param><param name="allowFullScreen" value="true"></param><param name="allowScriptAccess" value="always"></param><embed src="http://www.youtube.com/v/3P0OaWjv--U&rel=0&hl=en_US&feature=player_embedded&version=3" type="application/x-shockwave-flash" allowfullscreen="true" allowScriptAccess="always" width="640" height="390"></embed></object>[/dohtml]

It is not just the media showing irresponsibility. It is almost everyone looking up to the skies saying: “They are spraying that stuff again. Oh well, nothing I can do about it. If there was anything wrong or dangerous going on they would report it on TV. I am sure they know what they are doing. I don’t want to sound like one of those conspiracy guys”.

The truth is, we should all be screaming at the top of our lungs and asking every local TV news station to report this on a daily basis until we force the big media to get their heads out of the sand. This is the most American thing you can do.

You can email ARM with a few questions; however, they will always say, “We only measure the natural particles found in the atmosphere.” The next step is to send them a photo of chemtrails (similar to the one seen here) with a message saying: “OK, Then please tell me which branch of the government is doing this.” They will then stop communications with you. Yet, on their own website they talk about the many campaigns (past and future scheduled) of scattering aerosols into the atmosphere.

When you call ARM and ask them who is responsible for the visible trails in the sky they tell you they are merely contrails. When you ask them to please look at the picture of chemtrails, they tell you they are terminating the conversation and simply hang up on you. (Author’s own experience)

ARM’s phone number is 1-888-ARM-DATA. Please call them! Remember, they are “your” government; you are paying their bill! Tell them exactly what you think!

HAARP and Earthquakes (Excellent Video)

Posted by Brian Andrews
Sunday, March 20th, 2011

[dohtml]<object width="640" height="390"><param name="movie" value="http://www.youtube.com/v/OcHPAR_5TEc&rel=0&hl=en_US&feature=player_embedded&version=3"></param><param name="allowFullScreen" value="true"></param><param name="allowScriptAccess" value="always"></param><embed src="http://www.youtube.com/v/OcHPAR_5TEc&rel=0&hl=en_US&feature=player_embedded&version=3" type="application/x-shockwave-flash" allowfullscreen="true" allowScriptAccess="always" width="640" height="390"></embed></object>[/dohtml]

The United States has three ionospheric heating facilities: the HAARP, the HIPAS, near Fairbanks, Alaska, and (currently offline for modifications) one at the Arecibo Observatory in Puerto Rico. The European Incoherent Scatter Scientific Association (EISCAT) operates an ionospheric heating facility, capable of transmitting over 1 GW (1,000,000,000 watts) effective radiated power (ERP), near Tromsø in Norway. Russia has the Sura ionospheric heating facility, in Vasilsursk near Nizhniy Novgorod, capable of transmitting 190 MW ERP.

Another site, operated by military sub-contractor under unknown arrangement between the US and Canadian government, is located near Cape Race, Newfoundland, Canada, at N46° 38.649′ W53° 9.010′ There is minimal or no grid power available at this site, so this may be a passive listening post for the transmissions emitted by other HAARP sites.

In August 2002, further support for those critical of HAARP technology came from the State Duma (parliament) of Russia. The Duma published a critical report on the HAARP written by the international affairs and defense committees, signed by 90 deputies and presented to then President Vladimir Putin. The report claimed that “the U.S. is creating

new integral geophysical weapons that may influence the near-Earth medium with high-frequency radio waves … The significance of this qualitative leap could be compared to the transition from cold steel to firearms, or from conventional weapons to nuclear weapons. This new type of weapons differs from previous types in that the near-Earth medium becomes at once an object of direct influence and its component." However, given the timing of the Russian intervention, it is possible that it was related to a controversy at the time concerning the US withdrawal in June 2002 from the Russian-American Anti-Ballistic Missile Treaty. This high level concern is paralleled in the April 1997 statement by the U.S. Secretary of Defense over the power of such electromagnetic weaponry. Russia owns and operates an ionospheric heater system as powerful as the HAARP, called 'Sura,' which is located roughly 150 km from the city of Nizhny Novgorod.

The objectives of the HAARP project became the subject of controversy in the mid-1990s, following claims that the antennas could be used as a weapon. A small group of American physicists aired complaints in scientific journals such as Physics and Society, charging that the HAARP could be seeking ways to destroy or disable enemy spacecraft or disrupt communications over large portions of the planet. The physicist critics of the HAARP have had little complaint about the project's current stage, but have expressed fears that it could in the future be expanded into an experimental weapon, especially given that its funding comes from the Office of Naval Research and the Air Force Research Laboratory.

These concerns were amplified by Bernard Eastlund, a physicist who developed some of the concepts behind the HAARP in the 1980s and proposed using high-frequency radio waves to beam large amounts of power into the ionosphere, energizing its electrons and ions in order to disable incoming missiles and knock out enemy satellite communications. The US military became interested in the idea as an alternative to the laser-based Strategic Defense Initiative. However, Eastlund's ideas were eventually dropped as SDI itself mutated into the more limited National Missile Defense of today. The contractors selected to build HAARP have denied that any of Eastlund's patents were used in the development of the project.

After the physicists raised early concerns, the controversy was stoked by local activism. In September 1995, a book entitled Angels Don't Play This HAARP: Advances in Tesla Technology by the former teacher Nick Begich, Jr., son of the late Congressman Nick Begich (D-AK) and brother of U.S. Senator Mark Begich (D-AK), claimed that the project in its present stage could be used for "geophysical warfare."

Source: HAPPYxGEORGE. This video, filmed earlier today, of chemtrails over Great Yarmouth in the UK provides additional evidence of a worldwide geoengeering effort. Also, the following evidence is provided in the notes for the video:

UK government document:
http://www.publications.parliament.uk/pa/c...ech/221/221.pdf

This is a must read…… Its bigger than I first estimated:
http://www.climateresponsefund.org/images/...finalreport.pdf

Facebook pages:

http://www.facebook.com/home.php?sk=group_...4129467335&ap=1

The world governments are Liability free read below…
Responsibility, or even liability, for unintended or damaging outcomes will need to be a critical element of government consideration. Even with research that proceeds incrementally and prudently, and with a serious commitment to risk assessment, monitoring, and regulatory control, large-scale experiments will unavoidably entail some risks.

Attributing particular harms to specific research activities, however, is likely to prove difficult, just as it has required special efforts to attribute specific harms to climate change within the variability of normal weather and climate. Liability and compensation processes based on 'no-fault' principles over some range of potential impacts defined in advance of particular experiments may be needed as part of the approval process. Without such a system, it may well be that public perceptions of potential risk may become an obstacle to continued climate engineering research.

Such complexities will require that public outreach and development of the governance framework Chemtrails are a world phenomena. The chemtrail conspiracy theory holds that some trails left by aircraft are actually chemical or biological agents deliberately sprayed at high altitudes for a purpose undisclosed to the general public in clandestine programs directed by government officials.

As a result, official agencies have received thousands of complaints from people who have demanded an explanation. The existence of chemtrails has been repeatedly denied by government agencies and scientists around the world, who say the trails are normal contrails.

The United States Air Force maintains that the theory is a hoax which "has been investigated and refuted by many. he term chemtrail is derived from "chemical trail" in the similar fashion that contrail is an abbreviation for condensation trail. It does not refer to common forms of aerial spraying such as crop dusting, cloud seeding, skywriting, or aerial firefighting.[7] The term specifically refers to aerial trails allegedly caused by the systematic high-altitude release of chemical substances not found in ordinary contrails, resulting in the appearance of uncharacteristic sky tracks.

Supporters of this theory speculate that the purpose of the chemical release may be for solar radiation management, population control,[1] weather control,[2] or biological warfare/chemical warfare and claim that these trails are causing respiratory illnesses and other health problems.

Check us out on facebook We just want to know the truth behind this smoke screen http://www.facebook.com/home.php?sk=group_...7414572778&ap=1 This video is all my own work thanks to everyone that took the time to watch. Title: The Biggest Crime Of All Time

TheUnhivedMind - May 14, 2011 10:37 PM (GMT)

The Biggest Crime Of All Time

Posted by Brian Andrews
Wednesday, March 2nd, 2011
By: Clifford E Carnicom.
http://aircrap.org/the-biggest-crime-of-all-time/331026/

Note: I am not offering any medical advice or diagnosis with the presentation of this information. I am acting solely as an independent researcher providing the results of extended observation and analysis of unusual biological conditions that are evident. Each individual must work with their own health professional to establish any appropriate course of action and any health related comments in this paper are solely for informational purposes and they are from my own perspective.

It can now be shown with conviction that environmental filament samples and the filaments that are characteristic of the “Morgellons” condition are of one and the same nature. This has been demonstrated visually at the microscopic level on two prior occasions (please see An Environmental Source and The Breath of a Decade) but there has been a reluctance on the part of the general public to engage in the truths of this issue.

The case that they are of one and the same nature can and is also now being made analytically through the use of spectral analysis. This paper will progress through a series of spectral analyses that have been made, both on the control side as well as on the investigative side. The end conclusion that is reached from the work is that at least one source of the so-called “Morgellons” condition has been identified. The fact that this traces itself to a repeatedly occurring environmental sample represents, in my opinion, the worst crime in human history. There have been repeated attempts to have the full nature of these environmental samples disclosed for more than a decade but they have failed.

The primary party that is responsible for the failure of the identification and disclosure is the United States Environmental Protection Agency. The United States Centers For Disease Control and Prevention is culpable for health neglect and the United States Air Force and the United States Congress share in the complicity of dismissal. I claim the right to speak honestly as I see appropriate.

The general public will at one point or another confront and reconcile with this reality, no matter how difficult the prospect will be. Progress in addressing the seriousness of the problem is not going to take place until this recognition by the public does take place. However unfortunate the task, this researcher will continue to put forth the evidence that forces this confrontation to the point of understanding.

Let us now proceed with the work that is to be described.

Through the course of the last year, a Beckman dual-beam spectrophotometer has been acquired under the auspices of the Carnicom Institute. It has been put to introductory use through the course of last year and familiarity with the capabilities and the principles of the instrument has been acquired. There remains a need for much additional equipment, a facility and a more contemporary version of the current spectrophotometer but some progress, nevertheless, has taken

place. The current project involves the calibration of the spectrometer through a series of controlled studies and then the application of the instrument to unique and unidentified biological entities.

The Beckman model that has been acquired is rather elderly and it is based upon tube technology. All tubes have been replaced and control studies have been completed to give a reference point on the serviceability and the reliability of the instrument. These tests have been passed with sufficient confidence and the results of these tests will be presented first in this discussion.

The first problem is to acquire known spectral analyses and to see if the results can be duplicated with the equipment at hand. Spectral analysis is its own profession deserving of sufficient staff and resources, but the principles of operation and result are not so difficult that they cannot be understood by the majority of us. Levels of refinement in the process can continue as the understanding of the need for further support avails itself to the cause.

The first example chosen will be a spectral analysis of human blood, or hemoglobin as the case may be. This was one of the early studies in the application of the instrument and a level of confidence in those early results was achieved some time ago. Let us look at such a chart:

http://omlc.ogi.edu/spectra/hemoglobin/

A spectral analysis is essentially a fingerprint, or a unique signature, of a chemical substance or species within a particular range of frequencies. There are many ranges of energy that can be used if the required instrument and detectors are available; our particular interest here is in the range of visible light. The particular spectrum shown here from the reference designated above shows the absorbance of energy of hemoglobin (two variants, one combined with oxygen) as it is subjected to visible light energy; there is also some extension on each end into the ultraviolet and infrared portions of the spectrum. Visible light runs from approximately 400 to 700 nanometers in wavelength and it is represented along the horizontal axis of the graph. The Beckman instrument being used has a useful range of approximately 300 to 800 nanometers and that will be the band of comparison in the graphs that are presented.

Our main interest in the study at this time is the location of the peaks and troughs of the spectrum, as these locations are a key feature in establishing the unique signature of a particular species or substance. The magnitudes of the peaks and troughs (local maximums and minimums) can vary depending on concentration levels and is not our primary concern at this point; locations can also vary by the solute involved. What we are looking for is a reasonable comparison between the minimums and maximums of a known substance in solution and that same substance in solution measured directly with the Beckman spectrophotometer. Some variations are to be allowed for, however, the locations of the maximums and minimums at specific wavelengths should compare reasonably well. Recall that we shall confine our examination to between 300 and 800 nanometers. For the graph above it is reasonable to use an average of the two graphs; our sampling methods do not allow for the distinction between pure hemoglobin and that combined with oxygen. At this point, we are simply attempting to establish a reasonable control on the reliability of the instrument that is being used.

In the control chart above, we see a minimum at approximately 310 nm, a maximum at approximately 420 nm, minimums at 480-505 nm, a maximum at approximately 550 nm and finally another low in the range of 700-750 nm. This provides us with several reference points to see if these inflection points can be reasonably reproduced.

A graph of human blood in water obtained with the approximately 50 year old Beckman dual-beam spectrophotometer is shown above. This particular instrument

has no automatic recording features, and all data must be observed by visually sampling meter readings at periodic intervals and then producing them on the graph above. In this case, the sampling has been done at 20 nm increments from 300 to 800 nm. Blood is a complex substance but we expect to see at least some reasonable concurrence in the data to continue the work further. Remembering that we are to dismiss magnitudes at this point and focus on the inflection points, we find a minimum at approximately 320 nm, a maximum at approximately 420 nm, a minimum at approximately 480 nm, a maximum at approximately 525 nm and a final minimum at approximately 725 nm. This indicates that we have in some reasonable fashion captured the characteristic signature of hemoglobin and that at this point there is no reason to doubt the integrity of the instrument.

It may be fair to presume that the resolution of detection within an older instrument is not expected to be the same as that of a modern instrument, but the locations of inflections should compare reasonably well. This has been achieved with the example above. It is also noticed that the varying light colors are easily and directly visible within the sample container of the instrument and that they correspond to the expected meter readings as the wavelengths are varied; this adds to the confidence in the instrument being used. A modern recording instrument would indeed be valuable but it is simply not available. Incidentally, dual beam spectrophotometers are considerably more complex but easier to use than single beam instruments, as they eliminate many of the variations that can occur with the swapping of a reference solution with the substance dissolved in another container of that same solution.

Figure 7.11: The optimized graph shows the absorption spectrum of 0.1 mol/l to 0.5 mol/l solutions of copper sulphate. In descending order, the highest concentration 0.5 mol/l has the highest absorption of light at e.g. 700 nm. It is now clear that the absorption increases along with an increase in concentration. The curves have a higher slope around 300nm and a wider peak in the area from 600nm to 800nm.

http://www.bjarke.com/upload/P1_done.pdf

Our next example of a control test is that of a solution of copper sulphate ($CuSO_4$); the graph above will serve as our reference. In the example above, the point

is made that the concentration of the solution can directly affect the magnitude of the spectrum. The general shape of the characteristic curve remains generally consistent, however, we can see that the major peak at approximately 750 nm is not revealed until sufficient concentration exists. This is another reason that we must constrain ourselves to generalized interpretations of the spectrums at this point. More detailed instrumentation and constraints on the solutions will yield correspondingly more precise information for interpretation. Our objective here is simply to assure the reliability of the instrument being used for this report. The general features of this example are to notice a relatively sharp decrease in absorbance from the 300 to 400 nm range, a generally and relatively low and level absorbance in the range of 400 to 550 nm, a rather sharp increase in absorbance in the 600 to 800 nm range, and with sufficient concentration, a sharp local maximum at approximately 740-760 nm.

Above is the graph of solution of copper sulphate (concentration unknown) made with the Beckman dual-beam spectrophotometer. Once again, the general reliability of the instrumentation is established here. We notice a decrease in absorbance in the 300 to 360 nm range, a relatively modest to slightly increasing absorbance in the 400-600 nm range (mild increase in slope over the control sample, however), a sharp increase in absorbance over the 600-800 nm range, and a very pronounced maximum at approximately 750-760 nm. The more generalized resolution of the instrument on hand also remains apparent, but the uniqueness of the spectrum is once again established with reasonable confidence and reliability. A third control test was conducted using food dyes and the results again remain reasonable. It is at this point that we are sufficiently prepared to apply the spectral measurement instrumentation and techniques to an unknown substance. This will be discussed in the examples below.

It is at this point that we begin to gain valuable new insight into a long standing problem. Above is a spectral analysis graph of an important and unique filament structure. The filament sample above is the same airborne environmental filament sample type that was sent to the United States Environmental Protection Agency. It was requested that the agency identify the nature of this filament structure on behalf of the public welfare and health interest. The agency refused to conduct this analysis and disclosure and stated that it was not their policy to do so. This filament structure has been described in detail on this site as it has been subjected to extensive microscopic analysis; please see the many reports in this site on this matter.

It has been learned from much testing that the exterior of the filament appears to be primarily an encasing structure and that it appears to consist of a keratin-like substance that is extremely resilient and difficult to penetrate or break down. Over recent years my focus has been on the internal nature of the filament as there are complex structures and biological developments that occur within. These observations have also been reported on extensively in this site. One of the most successful methods of penetrating the filament has been with the use of sodium hydroxide and heat; several experiments of that sort have been described.

The graph above shows a spectral analysis using primarily visible light wavelengths in a solute of sodium hydroxide after heat was applied; the sampling rate is 10 nm. The most salient features of this absorbance spectrum analysis include a very sharp peak at approximately 375 nm, a sharp increase prior to this maximum and a fairly sharp and steady decline in absorbance out to the end of the spectrum at 800 nm. As such, the spectrum is not inordinately complex but by nature it is unique and distinctive. This is, to my knowledge, the first time that this spectral information has been made available to the public using this particular analytical technique.

The graph immediately above is also remarkable for what becomes an obvious reason. The graph above is an absorbance spectral analysis of a culture that has

been developed from human oral filament samples that are representative of, and characteristic of, the so-called “Morgellons” condition. The description of these cultures and the many microscopic examinations of these cultures have been presented througout this site. This particular culture material is approximately one year old and was subject to drying and pulverization and it also was also placed into a sodium hydroxide solution with heat. The relative smoothness of this graph is likely due to the homogeneity that can be achieved in the preparation of this sample state. The biology of the organism appears to allow existence indefinitely in a dormant state if the environmental conditions demand it.

It is apparent that the latter two graphs are essentially identical. As the reliability of the instrument under use has been established with reasonable confidence, the following conclusion becomes evident: This conclusion is that the nature of a repeatedly occurring environmental filament sample is identical in nature to that filament entity which is representative and characteristic of the “Morgellons” condition. This equality in nature has now been established unequivocally through three different methods: visually, metrically, and analytically. There are potential therapeutic ramifications to the strong absorbance peak at approximately 375 nm and any strategies are to be treated with caution and respect; these will need to be developed in later reports.

As such, at least one source of the Morgellons condition has been identified and it is a repeating environmental source. It is now up to us as the inhabitants and stewards of this planet to comprehend the consequences and the significance of the conclusions herein.

Sincerely,

Clifford E Carnicom

Source: kraken45. I extracted a nano sized organism from a chemtrail fiber that had been collected after heavy spraying in Nebraska. I captured its growth with my dark field scope. The living fiber is now on its way to a friend who has better lab access.

I have tested 23 out of 35 adults and 3 out of 4 children positive for these same fibers. None of those tested showed any outward signs of Morgellons. I now know these fibers respond to frequencies, electromagnetic ones. Let’s hope none of our friendly governments decide to let loose a frequency that awakes these horrors.

US Government Takes Down HAARP Website to Conceal Evidence of US Weather Modification and Earthquake Inducing Warfare

Posted by Brian Andrews
Sunday, May 1st, 2011
http://aircrap.org/us-government-takes-dow...warfare/331384/

(presscore.ca) The HAARP (High Frequency Active Auroral Research Program) website was down for over three weeks. (aircrap.org: The website is now back up – see the Update April 21, 2011 section below.) It was ordered taken down by the US government to conceal US weather modification and earthquake inducing warfare activities against foreign states. The HAARP website was publishing very damaging evidence of US military weather modification and earthquake triggering operations against foreign states. HAARP's waterfall charts and magnetometer charts gave evidence of an ongoing weather war between the United States government and foreign states. The magnetometer presented concrete evidence that HAARP triggered the Japan earthquake and ensuing tsunami.

HAARP's magnetometer can be used to predict as well as give evidence of a HAARP created earthquake. A magnetometer measures disturbances in the magnetic field in Earth's upper atmosphere. HAARP was broadcasting a 2.5 Hz frequency (the signature frequency of an earthquake) from just before midnight on March 8, 2011 and continued to broadcast the frequency for the entire days of March 9, 2011 and March 10, 2011. The 2.5 Hz frequency continued to be broadcasted and recorded by the magnetometer for another 10 hours the day of the Japan 9.0 magnitude earthquake.

Scientists at the HAARP institute discovered that a 2.5 Hz radio frequency is the signature frequency of an earthquake. Since this discovery the HAARP phased array

antennas have been used by the US military to beam the earthquake frequency into the ionosphere and the ionosphere reflects it back to Earth – penetrating as deeply as several kilometers into the ground, depending on the geological makeup and subsurface water conditions in a targeted area.. By beaming the frequency at a specific trajectory HAARP can trigger an earthquake any place on Earth. A short burst isn't enough to disturb solid matter (the Earth crust) so they keep beaming the 2.5 Hz earthquake frequency for hours or days – until the desired effect is achieved.

The Environmental Modification Convention (ENMOD) prohibits the military or other hostile use of environmental modification techniques. It opened for signature on 18 May 1977 in Geneva and entered into force on 5 October 1978. The Convention bans weather warfare, which is the use of weather modification techniques for the purposes of inducing damage or destruction.

Evidence from HAARP's own website revealed that the US government was acting in violation of the ENMOD treaty – use of weather modification techniques (HAARP) for the purposes of inducing damage or destruction. HAARP broadcasting data published on the HAARP website coincided with a number of recent major catastrophes such as the 2010 Haiti earthquake, the 2010 heatwave in Russia, the major floorings in 2010 in China and Pakistan and the major earthquakes in Haiti and Japan – all occurred since US president and commander-in-chief of the United States military Barack Hussein Obama took office.

The Japan 9.0 earthquake offered the most damaging evidence of the US government using HAARP to induce major damage and destruction against a foreign state. HAARP's magnetometer data showed the World that HAARP (jointly managed by the US Air Force and the US Navy) began broadcasting the earthquake inducing frequency of 2.5 Hz on March 8, 2011 and continued to broadcast the frequency for the entire days of March 9, 2011 and March 10, 2011. HAARP wasn't turned off until 10 hours after the Japan 9.0 magnitude earthquake that was triggered on Friday, March 11, 2011 at 05:46:23 UTC. Smaller earthquakes have continued for weeks without being registered on the HAARP magnetometer. Why? Because, as stated before a magnetometer measures disturbances in the magnetic field in Earth's upper atmosphere. It is not a seismometer which measure motions of the ground. The magnetometer doesn't measure seismic activity it measures and records electromagnetic frequencies in the Earth's atmosphere. HAARP's antenna array beams the 2.5 Hz earthquake inducing radio frequency into the atmosphere where a magnetometer can record and provide concrete evidence of a US weather modification and earthquake triggering attack against foreign states.

HAARP Patents (Assigned to APTI, Inc. Los Angeles, CA, Washington, DC)

U.S. Patent 4686605: Method And Apparatus For Altering A Region In The Earth's Atmosphere, Ionosphere, And/Or Magnetosphere Issued: Aug. 11, 1987 Filed: Jan. 10,

1985

U.S. Patent 5038664: Method For Producing A Shell Of Relativistic Particles At An Altitude Above The Earth's Surface ~ Issued: Aug. 13, 1991 Filed: Jan. 10, 1985

U.S. Patent 4712155: Method And Apparatus For Creating An Artificial Electron Cyclotron Heating Region Of Plasma ~ Issued: Dec. 8, 1987 Filed: Jan. 28, 1985

U.S. Patent 5068669: Power Beaming System ~ Issued: Nov. 26, 1991 Filed: Sep. 1, 1988

U.S. Patent 5218374: Power Beaming System With Printer Circuit Radiating Elements Having Resonating Cavities ~ Issued: June 8, 1993 Filed: Oct. 10, 1989

U.S. Patent 5293176: Folded Cross Grid Dipole Antenna Element ~ Issued: Mar. 8, 1994 Filed: Nov. 18, 1991

U.S. Patent 5202689: Lightweight Focusing Reflector For Space ~ Issued: Apr. 13, 1993 Filed: Aug. 23, 1991

U.S. Patent 5041834: Artificial Ionospheric Mirror Composed Of A Plasma Layer Which Can Be Tilted ~ Issued: Aug. 20, 1991 Filed: May. 17, 1990

U.S. Patent 4999637: Creation Of Artificial Ionization Clouds Above The Earth ~ Issued: Mar. 12, 1991 Filed: May. 14, 1987

U.S. Patent 4954709: High Resolution Directional Gamma Ray Detector ~ Issued: Sep. 4, 1990 Filed: Aug. 16, 1989

U.S. Patent 4817495: Defense System For Discriminating Between Objects In Space ~ Issued: Apr. 4, 1989 Filed: Jul. 7, 1986

U.S. Patent 4873928: Nuclear-Sized Explosions Without Radiation ~ Issued: Oct. 17, 1989 Filed: June 15, 1987

Still think that HAARP is just another wacky fictional conspiracy? The above listed patents should be enough to convince any intelligent person that HAARP is real and is now actively modifying our weather and triggering earthquakes. For those who are still not convinced, look to the United States Congress for proof. In order for HAARP to get funding the people who first created HAARP needed funding. That funding was made possible by the US government. If you were to look at Congressional records you would find documents that states just one of the many official purposes of HAARP – for penetrating the earth with signals bounced off of the ionosphere. Congress was informed by people in the High Frequency Active Auroral Research Program that the bounced signals would be used to look inside the planet to a depth of many kilometers

in order to locate underground munitions, minerals and tunnels. If you bounced the known earthquake signature signal (2.5 Hz) for a sustained period of time an earthquake could triggered many kilometers inside Earth's crust. The U.S. Senate actually set aside $15 million dollars in 1996 (Clinton and Al Gore Administration) to develop this ability alone — earth-penetrating-tomography.

Update April 21, 2011

Under pressure from the International community the HAARP website is up again. No data is available from April 7 to April 12, 2011. Data before and after shows the signature frequency of an earthquake (2.5Hz) being transmitted. Also shows energy spikes which indicates active weather modification. Now that the website is up again you can view the data for the Japan earthquake at http://137.229.36.30/cgi-bin/scmag/disp-scmag.cgi?20110311. From the magnetometer induction data you can see 2.5Hz (earthquake inducing frequency) being broadcasted and recorded for several days before the 9.0 magnitude earthquake. To see what a normal (no HAARP broadcasting) day looks like view the magnetometer charts for the days of March 15, 16 and 17 – March 16, 2011 http://137.229.36.30/cgi-bin/scmag/disp-sc...=20110316&Bx=on. No earthquake inducing broadcast was detected from March 15 to March 27, 2011. On March 28, 2011 a low powered broadcast was detected from approximately 12:00 am to 3:00 am. Broadcasting resumed on April 2, 2011. April 6, 2011 shows you what the magnetometer charts looks like when a solar storm blasts Earth. No data is available from April 7, 2011 to April 13, 2011 – a shutdown. Starting on April 15, 2011 and ending approximately 10:00 am April 16, 2011 the earthquake inducing frequency of 2.5Hz was detected being broadcasted.

Weather Modification

To detect active weather modification use the HAARP waterfall charts. Weather modification doesn't require a long sustained activation and broadcast. Look at the chart for April 20, 2011. The chart is missing data for approximately 1 hour. Since PRESS Core has been studying and writing about HAARP and how to recognize a weather modification incident HAARP data is being censored in exactly the same manner as seen by the chart for April 20, 2011. The HAARP waterfall chart for July 28, 2010 (link image shown above) shows what a HAARP weather modification broadcast looks like. The tight color band from 2:30 PM to 5:00 PM is evidence of a HAARP weather modification broadcast. That type of data is being deleted from the waterfall charts – see HAARP waterfall chart for April 20, 2011 – http://maestro.haarp.alaska.edu/data/spect...a/last36_hf.gif

Morgellons Research Group - Human Specimen

By Kandy Griffin, Morgellons Research Group
http://morgellonsresearchgroup.com/

Morgellons is not a disease. It is a process. It is a form of forced/directed evolution of the human genome. It is the fetal stage of transhumanism, and it is upon us.

This stealth project is being carried out with the use of the daily chemtrail operations, which are happening globally. There is no escape. The chemtrail operations are terraforming the earth and everything on it, including you.

Many have died. While the CDC and Kaiser Permanente drag their heels with its so-called study, humans are perishing, suffering “unbelievable” symptoms and are left alone with nowhere to turn.

Countless patients have been improperly diagnosed with “Delusions of Parasitosis.”

Just before the “explosion” of Morgellons here in the United States, the CDC sent letters out to physicians across the country stating that they were seeing an increase of patients with DOP. Coincidence? I think not. They were covering their tracks, so to speak.

Last I knew, delusions do not cause oozing skin lesions, flying insects, worms, fungus, molds, plants, colored fibers and fiber bundles, polka-dotted, multi-colored plaques or crystals of different shapes/colors. These are just a few of the symptoms associated with this mutation process, based on one's genetic pre-disposition.

Morgellons sufferers are far from delusional. They are outsourced bioresearch test subject for the Global Governments, and so are you.

Independent researchers are learning a vast amount of knowledge about this entity and are putting the pieces together. It appears to have protein involvement as well as many different organic species and possibly nanotechnology/biosensor involvement.

It is slow, invasive and progressive.

Hundreds of samples have been obtained from people who show no outward symptoms of the mutation. The same specimens have been found with people who are noticeably infected, as well as in environmental sampling.

Imagine finding a black speck sprouting a blue fiber from a strange layer of skin that has formed over one of your open skin lesions. Then imagine finding the same black speck and the same blue fiber on a grain of rice. I did. It was impossible to distinguish which came from my skin and which was from the rice.

Transhumanism through terraforming.

Kandy Griffin

Respiratory illnesses causing big problems

Area hospitals report ‘widespread’ outbreak of flu

Posted: Sunday, February 27, 2011 2:00 pm | Updated: 12:25 am, Tue Apr 5, 2011.
ByAllison Hurtado Ahwatukee Foothills News | 0 comments
http://www.eastvalleytribune.com/local/the...f3d2f2a84c.html

This time is always busy for hospitals and emergency rooms, but the severity of illnesses may be above average this year, officials say.

"We always have an increase in emergency room visits during the winter due to seasonal illness," said Kimberly Day, spokeswoman for Chandler Regional and Mercy Gilbert medical centers and CHW Urgent Care. "We are experiencing more positive flu tests so there is some component of the flu (influenza A), pneumonia and general viral illness responsible for the increased patient visits."

The state is considering the outbreak of the flu, or influenza A, as "widespread." The Department of Public Health's weekly influenza reports for Maricopa County during the week ending Feb. 12 said, "Maricopa has a total of 2,415 cases of influenza. Since the beginning of the season this is the week with the largest number of reports."

The report mentions that this season, which began in September, the flu has been considered widespread since the beginning of January.

Influenza A is only one type of respiratory illness. Hospitals are seeing a significant increase in cases of Respiratory Syncytial Virus, or RSV. Through Feb. 12, 994 lab-confirmed cases of RSV have been reported. More than 20 percent of all visits were due to a respiratory syndrome, the report said.

All of this is causing a shortage of beds in local hospitals.

"There has been a significant increase of critical patients with respiratory illness requiring ICU level of care," Day said. "Our ER volumes are up but not excessive for this time of year. The admissions to the hospital from the ER are normal, as well; it's just that the acuity of the patients is much higher."

The hospital staff is meeting throughout the day to move patients along in the admit and discharge processes to make more beds available, Day added.

Symptoms of influenza like illnesses are a fever of 100 degrees or above, cough and/or sore throat. Symptoms of RSV are much like a bad cold. They may include a cough, a stuffy or runny nose, a sore throat, an earache or a fever. RSV is especially dangerous for infants.

It is unclear where this outbreak is coming from but respiratory illnesses are very contagious. Sickness at work, the grocery store and poor hand hygiene are some contributing factors, Day said.

"Good hand washing, taking your medicine correctly, getting rest, exercising regularly, eating a balanced diet and staying hydrated with fluids," said Day about avoiding either illness. "Most healthy adults can recover fully from the flu and seasonal viral illness. The more concerning folks are the elderly and the young, along with those with debilitating medical conditions."

Morgellons Victim Jumps to Death in Germany

Posted by Brian Andrews
Saturday, April 23rd, 2011
http://aircrap.org/morgellons-victim-jumps...germany/331357/

Morgellons Victim, Monika B., jumps from a balloon from 500 feet in Egling, Germany.

Source: LymeBuster. A woman in Germany jumped to her death from a hot air balloon. Monica B. had Morgellons. She chose this spectacular method of suicide to publicize the plight of those with this illness. She left a note about having Morgellons and not receiving any help . Here is the German article from the Munich newspaper (you may be able to translate with Google translater):
http://www.tz-online.de/aktuelles/muenchen...-tz-878295.html

This has produced a storm of publicity about Morgellons in Germany. The backlash went to Marc Neumann. He had been contacted to help Monica B., but before he could get through to her she committed suicide. I just talked to him and he feels threatened. His German site was being attacked as we spoke. His site has been suddenly visited by numerous government agencies. And most notably by those companies that produce pesticides containing bioinsecticides made with fungus', nemotodes, bacteria and other living materials. The biggest of those companies is Bayer which was on his site just today.

Marc Neumann went to see a lawyer about suing the pesticide companies that are causing widespread environmental hazards. Now he is actually in fear for his life because he has spoken out about a multimillion business. If he decides to sue these companies he might be in danger. I for one would help him any way I could, including a defense fund, if needed. Or, if he could actually sue these companies, I would like to contribute to shut them down. This includes the evil Monsanto.

TheUnhivedMind - May 14, 2011 10:17 PM (GMT)

Secrets in the Sky Airs on ABC Affiliate in Albany, NY

Posted by Brian Andrews
Tuesday, May 3rd, 2011
http://aircrap.org/secrets-in-the-sky-airs...bany-ny/331400/

ABC affiliate WTEN TV in Albany aired a 3 1/2 minute news segment on chemtrails last night that was similar to the segments that aired on CBS Atlanta earlier this year. Snippets of interviews with chemtrail activists Ted Gunderson (pictured), Cynthia Pikoulas, and Bonne Hoag were aired. Then, an “expert” named Dr. Kevin Rhoads, who specializes in atmospheric chemistry, disputed their claims (after showing him peering into a microscope): “It’s a pretty far fetched idea that these aircraft could be spreading much quantity of anything other than the exhaust.”

The way many of these news segments are presented, it essentially comes down to whether the viewers believe the expert behind the microsope or the “conspiracy” theorists. Unfortunately, many unaware viewers will not realize that Dr. Rhoads’ arguments against chemtrails were ludicrous: “The word ‘Chemtrail’ has never appeared in any scientific literature anywhere… If you were to load some type of chemical agent aboard that plane, that were to be spread, the very weight of that would make the plane unflyable,” said Dr. Rhoads.

I am very thankful that Cindy and Bonnie were able to get chemtrails on the news. And, I also thank Ted for his appearance on segment and Anthony Hilder for filming Ted. But, I wish that the coverage was a little more like this news segment that aired a couple of years ago: Government Admits Secretly Spraying Poison on Us

Cindy Pikoulas is urging everyone to email their chemtrail photos, videos, and any other evidence that they have to WTEN Albany. Also, please be sure to request a more indepth investigation. Send email to: pictures@wten.com

Title: Federal plan aims to track all livestock by 2009
Description: *(THE REAL REASON FOR BIRD FLU SCAM)*

craig-oxley - September 13, 2008 04:29 PM (GMT)

The REAL reason for the Bird Flu scam amongst others which I've said all along were to help destroy independant farming and start land grabbing for pennies along with track livestock. -2tuff

Federal plan aims to track all livestock by 2009

New system intends to stop disease

Kristin Collins / The (Raleigh) News & Observer | April 10 2006
http://www.wilmingtonstar.com/apps/pbcs.dl.../204100308/1051

RALEIGH - Once in a while, Leslie Averill grabs a goat from the back yard and puts it in her Chevy Silverado for a spin. They visit her chiropractor's office, maybe stop by the outlets – just to socialize a little and see the looks on people's faces. Pretty soon, Averill might have to report every goat jaunt to the federal government.

A new national system, designed to prevent the spread of diseases such as avian flu and mad cow disease, aims to track every livestock animal in the nation – be it a cow on a feed lot, a farm-raised trout or a baby goat in Averill's back yard.

Farms will be registered, animals will be tagged with numbers, and their movements will be reported to the U.S. Department of Agriculture. The information will be stored in a national database.

It will affect an estimated 50,000 animal owners in North Carolina. Even children who raise animals for 4-H programs might have to comply.

"Even if it's Aunt Bessie's pet cow, that cow is susceptible to foot and mouth disease,"

said Mary Ann McBride, a state Department of Agriculture veterinarian implementing the system in North Carolina.

The program is voluntary for now. Agriculture officials are asking animal owners only to register their property. But the government plans to make the full program mandatory by early 2009.

The idea has many animal owners feeling besieged.

Internet chat groups for animal owners are ablaze. Grass-roots opposition groups are forming, and rumors are flying.

Horse enthusiasts worry that they will have to put ear tags on show horses, or tell the government each time they take a trail ride. One Person County farmer said a neighbor feared that he would have to tag the worms he uses for composting.

Much of the fear arises from uncertainty. Federal agriculture officials are still working out details of the program: how the animals will be tagged, what it will cost, how animal movements will be reported. They are throwing around all sorts of high-tech tracking ideas: ear tags that emit radio frequencies, microchips – even retinal scanning.

"People have jumped on the national security bandwagon without really thinking it through," said Averill, who breeds and sells goats on her 36-acre farm in Johnston County. "The small breeder is going to be forced into something that's so cost-prohibitive that they won't be able to own their animals anymore."

Federal agriculture officials created the National Animal Identification System in 2004, after the United States confirmed its first case of mad cow disease in a Holstein in Washington state. Mad cow, or bovine spongiform encephalopathy, is a brain-wasting disease whose human-variant is fatal and has forced the slaughter of millions of cows in Britain.

Officials couldn't track all the places where the Washington cow had lived, or all the other cows that came in contact with it.

The new system would let the government trace an animal's history within 48 hours. If it works, agriculture officials will be able to look up an animal's ID number and know every place it has ever lived.

Some in the meat industry say there are plenty of reasons to track animals more closely.

Bundy Plyler, director of the N.C. Cattlemen's Association, said many countries that buy U.S. beef want more detailed information about it. Being able to lay out the life history of a steak could be a major selling point. "There are consumers that say they want to know more about where their food comes from," Plyler said.

The logistics of tagging and documenting animal movements are one thing for large farms with bookkeepers and accountants. They're another for small farmers trying to make a living selling eggs or goat's milk soap.

Steve Moize keeps about 3,000 chickens and turkeys on his Person County farm. It's a tiny operation compared with most chicken farms in the state, where farmers raise hundreds of thousands of birds in long metal houses.

The standards for tagging chickens and turkeys aren't set, but under current proposals, Moize would have to tag more chickens than larger farms. The USDA has said it probably will let large flocks be tagged with one number because the birds stay together and never go outside.

Moize's free-range birds are raised outside, so he probably will have to identify each one.

Moize said spending a few dollars to tag each bird could put his operation in the red. "And if I had to track every animal movement every time I sold one chicken or a predator killed a chicken, that would be a lot of paperwork I don't have time to do," he said.

McBride, the state agriculture official, said it's too soon to panic.

The standards for tagging most animals have yet to be set. The federal government is studying each species independently, so animal owners won't end up with unworkable rules – such as ear tags for show horses.

For now, McBride said, she is just asking animal owners to fill out a short registration form. Nearly 2,700 animal owners have signed up. She said the state won't do anything more until the federal government insists.

"I think people are just looking for another indication that the government, that Big Brother is trying to take over," McBride said. "This is a consumer confidence issue. Right now, who knows where that hamburger at McDonald's comes from?"

View Full Version: One Wicked Lie Can Kill Billions Around The Globe

Title: One Wicked Lie Can Kill Billions Around The Globe

craig-oxley - September 13, 2008 04:27 PM (GMT)

How One Wicked Nation Can Kill Billions Around the World - With One Lie!

January 24, 2006
Lorraine Day, M.D.
http://www.goodnewsaboutgod.com/studies/birdflu.htm

When the wicked leaders of a wicked nation want to:

· Create FEAR and CHAOS and TERROR throughout the world

· Take away the rights of citizens in every nation in the world

· Create a world-wide pandemic and annihilation of a large segment of a nation's population by forced vaccinations that secretly contain live bacteria and viruses for AIDS, herpes, hepatitis, and small pox, as well as preservatives made from mercury that cause brain damage and autism

· Control every country in the world by allowing the World Health Organization (WHO) to enter and take over their emergency medico-political apparatus and place embargos or quarantines on the entire country

· Eliminate the Posse Comitatus Act of 1878 which bans the military from participating in police-type activity on U.S. soil. This act specifically prohibits the government from using the military against its own citizens. (This Posse Comitatus Act was severely violated at Waco, when U.S. military troops were used against the Branch Davidians.)

· Help create famines in order to annihilate a large portion of the world's population by killing off the food supply of any and every nation, by killing their chickens, turkeys and

other birds used for food.

· Declare martial Law and suspend the Constitution

All they need to do is create - **out of thin air** –

the Bird Flu "Pandemic" **HOAX!**

Almost daily, the newspapers, radio stations and television programs pummel us with news of the coming Avian Flu "pandemic" and the necessity of developing vaccines and instituting mandatory vaccination programs - - - for EVERYBODY!

President George W. Bush has spoken repeatedly of a "Military Takeover In Case Of A Flu Outbreak." (CNN October 4 & 5, 2005) and possible quarantine of the victims of bird flu! "I'm concerned about what an avian flu outbreak could mean for the United States and the world," the President told reporters during a Rose Garden news conference.

The Posse Comitatus Act of 1878 bans the military from participating in police-type activity on U.S. soil. It was enacted to prohibit the government from using the military to control or attack the citizens of its own country. Bush began discussing the possibility of changing or eliminating this law in the aftermath of the government's sluggish response to civil unrest following Hurricane Katrina. If this is done, it would allow the government of the United States to use military troops against its own people (as was already done in the Waco tragedy).

Symptoms of Bird Flu

Let's examine the widely heralded (supposedly) coming Avian Flu Pandemic and what impact it could possibly have on the U.S. and the World!

1. What are the symptoms of bird flu in humans?

According to the web site of the (WHO) World Health Organization (http://www.who.int/csr/don/2004_01_15/en/), the symptoms of **avian** influenza (Type H5N1) are:

Fever

Sore throat

Cough

And possibly, viral pneumonia

The web site of the (CDC) Centers for Disease Control (http://www.cdc.gov/flu/avian/gen-info/facts.htm) gives the following symptoms for **avian** flu:

Fever

Cough

Sore throat and muscle aches

And possibly, pneumonia

Another area of the web site of the CDC at http://www.cdc.gov/flu/avian/professional/han020405.htm gives the following symptoms for Avian Flu:

documented temperature of >38 degrees C

(>100.4 degrees F), AND one or more of the following:

cough,

sore throat,

shortness of breath, AND

History of contact with poultry (e.g. visited a poultry farm, a household raising poultry, or a bird market) or a known or suspected human case of influenza A (H5N1) in an H5N1-affected country within 10 days of symptom onset.

Please note: A temperature of 100.4 degrees Farenheit can be generated on a hot day in a totally healthy person who has NO disease whatsoever! This is a medical fact.

A cough can occur from a cold, allergies, asthma, air pollution, certain medications, from smoking, or many other causes.

All these symptoms are non-specific, meaning they can occur in any combination with a host of medical conditions totally unrelated to bird flu OR regular flu.

So it's possible for the government to quarantine a person for an indeterminate period of time, jeopardizing the person's job and income, if he or she has a **cough on a hot day**! (Remember, the symptoms are: a temperature of >100.4 F AND one or more of the following: cough, sore throat, shortness of breath, OR contact with any type of bird.

2. What are the symptoms of **REGULAR flu** (NOT avian flu)? These are also given on the CDC's web site at http://www.cdc.gov/flu/keyfacts.htm. They are the following:

Fever of 100.4 degrees F or higher

Headache

Extreme tiredness

Dry cough

Sore throat

Runny or stuffy nose

Muscle aches

Stomach symptoms, such as nausea, vomiting, and diarrhea, also can occur but are more common in children than adults.

3. **Question**: How does anyone differentiate the symptoms of AVIAN FLU (bird flu) from the symptoms of REGULAR FLU?

Answer: As a physician, I can tell you that it is IMPOSSIBLE to tell the difference!

“How many people die each year from REGULAR FLU (NOT bird flu)?

“The Centers for Disease Control (CDC) states, “Every year in the United States, on average, 36,000 people die from flu.” (http://www.cdc.gov/flu/keyfacts.htm)

But this is a deliberate deception by the CDC!

“Below are the actual number of flu associated deaths from 1999 to 2002 from the CDC National Vital Statistic Reports

(http://www.cdc.gov/nchs/data/nvsr/nvsr52_13.pdf):

753 deaths in 2002 (page 16 of report)

257 deaths in 2001 (page 16 of report)

1,765 deaths in 2000

1,665 deaths in 1999

“How does the CDC get from 753 flu deaths to its statement that 36,000 flu deaths occur annually?

“By combining flu deaths with pneumonia deaths. The CDC National Vital Statistic Report for 2002 lists Influenza and Pneumonia as the 7th leading cause of death in 2002. You probably already guessed it – **only 753 of those deaths were flu-associated** and the rest of the 36,000 were pneumonia-associated. If all flu-associated

deaths are removed, pneumonia associated deaths still ranks number 7 by itself. The media used the false 36,000 deaths number in its coverage – 50 times the actual 2002/2003 number.

“Are the 257 to 1,765 reported annual flu deaths from 1999 to 2002 even accurate?

“No. It is not possible to determine the actual number of deaths caused by the flu because the **CDC has no death certificate category** for deaths caused **only** by the flu. The CDC has three basic categories of flu deaths:

influenza plus pneumonia
influenza plus other respiratory manifestations/symptoms
influenza plus other manifestations/symptoms (non-respiratory)”

“Health professionals may try to justify the legitimacy of combining flu deaths with pneumonia deaths with the statement that “influenza leads to pneumonia.” But **the facts do not support this** frequent, broad misstatement by health professionals.

“The American Lung Association (ALA) describes pneumonia as having over 30 different causes (one being the influenza virus). Neither the CDC nor ALA know the specific causes of the pneumonias that resulted in death. However, we do know that influenza is not the major cause.

“Keep in mind that the **influenza vaccine provides no protection from bacterial infections**. The National Institute of Allergy & Infectious Disease as well as other health agencies estimate that the single bacteria – streptococcus pneumoniae – is responsible for 15% to 50% of ALL cases of pneumonia in the US, including up to 40,000 deaths annually (http://www.nlaid.nih.gov/factsheets/pneumonia.htm)

“Pneumonia is also caused by other bacteria such as Staphylococcus aureus (staph), Pertussis (whooping cough), Streptococci, and Mycoplasma pneumoniae (a common cause of “walking” pneumonia). There are also many non-infectious causes of pneumonia such as asthma, aspiration of fluids, immunodeficiency, etc.

“So, it stretches credibility to assert that the flu causes pneumonia when, in fact, the data shows that it only causes a small minority of cases of pneumonia.”

CDC,Media Hype The Flu – Facts Show Different Picture Health Supreme by Sepp Hasslberger. Statistics compiled by Frank Hartman. http://www.newmediaexplorer.org/sepp/2004/...ent_picture.htm

My Talk With The CDC

Several months ago, I called the CDC and spoke with one of the doctors in the “Flu Division.” I identified myself by name and as a physician, and he gave me his name and

position. I asked him how a physician like myself could possibly differentiate “Bird flu” from “regular flu.” He answered, “You really can’t.”

I asked him if we physicians were asked to go house to house to check for people with bird flu with the possibility of quarantine of the patient (for how long?) and the potential for the quarantine to cause the person to lose income or even to lose his job, how could we distinguish “Bird flu” from the “regular flu”? He agreed it would be virtually impossible.

Then I asked him why President George W. Bush was publicly contemplating QUARANTINE for these patients? His response was, “He didn’t get that from us here at the CDC. That’s ALL politics!”

But Now The CDC IS Talking About Quarantine (I guess they got the message!)

Recently, Julie Gerberding, M.D., Director of the CDC, publicly discussed the possibility of quarantine as a method of controlling the “Bird flu” even though, by their own admission, it’s impossible to tell “Bird flu” from “regular flu.”

Remember SARS? How Does SARS fit into all this?What Are the Similarities Between “Bird Flu” and “SARS”? (according to the CDC’s own website)
1. They have IDENTICAL symptoms:

Fever of 100.4 degrees F or higher

Headache

General discomfort and body aches

Possibly a dry cough with mild respiratory symptoms

NOW, the question here, of course, is: How does one distinguish the symptoms of “Bird Flu” from “SARS”?

Answer: It is **IMPOSSIBLE!**

“Bird Flu,” “SARS, and Regular Flu ALL have the SAME symptoms!

How Interesting!!

SARS Was “Billed” as a Coming, Frightening Pandemic!

But just how many people have **died** from SARS?

According to the website of the World Health Organization (WHO), as of January 21, 2005, the statistics for SARS are as follows:

a. 8439 people – **worldwide** - have "been affected" – whatever that means! Does that mean they contracted the disease of "SARS" but didn't die, or does that mean that they were "affected" because they or someone in their family was just **exposed** to SARS but did not get sick? The World Health Organization doesn't tell us.

("Been affected" is NOT a medical term and the WHO doesn't explain what they mean. It sounds like the World Health Organization is trying to make the numbers sound bigger than they really are.)

b. And 812 deaths **WORLDWIDE - over a period of the last 3-4 YEARS!** (If, indeed, we can believe ANY of the figures we receive through the commercial media!)

Now Let's Put This In Perspective!

Are you aware that **EVERY DAY in the U.S. ALONE**, more than **1,400 Americans die from Heart Disease?**

Remember, that's **EVERY DAY**! - - - - In just **ONE country**!

It is absolute **NONSENSE to classify "SARS" as a potential pandemic**! This is NOTHING more than **rank propaganda! 812 deaths from SARS – Worldwide – over 3-4 years - compared to 1,400 deaths per DAY from heart disease in this country alone!**

But SARS Did not Spread Fast Enough to Produce a Pandemic

Because "SARS" did not spread fast enough from country to country to create the Pandemic that was Predicted (and PLANNED for by the New World Order) – something else had to be done!

They had to develop - -

"SARS" With Wings!! - - -"Bird Flu"!!

Now they (the WHO – run by the New World Order) can have this disease flying from one country to another country wherever they want it to land. In addition, it allows them to destroy a significant portion of the food supply of any country they wish – the chickens, turkeys and other birds used for food by the population of these various countries. The New World Order has found that one excellent way to control a country is to control (or eliminate) their food. (See the United Nations quote at the end of this article!)

Is This Just "Terror Talk"?

How does one discern “Terror Talk”? How does one differentiate Truth from Propaganda?

Pay careful attention to the words in the title of the articles, and the (unfounded) assumptions and pure speculations made by the author both in the title and throughout the article. Here are a just a few REAL examples from some “Bird Flu” articles posted on the internet and in the print media in the last few months:

Indonesia – New Suspected Human Bird Flu Case (Web-Posted 1-8-06)

Notice that this is only a “suspected” Human case. In many, if not most, instances, the “suspected” case turns out not to be Bird Flu. But the public is never informed, leaving the impression that the case is real.

Mystery – Bird Flu Fails to Migrate As Expected (Posted 12-29-05)

The word “Mystery” is calculated to created fear in the reader, fear that no one will know what to do or how to stop the supposed “epidemic.” This article also suggests that “bird flu” is NOT traveling with migratory birds. (Maybe that’s because it’s NOT “Bird” flu!)

Bird Flu: How Worried Should You Be? USA TODAY , Oct 11, 2005

Notice that the title is assuming you should be worried! The ONLY question is HOW worried should you be. This is cleverly crafted to create unwarranted fear in the reader.

Bird Flu Could Pose Enormous Threat To US Economy Posted 12-9-05

Bird Flu “Could” do anything in the world that the author of the article can conjure up in his imagination. The use of the word “could” defines this article as pure propaganda. The article contains projections that have no basis in fact, including exaggerated mortality rates, and a preposterous figure of 30% of the population being affected. NOWHERE in the world, is this happening. This type of propaganda is shameful to the author and offensive to any reader who is a thinking person.

Dangerous Unique H5N1 Mutation in Ukraine? Posted 12-10-05

Notice the question mark at the end of the title. Nothing in the article has been verified. This should not even be reported until it is verified. This type of title (particularly beginning with the word “Dangerous!”) is specifically designed to put the question into the reader’s brain as though it is a fact. It is not fact. It is irresponsible to headline articles in this way.

Extensive H5N1 Human-To-Human Transmission In Indonesia? Posted 10-22-05

Here again we have the question mark! The information in the title is designed to be

planted into the reader's brain as fact – when it is only a question. This is a deliberately inflammatory title. This is irresponsible journalism. In addition, the article refers to only 7 or 8 cases, linked to what is termed four familial "clusters." The word "cluster" is being used to imply that there are a number of cases of human-to human-transmission. On closer examination of the article, the reader finds that the author is using the word "cluster" to describe only TWO people. "TWO" people cannot be referred to as a "cluster." Again, this is deliberately misleading, and irresponsible journalism designed to strike fear into the heart and mind of the reader, as well as to imply that this (non) disease WILL cause an epidemic.

Is H5N1 Wild Bird Flu In Canada? Posted 11-17-05

Again, watch for the question mark at the end of the title. The author is deliberately propagandizing the reader by implanting the question as a "fact" in the reader's mind. But it is NOT a fact and should never be reported unless it IS a fact!

Turkey H5N1 Is Recombining With Mammalian Polymorphisms Posted 1-14-06

The average reader would have no idea what this author is writing about and does not have the background to understand anything in the article. All the reader will see is the title, and in the title the words "Turkey H5N1" and "Mammalian." This is designed to implant in the reader's mind the idea that "Bird Flu" is mutating into "Mammalian" or Human "Bird" flu. The purpose, again, is to create fear in the reader that the epidemic is getting worse, when, in truth, the article gives NO evidence to support that notion.

Several solid rules for judging whether an article is propaganda, are:

1. Watch for speculative terms. If the title ends with a question mark this is pure speculation. This allows the author to use his wildest imagination in developing a scenario to cause fear and panic.

2. Again watch for speculative terms. If the title contains the word "could", this is pure speculation. This, again, allows the author to fabricate any outcome he chooses.

3. If the title contains inflammatory words such as "Dangerous" "Suspect" "Mystery" "Worried" "Fear" "Explode", the chances are extremely high that this is pure propaganda designed to create fear.

Human Deaths From "Bird Flu"

How many deaths from Human "Bird Flu' have been reported to date?

Approximately 65 deaths in Asia (the main area this "disease" supposedly has affected) from Human cases of "Bird Flu" have been reported by the World Health Organization (WHO).

According to the Internet World Stats (Usage and Population Statistics), the population of Asia is 3,622,994,130. That's 56.4% of the World's population.

If we divide 65 (supposed deaths from "bird flu") into 3,622,994,130 people in Asia, the answer is approximately 54 million. That means that in Asia there has been **ONE death for every 54 MILLION people**! - - - HARDLY the statistics necessary to predict a frightening "Pandemic!" OR to call out the military forces!

That would be similar to declaring an epidemic of "Bird Flu" in the United States with only 5 or 6 deaths in the entire country! That, of course, would be ridiculous!

But why should we be surprised! George W. Bush is talking about declaring martial law and calling out the military when there has been NOT ONE SINGLE DEATH - - - OR EVEN ONE PERSON INFECTED with "Bird Flu" in the entire country!

This is nothing more than Fear-mongering Propaganda!

And What Are Our Sources of Information? Can We Trust Them?

We know that the commercial media, including television and the newspapers, is owned by a handful of people, the vast majority of whom are Zionist Jews. (If you don't believe it, just search the web for the owners and CEOs of the TV networks and the major newspapers.) Here are some of their quotes, demonstrating that we cannot expect to hear truth through their news outlets:

Richard M. Cohan, Senior Producer of CBS political news said: "We are going to impose OUR AGENDA on the coverage by dealing with issues and subjects that WE choose to deal with."

Richard Salant, former President of CBS News stated: "Our job is to give people not what they want, but what WE decide they ought to have."

John Swinton, Former Chief of Staff for the New York Times, called by his peers "The Dean of his Profession" said in 1953: "There is no such thing. . . as an independent press. . . If I allowed my honest opinions to appear in one issue of my paper, before twenty-four hours my occupation would be gone. The business of the journalist is to destroy the truth; to lie outright; to pervert; to vilify; to fawn at the feet of mammon, and to sell his country and his race for his daily bread. . .We are the tools and vassals of rich men behind the scenes. We are the jumping jacks, they pull the strings and we dance. Our talents and our lives are all the property of other men. We are intellectual prostitutes.

Needless to say, Commercial Television and the Newspapers have completely ceased to be repositories of truth. They are not trustworthy in any way.

How about the Internet?

Information on Bird Flu comes primarily from the web sites of the following organizations:

The Centers for Disease Control

The World Health Organization, and

ProMed/ISID (International Society for Infectious Diseases)

How reliable are these organizations?

The Centers for Disease Control (CDC)

This is a highly politicized government organization. For example, the AIDS Information Hotline at the CDC, where one would call to find out how to be safe from AIDS, is run, not by the CDC! - a group that has the HIGHEST rate of AIDS in the country! Obviously, they have not learned – or don't wish to practice – how to prevent AIDS!

If it is true, as it strongly appears to be, that "Bird Flu" is a HOAX, perpetrated by the government on the public to create fear, take away personal rights, make money on vaccinations and drugs for "bird flu", cause real pandemics of disease and death by placement of other disease-causing organisms in the supposed "bird flu" vaccines, destroy huge numbers of turkeys, ducks and other birds to assist in causing massive famine, all of which will help decrease the population of the world, - - - then if a CDC employee, including the Director of the CDC, refused to go along with the government propaganda, he or she would be fired for insubordination.

So the CDC is not a trustworthy source of information about "Bird Flu."

The World Health Organization (WHO)

The World Health Organization is the Population Control/Euthanasia/Genocide arm of the United Nations. The WHO has the same problems of bias and oversight as the CDC.

The United Nations ultimate goals are 1) the redistribution of wealth throughout the world, 2) a vast and rapid reduction in the population of the world for "sustainable development", and 3) the elimination of nation-states with the implementation of a One World Government.

In conjunction with Illuminati members such as Prince Philip and Prince Charles of the U.K., they want to return the world to what they term a "Post-Industrial" or "Feudal

Society" where there are only three main classes of people – The feudal lords (who own ALL the land), the administrators who work for the feudal lords, and the slaves, who work the land. (If you have any doubts about these issues, use your search engine to find information about the Illuminati, "Sustainable Development", "Feudalism", the "Georgia Guidestones - America's Stonehenge", One World Government, and Population Control. Dr. Stan Monteith's website www.radioliberty.com has excellent information to get you started.)

One efficient way of reducing the population of the world, the Illuminati has found, is by the **deliberate spread of disease**. Bertrand Russell, and advisor to several presidents, wrote in his book, The Impact of Science on Society,

"At present the population of the world is increasing... War so far has had no great effect on this increase... I do not pretend that birth control is the only way in which population can be kept from increasing. There are others... If a Black Death could be spread throughout the world once in every generation, survivors could procreate freely without making the world too full... the state of affairs might be somewhat unpleasant, but what of it? Really high-minded people are indifferent to suffering, especially that of others."

For thousands of years, all the way back to Nero - and probably before, dictators have controlled their subjects by Fear and Terror! It is no different now. The phony "War on Terror," promoted by U.S. President George W. Bush and his "Neo-Conservative" Zionist-Jewish controllers, such as Bill Kristol, Paul Wolfowitz, Richard Perle, Douglas Feith, Dov Zakheim, Natan Sharansky, and others like them, is designed to terrorize Americans into giving up their rights (Read the Patriot Acts – I & II) whereby they will become slaves of the New World Order.

What could possibly be George W. Bush's reason for doing this? Don't he and his controllers like us common Americans? The answer is a firm "No." In fact, they refer to us as "Useless Eaters!" Leaders of countries rarely have the best interest of their citizens at heart. If you doubt this, please read Death by Government by R. J. Rummel , a book that exposes genocide and mass murder by government. This extensively referenced book reveals that many more citizens have been murdered by their own government leaders than have been killed in war by foreign powers!

Recently, General Leonid Ivashov, the former Chief of Staff of the Russian armed forces when the September 11, 2001, attacks took place, said during the Axis for Peace 2005 Conference, and now explains publicly, that "international terrorism does NOT exist and that the September 11 attacks were the result of a set-up. What we are seeing is a manipulation by the big powers; this terrorism would not exist without them." (Posted at www.rense.com 1/22/06)

He explains that this "Terrorism" talk is the weapon used in a new type of war in

complicity with the media, which allows modifying international politics and changing existing reality. In other words, “Terrify the people with incessant talk of “Terrorism” so they will give up their rights and become malleable slaves in the hands of the New World Order.”

So the World Health Organization of the United Nations, which is also promoting this myth of the “War on Terror” is NOT a trustworthy source of information about “Bird Flu.”

What about the Internet News Outlet – ProMed/ISID? Is it trustworthy?

Let’s investigate who funds ProMed/ISID.

On their website (www.promedmail.org - and click on “About ProMed-mail), you will find the following:

“ProMed-mail and ISID are grateful to the Gates Foundation, the Rockefeller Foundation, the Oracle Corporation, the Nuclear Threat Initiative, and an anonymous donor for financial support.

Who are these Donors?

The Gates Foundation has been set up by Bill Gates, a Zionist Jew, to promote the Zionist Jewish agenda, which is the same as the Illuminati’s agenda. Their agenda includes a vast reduction in the population of the world, including the United States, by war, pandemic disease and famine.

The Rockefeller Foundation has the SAME agenda as the Illuminati and the Gates Foundation. David Rockefeller, a member of the Illuminati, is a founder and member of several organizations such as the Trilateral Commission, The Bilderbergers and the Club of Rome, whose purpose is to a) set up a One World Government, B) control ALL business throughout the world and, c) dramatically and rapidly reducing the population of the world from 6 billion to 500 million, by war, disease and famine. (Verification for this is readily available on the internet and in many fully referenced books.)

The Oracle Corporation

Oracle’s CEO is Lawrence Joseph Ellison who is identified as a Jew on the Oracle Corporation website. His biography on that web site states that “Larry Ellison was born out of wedlock to a 19-year-old mother, and raised by her aunt. Oracle Corporation went public in 1986 and was on the verge of bankruptcy by 1990 when it was revealed that its revenues had been “overstated” for several years. . .Ellison’s net worth dropped about 3 1/2 BILLION after September 11, as stocks plummeted and Oracle stock lost almost 50% of its value.”

It certainly is curious how a little boy, born in the Bronx to a 19 year old single girl could,

before the age of 50, amass a fortune large enough to LOSE 3 1/2 BILLION dollars!

The Nuclear Threat Initiative

The Nuclear Threat Initiative is run by Ted Turner who is infamous for wanting to eliminate a large majority of the world's population.

So there we have it. If we're going to evaluate ProMed/ISID, we must realize that its funding (and therefore its control) comes from groups, all of which have the goal of depopulating the earth.

How can we believe anything that comes from ProMed/ISID? Most certainly they would want to promote a Pandemic by propaganda! Nothing could please them more.

Also, anything that comes from the Zionist Jewish-controlled commercial media must be highly suspect!

Others who regularly Post "Bird Flu" Information on the Internet

Two others who regularly post information on "Bird Flu" on the web are: Henry Niman, Ph.D., and a woman with the internet name of Patricia Doyle.

In order to assess the veracity of any individual who posts information on the web or who speaks as an expert, it is necessary to be able to verify their qualifications.

Henry Niman, Ph.D.

Henry Niman received his Ph.D. at the University of Southern California in 1978 and took a post doctoral position at Scripps Clinic and Research Foundation, according to his website. His qualifications are verifiable. He is the Founder and President of Recombinomics, Inc., a company that, monitors viral recombination, a process that can be used to enhance vaccine development and allow vaccines to be prepared before viruses emerge," according to his web site, www.recombinomics.com.

Since Dr. Niman's company is heavily involved with the vaccine industry, and therefore, would significantly benefit financially from a "Bird Flu" pandemic, he certainly could have a real conflict of interest in the "Bird flu" situation. Much of the information he posts would be very difficult, if not impossible, to verify, as the cases of supposed "Bird Flu" come from obscure, tiny towns and villages - the smallest "nooks and crannies" on the globe.

How does he get this information?

Where does he get this information?

What are his sources?

It has been over two months now since I e-mailed him, asking him those questions, and to date I have received no response!

Patricia Doyle

Patricia Doyle (she admits that this is not her real name) chooses to remain a mystery. She uses the initials Ph.D. and D.V.M. after her name but she refuses to state where or when she received those degrees. I have e-mailed her directly asking for that information and she has refused to divulge it.

But she has admitted that she has NOT completed her Ph.D., yet she continues to use those initials after her name. This is Scientific Fraud!

She will not state WHERE she received her degrees!

She will not state WHEN she received her degrees!

She will not give her real name.!

This is totally unacceptable in the scientific world, and is insulting to the general public.

Why would anyone, especially a “professed” professional person, withhold this information unless she is deliberately lying about her qualifications and whether or not she actually holds these degrees.

Apparently she has shared some of this information with one individual who is not in the scientific world. But again, none of the information can be verified.

Until she comes clean and answers these questions for the entire public, she has no right to be considered an expert of ANY kind, nor should she have a forum on which to espouse her comments.

Her belligerence in deliberately withholding this information from the public, coupled with her promotion of the information on the (Illuminati/Zionist-Jewish-funded) ProMed/ ISID website raises serious questions about the possibility that she is an infiltrator and a Zionist-backed disinformation agent.

So how can anyone believe anything she says?

So, How DO We Find Truth?

You may ask, “How can we believe anything? How do we make a judgment on what is really going on?” The answer is, we can learn to evaluate what they are saying about this supposed “pandemic” in the following ways:

1) The media and the New World Order/Zionist Jewish cabal are using all sorts of hyperbole when discussing this “Bird flu,” exaggerations that are in no way warranted. (When something is REALLY going on, such as Mad Cow Disease – or AIDS, especially in the 90’s – the government was/is covering up and down-playing the truth on both issues.)

2. As mentioned above, the incidence of “Bird flu” in Asia (even if we could believe their figures) is 1 in 54 MILLION – hardly what one would call a “Pandemic”!

3. Even with ALL their efforts, the Illuminati/Zionist Jewish cabal was not able to propagandize the public enough to get them to believe the lies about SARS! So they had to create, out of thin air – “Bird” Flu – which is nothing more than SARS “with wings.”

Now they can have this “disease” flying all over the world, wherever they want it to land (and how convenient to have it land in countries that are the enemies of the Zionist Jews, such as the Arab/Muslim nations of Indonesia, Bali, Iraq, Iran, and the City of Mecca, just in time for the Muslim pilgrimage, and in countries like Turkey and Korea who are both causing political problems for Israel and it’s subsidiary – the United States.

Isn’t it amazing that the birds infected with “Bird Flu” seem to gravitate to the countries identified by George W. Bush as the “Axis of Evil!”?

SARS (remember, it has exactly the same symptoms as “Bird flu”) wasn’t able to travel fast enough from country to country to create the “world-wide pandemic” the Illuminati had planned, so they had to come up with something with wings! Voila! - - - Bird Flu! SARS with wings!

4. The commercial media is pushing the propaganda of “Bird Flu” about as hard as any propaganda I have ever seen them promote, including the prospect of forced vaccinations. The greatest Weapon of Mass Destruction they can use on this country or any other country is mandatory vaccinations, vaccines that will contain the bacteria and viruses of multiple horrific diseases (a Super Vaccine containing numerous disease-causing live viruses and bacteria - something the CDC already admits they are developing) to be forced on EVERYONE!

Then the Illuminati will be absolutely sure to produce the “Pandemic” they desire, when billions succumb to the very diseases contained in the vaccine injection they received!

5. Real and dangerous diseases like AIDS and Mad Cow Disease, are purposely down-played and covered up by the government, even though they will eventually kill millions, and possibly billions, of people in the U.S. as well as many other countries.

But when a government purposely advertises, promotes, and exaggerates a disease,

you can be sure that it's fake!

Why Would the U.S. Government and the U.N. Perpetuate this HOAX on America and the World?

Answer: Look who benefits – and How!

1. Follow the Money: Imagine the profits from forced vaccinations for every person around the globe! Followed by huge profits for the medical/industrial complex from drugs used for treatment, hospitalizations, physician costs, laboratory costs, and medical personnel to enforce quarantines! The pharmaceutical, vaccine-producing, and other medically related corporations are owned by the very same people (or their close associates) who run the world. (See 1) Bilderberg Profits from Bird Flu, Christopher Bollyn, American Free Press, Nov. 14, 2005, 2) World Bank To Put Up $1 Billion To Fight Bird Flu http://www.noticias.info/asp/aspCommunicad...d=116016&src=0)

I have received numerous e-mails from Stock Market Investment companies, showing how an investor can make huge profits on the coming "Bird flu" pandemic!

2. Power and Control: Any individual, group, state or nation that, in any way, resists the formation of a One World Government, can be quarantined, embargoed, or imprisoned. The Rulers of the world can stifle or annihilate ALL dissent.

3. De-population of the world: So the world can belong solely to the rich few who rule in tyranny. They have already begun the de-population the earth by:

War, in almost every country around the globe

Abortion, and its #1 promoter - Planned Parenthood

Infanticide – Soon to come

Euthanasia – physician-assisted suicide, of the elderly and those who are ill

Terminator seeds – Seeds that produce fruit that does not, in turn, produce seeds (such as "seedless" watermelons). These initial seeds have been patented by the mega-corporations, so the farmer must buy new seeds every year rather than being able to save seeds from his own harvest. In addition, the farmer can only purchase the seeds from the owners of the mega-corporations. This becomes so prohibitively expensive that the farmer goes bankrupt.

Patented Genetically engineered food that can be withheld at will – to promote famines

Weather control to make growing areas into dust bowls to engineer world-wide

famines (Search the web under “Weather Control.”)

Destruction of the food supply of the world by killing off the turkeys, ducks and other birds used for food (because of the irrational fear of “Bird Flu”) in addition to the destruction of cows (because of the REAL threat of Mad Cow Disease – which they are presently down-playing), and sheep (because of the REAL threat of “Scrapie” which is Mad Sheep Disease). This is one of the ways they will bring about massive famines that will starve to death millions of people.

Man-made Diseases, (such as AIDS) bioengineered in government and military laboratories to cause super-infectious world-wide pandemics.

Mandatory Vaccinations developed to CAUSE (not prevent) horrible, deadly diseases in those who receive them, as well as autism, sudden infant death syndrome (SIDS) and learning disabilities resulting from the mercury and other highly toxic substances vaccines contain. (See Vaccines: Are They Really Safe and Effective? by Neil Miller, New Atlantean Press at (http://www.thinktwice.com)

All of these methods are designed to de-populate the earth so the world can be owned and ruled by the “favored few”, those who say by self-proclamation, that they have the right and obligation to rule the world.

Here is a quote from the **United Nations:**

“Food is Power.

We use it to change behavior.

Some may call that bribery. We do not apologize.”

Catherine Bertini, executive director U.N. World Food Program, Beijing, China.

U.N. 4th World Conference on Women, September, 1995.

In other words,

“Do as we say, or we’ll starve you to death!”

Don’t Be Deceived!

The Government Has Done This Before!

And They Are Doing It Again!

The Bird Flu Hoax is NOT the first time the government, organized medicine and the pharmaceutical companies have lied to the public to bring about fear, carnage and profits. They did it with the Swine Flu Hoax in the 1970's and the vaccination-created Flu Epidemic of 1918.

Following are excerpts from the book entitled The Swine Flu Expose by Eleanora McBean, Ph.D., N.D., written in 1977 by a doctor who was THERE during the 1918 Flu Epidemic.

This booklet on Swine Flu hazards and fakery is part of a larger book on vaccination, titled, VACCINATION CONDEMNED BY COMPETENT DOCTORS. It is about time a large and comprehensive book of the long concealed facts about vaccination is brought forth. This is the largest and most informative book on the subject ever written in America. It contains data collected from medical records, army reports, and startling findings from researchers all over the world.

The book is intended to help combat the disastrous effects of vaccine promoters and their deceptive propaganda.
I have seen cancers caused by vaccinations, on the arms of people, exactly where the vaccine was injected. I have also seen paralysis and other tragedies caused by vaccinations. All these are unnecessary and avoidable by the application of information contained in the chapters of this book.

It will be noted that there are many repetitions of certain facts all through the book. There are two reasons for this. One is that some chapters are used as separate booklets like the chapter on SWINE FLU. The other reason is that the wrong information about vaccination has been drilled into the people from early childhood, so it is necessary to repeat the truth many times in order to re-program the thinking from false claims to the truth.
Truth wears no mask, she seeks neither place nor applause, bows to no human shrine; she only asks a hearing."----Anon

SWINE FLU ANOTHER MEDICALLY-MADE EPIDEMIC

"Take the profit out of the manufacture and administration of serums and vaccines and they would soon be condemned even by those who are now using them"—George Starr White M D

At the present writing, October 1976, a group of medical opportunists have taken upon themselves the dictatorial authority to declare the threat of a sweeping epidemic of SWINE FLU which they said was similar to or related to the 1918 epidemic of Spanish influenza which wiped out 20,000,000 people world-wide. This declaration was supposed to scare all the people into their vaccination centers to be shot full of experimental vaccine poisons, while they, the promoters, raked in the profits. During the

big polio vaccine drive, a spokesman for ParkeDavis one of the five drug houses making the vaccine stated "Our company will clear over $10,000,000 on Salk vaccine in 1955 " Before they were through they had fleeced the people of over $4 billion dollars on the Salk racket (See the chapter on POLIO CAUSED BY VACCINATION)

craig-oxley - September 13, 2008 04:27 PM (GMT)

Most of the people had their eyes opened during the polio vaccine fiasco so now when the same poison pushers started to beat their drums again for swine flu vaccine customers, they were smart enough to see through the hoax and refuse the shots, even though the scare-head propaganda slogans said swine flu is contagious and you can die if you don t get the shots

However, the scare techniques and perhaps other inducements, worked on (the then acting) President Ford who has since been voted out of office—and none too soon. When the high pressure sales committee, Doctors Salk Sabin, Sencer, Mathews Cooper, etc marched into Ford's office in March (76) and told him to hand over $135,000,000 to support their private money making racket, he handed it over like a simple child without even bothering to ask them for a guarantee that their unproved vaccine would not kill the people—as it did in other vaccine drives—or that their claims were justified.

Their claims of safety, effectiveness and need have all been proved to be false during the past few weeks when the vaccine killed 113 people, nation wide, and paralyzed 75 in California alone. We do not have the reports from all 50 states, but if it is the same as in Calif. that would add up to 3,675 cases of paralysis. Many coroners have been given orders by the doctors not to give out the swine flu casualties. So, we don’t know all the facts yet, and we may never know unless we have a "Watergate" investigation.

$5,000,000 LAW SUIT FILED AGAINST FLU PROMOTERS FOR CAUSING PARALYSIS

A radio newscast (Jan. 77) reported that one of the paralyzed swine flu victims has filed a $5,000,000 suit against the vaccine promoters for causing his paralysis in December of 1976. His suit is against the instigators of the flu epidemic scare, who are Dr. David Sencer of CDC (Center for Disease Control) who spearheaded the vaccine campaign, and Dr. Theodore Cooper of WHO (World Health Organization), the Health Departments which promoted the shots and the six drug houses making the swine flu vaccine. (Why not Ford also and his Congress who financed it?) His complaint was that they had put out propaganda promising that the vaccine had been thoroughly tested and was perfectly safe, and that the swine flu was contagious and people could die if they didn’t get vaccinated, and that they would be protected if they had the shots, and that the side effects, if any were "inconsequential."

Dr. Edwin Kilbourne, head of the Microbiology Department at Mount Sinai Medical School (L.A. Calif.) said he thought "the cases of paralysis were only coincidence."

Paralysis is known to be a common after-effect of vaccination—any kind of vaccine—and these 75 California cases were paralyzed shortly after their flu shots—and yet, this doctor says (in effect) "forget it—maybe it wasn't the vaccine that did it." If that is the kind of teaching and slipshod guesswork that our young medical students are getting it isn't surprising that the doctors come out of medical college all mixed up and unable to cure anything—not even the common cold or pimples. All they learn is how to suppress symptoms with poison drugs or mutilate the patients with unnecessary operations. 97% of the operations performed by U.S. doctors are unnecessary, according to the admission of doctors, themselves, who met to decide what operations would really be necessary in case of socialized medicine when there would be no profit in it for them. They decided that only about three percent (3%) would be necessary.

All the flu vaccine sales promises were lies—proved later by the deaths and disasters within a few hours after the shots.

The insurance companies which had insured the doctors and vaccine makers down through the years balked at this obvious vaccine swindle game. We wonder why Ford couldn't have taken a tip from these shrewd businessmen and also turned down the whole, questionable vaccine program. We wonder what inducements prompted Ford and Congress to let themselves be talked into financing not only the vaccine but paying the damage costs which could amount to billions of dollars judging by the large number of deaths and disasters already reported, plus those which have been hushed up by the vaccine promoters.

The most common remark we hear on the streets today is, "IT'S THE BIGGEST RIP-OFF OF ALL TIME."

The vaccine promoters and drug insurance companies, no doubt, remembered the multi-million dollar law suits following the devastating polio vaccine campaign of the 1950's when the Salk, Sabin, and Cutter vaccines caused thousands of cases of polio, death, and other disasters. The law suits flooded the courts and the vaccine promoters and drug houses had to pay out damages amounting to many millions of dollars.

The five pharmaceutical houses making the Salk vaccine were called the Rockefeller chain then, and it is the same ones now making the swine flu vaccine, with a few exceptions. The vaccine promoters wanted to dodge all financial loss—the cost of the vaccine and the damage suits, so they could make clear profit, while the taxpayers were saddled with both the payment of the vaccine and the damages, also. I doubt that the crime syndicate could run a more crooked racket than this government sponsored and financed caper, with all the profits siphoned off into the pockets of the medical and drug concerns.

If those smooth talking con-men had been holding a machine gun on Ford they couldn't have done a quicker and easier job of robbing this simple man who didn't even know enough to do a little investigating before dipping into the public till to finance a private money making scheme.

Ford was not the only guilty one in this conspiracy against the people. Most of the members of Congress gave their supporting vote.

Before leaving office Ford asked the taxpayers to give the Congressmen a substantial raise. We wonder if he wanted to reward them for their part in helping him support organized medical crime.

An AP news report in the Los Angeles Times (Dec. 3, 1976) with a headline: $129 MILLION FEDERAL RAISE PROPOSED, says in part:

". . . Ford will put the exact rates of pay he thinks advisable into the budget submitted next month. Unless the House or Senate kills the proposals. (Are they likely to turn down a raise?) the members of the House and Senate will receive $57,500 annually compared to the current $44,600."

Are they worth it? Another report told us that most of our Congressmen are corporation lawyers with an eye to serving private interests. Their vote for giving $135,000,000 of tax money to support a private medical racket (swine flu vaccine) would indicate that they are indeed working for "outside interests", and not for the good of the people who hired them to their high positions.

The same AP report also says: "The commission (to raise salaries) made it clear that it hoped to link the raises to a commitment by the three branches of government to come up with a stricter code of conduct on outside income and financial disclosures."

Does this mean that if they are given the big raise they must promise to tell the truth about what "outside interests" paid them extra to swing the "big deals" in their favor?

Public officials like this should not be given any raise at all; they should be given a dismissal and a prison sentence, plus confiscating the bribes they have taken from "big business".

SWINE FLU VACCINE TESTS PROVE UNSAFE

At the same time the vaccine promoters were telling Ford the vaccine was "tested and perfectly safe" they were still testing it on lab. animals, soldiers and little children. The ones who can't defend themselves.

In A REPORT TO THE CONSUMER (Sept., 75) by Ida Honorof, she presents a compilation of data from the National Institute of Health—Division of Biologic Standards,

Bulletin of World Health Organization, and Dr. J. Anthony Morris, former Director of a branch of FDA Virus research. Dr. Morris' findings show that the flu vaccine, when inhaled by lab. animals "tended to enhance cancerous tumors."

Pregnant women had been on the preferred list for shots until findings indicated that certain substances in flu vaccine "could pose a serious threat of fetal damage to women who might become pregnant. . ."

In the report she reviews an article by Aurora Reich, Director of Scientific Communications, published in Indianapolis Star, which states:

"The virus itself (flu vaccine) has toxic properties, even after it is killed, which can cause fever and convulsions, especially in children. January Journal of Pediatrics carried the research of Doctors at Atlanta and Sheffield, England working together testing a purified killed influenza vaccine. They concluded that even the purified killed vaccine is too toxic (poison) to be given to children . .. The study showed 69% of the infants ran high fever 6 to 12 hours after vaccinations, and one had convulsions."

Other studies showed that about 10% had convulsions, and one died. One doctor pointed out that "there are 9 million children under 3 years of age. If 10% of them had convulsions, that would be 900,000 with convulsions.. (and how many deaths?) The routine vaccination of infants and children has not been recommended by the Public Health Service."

How tragic that these helpless little children are being used to test poison drugs—like laboratory animals. I thought that was against the law. It's deplorable to even use animals for this, as practically all the tests are for things we do not need, such as poison drugs, vaccines, unnecessary operations, etc. Yes, all vaccines are dangerous drugs. (See the chapter on HOW VACCINES ARE MADE)

Every once in a while we hear of an honest doctor who is not afraid to speak out and warn the people against vaccines. Such a man is Dr. James A. Shannon, of the National Institute of Health. He stated: "THE ONLY SAFE VACCINE IS A VACCINE THAT IS NEVER USED."

When it was proved that the vaccine was too dangerous to be used on children it should have been condemned and destroyed before it did any more harm, because if it is too dangerous for children or anyone else, it is too dangerous for all people.

Doctors who have been questioned, admit that they are not taking the shots for themselves or their own children.

The old, the ill and the other "high risk" cases are more sensitive to poisons and more readily broken down and killed by them, and yet, the doctors and vaccine promoters advised them to be the first in line to get the shots. I think they wanted to test the risky

vaccine first on them to see what would happen and if it caused death and disasters the doctors could blame it on their old age or their various infirmities.

The doctors seem to consider these sick and elderly people expendable commodities of no importance. I saw an example of this when I sat in on a vaccine promotion meeting on USC campus (L.A.) recently, when the promoters were trying to drum up business and get the students to submit to the shots.

People in the audience started to ask questions of the doctor on the stand. They asked about the vaccine death that had occurred a few hours after the shots. He passed it off lightly with indifference saying that "they would have died anyway," or "They were old and probably had ailments that killed them." he made it clear that the vaccine promoters were not going to take any responsibility for their death dealing vaccines. He was one of the teachers at the medical school at USC. God protect us from the kind of doctors he would influence.

These vaccine casualties were not listed as such or the public records. The death certificates were falsified and causes were given other than the vaccine which killed them (See the chapter on FALSIFIED MEDICAL RECORDS.)

NO SWINE FLU EPIDEMIC

The whole swine flu scare was based on the death of only one soldier at Fort Dix, New Jersey (One report said october, 1975 and another said February, 1976). There was never any real evidence that he even had swine flu. There was a wide divergence of opinion among the doctors as to the real cause of his death. Some even tried to blame it on a walk he took when he was ill. An official diagnosis pronounced his death to be from A-Victoria flu, and not swine flu. All the soldiers at the camp had been innoculated with Port Chalmers flu vaccine, which was claimed to contain antigens to protect against all strains of flu. Shortly after the shots over 500 men got sick with the flu anyway, thus proving that the flu vaccine is a total failure and does not protect from the flu or anything else. 66 more were hospitalized at Fort Knox about the same time. We do not have the report from all the army camps but, it is quite certain there were a large number of cases of serious vaccine poisoning—no doubt, called by some other name, and death certificates falsified as is usually the case with vaccination deaths. The death certificates of vaccine poisoning usually read, "died of pneumonia" or hepatitis, or meningitis or something else.

The present flu vaccine they are using on the civilian population is just as ineffective and dangerous, and yet, it is being promoted all over the country with disastrous results. No matter how many casualties they have they are determined to use it as long as they can get away with it—because it is profitable. That is its one and only purpose.

Even if the swine flu had been the cause of the soldier’s death, one case of a disease is

not grounds to stage a nation-wide epidemic. It takes at least 30 cases of the same disease in the same locality to constitute an epidemic.

The vaccine promoters have been frantically trying to find at least one case of swine flu anywhere in the world to justify their custom made vaccination campaign. But they have not found one case—even among the swine. They heard of a man named Larry Hardison in Missouri who had a cold and they rushed to him to try to get a throat sample so they could make a case out of it. But he got well before they got the throat sample. Most of the cases of flu they check are caused by the vaccine itself.

There is no swine flu epidemic in U.S. or anywhere else in the world, and there is not going to be one either unless the vaccine promoters carry out their plan to vaccinate all the people; then there will be a full blown epidemic of vaccine poisoning—not flu. There are already 113 recorded vaccine deaths and that is enough to be an epidemic of vaccine poisoning.

ALL VACCINES ARE POISON

Vaccines contain decomposed protein such as that which is taken from pustules on sick animals or putrefied eggs mixed with deadly drugs such as carbolic acid (phenol), mercury, formaldehyde (formalin), etc. Decomposed proteins can cause botulism, salmonella or other types of body poisoning. It’s no wonder people drop dead after the shots.

All doctors who know the subject know and admit that all vaccines are highly toxic, and the after-effects are unpredictable. No doctor, laboratory technician or scientist can possibly determine the reaction the vaccine will have on each individual. It is impossible to know, in advance, the toleration point for poison which each person has. Therefore it is a deadly gamble—like Russian roulette—as to whether the vaccine will cause instant death (and that sometimes happens), or paralysis a few hours later, or cancer, heart trouble or TB a few years later, or kidney disease, liver damage, insanity (post vaccinal encephalitis—inflammation of the brain caused by vaccines) or some other chronic disease somewhere along the way.

Vaccine is even worse than Russian roulette because that kills only a few and they are usually other crooks, while vaccination kills thousands of innocent and trusting people.

FORD THE PUPPET

After the vaccine promoters "took" Ford for $135 million, they told him to be a good boy and roll up his sleeve so they could photograph him having a shot to induce all the rest of the people to follow his example. They wanted to use him and his photo and influence as sales propaganda to sell their poison drugs. He obeyed like a puppet on a string.

No wonder the rest of the world is laughing at us. They see a fake epidemic—a mass poisoning campaign—and our national leaders dancing to the tune of the drug (vaccine) pushers.

Dr G. Nossel of the World Health Organisation said:

‘You Americans ought to have your heads examined—No way would we permit it.. . There has been no proper investigation . . . The vaccine has not been properly researched.. . There are too many unknowns."

From as far away as Australia, there are those in authority who are shocked to see that such a fraud should be permitted—even promoted by the U.S. Government, along with the medical establishment, notorious for their money making schemes.

Dr. Archie Kalokerines, medical superintendent of Colleranebri Hospital in Australia, called the swine flu immunization program "a plan for mass murder . .. If a person is susceptible, the vaccine may act as an immunological insult predisposing that person to things like pneumonia or anemia ... If an individual is incubating another flu virus it can cause an immediate and severe attack of that disease.. . We don’t know what the long term effects of this drug (swine flu vaccine) will be. It may predispose a person to cancer or other diseases . . ." (See the chapter on CANCERS CAUSED BY VACCINATION.)

The above statement is from an exclusive interview with the Glendale News Press (9/24/76) and reprinted in A report to the Consumer, by Honorof.

"Harry Nelson, Medical Editor for L.A. Times, reported on an American Cancer Society Seminar for Science Writers, and announced that microbiologists have uncovered new findings that incriminate vaccination. One of the participants was Dr. Robert M. Simpson of Rutgers University, N.J., who stressed that ‘Immunization programs against flu, measles, mumps, and polio may actually be seeding humans with RNA to form proviruses which will then become latent cells throughout the body . .. Some of these could be molecules in search of a disease, which under proper conditions become activated and cause a variety of diseases including rheumatoid arthritis, multiple sclerosis, lupus erythematosus, Parkinson’s disease and perhaps cancer." This quote is from the Honorof Report for June, 1976.

The chapter on CANCER CAUSED BY VACCINATION shows photographs of vaccine victims with cancers on the arms where the vaccine was injected.

From the NATIONAL HEALTH FEDERATION we hear, "The risks of life and health from the high incidence of fever and other side-effects of the swine flu vaccine are substantial. Public health experts estimate that approximately 15% of those inoculated will suffer disabling illness."

Our paid government health agencies who are supposed to warn us of health hazards are not doing it. It has been outsiders who have been busy spending their own time and money to find out facts and warn the people against this colossal medical fraud. One source we need to thank for this is THE NATIONAL ENQUIRER and their state-by-state probe to collect data on deaths from vaccination, cases of swine flu, if any, who started the vaccine hoax and why, etc. In their Nov. 2, 1976 article by Chuck Michelini and Dan Schwartz, they write:

"Blundering government health experts (?) are directly to blame for the trail of deaths in the swine flu program — because they failed to warn people of vaccination dangers. And the mass inoculation program is needless —because there are no cases of swine flu in the entire world.

"Those are the charges leveled by top medical experts — who say the swine flu threat was blown out of proportion, then sold to President Ford and the American public with scandalous "horror tactics."

"Government officials are trying to scare Americans into getting shots with totally misleading TV commercials that say swine flu is contagious — and newspaper ads saying ‘you can die’ if you aren’t vaccinated."

Actually, swine flu is not contagious at all. Like other diseases, it is a cleansing effort of the body to force out the accumulated poisons that have been injected or eaten, breathed or taken in in some other way. Coughing, sneezing, sweating (fever), vomiting, diarrhea, rashes, eruptions, etc. are the manifestations of the unloading program and should not be interfered with by suppressive drugs or other medical meddling. Most drugless doctors say that most diseases heal normally if the patients stay at home in bed, in a quiet airy room with no food, no medicines, and no drinks except a little warm distilled water.

In case of a cold, most medical doctors say take two aspirins and drink plenty of liquids. That’s bad advice because aspirin is a drastic heart poison and should be avoided entirely in all circumstances, and "liquids" — not specific enough. The patient could take that to mean coffee, tea, alcoholics, soft drinks (all of which are poison) or soups, fruit juices, ice water, etc. all of which are harmful in illness. Reasons are given in another chapter.

Although the medical and government propaganda mills sent ads to the major newspapers warning "You can die from swine flu," authorities who were willing to stick to facts were saying just the opposite. For instance, Dr. J. Anthony Morris, one of the government’s top experts on vaccines, stated:

"That’s absolutely false. There’s no evidence that swine flu is a killer . . . It is not

contagious . . . There is no evidence that swine flu will spread. It has not been isolated anywhere since it was (allegedly) found in Feb. at Fort Dix, N.J." While addressing a meeting in Los Angeles he said, "...The swine flu vaccine is worthless. There's no evidence that it will protect you against swine flu because there's been no cases of swine flu to test it against."

He also said: "Effectiveness of flu vaccine is comparatively low. Flu vaccine made from inactivated virus particles such as now being manufactured, produces the wrong kind of immunity. It elicits systemic antibody that can be measured in the blood, but does not produce the local antibody in lungs and nose needed to protect against infection to the virus if later infected.

"There is no precise way to measure the potency of flu vaccine that will be offered Americans because the standard units do not measure the mass of virus particles in a vaccine."

Dr. Morris was fired from his job because he opposed the swine flu program and pointed out the defects which showed it could be dangerous as well as entirely ineffective.

Dr. Weidman, of the University of Florida, a recognized virologist, also agrees that the swine flu vaccine is inadequate to do any good. Doctors both here and in England found that their tests on laboratory animals were not encouraging. When the dose was potent enough to kill the virus it also killed the animals and when it was weakened enough to be safe for animals and people it was too weak to do any good, and was no protection.

"So far, only 25,000,000 Americans out of a total population of 216.2 million have had the swine flu shots. And as Dr. J. Anthony Morris puts it: 'That means 191 million Americans have failed to be taken in by the hard sell propaganda. The swine flu program is a program of incredibly high costs and questionable benefits' " (Enquirer, 12/21/76).

It seems to us that some doctors are slow learners. They should have found out by this time that they can't fight poison with poison, as their poison drugs and medicines only make matters worse in the long run. Most diseases are caused by poisons either generated within the body or imposed upon the body from without such as contaminated, devitalized foods, tobacco, alcohol, coffee, vaccines, fluoride-poisoned water, all drugs, insecticides, radiation, etc. Because vaccines are all poison they do damage in 100% of the cases. The damage ranges all the way from sudden death to chronic diseases in later years.

VACCINE CAN TRIGGER HEART ATTACK

Dr. Selye of the University of Montreal, one of the world's foremost authorities on human stress, stated:

"After inoculations, elderly people and the chronically ill are particularly predisposed to have certain stress reactions such as heart failure." (Enquirer 12/21/76)

In spite of this and other similar findings, the vaccine promoters urged all the senior citizens, the old and ill the high risk cases to be the first in line to get their shots. Because of this mad rush for profits the promoters are guilty of causing all those needless deaths of the elderly people a few hours after they had their shots.

Dr. Cyril Wecht, of Allegheny, Pa. performed autopsies on several of the flu vaccine victims and said:

"People should have been advised to ask their doctor if the shots were safe for them, especially if they'd had heart attacks or high blood pressure — but this was not done."

What good would it do to ask their doctor? Most doctors don't know the dangers of vaccination, and if they did they wouldn't tell their patients, as long as it was profitable to them to keep silent about it. The individual doctors usually do what their medical hierarchy tells them to do, and when they are promoting a vaccination drive the doctors are ordered to comply.

My previous research on vaccination revealed many cases of sudden death from heart failure after vaccinations. As stated many times before, all vaccines are poison and when they are shot directly into the bloodstream they circulate throughout the body including the heart, in a matter of seconds, and continue to circulate and cause corrosion and malfunction of all the delicate tissues of the body. The heart valves are made of fragile membrane which is affected by the poisons, in such a way as to render it incapable of proper functioning, leading to heart failure. At the same time, all other vital organs are impaired by the same poisons.

Most doctors and coroners try to deny the obvious when protecting a favorite money making racket like vaccination. For instance, the Los Angeles County Coroner, Thomas Noguchi performed autopsies on people who had died within 48 hours after being inoculated with swine flu vaccine. His statement, published in Los Angeles Times, Nov. 2, 1976, savored of both whitewash and sales propaganda when he said: "We do not believe the vaccine had anything to do with their deaths . . . Heart disease of various types was the cause of death in each case The patient with heart disease is clearly at risk of getting flu if he or she is not protected. Therefore, under guidance of their physician, it is advisable for such high risk persons to get their shots."

If we all followed his advice and got poisoned with the vaccines we would all be dead from vaccine induced heart failure or some other disease of blood contamination.

80% OF ALL MEDICAL DOCTORS ARE UNFIT

In a KABC radio interview, recently, Edgar Berman, M.D., consultant on medical affairs to the White House and associate professor at Johns Hopkins School of Medicine made some startling statements, a few of which are as follows:

"At least some 200,000 M.D.'s practicing medicine today are guilty of incompetence. . . I estimate at least 10% of these are actually fraudulent and corrupt ... And an unfortunately small percentage — certainly less than 15% —are intelligent, hardworking, compassionate, and moral

The scramble for the dollar shows up in statistics. Approximately 1 500 000 (unnecessary) tonsillectomies a year Some 14 000 to 16,000 persons die each year because of the 2,000,000 to 3,000,000 unnecessary operations performed, and God knows how many hundreds of thousands have complications.

"Over the past 50 years doctors have been implicated in producing more infections, crippling and suffering than all the accidents caused by the combustion engine plus every illness foisted on the laborer by industry, from black lung to radiation poisoning.

"Studies at Cornell and Yale have shown that 1,250,000 hospitalizations a year are caused by prescribed drugs. And once in a hospital, you're still far from safe. Our hospitals, even the best in the land, produce over 5,000,000 cases of disease a year."

Dr. Berman wrote a book titled, THE SOLID GOLD STETHOSCOPE. It's a shocker. It "gives the low-down on the high-ups" in the medical field and has the authenticity of a man — a medical doctor — who knows the story from the inside — the seamy side. It's not only informative, it's a million laughs.

There is so much bungling, guesswork, faulty diagnosis and cover-up, both inside and outside of the hospitals, that the doctors conceal their manslaughter cases by calling them "Accidents." There are so many doctor-caused diseases that they have given them a name, "iatrogenic." It means doctor-caused diseases. People think they go to the hospitals to get well — to be healed, but instead, millions of them are made sicker by the treatments, and even killed by the poison drugs, operations and experiments. Most, maybe all, of the hospitals have a separate section set aside for their "iatrogenic diseases." Why are they kept separate? It is probably because the doctors don't want the visitors to see what they have done to them, and also to use them for experimentation. They justify this by claiming they must experiment to find a cure for the diseases they have caused. But they use the same deadly drugs and treatments that caused the diseases in the first place.

The famous Dr. Charles Mayo, in a radio broadcast a number of years ago was honest enough to admit that with all their latest equipment and medical training at the Mayo

Clinic, they are able to get only 20% of their diagnoses and treatments right. The autopsies on the dead bodies showed them what they did wrong.

An article in Dr. Shelton's Hygienic Review (Dec. 76) quotes some interesting statements from a group of 18 internationally known scientists. The Chicago Tribune (Dec. 22/76) also carried the article by Ronald Kotulak. Here are a few of their remarks:

The shocking conclusion is that drugs are so widely misused that only 10% of the medications taken in the industrialized world are for disease-related purposes.

"They point out that there is no such thing as a safe chemical, a fact that doctors tend to forget and that most people do not know . . . Doctors frequently prescribe drugs even though they know little about them, and the people eagerly take them. The price which the patients pay in terms of adverse side effects are horrendous.

"Studies in America and England have revealed that, out of every 20 hospital patients, one is admitted because of the harm done by drugs.

"Once in the hospital the risk increases. Up to 18% of the patients suffer from bad side-effects caused by medications prescribed in the hospitals.

"'The annual cost of treating this unnecessary and preventable abuse of medications is close to $3 billion,' said this international Commission of Internal Pollution — a staggering waste of money and health

"Who is to blame for our medicinal extravaganza? The responsibility must be shared by the drug industry, the government agencies that oversee them, the doctors and those who take the drugs.

"Another breakdown occurs when it comes to test new drugs on people. A spot check conducted by the Food and Drug Administration in 1973 disclosed that 20% of the doctors doing these clinical trials were guilty of unethical practices, including prescribing wrong doses and falsifying records."

DRUGS CANNOT CURE

All chemicals and drugs are inert, foreign substances which act as irritants when taken internally. They do not have power to act in the body or cure anything. The only reason why they seem to cause some changes which people like to believe are curative is that the internal defense system tries to eject this unwanted foreign matter, and that sets up a reverse action to remedy the harm done by the drugs or chemicals. This taxes the bodily reserves and delays healing. In the case of some drugs it makes healing impossible.

I talked to a young medical student who said that the med. schools were dominated by

the drug houses which are flooding the market with so many new drugs which the students are required to learn that they didn't have time to study anatomy and the things which doctors are supposed to study. No wonder the new doctors don't seem to know anything except how to give drugs, shots and whatever the pharmaceutical houses dish up to them.

The antibody theory collapsed with scientific tests and that leaves the vaccine business without a leg to stand on. (See Chapter on Germ Theory.)

VACCINE PROMOTERS TRY TO DODGE THE BLAME

Now that the vaccine racket is being exposed, the vaccine promoters are trying to squirm out of it by making confessions or trying to lay the blame on others. The day after the scare headlines came out in the papers — "Swine flu can cause death" — and "the flu vaccine is safe and will protect you. . .", etc., a top virologist for the CDC (Center for Disease Control) which heads the flu program — admitted that the CDC knew the headlines were false." (Enquirer Probe, 12/21/76).

"An official working with the CDC — Dr. Elmer Spurner, director of laboratories for the Missouri Division of Health, admitted, 'Our tests were not meant to confirm that there was a swine flu outbreak. I don't know how that got into newspaper stories.' "He knows.

He and the other promoters did not issue any denials when the headlines across the country read: "Swine Flu Case is Confirmed," and "Flu Vaccine Rushed to Missouri in Crisis." (Ibid)

After the many deaths, heart attacks, paralysis and other cases of vaccine poisoning began to mount, some of the promoters were asked to justify their widely advertised claims that the vaccine "would protect 85% to 90% of those vaccinated" . . . and that the side effects would be few and "inconsequential." One of the favorite tricks of the guilty was to lay the blame on others. As an example, Dr. John Seal of the National Institute of Allergy and Infectious Diseases said:

"The public should be much more careful in interpreting what we mean when we make such statements." (Ibid) What did he mean?

Another man on the advisory committee admitted:

We don't know what the vaccine will do when it faces the virus." Yet, they all told the people it was "tested and perfectly safe."

In other words, they don't know what they're doing, but they tell lies to lure people into their vaccination centers, and when the deaths and disasters occur, the doctors tell us in effect — "It's your fault for being stupid enough to believe us."

"Dr. Ernest C. Harrmann, associate professor of microbiology at Peoria, Ill., School of Medicine, believes that "the time has come to ask for resignations of all those behind the swine flu vaccine rip off.' "(Enquirer Probe—12/21/76)

A FEW CONGRESSMEN BLAST THE SWINE FLU HOAX

Not all of our Congressmen are hopeless. Some are actually on our side. Congressman Ron Paul of Texas is also a doctor and is able to see both sides of the swine flu question. Most doctors have tunnel vision and see only one side — the side with the dollar mark.

Congressman Paul, in an interview with the Enquirer (Dec. 21, 76) said: "I am outraged by this program. It has been a shocking misuse of funds ... and an evil political maneuver. There are people whose careers are in question because of this program. And I predict these blatant advertising efforts to panic the people into taking swine flu shots will fail.

"I think Congress has wasted more than one hundred million dollars. The swine flu program should be brought back to Congress and discontinued at once. The program should be stopped, and those who were responsible should be held morally accountable to the American public."

Congressman Larry McDonald of Georgia, also a medical doctor, said: "I think the swine flu program is a tailor-made hoax that finds its roots in frightening the American people . . . I believe that a full investigation of those in charge should be launched . . . and if it turns out to be a dishonest promotion, everyone responsible should be removed from their jobs."

It’s heartening to find that all our Congressmen are not corrupt. But where were they, the good ones, when the vote was being taken to endorse and finance this mass poisoning program?

HOW TO PUNISH THE CULPRITS

Removing the guilty from their jobs is not enough. A punishment should be imposed on them which they will feel, and that would be to take away all their money — that’s their real love, obviously. If we gathered up all the bribes they have taken from their outside clients, plus all the other millions they have rounded up by using their governmental influence it, would amount to a billion dollars or more —perhaps. With this backlog of funds we could establish some good non-medical schools which would teach the people what to do to take care of their own ailments — even how to avoid all illness. That is possible because many are now living the health life and have no ailments whatsoever. These schools should be kept free from medical domination and political strings.

Health doctors with the right kind of non-medical training get at least 90% more successful "cures" than do the medical doctors with drugs. This project should be carefully supervised to make sure that a lot of pseudo schools do not spring up parading under the guise of the authentic, well trained schools of natural healing.

The present day medical doctors are 30 years behind the well trained health doctors. Medicine is on its way out. It is a failure method which leads the people astray.

LAW SUITS AGAINST THE VACCINE PROMOTERS

When our President and Health Departments joined bands with our mortal enemies--the poison pushers (vaccine promoters), and failed to warn the people against hazards of the oncoming poison raid, the people were left unprotected, with no use of the mass media (TV, radio, press etc.) and no help from City Councils, Mayors, Congressmen, County Supervisors, or police, because all our paid protectors had given their allegiance to the public poisoners. When the vaccine was causing death and disaster soon after the campaign was launched a and the trusting unwarned, people were walking blindly into the vaccination centers, the few "do-gooders" who knew what was going on tried to reach as many as possible with WARNING leaflets and meetings. But that was not reaching enough people. It is a helpless feeling to see all our tax supported public officials working against the people and supporting a killer racket.

A few tried to go through legal channels with law suits against our derelict president and the heads of thE vaccine campaign. But that is a slow and expensive procedure, and besides, these hard working "do-gooders’ were not making any money at their self appointed task of warning the people of the deadly hazards of the vaccines.

Three suits were filed from California. One suit which is progressing well was filed by Lewis E. Cook Jr. of San Diego, Calif. He charges that the inserts that appear in the vaccine packages produced by Merck, Sharp and Dohme, Wyeth, and Park Davis (firms making the swine flu vaccine) do not state the vaccine "might be in any way effective ir Preventing influenza . . ." which is supposed to be its purpose and its only justification...

"The claims that influenza vaccine will or can prevent influenza cannot be made legitimately since there is no evidence anywhere in the world which would suggest that influenza vaccines have ever prevented even one case influenza.

"The data indicates that the entire mass immunization program is fraught with unknowns, suppositions, speculations, assumptions and little or practical and sound scientific validity---conceived and implemented in a most amateurish, haphazard and irresponsible manner, which poses a threat to the health -lives of the American public….

"Antibodies (supposedly) produced by the injection of the inactivated and disrupted

whole virion and subvirion flu vaccines manufactured for swine flu cannot be shown to be effective in preventing swine flu ... The whole mass immunization program is fraught with dangers and risks without sound scientific data. The immediate, short, and long term adverse effects of the vaccines could not have been adequately determined during the brief period of only 3 or 4 months during which experiments on a few humans were conducted prior to publication" (of drug inserts).

It usually takes the drug companies several years to test vaccines before trying them out on people.

The third suit was filed by Ida Honorof representing People Against Political Innoculations, and of The National Health Federation. They joined forces to file suit in the U.S. District Court to stop the misuse of public funds for a vaccination campaign that has not been proven safe or effective. They assert that the mass inoculation program violated the U.S. Constitution--First Amendment. They request that the whole program be discontinued "unless and until grave doubts and hazards associated this massive vaccine program are disclosed and fully known to the public." Honorof contends that the swine immunization program has been "a series of lies, deceptions - and errors of judgment. We're asking Ford, and Education and Welfare (HEW) that they terminate the program at once. The greatest danger is not flu but vaccine itself." (Published in VANGUARD, Sept. 76)

AMERICAN MEDICAL ASSOCIATION HAS BEEN OUTLAWED

The A.M.A. was found guilty in a U.S. Court of Law for violating the Anti-trust act a number of years ago. Dr. Morris Fishbine, President of the AMA, at that time, was sentenced to a prison term and the AMA was fined and admonished to cease and desist from their illegal activities. Fishbine didn't serve his prison term and the fine was not heavy enough to worry the association so they have continued to operate in violation to the law ever since then. Therefore, they are an "outlaw gang."

NEW ANTI-TRUST SUIT AGAINST A.M.A. FILED BY CHIROPRACTORS

On Oct. 12, 1976 an anti-trust suit was filed in Chicago, U.S. District Court, against the American Medical Association. This suit was filed by a group of Chiropractors who have proof that the AMA has, for years, boycotted, libeled, and tried to destroy and eliminate the whole chiropractic profession. Details in an article in SPEARS HOSPITAL NEWS, (Denver, Dec; 1976).

The AMA has not only carried on a continuous fight against Chiropractors, but all drugless fields of healing, most, if not all of which have safer and more successful methods of healing. Some of the drugless methods are not as good as others but, at least, they don't use poison drugs and knives, so they cannot do the harm that medical methods do.

The medical profession has no safe and sure cure for any disease. I know because I have worked with medical doctors. They hired me for what I knew that they didn't know. But, in spite of their lack of ability to cure anything, they used dictatorial powers to put out of business and into prisons many drugless doctors who could "cure" what they couldn't cure.

I know several highly successful health doctors who were practicing under Chiropractic licenses, but were sent to prison for "practicing medicine without a medical license." This was in a state where the medical dictatorship held sway, and they would not allow any other school of healing to practice there, although the drugless doctors achieved better results than they did.

Medical doctors call all other healers "quacks." A quack is one who claims to be able to cure diseases, and takes money for it, and does not "cure" the patients. Doesn't this description of "quack" fit practically all the medical doctors? They can't cure cancer; they can't cure arthritis; they can't cure colds or anything, but they treat the patients and take their money.

The better drugless doctors have "cured" all these diseases without drugs.

When President Ford rolled up his sleeve and had a shot for advertising purposes, he was making it clear that the government endorsed the vaccine program and he wanted all the people to follow his example and be vaccinated. When a person tells others to take a certain medication he is prescribing medicine. Technically speaking, Ford was practicing medicine without a license. The AMA likes to put people in prison for practicing medicine without a license. The medical associations usually pick on their business rivals, the drugless doctors. Will they put Ford in Prison for committing the same crime they have convicted others for? Or, is there one law for those who oppose the harmful medical methods and another law for those who help promote medical crimes?

2,000,000 DOSES OF DEFECTIVE SWINE FLU VACCINE CONDEMNED

The haphazard and slipshod methods used by the vaccine makers has produced vaccines that have killed and paralyzed hundreds of people already, and no one seems to be supervising them. There are no safeguards, no tests and no proof of safety and effectiveness required of the vaccine makers except what they, the manufacturers, set for themselves.

The Los Angeles Herald Examiner (June, 3/76) published an AP report stating that the experimental "vaccine ready for testing on elderly and high risk cases was found to be defective. As a result, the program would be delayed 6 weeks. The Public Health Service said that 2,000,000 doses will be held in reserve for use if the correct vaccine is

in short supply."

They admit it is a bad batch---too dangerous to use---and it is condemned, yet they didn't destroy it as they should have done. They intend to use it anyway--if they can get away with it---who would know the difference, (seems to be their attitude) as long as they can sell it and make money.

Who will know which of the unlucky people will get the bad vaccine? The vaccinators are not going to tell. Were all those 113 people who died a few hours after the shots given some of the condemned vaccine? Or was it approved vaccine? They're just as dead with one or the other, as all vaccines are poison---they are purposely designed to cause illness.

The bad batch was not discovered by government inspectors or by the lab technicians making the vaccine, but by another doctor not assigned to that task. We wonder who is supervising the supervisors. Is there another "outsider" sleuthing in all the laboratories which make the vaccine, looking for mistakes that pass as safe vaccine? We think not, as there have been too many casualties for that possibility.

Mistakes are also being made in other laboratories making different vaccines. This has been going on for years. Back in the days when the polio vaccine was being high-pressured on the public, the same Dr. Anthony Morris who is trying to warn us against the dangers of the swine flu vaccine, was doing the same then. He found that some of the polio vaccines were contaminated with SV 40, a virus known to cause cancer in monkeys and hamsters.

It's frightening to think that all this uncertainty, careless, unscientific guesswork with its deadly hazards passes for safe and scientific vaccination, approved by the government, the schools, the medical boards, the press and then passed on the people as something that they must not question or criticize.

The only way to be safe from these blood poisoning, money making vaccine campaigns is to refuse all shots. Prevention is better than cure; and much can be learned by reading good health books written by qualified health researchers. A few are listed in the bibliography. Don't be fooled by medical books with health titles. They have misled and mistaught the schools and the general public, for over a century. Medicine is not health. It is a health destroyer. "Preventive" medicine should actually "Prevent" medicines and drugs, and then it would be doing some good.

People are often fooled by, SO called "scientific findings" which are not scientific at all, but are manipulated by schemers, and then bought and paid for to be used as propaganda. The following is from an article in the Los Angeles times (11/26/76). The survey was run by Dr. Ian St. James-Roberts of London. (See page 42)

"MANY FAKE FINDINGS BY SCIENTISTS SEEN"

"Many scientists may be faking their findings, according to a report published Thursday in New Scientist magazine.

"The magazine asked scientists in a questionnaire whether they knew of cases of ‘intentional bias’--- faking results to make experiments appear well conceived and important.

"90% of 200 replies reported knowledge of such cases.

"University scientists proved the worst offenders. Most cheaters were discovered by other scientists trying to duplicate the experiments. But those who replied said the gains from such frauds were often nothing, but in a few cases resulted in promotion.

"Some scientists implied that drug companies encouraged them to cheat by being obsessed with getting positive results, for one forensic scientist said it was not unusual for the police to indicate the sort of forensic (legal procedure) evidence they would prefer."

We wonder what pressures, bribes or other inducements were offered the, so called, scientists to say that the swine flu vaccine was properly tested and safe. Dr. Wecht said people should have been warned that the vaccine could trigger heart attacks, "but this wasn’t done."

Many people who saw through the fraud from the start tried to get warnings in the papers and on T.V. and other channels of communication, but the media turned a deaf ear.

SWINE FLU PROMOTERS TRIED TO CON THE SWINE RAISERS

In the planning stage, the vaccine promoters expected to round up a few cases of flu and stampede the whole world into the vaccination centers like they did for the 1918 flu epidemic. That would be a multi-billion dollar profit, like their lucrative polio vaccine drive. But the world didn’t take the bate this time, and most of the Americans didn’t either. So the promoters thought they would have a ready market with the swine raisers because they had named the vaccine "swine" flu vaccine. They tried to sell 80,000,000 doses of the vaccine to the swine raisers, but they saw through the fraud and turned it down without hesitation, not that hogs don’t have ailments sometimes --they do when they are fed wrong and medicated. But the hog raisers had learned through bitter experience that shots, in previous years, had disastrous effects on their herds and they lost hogs and money from it.

If the hog farmers had enough common sense to refuse the poison shots for their hogs, why couldn’t our high priced President and Congress use some of that common sense

and do the same? Aren't our leaders as interested in Protecting us from the commercial poisons as the farmers are in protecting their pigs?

When the opportunists see a weak president on the "throne" they plan to "use him". When they staged massive polio vaccine drive in the 1950's they worked on the smiling, affable President Eisenhower and got $9,000,000 to start with, then kept twisting his arm until they wrenched $63,000,000 from him (the taxpayers) to support their killer vaccine campaign.

President Franklin Roosevelt was another "touch." He even let them use him and his infirmity to advertise and sell their polio vaccine.

The same drug houses and vaccine promoters got $100,000,000 from Nixon.

After the polio vaccine drive was over the promoters bragged that they had raked in $5 billion dollars over the several years they kept polio vaccine sales going.

PRESIDENT COOLIDGE UNSWAYED BY MEDICAL PRESSURE

We need strong, intelligent leaders. Where are they now when we need them? President Coolidge set a good example. When the Jones-Parker Bill and the Randall Bill (bills to set up a medical dictatorship within the government, raising the head potentate to the official status and salary of the Surgeon General of the Army) were rushed through Congress in 1928, and were brought before President Calvin Coolidge, he was unmoved by the high pressure medical lobbying. He looked at the bills and stopped them with a Presidential veto. He gave as his reason for this action:

"These bills give a military status to men supposed to be engaged in scientific research."

The plot of medical establishments to set up a medical dictatorship in U.S. goes way back to the Founding Fathers when they were framing the U.S. Constitution. There were quite a number of medical doctors in Congress at that time trying to high pressure a constitutional decree to set up a medical dictatorship. But the wise opposition won. Dr. Benjamin Rush and Dr. Josiah Bartlett were the opposing forces. They convinced Congress that one branch of healing in control would be as bad as one religious sect dominating all the others. That's exactly what we were fighting against.

George Washington was also a strong President. Even that long ago in 1775 he knew more than our present day doctors do about the harmful effects of vaccination. He issued an order that no man in the Continental Army was to be inoculated. Any enlisted man or officer who submitted to that blood contaminating practice would be dishonorably discharged. He had seen the devastation of smallpox caused by the practice of arm-to-arm inoculation which was introduced from Europe. Edward Jenner and his cow pox abomination did not begin until 1791--16 years later. Both methods caused widespread disease, disability and death until compulsory vaccination was

abolished all over the world except in about three backward countries and the U.S. armed services. These are the places which still have outbreaks of the same diseases they vaccinate against. And the diseases are in the vaccinated.

George Washington had enough problems without a lot of vaccine induced disease. Vaccination and inoculation was practiced by the unenlightened as far back as 1,500 years B.C. (See the chapter on HISTORY OF VACCINATION).

What is wrong with our leaders of today. Are their heads turned by bribes or can't they tell the difference between false propaganda and facts. They are being paid by us to do some home work and investigate before putting our lives and our money on the line.

The following poem sounds a clarion call:

GOD GIVE US MEN

"God give us men! A time like this demands •
Strong minds, great hearts, true faith and ready hands •
Men whom the lust of office does not kill;•
Men whom the spoils of office cannot buy;•
Men who possess opinions and a will;•
Men who have honor; men who will not lie;•
Men who can stand before a demagogue and damn his •
treacherous flatteries without winking.•
Tall men, sun-crowned, who live above the fog•
In public duty and in private thinking;•
For while the rabble, with their thumb-worn creeds •
Their loud professions and their little deeds,•
Mingle in selfish strife, Lo, Freedom weeps,•
Wrong rules the world, and waiting Justice sleeps.•
—Josiah Gilbert Holland

WHAT OUR LEADERS SHOULD HAVE CHECKED ON BEFORE THROWING US TO THE KILLER (VACCINE) SHARKS

(1) First of all, Ford, Congress and the other leaders paid to look after our interests and safety, should have required a guarantee that the vaccine was safe--not deadly. The propaganda of the sales crew said it was safe, but they gave no proof and no guarantee. The sales crew are not authorities; so Ford should have demanded a money back guarantee from the pharmaceutical houses making the vaccine. There should have been written proof of safety and effectiveness before the $135,000,000 was paid. But, the drug houses could not give any proof of safety because they knew it was not safe. Their lab. tests and field tests proved it killed test animals and people. This was not made public.

A number of years ago when the diphtheria toxin-anti-toxin was being promoted, some suspicious people went to the laboratory making the vaccine, and asked for a written guarantee. The lab. refused to give any statement of safety, and admitted that "all vaccines are unstable and unpredictable in their effects, and could never be declared safe."

If Ford and the rest of the government had taken care of that necessary bit of business (making a careful check) before transacting the questionable $135,000,000 deal, then the flu vaccine would have been rejected and the taxpayers would not have been swindled out of the $135 million. Besides that, all those people who were killed by the vaccine would still be alive and happy today.

(2) The promoters said that the vaccine would prevent flu. It didn't; it caused it.

(3) They said the flu was contagious and the vaccine would protect people. Flu is not contagious. It is caused by the blood poisoning effects of the vaccine itself as well as other kinds of body contamination. Viruses and germs cannot cause disease. (See the chapter on WHY GERMS CANNOT CAUSE DISEASE.)

(4) The vaccine promoters said the blood samples from the man who died at Fort Dix showed viruses like the blood samples from the 1918 flu epidemic and that it could trigger a widespread, deadly epidemic like the previous one.

craig-oxley - September 13, 2008 04:28 PM (GMT)

This is not true because there are no virus-bearing blood samples from the 1918 flu epidemic. That epidemic was 58 years ago and viruses were unknown then. The first swine virus was discovered by a U.S. man in 1931. A British science team isolated the first virus in man in 1933. But, viruses have never been proved to be the cause of disease anyway, although the vaccine makers try to use them as a scare tactic, knowing that they are so small that people can't see them or prove one way or another if they have any. One dictionary definition of virus is "a morbid poison." A poison is an inert substance. It cannot move about and attack people.

If any blood samples from the 1918 flu epidemic are still on record they would be so dried up and changed in structure that they couldn't prove anything. Certainly no germs or viruses would be seen.

I have examined fresh blood samples under the microscope in college and saw how rapidly the blood changed in color and structure as it dried on the plate in just a few seconds. A sample 58 years old is a poor excuse for the vaccine promoters to try to rely upon for proof.

Viruses would not have even been mentioned in the medical or lab. reports for the 1918 period because they were unheard of. And besides, they couldn't be seen with the kind of microscopes they had then.

The flu of 1918 was caused by the conglomeration of diseases which the sinister variety of vaccines brought on. Practically everyone in the world had been propagandized into submitting to all the vaccine that were invented---the surplus stock left over from World War I which was the first war in which all the vaccines were used. The vaccinated got the flu and the unvaccinated didn't. I was one of the unvaccinated and I didn't get the flu. I didn't see an unvaccinated person who got the flu.

QUESTIONS THAT SHOULD HAVE BEEN ANSWERED BEFORE CONSIDERING ANY VACCINATION DRIVE

Ida Honorof, head of PEOPLE AGAINST POLITICAL VACCINATION, tried to get the Los Angeles Board of Supervisors and certain other officials to put pressure on David Mathews of Health, Education and Welfare, and other promoters of the vaccine to answer some important questions before they embarked on the questionable vaccination drive. Mathews was in L.A. to give a talk and his mind was already made up to promote the vaccine. Honorof, confronted him and presented him with the list of questions, but he didn't answer them and the Supervisors didn't request him to.

The questions are as follows:

(1) Can you define any benefits derived from the swine flu vaccine? According to the law the benefits must outweigh the risks. (They don't.)

(2) Will the swine flu vaccine prevent swine flu? (It never has.)

(3) Is it true that if one gets the "shot" will he get an even more severe case of flu? (Yes, and death 113 cases.)

(4)Why were Dr. Morris' test animals in 4 laboratories destroyed? His test results would have shown the efficacy or hazards of the vaccine.

(5) Did Health, Education and Welfare submit any testimony before the sub-committee on Health and Environment…..at their scheduled hearings, relating to possible hazards of the swine flu vaccinations, names of persons submitting opposing evidence and how many witnesses were heard that opposed the program?

(6) Is there any evidence that a high percentage of those who have the shots will receive no benefits?

(7) Claim is made that 70% of the people who get vaccinated would be protected. Among the unvaccinated 75% would be protected. Explain these contradictions.

(8) Can you give any evidence that a swine flu epidemic exists? (None)

(9) It takes approximately 10 years of testing and research to approve any substance, drug or biological which is to be administered into the human body. If the same standard applies to vaccines why has not the swine flu vaccine been subject to the same tests which the FDA says are necessary before injection into human beings?

(10) Even though the Pharmaceutical insert accompanying the flu vaccine cautions against "injecting intravenously," isn't it true that there is no control with the jet injector, which explodes the vaccine into the skin with 1,300 pounds pressure--- into tissue space, tissue cells, directly into the arteries, veins, lymph vessels (and right to the heart) thereby producing great destruction, and eventually ending up in the blood stream?

(11) Each of the vaccine manufacturers making the swine flu vaccine (Park-Davis, Merrell, Wyeth, Merck) use a mercury derivative as a preservative. The danger of (the highly poisonous) mercury injected into the body---or inhaled or ingested, etc. is well documented.

(12) Why is the printed form which is presented to persons to sign before getting their shots, read "registration," when Public Law 94-390 specifically stipulates that it be a "consent" form. This was strenuously objected to by the National Commission for the Protection of Human Subjects of Biomedical and Behavioral Research, and they asked that said forms be destroyed and not used, since they are definitely not "consent" forms, and are gross violation of the act.

(13) What is the detailed definition and description of swine flu?

(14) Is there really a disease called "swine flu"?

(15) Why wouldn't vaccine manufacturers produce and distribute the vaccine without indemnification from all the liability for vaccine-caused sickness, disabilities and deaths?

(16) Why did the insurance companies refuse to provide such insurance?

(17) Why were the people and public tax money, made responsible for all liabilities and claims resulting from the sickness, disabilities and deaths caused by the swine vaccine?

(18) Who benefits from the mass vaccination of 215 million Americans?

(19) Is it really necessary or advisable for everyone to get a swine flu vaccination? (No)

So far, the flu promoters have not answered the questions.

DEATH COUNT MAY NEVER BE KNOWN

Up to January 7, 1977 the death count from swine flu vaccine was 113 (people) and paralysis was 139. We have reason to believe that this is only a fraction of the actual casualties. During the polio vaccine drive in the early 1950's when the shots caused so many deaths and cases of paralysis, Dr. Dale, of the Los Angeles Epidemiology Department, said that for every case that was reported there were an estimated 15 unreported cases. Many vaccine deaths were recorded as from other causes, to conceal the hazards of the vaccine.

During my 30 years of research and writing I have uncovered facts that prove the medical records and death certificates are sometimes deliberately falsified and changed to cover up guilt of doctors and lab. technicians. (See the chapter on FALSIFIED DEATH CERTIFICATES AND MEDICAL RECORDS.) -

All vaccines are poison, and therefore, cause death and disease. This is a known fact, and every vaccination campaign has brought on a large number of disasters. Those of us who knew this, tried to warn the people and ward off the vaccine drive. But the din of the well financed vaccine juggernaut drowned out our cry, and the high pressure advertising scare campaign panicked millions into the vaccination centers. We knew death and disease were inevitable — but none were announced in the papers at first. Therefore, Ida Honorof (head of Citizens Against Political Vaccinations) decided to do what the health officials should have done; she went to the L.A. County coroner and made a check on the deaths. She found that five people there had died within 48 hours after their flu shots. Some were young and didn't have other ailments that could be blamed for their deaths. The vaccine promoters including the health departments had intended to cover up the vaccine deaths and disasters. But Honorof brought it out in the open. She contacted the National Health Federation (a non medical group which tries to protect the people from health hazards from medical, commercial and political sources. They called a public meeting in Glendale, Calif. where they aired some startling facts about the vaccination campaign and the mounting disasters caused by the poison vaccine. Some of the relatives of the flu victims were there and gave account of the state of health of those who were killed by the vaccine.

After this expose' the papers had to announce some of the deaths as it was no longer possible to conceal them. The coroner and doctors tried to gloss over it by saying that the deaths were all from heart trouble and they would have died anyway without the shots. Naturally, the heart stops when a person dies from any cause, so heart failure is an "easy out" for the coroner.

For a few days, deaths were announced in the papers until the count rose to 52. Then suddenly the death reports stopped. People got suspicious because the vaccinations were continuing and we knew that all vaccines are poison and that means that people do die from the shots.

Honorof did a little more detective work and learned that Dr. Shirley Fannin, Chief of Acute Disease Control Center of L.A. had met with the vaccine promoters and medical boards to decide what they could do to keep the people from finding out how many were being killed by the vaccine. They decided among themselves not to count as vaccine casualties those who didn't die suddenly within 48 hours after getting the shots.

This was a shocker. The idea that these poison promoters who were killing the people with wild abandon, had set themselves up to be so high and mighty that they could lay down the law as to what hour people could die, and if they happened to die 49 hours after the shots they would not be dead from their poison vaccine. Dr. Fannis then wrote a letter to the Coroner ordering him to not announce the deaths as vaccine casualties unless they died within her 48 hour time span. This gives us an idea of the tricky business they have been carrying on all through the years, and we didn't suspect a thing.

The 48 hour "cut off time" of theirs, cuts out those thousands who died a little later. It also cuts out Private David Lewis, the man who died at Fort Dix, New Jersey of what the doctors diagnosed as swine flu. He died more than six weeks after his vaccinations at camp. He was the one and only case of swine flu the doctors have found in the whole world. He was all they had to hang their whole nation-wide swine flu scare on. And now, their own medical decree that it isn't swine flu unless he dies within 48 hours, knocks out their one and only case. Actually, the official diagnosis by military doctors was that Pvt. Lewis died of A-Victoria flu (vaccine), not swine flu.

Now, without one authentic case of swine flu and without any epidemic except the epidemic of vaccine poisoning, the vaccine promoters and all the doctors who participated in giving or endorsing the shots, as well as the political heads who financed it, are all guilty of hundreds of vaccine deaths--murders. What are we going to do about it? Are there enough honest and concerned officials to prosecute them and make them pay all the damages and then put them out of circulation?

WHO POCKETS THE MONEY?

The arrangement was that the $135,000,000 of the people's money was for vaccine doses for all the 215 million people in this country, at 50c a shot. So many people were killed and paralyzed by the vaccine that the campaign had to be stopped before a riot broke out to kill all the doctors and vaccine promoters--and a few others. So only a few in the country were vaccinated. Even if we stretch a point and estimate that there were 50,000,000 who had shots, that would be only 25,000,000 dollars used out of the $35,000,000. That leaves $110,000,000 of our money which they, the promoters, still have. Do those doctors and various other crooks intend to pocket the $110 million? It should be returned immediately to the treasury and the vaccine promoters billed for the rest of the $25,000,000 which they took under false pretenses, because there was no

epidemic and the vaccine was not safe and all their promises and claims were false.

COMPULSORY ARMY VACCINATIONS ARE UNCONSTITUTIONAL

Private David Lewis who died at Fort Dix, supposedly of swine flu, would be alive today if the Army had not violated the law by forcing the poison shots on the soldiers. Our U. S. Constitution gives us the "right to be secure in our persons." Therefore, all enforced vaccination (mass medication) is a violation of our legal rights.

According to Blackstone (the "Bible" of the lawyers): "No laws are binding upon the human subject which assault the body or violate the Conscience."

The U.S. Supreme Court ruled that:

"No right is held more sacred or is more carefully guarded by the common law, than the right of every individual to the possession and control of his own person, free from all restraint or interference of others ….

Judge Cooley stated: "The right of one's person may be said to be a right of complete immunity; to be let alone."

In the official code book of the U.S. Armed Services titled, UNION CODE OF MILITARY JUSTICE, we find that there is no compulsory vaccination law in any of the branches of our military services. Therefore, as there is compulsory vaccination law in United States or the military establishment, the enforced vaccinations on our recruits is against their legal rights. Because vaccines are proved to be poisonous and harmful in all cases, the military forces are guilty of malpractice and subject to the laws governing that offense.

One woman I talked to has already sued the Army for $1,000,000 for causing the death of her son as a result of shots at camp. In England, so many outraged parents sued the government for vaccine damages to their sons in the military services, that the government abolished compulsory vaccination in both the military and civilian life. (See the chapter on WHAT VACCINATIONS DID TO OUR SOLDIERS.)

HOW WILL OUR NEW PRESIDENT CARTER HANDLE THE SWINE FLU SWINDLE?

Last Spring (1976) the epidemic makers were in a frantic rush to get President Ford to give them the full payment of $135,000,000 immediately, with no questions asked, no guarantee of safety and with no swine flu epidemic pending, not a case in the world, and they didn't even have any effective vaccine.

Why the big rush we wondered. The only obvious answer was that the November Presidential election might remove their "pigeon." They knew Ford was easy to manipulate and they wanted to "use him" while they had him on a string. A new president might take a second look and refuse to support their private money making

racket.

Now, the election is over and our new President Carter .is left with the ragged ends to clean up, left from Ford's term. We are wondering how he will handle "Ford's Folly" and if he will investigate the vaccine scandal and require the guilty ones to repair their damages and return our money they took under false pretenses.

We are hoping that President Carter will not be swayed and dominated by the powerful medical and drug lobby. But one blotch on his past record makes us wonder. We heard that he let himself be controlled by the fluoride promoters and paid them to poison the entire state water system of Georgia. If he is a man for the people why didn't he investigate the other side, not just the false sales propaganda? Chemists report that "fluoride compounds rank along with cyanide and arsenic in toxicity." Sodium fluoride or hydrofluosilicic acid is the form which is used to poison the public water supplies. Most water supplies already contain calcium fluoride which is also poisonous, but sodium fluoride is 15 times more poisonous than calcium fluoride. A few states such as Texas are working to filter out all the fluoride even the calcium fluoride because they have found by tests that all fluoride is too dangerous for them.

Sodium fluoride is a cheap by-product of the aluminum and fertilizer companies. About the only thing it is good for is rat poison. But their promotion man conceived the idea of selling it to the politicians to dump in the public water supplies. Enough City Council members were "on the take" or weak minded enough to buy the sales propaganda and consequently quite a number of cities and a few states were fluoridated. However, hundreds of them have abandoned the program when it was found, after years of use, that the fluoride was not only expensive, it was damaging to the health and to the water pipes and all equipment that came in contact with the poisoned water.

Their main selling point is that it (fluoride) prevents cavities in children. This is false. Fluorides deteriorate the bony structure of the entire body and make the tooth enamel brittle, thus causing more dental trouble in later years.

FLUORIDATED TOOTH PASTE DANGEROUS

TV commercials saying that fluoridated tooth paste has 20 tests proving that said tooth paste prevents cavities, should be investigated. Some dental associations have been "procured" by the fluoride promoters, and they try to get all the dentists under their influence to endorse fluoridation. But those who dare to tell the truth say fluoride is damaging to the teeth and the general health. The membrane of the mouth is very porous and the poison fluoride in the tooth paste enters the blood almost immediately and causes kidney disease and all kinds of diseases of body poisoning. (See the chapter on FLUORIDATION.)

MEDICINE — ON THE WAY OUT

The study of medicine has never been a science. It creates far more illness than healing. Recovery occurs in spite of the drug treatment because of the internal healing forces within all living organisms which struggle to survive.

Books on the newer knowledge of "nature cure", teaching the underlying fundamentals of health and healing will soon be available to the general public and they will read them and be able to follow the rules and avoid disease. Those who are already ill will be able to "cure" their ailments better than the established medical methods. This will make medicine obsolete — out of date and unpopular.

In closing this chapter I should like to state that all medical men are not guilty of the crimes exposed in this booklet. A few doctors are sincere in their efforts to help their patients. Their weakness is that they are badly trained and dominated by an organization which leads them away from their avowed purpose. There is hope for those who want to learn better ways and help the sick get well. If they don't try to catch up with the modern "health doctors" and "natural methods" of healing, their patients will outstrip them in knowledge and ability and leave them trailing in the dust.

A BETTER CAMPAIGN

The swine flu vaccine campaign was such an obvious fraud, with no epidemic, not even one authentic case of swine flu anywhere in the world, it makes us wonder about the sanity of the promoters. If they really wanted to combat a growing health disaster why don't they work against something that is killing millions, such as SMOKING? Tobacco and its smoke contains over 30 poisons, three of which are cancer causing. Over 300.000 people in the United States alone, die from the effects of poisons in tobacco. The great number of cases of tobacco heart, lung cancer, Burgher's disease (gangrene of the feet caused by smoking), and many other diseases of tobacco poisoning, make smoking the number one killer of today. Smoking kills more in one year than were killed in all our wars from the American Revolution on down to the late Vietnam war, and hardly anyone is trying to stop it. Our government subsidizes the killer tobacco industry because it brings in around $8 billion in revenue. But the damages and disasters caused by smoking (fires, death, disease, etc.) cost this country over $24,000,000,000 (billion) every year.

Ford and our government gave $135 million to support a fake swine flu epidemic which killed and paralyzed hundreds (maybe thousands if we had the "undoctored" records), so why not bring that money back from the medical swindlers and put it into a campaign to get rid of the real killer of men, women and even children. Many children die of tobacco heart because they have to breathe the poison fumes from their smoking parents; also, they learn to smoke early because they see it all the time and think it is all right because their parents smoke. (Read my book, ANSWERS FOR THE WORRIED SMOKER, which tells how to quit without the "cold turkey" method, which is harmful and

not too effective. Write to E. McBean, Box 55278 — L.A., Calif. $5.00, postage and tax paid. Deluxe edition.)

Some people are wondering if Chicago ‘s famous Mayor Daily also got a wrong dose of the flu and suddenly died, the same as hundreds of others within hours after their flu shots.

If anyone knows for sure if Mayor Daily had a swine flu shot, please write and give me the such as time, place, who gave the shot, etc.

Thank you, E .McBean

THE SPANISH INFLUENZA EPIDEMIC OF 1918

WAS CAUSED BY VACCINATIONS

Chapter 2 from the book Swine Flu Expose by Eleanora I. McBean, Ph.D., N.D., Published in 1977

As has been stated before, all medical and non-medical authorities on vaccination agree that vaccines are designed to cause a mild case of the diseases they are supposed to prevent. But they also know and admit that there is no way whatsoever to predict whether the case will be mild or severe - even deadly. With this much uncertainty in dealing with the very lives of people, it is very unscientific and extremely dangerous to use such a questionable procedure as vaccination.

Many vaccines also cause other diseases besides the one for which they are given. For instance, smallpox vaccine often causes syphilis, paralysis, leprosy, and cancer. (See the chapters on smallpox and plagues.) Polio shots, diphtheria toxin-antitoxin, typhoid vaccine, as well as measles, tetanus and all other shots often cause various other stages of disease such as post-vaccinal encephalitis (inflammation of the brain,) paralysis, spinal meningitis, blindness, cancer (sometimes within two years,) tuberculosis, (two to twenty years after the shot,) arthritis, kidney disease, heart disease (heart failure sometimes within minutes after the shot and sometimes several hours later.) Nerve damage and many other serious conditions also follow the injections.

When several shots are given (different vaccines) within a few days or a few weeks apart, they often trigger intensified cases of all the diseases at once, because the body cannot handle such a large amount of deadly poison being injected directly into the bloodstream. The doctors call it a new disease and proceed to suppress the symptoms.

When poison is taken by the mouth, the internal defense system has a chance to quickly eject some of it by vomiting, but when the poisons are shot directly into the body, bypassing all the natural safeguards, these dangerous poisons circulate

immediately throughout the entire body in a matter of seconds and keep on circulating until all the cells are poisoned.

I heard that seven men dropped dead in a doctor's office after being vaccinated. This was in an army camp, so I wrote to the Government for verification. They sent me the report of U.S. Secretary of War, Henry L. Stimson. The report not only verified the report of the seven who dropped dead from the vaccines, but it stated that there had been 63 deaths and 28,585 cases of hepatitis as a direct result of the yellow fever vaccine during only 6 months of the war. That was only one of the 14 to 25 shots given the soldiers. We can imagine the damage that all these shots did to the men. (See the chapter on What Vaccinations Did to Our Soldiers.)

The first World War was of a short duration, so the vaccine makers were unable to use up all their vaccines. As they were (and still are) in business for profit, they decided to sell it to the rest of the population. So they drummed up the largest vaccination campaign in U.S. history. There were no epidemics to justify it so they used other tricks. Their propaganda claimed the soldiers were coming home from foreign countries with all kinds of diseases and that everyone must have all the shots on the market.

The people believed them because, first of all, they wanted to believe their doctors, and second, the returning soldiers certainly had been sick. They didn't know it was from doctor-made vaccine diseases, as the army doctors don't tell them things like that. Many of the returned soldiers were disabled for life by these drug-induced diseases. Many were insane from postvaccinal encephalitis, but the doctors called it shell shock, even though many had never left American soil.

The conglomerate disease brought on by the many poison vaccines baffled the doctors, as they never had a vaccination spree before which used so many different vaccines. The new disease they had created had symptoms of all the diseases they had injected into the man. There was the high fever, extreme weakness, abdominal rash and intestinal disturbance characteristic of typhoid. The diphtheria vaccine caused lung congestion, chills and fever, swollen, sore throat clogged with the false membrane, and the choking suffocation because of difficulty in breathing followed by gasping and death, after which the body turned black from stagnant blood that had been deprived of oxygen in the suffocation stages. In early days they called it Black Death. The other vaccines cause their own reactions — paralysis, brain damage, lockjaw, etc.

When doctors had tried to suppress the symptoms of the typhoid with a stronger vaccine, it caused a worse form of typhoid which they named paratyphoid. But when they concocted a stronger and more dangerous vaccine to suppress that one, they created an even worse disease which they didn't have a name for. What should they call it? They didn't want to tell the people what it really was — their own Frankenstein monster which they had created with their vaccines and suppressive medicines. They

wanted to direct the blame away from themselves, so they called it Spanish Influenza. It was certainly not of Spanish origin, and the Spanish people resented the implication that the world-wide scourge of that day should be blamed on them. But the name stuck and American medical doctors and vaccine makers were not suspected of the crime of this widespread devastation — the 1918 Flu Epidemic. It is only in recent years that researchers have been digging up the facts and laying the blame where it belongs.

Some of the soldiers may have been in Spain before coming home, but their diseases originated in their own home-based U.S. Army Camps. Our medical men still use that same dodge. When their own vaccines (required for travel) cause vaccine diseases abroad they use this as grounds for a scare campaign to stampede people into the vaccination centers. Do you remember the Hong Kong Flu and the Asian Flu and the London Flu scares? These were all medically-made epidemics mixed with the usual common colds which people have every year.

Now (1976) we are being worked on again by the vaccine -epidemic makers in their effort to force another multi million dollar vaccine sale caper. Their con men have already talked President Ford into handing over $135 million dollars to start their vaccine racket. Even the insurance companies refused to become involved with such an obviously dangerous and crooked scheme. So, again the medical and drug con men induced the appropriate government officials to guarantee insurance against the, possible billions of dollars in law suits which could be brought against the vaccine promoters if the vaccine campaign is carried out as planned. It’s a good thing Ford was voted out of office. It’s too bad he wasn’t "dumped" before he paid the poison squad the MONEY’ to poison the whole population. However, we don’t yet know if President Carter will be any better. Will he be held in the grip of the medical and drug dictatorship? Or will he investigate — learn the truth — reverse the decisions and make the vaccine makers return the money taken from the taxpayers under false pretenses?

The statement of the swine flu vaccine promoters to the effect that the vaccine is harmless, is false, and the statement that it will protect against flu is false. Fifty-six people died after the shots, some within 48 hours. There is confusion and disagreement among the doctors about all aspects of the vaccine, from the safety and effectiveness to the necessity for it, who should have it and who should be warned against it.

Their scare-head campaign cry is that the swine flu is like the 1918 flu which killed 20,000,000 people. They don’t have any usable and provable blood samples from the 1918 flu epidemic to prove it. That was 58 years ago, and the doctors were just as confused and inefficient then as now. **However, one thing is certain — the 1918 Spanish Influenza was a vaccine-induced disease caused by extreme body poisoning from the conglomeration of many different vaccines. The soldiers at Fort Dix who were said to have had Swine Flu had been injected with a large variety of vaccines like the vaccines which caused the 1918 flu epidemic. The flu epidemic at Fort Dix was in no way related to swine**. There were no swine at camp

(unless we want to sarcastically call the vaccine promoters who caused the diseases -"swine.")

To add to the confusion, the doctors tell the people that there are a lot of various kinds of flu; the one which the soldiers at Fort Dix had was A Victoria flu, there are other strains of flu virus, and also, that the swine flu vaccine which so many people have taken already will not protect them against the many other types of flu. **This will be used as an "out" in case of law suits later on when more casualties begin to show up. The doctors will say that the vaccine failed because it was the wrong kind of flu for the vaccine**. Of course, no one can prove it one way or the other because viruses are illusive, invisible organisms which are unstable and unpredictable. One dictionary definition of virus is "a morbid poison." The vaccines injected into the body are poison and cause the typical poison reactions. Virus (poison) does not fly around and attack people.

Therefore, *there will be no swine flu epidemic unless the vaccine promoters make one like they did in the 1918 flu epidemic*. It will not kill 20,000,000 people unless the people submit to the disease-producing shots. There are also, other causes of disease besides vaccines, such as bad food, which has been devitalized and contaminated with poison preservatives and artificial drug concoctions. There are many more causes of disease but no diseases are contagious(See the chapter on the germ theory).

Vaccine drives come and go as often as the vaccine promoters can cook up the slightest pretense of a reason. Back in1957 they were trying to stir up a vaccination campaign for what they decided to call Asiatic flu. An editorial in the Herald and Express for August 29, 1957 was captioned, "**Fear of Flu Propaganda**." Part of the piece is as follows:

"What a tempest in a teapot has been blown up over the probability that this country will experience an epidemic of the Asiatic flu in the fall and winter months ahead.

"Even the United States Department of Health is stooge for the panic — and has issued statements which are frightening the public, rather than reassuring them by pointing out that this epidemic, while widespread, gives no indication of being any more dangerous than our usual flood of influenza-like colds when winter comes on.

"Those who read between the lines even wonder whether the whole thing might not be a bit of super salesmanship on the part of those who are making and selling the vaccines which are being prepared.. . ."

I WAS AN ON-THE-SPOT OBSERVER OF THE 1918 INFLUENZA EPIDEMIC

All the doctors and people who were living at the time of the 1918 Spanish Influenza

epidemic say it was the most terrible disease the world has ever had. Strong men, hale and hearty, one day would be dead the next. The disease had the characteristics of the black death added to typhoid, diphtheria, pneumonia, smallpox, paralysis and all the diseases the people had been vaccinated with immediately following World War 1. Practically the entire population had been injected "seeded" with a dozen or more diseases — or toxic serums. When all those doctor-made diseases started breaking out all at once it was tragic.

That pandemic dragged on for two years, kept alive with the addition of more poison drugs administered by the doctors who tried to suppress the symptoms. As far as I could find out, the flu hit only the vaccinated. Those who had refused the shots escaped the flu. My family had refused all the vaccinations so we remained well all the time. We knew from the health teachings of Graham, Trail, Tilden and others, that people cannot contaminate the body with poisons without causing disease.

When the flu was at its peak, all the stores were closed as well as the schools, businesses — even the hospital, as the doctors and nurses had been vaccinated too and were down with the flu. No one was on the streets. It was like a ghost town. We seemed to be the only family which didn't get the flu; so my parents went from house to house doing what they could to look after the sick, as it was impossible to get a doctor then. If it were possible for germs, bacteria, virus, or bacilli to cause disease, they had plenty of opportunity to attack my parents when they were spending many hours a day in the sick rooms. But they didn't get the flu and they didn't bring any germs home to attack us children and cause anything. None of our family had the flu — not even a sniffle— and it was in the winter with deep snow on the ground.

When I see people cringe when someone near them sneezes or coughs, I wonder how long it will take them to find out that they can't catch it — whatever it is. The only way they can get a disease is to develop it themselves by wrong eating, drinking, smoking or doing some other things which cause internal poisoning and lowered vitality. All diseases are preventable and most of them are cureable with the right methods, not known to medical doctors, and not all drugless doctors know them either.

It has been said that the 1918 flu epidemic killed 20,000,000 people throughout the world. But, actually, the doctors killed them with their crude and deadly treatments and drugs. This is a harsh accusation but it is nevertheless true, judging by the success of the drugless doctors in comparison with that of the medical doctors.

While the medical men and medical hospitals were losing 33% of their flu cases, the non-medical hospitals such as BATTLE CREEK, KELLOGG and MACFADDEN'S HEALTH-RESTORIUM were getting almost 100% healings with their water cure, baths, enemas, etc., fasting and certain other simple healing methods, followed by carefully worked out diets of natural foods. One health doctor didn't lose a patient in eight years. The very successful health treatment of one

of those drugless doctors who didn't lose any patients will be given in the other part of this book, titled VACCINATION CONDEMNED, to be published a little later.

If the medical doctors had been as advanced as the drugless doctors, there would not have been those 20 million deaths from the medical flu treatment.

There was seven times more disease among the vaccinated soldiers than among the unvaccinated civilians, and the diseases were those they had been vaccinated against. One soldier who had returned from overseas in 1912 told me that the army hospitals were filled with cases of infantile paralysis and he wondered why grown men should have an infant disease. Now, we know that paralysis is a common after-effect of vaccine poisoning. Those at home didn't get the paralysis until after the world-wide vaccination campaign in 1918.

CHAPTER 4

MEDICALLY-MADE EPIDEMICS---COURT CASES

Drug sales are big business, whether it is marijuana, heroin, tobacco, vaccines, or the misnamed "miracle" drugs, antibiotics, etc. They all cause cell destruction and eventual death — delayed reaction in most cases — although some deaths are sudden, as in penicillin and vaccines which often cause death within 20 minutes.

Vaccine campaigns have been carried on periodically for many years, and it is one of the most lucrative of drug sales, and not illegal such as for heroin and marijuana. The sales propaganda is so deceptive that most of the people believe it, and the medical and drug businesses have enough control over the news media to conceal or distort the reports of deaths and disasters from vaccines to keep the people in the dark as to the hazards of their popularized poisons. The Better Business Bureau is better for business but not for the people. That agency is instructed (by the medical and drug concerns) to forbid the newspapers from selling any advertising space to writers of anti-medical books and articles. I wouldn't make this statement unless I had proof and legal papers to back it. (This is discussed in more detail in another chapter.) It is a form of medical dictatorship — and that is against the law.

Most of the medically-made epidemics get by without being exposed and prosecuted, but a few occurred in cities which had some alert and concerned health groups which took the vaccine promoters to court and got convictions. Two of these court cases are briefly outlined below:

COURT CASES OF SMALLPOX EPIDEMICS DECLARED WHEN THERE WAS NO SMALLPOX

(Report from THE ADVERTISER'S PROTECTIVE BUREAU of Kansas City)

"In the fall of 1921 the health of the city was unusually good, but dull for the doctors. So the **Jackson Medical Society met and resolved to make an epidemic in the city.**

According to the record:

"MOTION WAS MADE AND SECONDED THAT A RECOMMENDATION BE MADE BY THE COMMITTEE TO THE BOARD OF HEALTH THAT AN EPIDEMIC OF SMALLPOX BE DECLARED TO EXIST IN THE CITY AT THE PRESENT TIME.

"MOVED AND SECONDED THAT A DAY BE SET ASIDE TO BE TERMED VACCINATION DAY, ON WHICH PHYSICIANS WILL BE STATIONED AT ALL SCHOOLS, CLINICS, PUBLIC BUILDINGS AND HOSPITALS ... TO VACCINATE, FREE OF CHARGE. (No shots are free. The taxpayers are charged for them.)

"It is further recommended that wide publicity be given, stating that vaccination is a preventitive of smallpox and **urging the absolute necessity of vaccination for every man, woman and child in the city**.

Those who investigated this fake, doctor-made epidemic searched for cases of smallpox to justify this vaccination drive, but could not find one case in the city.

The scare-head vaccination propaganda showed a picture of a child covered with sores (probably from empetigo, psoriasis or congenital syphilis), and called it smallpox. People are easily frightened when public officials tell them a disease is contagious and is in their midst. The fear vanishes when people learn the truth. Smallpox is not contagious, and compulsory vaccination is illegal. (See the chapter on smallpox for information on tests which proved smallpox and other diseases are not contagious, and can be avoided with the right knowledge and application of that knowledge, given in the big book, "VACCINATION CONDEMNED BY COMPETENT DOCTORS."

Most people do not question the decision of their doctors and public officials so they trustingly put their lives and the lives of their children into the hands of the unprincipled drug vendors. The results were disastrous for the people but good for the doctors. The hospitals were soon filled with vaccine poisoned people and the doctors had business all winter.

According to the record, the doctors made $500,000 from that Kansas City vaccination spree, not counting the millions of dollars from the hospital cases.

ANOTHER MEDICALLY-MADE EPIDEMIC IN PITTSBURGH IN 1924

The same procedure was carried out as for Kansas. The doctors called a meeting and moved and seconded that an epidemic be declared in the city. As usual, they spread their scare propaganda far-and-wide and herded the people into the vaccination centers.

When the vaccination campaign was at its height, the report showed the death-rate rose 22% in three months, from July 1 to Sept. 30. These deaths were all among the recently vaccinated. Were the doctors and pharmaceutical companies **charged with murder** and given the death sentence? No. They "got by with murder;" they usually do.

This doctor-made epidemic never would have been brought to public attention if it had not been for an active, and well informed group of non-medical, health-minded citizens known as THE PITTSBURGH HEALTH CLUB. They, and their legal aid investigated this manufactured epidemic and brought the instigators to trial.

According to the Health Club's attorney:

"THE DIRECT MONEY LOSS TO THE CITY OF PITTSBURGH IN THIS VACCINATION RAID in 1924 was $3,096,616 of which the doctors took $2,000,000. .

"This does not represent the indirect losses such as deaths, permanent injury, business loss from work, etc."

Every city and town today should have an active, capable, and well prepared NON-MEDICAL health group such as those in Pittsburgh and Kansas City to warn the people against the many questionable practices of the medical doctors, because they continue to stage deadly vaccination campaigns, both large and small in all cities across the country every year, but most of them are not investigated or questioned.

We are in the middle of one of these medically-made epidemics right now. It is the SWINE FLU VACCINE epidemic. There was not a certified case of swine flu in the world when they planned it in 1976, but this multi-million dollar vaccine campaign was foisted on the people anyway, and now three months after it started there are 113 reported deaths and many more cases of paralysis from the shots. All these "murders" forced the public officials to halt the vaccinations. However, the doctors and vaccine makers have stated in the papers that they will try to lift the ban and continue the vaccinations — poisoning and killing more people and refusing to take the blame, because it is profitable.

That is why this book has been rushed into production — unfinished — to warn the people and prevent more disasters from the vaccines. The chapter on swine flu and a few others are included in this advance edition, and the rest will be available later, for those who send for them.

POLIO VACCINE EXPOSE' BLOCKED BY AMA

After reading of the above court cases in Pittsburgh and Kansas City people may say, "That happened way back in 1921 and 1924; that couldn't apply to us now in 1977." Oh, yes it can; it's being done right now again with the swine flu racket. They — the vaccine promoters — should be investigated, prosecuted and stopped permanently.

In 1954 when the vaccine promoters were building up their nation-wide polio vaccine campaign, I wrote a book of facts trying to warn the people against the Salk, Sabin, and Cutter vaccines which were bound to cause widespread death, paralysis and financial loss to the taxpayers. The Better Business Bureau — arm of the medical and drug trusts — blocked me from getting any advertising notices in the papers, radio, TV, etc. But I got some of the books out to as many people as I could anyway. But the "medical dictatorship" decided they were not going to let me tell any more people about things they had kept suppressed, including the court cases. You didn't read of those investigated and prosecuted medical rackets in the papers did you? I had to "dig" for that information. In order to stop my book and put it out of circulation, they had it barred from the mails —without any legal grounds. I had taken it (the manuscript before printing) to a lawyer and had him examine it to see if it was legal. He said, "It is all in order — nothing against the law — but it is dynamite."

I then took it to the Post Office in Los Angeles and had them go over it to see if anything was against their regulations. They said, "It is all in order and not against our rules, not libelous, not obscene, not anti-American, not fraudulent."

So, I had it printed and distributed until the medical "dictatorship" issued orders to the Post Office to bar the book from the mails. This they did, although they had told me it was all in order and legal for the mails.

It's hard to believe that one branch of the business (medical) in this country is so powerful that they can force the Post Office to break the law and bar a book they have approved — a book which is designed to save lives.

In the hearing, the opposition said they barred my book from the mails because it disagreed with accepted medical opinion.

It seems I was the only one with a "fighting book" out to condemn the polio vaccinations, so when it was eliminated and I was threatened if I sold it, distributed it, or even gave it away, the medical poisoners had a clear field to sell their poison vaccines without hindrance. So they continued selling polio vaccine and are still at it, even though it has killed and paralyzed thousands. Many law suits were filed against the vaccine makers and won, and they, the vaccine promoters, had to pay millions of dollars in damages, but they make more in sales than they have to pay out in damage suits so they consider it a good business venture anyway. This is the reason why people rarely hear anything against vaccination; those who raise a voice against it are silenced.

The "Bird Flu" HOAX is only one part of an enormous plan to allow a select few to Rule the World and enslave or annihilate the rest!

This is HOW One Wicked Nation, the United States of America,

Can Kill Billions Around the World - - -

With One Lie!

Addendum: If you're concerned about your health and the ability to resist all types of diseases, including the REAL emerging diseases (not "Bird Flu") that will be perpetrated on the world by the Illuminati, please understand that you CAN be well, in spite of their evil plans. Visit my website at http://www.drday.com and learn how to **Get Well and Stay Well – Naturally – From ALL Disease - Without Drugs!**

Dr. Lorraine Day is an internationally acclaimed orthopedic trauma surgeon and best selling author who was for 15 years on the faculty of the University of California, San Francisco, School of Medicine as Associate Professor and **Vice Chairman of the Department of Orthopedics**. She was also Chief of **Orthopedic Surgery** at San Francisco General Hospital and is recognized world-wide as an AIDS expert.

She survived what was diagnosed as terminal breast cancer **without radiation, chemotherapy or mutilating surgery**. She got well by using only natural methods and continues to be **totally well and cancer-free, fourteen years** after her cancerous tumor first appeared! (See http://www.drday.com)

She has been invited to lecture extensively throughout the U.S. and the world and has appeared on numerous radio and television shows including **60 minutes, Nightline**, CNN Crossfire, **Oprah Winfrey, Larry King Live, The 700 Club**, John Ankerberg Show, USA Radio Network, **Art Bell Radio Show**, Three Angels Broadcasting Network and Trinity Broadcasting Network.

Title: UPPER RESPIRATORY SYSTEM

craig-oxley - September 13, 2008 04:26 PM (GMT)

UPPER RESPIRATORY SYSTEM

Michael Tierra L.Ac., O.M.D.

LUNGS
The Lungs rule Qi, have a dispersing and descending function and are directly connected to the exterior environment. This makes them vulnerable to external invasion of Pernicious Influences. Because of this, patterns of Lung disharmony include External as well as internal conditions.

Causes for Lung Disharmonies: Pathogenic Influences: The Lungs are the only Internal Organ that has direct contact with the outer environment through breathing, controlling the skin and influencing Defensive Qi. Being vulnerable to External Pernicious Influences, they are regarded as the "sensitive," or the "princess," of the Organs. Any of the External Pernicious Influences can invade - Wind, Heat, Fire, Cold, Damp, and Dryness, although Wind 2 generally combines with any of the other factors. Thus, exposure to any of these Influences, or to environments in homes or work places where these are present, can cause any of the external patterns of disharmony.

Emotions: Grief, worry and sadness in excess can have a profoundly debilitating affect on the Lungs, being a precipitating cause of conditions such as asthma, emphysema, bronchitis, frequent colds and flus or pneumonia.

Diet: Diet is very important to Lung health, as it is to all the Organs. Excessive consumption of cold, raw and damp foods, such as salads, fruits, juices, dairy, wheat, iced or refrigerated drinks and foods, causes Dampness3 in the Spleen which is often "stored" in the Lungs. This is why Lung Dampness, manifested as certain types of bronchitis and asthma, can often be healed by moving to a dryer environment, eliminating foods such as dairy and various fruit juices like orange juice from the diet and taking herbs that contain Citrus and Pinellia (Citrus and Pinellia Combination) that

eliminate Spleen Dampness.

Lifestyle Habits: Exercise stimulates Fire in the body and is essential in moving the lymphatic system and drying Dampness. Those who's work or inclination involves lack of physical activity will be especially susceptible to Damp accumulation caused by injury to the Spleen and Lungs. Coldness ultimately tends to inhibit circulation, which further slows the lymphatic system and leads to Dampness. Sudden exposure to Cold, Heat and Damp may not give the body sufficient time to prepare for the climatic changes and eventually can compromise the immune system. Finally, mucus-forming foods such as dairy and flour products, denatured foods such as white sugar and Damp-natured foods such as citrus and fruit juices can weaken the body and cause External invasion.

The Chinese concept of 'Wind' implies something that travels or changes. In some instances it suggests the process of infectious diseases, at the same time it suggests the nervous system's ability to control the dilation and contraction of the pores of the skin. Internal Wind refers to the nervous system, especially the Central nervous system of the brain.

Dampness, or Phlegm, according to Chinese medical theory comes from weak or incomplete digestion and assimilation that refers to Spleen Qi. Since the Lungs require a significant amount of lubrication to offset their constant drying influence from air, it is reasonable that most of the residual Spleen Dampness would first go to the Lungs. If there is too much, therefore, the Lungs are often the first place to be adversely effected.

Physiological explanation for the traditional assignments for the lungs

The Lungs Rule Qi

The process of creating energy is a metabolic process that involves and requires oxygen and in turn produces carbon dioxide as a waste. Oxygen from the lungs combines with iron and is necessary for the creation of oxyhaemoglobin or oxygenated erythrocytes. Energy is stored as adenosine triphosphate (ATP) and heat. Heat is necessary to maintain the body for the optimum level of chemical activity (about 98.4 degrees F. or 36.9 degrees C).

The Lungs Control the Channels and the Blood Vessels

The process of inspiration is active and requires energy for muscle contraction. Upon inhalation the diaphragm is pushed down and puts pressure on the abdomen and all its contents including the intra-abdominal veins. At the same time, pressure in the thorax decreases. This includes a decrease of pressure in the intra-thoracic veins and right atrium of the heart. With a decrease of outer thoracic pressure, there is an increase of pressure between the peripheral veins and the heart. The deeper the inspiration as in exercise, Qi Gung and deep breathing exercise, the more blood transported from the

peripheral veins to the heart. All of this results in increased oxygen to the cells for the metabolism of energy and the greater the release of carbon dioxide waste.

The Lungs Control Dispersing and Descending

The dispersing function of the lungs refers to the transportation of the bulk of oxygen throughout the body to maintain a continuous oxygen supply to all cells.

The Lungs Control the Skin and body Hair

The bulk of oxygen absorbed from the lungs combines with iron (the metal element) to be transported around the body forms oxyhaemoglobin, giving blood its characteristic red color. Therefore, the level of hemoglobin and the amount of blood circulating in the dermis give the skin its pink color. The condition of the skin and the associated hair follicles are influenced by the hemoglobin circulating in the skin.

The Lungs Open to the Nose

The nose is considered the 'doorway to the lungs.' Breathing deeply through the nose has the effect of sending the external air through the nasal passages, resulting in a greater capacity of the body to trap airborne pathogens as well as warm the breath more effectively for better assimilation of oxygen in the lungs. It is obvious that any aspect of the nasal-pharyngeal passages that impairs the intake of air, will have a negative effect on the lungs.

The Lungs Abhor Dryness

From the nasal passages down to through the bronchioles and lungs, the dehydrating effect of air is occurring. As a result the relation of the spleen to the lungs means that any byproduct of non-fully metabolized food is transformed to mucus. Since the bulk of the lubricating effects of mucus are actually needed by these respiratory passages, they tend to accumulate there. Food deprivation, or foods that lack calories and bulk, lighter, more eliminative foods such as fruits, vegetables together with drying and astringent foods and spicy foods, (the flavor of the lungs) will promote lung dryness. Any excess of these can injure the lungs by depriving them of sufficient mucus to maintain proper lubrication (called lung yin).

The Lungs House the Corporeal Spirit

The Corporeal Spirit or "Po" as it is called in Traditional Chinese Medicine, is the very spirit of life. This in contrast to the Ethereal soul or "Hun" housed in the liver and is responsible for the pure expression of being. While the Po represents the physical aspect of spirit, the objectifying "what and how we are," the Hun represents manifestation of the deeper spirit or more closely "who" we are and thus is most closely associated to Shen or spirit. The Po is related to the lungs and is corresponds to the

breath of life manifesting as physical energy. The Po is connected to all our life promoting automatic responses, the most fundamental of which is the act of breathing. Of course it does other things as well such as maintaining bodily rhythms, metabolism and homeostasis. As the moment of conception the Po becomes active and controls Hun. In other words, the expression of our feelings and emotions in utero is non-existent as all physiological life processes are governed by PO while Hun is dormant. Upon birth Po and Hun separate and we see that upon the first breath, there is often the expression of crying. Actually this also helps to promote the process of respiration but who could not associate the first tears of birth with an expression of spirit. Upon death, Hun returns to the realm of heaven (pure being) while Po dissolves with the physical body and returns to earth.

The relation of Po to the lungs extends from the control of breathing to the greater sense of moment to moment self maintenance. Po imparts the sense of detachment that allows one to remain in the moment. It is the ability to receive and release whatever is or is not needed with each inhaled and exhaled breath.

An expression of Po may have to do with our ability to experience pleasure or pain without dwelling on either which in the case of pain involves suffering, a negative expression of Hun. Many times if we can separate our pain from our suffering response to it, the pain becomes less and consequently the ability of Po to maintain and regenerate the body is optimized. Po is often called the Animal Spirit exemplified by the ability of animals to remain in the moment with their experience of pain. At the same time, they have a much less developed sense of Hun that requires a higher order of associative intelligence allowing them to suffer as a result of attaching significance to their pain. Dwelling on pleasure on the other hand leads to suffering when it is no longer happening.

The Lungs Loathe Cold

The entire metabolic process involving the creation of energy is slowed under the influence of cold. The effect of cold actually slows the process of alveolar ventilation in the lungs responsible for the assimilation of oxygen into the blood.

The Lungs Govern the Voice

The process of speech is all done on an exhaled breath. Weakness of the lungs, is reflected in general qi or energy deficiency that causes our diaphragmatic muscle to be weaker. As a result we are unable to sufficiently project our voice.

The Emotion of the Lungs are Grief and Sadness

The movement of air in the lungs is responsible for the expression of a number of

emotions including laughing and crying. Laughter pushes the diaphragm and causes upward pressure on the lungs and results in a more forceful and gratuitous expulsion of air. The emotion of sadness and grief often causes one to hold one's breath for prolonged periods, oxygen uptake is decreased and metabolism is slowed. This may be followed by a compensatory process of sobbing and crying which is an attempt by the body to compensate for the loss of life giving air and oxygen. Stored carbon dioxide, in the tissues is released along with the buildup of lactic acid in the muscles causing stiffness and pain. A greater ease is generated throughout the body. These are perhaps only some of the physiological reasons that either crying or laughing tend to make one feel better. Obviously a prolonged condition of oxygen deprivation may not only slow a part of the process of air and oxygen intake, but lower the immune system, slow digestion and metabolism (the "I'm not hungry" and weight loss accompanying those who are grieving) and the buildup of metabolic waste.

External Patterns

Invasion of the Lungs by Wind-Cold

This pattern is one of Wind and Cold Pernicious Influences invading and obstructing the Lungs. The descending function is disrupted, causing cough and -a runny or stuffed nose, and the dispersing function is impaired, resulting in sneezing. When Wind-Chill attacks the Defensive Qi, the pores try to stay closed in the "battle" against the attack, resulting in lack of perspiration, fever, chills, body aches and aversion to cold. However, in this case the chills are stronger from the Cold invasion.

This pattern occurs from over-exposure to a cold and possibly windy environment, air conditioning, drafts or refrigerated store-rooms. Further, it can occur if there is a weakness of the Defensive, or "Wei", energy, thus allowing the External Influences to more easily and frequently invade the body. Finally, the nature of External acute conditions is that they can change quickly, and can move back and forth from Wind Heat to Wind Cold, or vice versa.

aversion to cold
sneezing
slight fever strong chills
body aches cough with thin, watery sputum
lack of sweating
itchy throat
stuffed or runny nose with clear-watery mucus
occipital headache
Pulse: floating, tight
Tongue: thin white coat

Herbal Therapy: Trikatu, ginger tea, garlic, Nine Herbs with Notopterygii Decoction (Jiu Wei Qiang huo Tang), Ephedra Combination (Ma huang tang) for Excess conformation or when there is no sweating, Pueraria Combination (Ge gen tang) for middle strength constitutions or when there is accompanying tight neck and shoulders, Cinnamon Combination (Gui zhi tang) for Deficient types or when there is sweating. 'Trikatu' is a traditional Ayurvedic preparation easily made at home for Coldness and Dampness There are many variations, but all are based on the idea of combining three spices, usually powdered and taken with honey. The standard preparation is equal parts powdered black pepper, pippali pepper (Chinese "bibo") and dry ginger in a honey-based paste. Anywhere from a half to a full teaspoon is taken two or three times daily. For children, Pippali pepper can be substituted with two parts anise seed.

Food Therapy: Eat all cooked foods, keeping them simple, such as soups of grains or black beans with garlic and onions, vegetables and a little chicken. Avoid all else until healed.

Other Therapies: Avoid exposure to air conditioning, drafts, cold and windy environments; dress warmly to conserve the body's heat and immune potential. One of the places that are most exposed is the neck and shoulders so that in cold, windy environment, a warm scarf is good protection. Again, to support the immune system that emanates from the power of the Kidneys, a Harimake will be gratefully appreciated in cold environments. In addition, therapies such as cupping and moxibustion over the upper back, chest, kidneys and lower abdomen is useful; breathing exercises; morning saline nasal wash; ginger fomentation, onion poultice or mustard plaster over the chest are traditional methods that can be employed with great benefit.

Exercise: Bed rest

Invasion of Lungs by Wind-Heat

Similar to invasion of the Lungs by Wind-Chill, in this case the Wind enters with Heat5, such as high fever, sweating and aversion to heat as part of the symptom complex. It can be caused by exposure to climatic Heat and possibly Wind, overly heated environments in the home and work place, or Wind-Cold conditions changing to Heat.

fever aversion to cold
sore throat
slight chills stuffy or runny nose with yellow mucus
perspiration
thirst
constipation dark urine swollen tonsils body aches
headache cough with yellow mucus
Pulse: floating and rapid
Tongue: red on the sides or tip with a white or yellow coat

Herbal Therapy: Lonicera and Forsythia (Yin Qiao San),

Heat. of course, refers to bacterial or viral pathogens.

Food Therapy: Keep the diet simple, perhaps fasting on fruit or vegetable juices or soups, such as rice and black or mung beans. Avoid all else until healed. Other Therapies: Avoid exposure to overly heated and perhaps windy environments and climates; do cupping over the upper back, breathing exercises as appropriate and onion poultices over the chest.

Exercise: Bed rest

Cold Dampness Obstructing the Lungs

This pattern can occur from an External Damp Pernicious Influence attacking the body, or from any External Influence invading and mixing with a preexisting chronic disharmony of Deficient Spleen or Kidney Qi. The result is an accumulation of Dampness, causing Phlegm and obstruction of the Lung functions. In this case, the Dampness is accompanied by Cold and thus, Cold signs. It is caused by lowered immunity, Deficient Spleen Qi or Yang and possibly Deficient Kidney Qi, and a diet high in cold, raw foods and drinks.

chronic cough with profuse white sputum
wheezing or asthma with copious white sputum chest and flank stuffiness
distension and soreness difficulty in breathing, especially when Lying down
white-pasty complexion shortness of breath or breathlessness
Pulse: slippery and weak-floating or fine
Tongue: thick, greasy white coat
Herbal Therapy: Citrus and Pinellia Combination (Er chen tang)

Food Therapy: Only eat and drink cooked warm foods and fluids, keeping them simple, such as soups. Some spicy tasting things can be helpful, such as ginger tea or horseradish. Avoid all else until healed. When over the acute stage, eat a diet of only cooked foods and warm drinks, avoiding cold raw and damp foods, such as dairy and flour products, salads, fruits, fruit and vegetable juices (especially orange juice), refined foods such as white sugar, and refrigerated or iced foods and drinks.

The inside juice part of the orange is both Cold and Damp while the outer peel is spicy and drying. For this reason, the Brahman sects in India are taught from a young age to always eat a part of the peel of any fruit that is peeled. In this case, warming and drying citrus peel is an antidote for the Cold Dampness of the inner fruit.

Other Therapies: Onion and/or ginger poultices over the chest; cupping on chest or over upper back; moxibustion in the same areas; nasal wash; keep warmly dressed, with a neck scarf and a harimaki, and avoid exposure to cold, damp and windy

environments.

Exercise: Bed rest

Phlegm Heat Obstructing the Lungs

This is similar to Cold Damp Obstructing the Lungs, but it is accompanied by Heat instead. It can be caused by an External Damp or Wind-Heat Pernicious Influence attacking the body and mixing with a preexisting chronic disharmony of Deficient Spleen Qi. It results in an accumulation of Dampness and Heat, causing Phlegm and obstruction of the Lung functions. It is caused by lowered immunity, Deficient Spleen Qi and a diet high in hot, greasy, spicy, fried foods, meat, alcohol and tobacco.

cough with profuse yellow or green sputum which is foul-smelling
shortness of breath wheezing or asthma with copious yellow or green sputum
chest and flank stuffiness, distension and soreness difficulty in breathing, especially when lying down shortness of breath or breathlessness
Pulse: slippery, rapid or slippery, rapid-floating
Tongue: thick, greasy yellow coat
Herbal Therapy: MaHuang and Apricot Seed Combination (Ma Xing Shi Gan Tang) and Citrus and Pinellia Combination (Er chen tang) with scutellaria, gardenia, apricot seed and platycodon.

Food Therapy: Simple soups or vegetable juice fast until healed. When over the acute stage, avoid: alcohol, red meat, tobacco, spicy, greasy and fried foods and dairy.

Other Therapies: Cupping over the chest or upper back; onion poultice; nasal wash; breathing exercises as appropriate.

Exercise: Bed rest

Internal Patterns

Deficient Lung Qi

When Lung Qi is Deficient, there is tiredness, weakness, cough, sweating and a propensity to catching colds and flus, because the Qi cannot adequately perform its protecting, dispersing or descending functions. It can be caused by a prolonged External Pernicious Influence (heat, cold, wind, fear, shock, dampness, dryness, summer heat) remaining in the Lungs and injuring the Qi. Excessive use of antibiotics will lock Cold in the Lungs and injures the Qi. Hereditary weakness, especially if one of the parents or grandparents had tuberculosis. Other aggravating factors include excessive stooping or leaning over desks and tables to work, or a diet high in cold raw foods and drinks.

shortness of breath weak voice bright-white complexion
cough watery sputum exhausted appearance
low voice and lack of desire to talk
weak respiration
daytime sweats
lowered resistance to colds and flus
tiredness
Pulse: empty
Tongue: pale or normal colored
Herbal Therapy: Four Major ingredients (Si junzi tang) with Astragalus root.

Food Therapy: Eat all cooked foods and warm drinks, plenty of grains, especially rice, sufficient protein at each meal, black bean soup with garlic and onions, cooked vegetables and greens; avoid cold, raw foods and drinks, salads, fruit, juices, alcohol, caffeine.

Other Therapies: Avoid excessive stooping or leaning over tables or desks; rest; dress warmly according to the season, especially with a scarf around the neck; avoid over-exertion in work or sexual activity; get plenty of rest, going to bed early such as 9 - 9:30 at night; moxibustion, especially over the lower abdomen; Harimake; breathing exercises; nasal wash; working on emotional issues such as sadness, grief and worry.

Exercise: Light to moderate exercise within the body's limits; do not over exercise or do strong aerobics; walking, swimming, cycling, Yoga, Tai Chi, Qi Gong are beneficial.

Deficient Lung Yin

Fluids can become depleted in the Lungs from invasion of Exterior Heat and Dryness that remains so long that it injures the Yin. Other causes are from Yin Deficiency of the Kidneys or Stomach, which affects the Lungs, long-term Lung Qi Deficiency, and from excessive and prolonged tobacco smoking. Characteristically, there will be Dry and Empty Heat signs along with Lung symptoms.

unproductive dry cough with little or no phlegm or blood-tinged phlegm
feeling of heat in the afternoon
dry mouth and throat
emaciated appearance
low or hoarse voice
malar flush night sweats
burning sensation in palms, soles and chest
insomnia
Pulse: floating, empty and rapid
Tongue: red, peeled, dry; possible cracks in the Lung area
Herbal Therapy: Eriobotrya and Ophiopogon Combination (Qing Zao Jiu Fei Tang)

Food Therapy: Avoid hot, spicy, fried and greasy foods. Eat grains, protein, vegetables and greens and, if digestion is good, some fruit and juices. Include asparagus, duck, black beans, and milk in the diet.

Other Therapies: Oil massage; breathing exercises; Harimake; rest; cupping over upper back; breathing exercises; meditation, contemplation and prayer.

Exercise: Rest is extremely important in replenishing Yin, both during the day and at night, going to bed early, by 9 PM. Avoid aerobic exercise or any activity causing sweating, but do Yoga, Tai Chi, Qi Gong and other stretches, and light walking and swimming.

Combined Patterns:

Lungs and Liver

The Lungs rule Qi while the Liver stores and regulates Blood. The Lungs are dependent on Liver Qi for the smooth movement of Qi, while the Liver relies on Lung Qi to regulate Blood. A dysfunction of the Lungs in dispersing and descending Qi causes Dryness and Heat to go downward which can stagnate Liver Qi or cause Heat in the Liver. On the other hand, if Liver Qi stagnates in the chest, it can impair the flow of Lung-Qi or turn into fire and burn the Yin of the Lungs.

Lung Qi Deficiency and Liver Qi Stagnation

cough moving pains
distension and fullness in the sternocostal or hypochondriac regions
dizziness
headache
depression
Listlessness
Pulse: empty and tight
Tongue: pale or normal colored
Herbal Therapy: Bupleurum and Dang Gui Formula (Xiao Yao San or Rambling Powder) with 9 grams of codonopsis and 6 grams of apricot seed. Food Therapy: The same as for Lung Qi Deficiency and Liver Qi Stagnation. Other Therapies: The same as for Lung Qi Deficiency and Liver Qi Stagnation. Exercise: Four Purifications breathing practices, meditation and Eight Brocades Qi Gong practices.

Liver Qi Stagnation Invading the Lungs

cough breathlessness or difficulty breathing
asthma distension and fullness in the sternocostal region
Pulse: tight, wiry
Tongue: normal colored

Herbal Therapy: Minor Bupleurum Combination(Xiao Chai Hu Tang)

Food Therapy: The same as for Lung Qi Deficiency and Liver Qi Stagnation. Other Therapies: The same as for Lung Qi Deficiency and Liver Qi Stagnation. Exercise: The same as for Lung Qi Deficiency and Liver Qi Stagnation. Liver

Fire Invading the Lungs

Breathlessness
asthma stuffiness and pain of hypochondrium and chest
headache irritability cough with painful breathing
coughing up of blood or yellow-tinged sputum
scanty dark urine
constipation
dizziness
Pulse: wiry and slippery
Tongue: red, especially on sides; swollen in Lung area; yellow coat
Herbal Therapy: Morus and Lycium Formula (Xie Bai San)

Food Therapy: The same as for Liver Fire rising and Lung Qi Deficiency. Other Therapies: The same as for Liver Fire rising and Lung Qi Deficiency. Exercise: Four Purifications and Shitali Pranayam exercise and the Eight Brocades, especially exercise number 5.

Lungs and Kidneys

The Lungs and Kidneys coordinate to promote movement of respiration. The Lungs rule Qi and respiration, perform the function of respiration and send Qi down to the Kidneys. Kidney Yang holds the Qi down sent by the Lungs and thus controls and promotes inspiration. Therefore, a Deficiency of Lung Qi causes painful and difficult breathing, while a Deficiency of Kidney Yang causes Lung Qi to not be received and results in difficulty of inhaling.

The Lungs also send Fluids down to the Kidneys, which evaporates some of it and sends that vapor back up to the Lungs to keep them moist. A dysfunction of either Organ can impair Fluid metabolism in the body, leading to either urinary incontinence or retention, or a Deficiency of Lung Yin from lack of moisture returning to the Lungs.

Lung Qi and Kidney Yang Deficiency

This is the same as the pattern of Kidneys Failing to Receive Qi under the Kidneys. Refer to that pattern for more details.

Lung and Kidney Yin Deficiency

dry cough that is worse in the evening
feeling of heat in the afternoon night sweating hoarse voice malar flush
tidal fever
Lassitude of loins and legs soreness of lower back, thin body
breathlessness on exertion
nocturnal emissions, heat in palms, soles and chest
Pulse: empty and floating
Tongue: red and peeled with two transverse cracks in Lung area
Herbal Therapy: Ophiopogon Combination (Mai Men Dong Tang) or Rehmannia Six Combination (Liu wei di huang wan) with schizandra, apricot seed and American ginseng.

Food Therapy: The same as for Deficiency of Lung Qi and Kidney Yang.

Other Therapies: The same as for Deficiency of Lung Qi and Kidney Yang. Exercise: The same as for Deficiency of Lung Qi and Kidney Yang.

Spleen and Lungs

The Spleen transforms food and fluids and transports the resulting Grain Qi to the Lungs where it is combined with Air Qi to form True Qi. Thus, they are both crucial to the production of Qi in the body. Furthermore, the Lungs control Qi and have a dispersing and descending function. If impaired, or if there is not enough deep breathing or exercise to bring in sufficient Air Qi, the Spleen is affected and can't function well in transporting, distributing and transforming nutrients or in performing Fluid metabolism.

On the other hand, an impairment of Spleen function or a diet high in cold raw foods leads to Deficient Qi of the Lungs and creates Dampness in the Lungs with symptoms of cough, excessive mucus and asthma. That is why one major way to treat Lung Dampness is to strengthen and dry the Spleen.

Deficient Lung and Spleen Qi

no appetite, tiredness
breathlessness
loose stools
weak voice bright-white complexion
slight spontaneous sweating
Pulse: empty
Tongue: pale
Herbal Therapy: Six Major Herbs (Liu junza zi tang) with astragalus

Food Therapy: The same as Deficient Lung Qi and Deficient Spleen Qi.

Other Therapies: The same as Deficient Lung Qi and Deficient Spleen Qi. Exercise: The same as Deficient Lung Qi and Deficient Spleen Qi

FORMULAS

Citrus and Pinellia Combination (Er chen tang or Two Cured Decoction)*
Pinellia (Ban Xia) 15gms Pinellia ternata

Citrus Peel (Chen Pi) 15gms Citri reticulatus

Poria (Fu Ling) 9gms Poria cocos

Baked Licorice (Zhi Gan Cao) 4gms Glycyrrhizae uralensis

Preparation: Prepare as a decoction adding 3gms of Fresh Ginger (Sheng Jiang) and 1pc of Umeboshi Plum (dried or salt preserved).

Properties and Actions:

a) Dries Damp and dispels Phlegm

B) Regulates Qi and harmonizes the middle warmer (Stomach and Spleen).

Indications: Cough with Damp-Cold Phlegm caused by Cold-Damp of the Spleen and Stomach. Symptoms may include chest and epigastric fullness, nausea, vomiting, lassitude, feeling of heaviness (from Excess mucus), possibly vertigo and palpitations in extreme cases. May be considered for upper respiratory tract infection, chronic bronchitis, cough, goiter, chronic gastritis, peptic ulcer and Meniere's disease.

Tongue: moist, greasy white coat

Pulse: slippery

Variations:

1. For Damp-Heat of the Upper Warmer add Scutellaria (Huang Qin), Gardenia (Zhi Zi), Apricot Seed (Xing Ren) and Platycodon (Jie Geng).

2. For Damp-Heat in the Lower Warmer add Sophorae (Ku Shen), Phellodendron (Huang Bai) and Talcum (Hua Shi).

3. For Wind-Dampness add Clematis (Wei Ling Xian), Gentiana (Qin Jiao), Xanthium

(Cang Er Zi) and Cinnamon Twigs (Gui Zhi).

4. For cough with copious sputum caused by External Cold in the Lungs add Ephedra (Ma Huang) and Apricot Seed (Xing Ren).

5. For vomiting caused by a Cold Stomach add Dried Ginger (Gan Jiang) and Cardamon (Sha Ren).

6. For vomiting of clear fluids add Black Atractylodes (Cang Zhu) and White Atractylodes (Bai Zhu).

7. For chronic Phlegm in the channels and flesh leading to rubbery nodules add Oyster Shell (Mu Li), Scrophularia (Xuan Shen), Laminaria (Kun Bu) and Sargassi (Hai Zao).

8. For Spleen and Kidney Yang Deficiency characterized by coughing of thin, watery sputum, deep pulse and urinary problems, add Cinnamon Bark (Rou Gui) and prepared aconite (Fu Zi).

9. For insomnia and sleepiness after meals add White Atractylodes (Bai Zhu) and Sweet Flag (Shi Chang Pu).

10. For severe coughing at night caused by Phlegm and Blood Deficiency add Angelica (Dang Gui).

11. For Damp-Phlegm obstructing the womb with irregular menstruation and copious leukorrhea add Ligusticum (Chuan Xiong) and Angelica (Dang Gui).

12. For Phlegm and dryness together, substitute Trichosanthis (Gua Lou) and Fritillary Bulb (Chuan Bei Mu) for Pinellia (Ban Xia).

13. For dizziness or vertigo, headache, full, stifling feeling in the chest, nausea, vomiting, headache; Tongue: white greasy coat; Pulse: slippery, wiry or bowstring, add: Gastrodia (Tian Ma) and 1 slice of fresh Ginger (Sheng Jiang) and 3-4 pcs of Jujube Date (Da Zao). This becomes Pinellia and Gastrodia Combination (Ban xia bai zhu tian ma tang)*. It is used to dry and dissolve Phlegm and smooth the Liver and quiet Liver-Wind (antispasmodic).

This formula forms the basis for countless other combinations that deal with Phlegm and fluid accumulation or what in Ayurvedic medicine is called "kapha", or mucus humour.

For instance Six Gentlemen Decoction (Liu jun zi tang) combines Pinellia, Poria, Licorice and Citrus with Ginseng and White Atractylodes as a Spleen tonic. This reflects the relationship of the Spleen Qi to fluid metabolism.

Another variation is Pinellia and Gastrodia Combination that combines Gastrodia (Tian Ma) and Atractylodes (Bai Zhu) to calm Liver-Wind and dissolve Dampness. It is used for symptoms associated with dizziness, vertigo, heaviness of the head, headache, and other central neurological symptoms caused by Wind and Phlegm.

Minor Bupleurum (Xiao chai hu tang)*
Bupleurum (Chai Hu) 12-15gms Bupleurum falcatum

Scutellaria (Huang Qin) 9-12gms Scutellaria baicalensis

Pinellia (Ban Xia) 9-12gms Pinellia ternata

Fresh Ginger (Sheng Jiang) 3-6gms Zingiberis officinalis

Ginseng (Ren Shen) 6-9gms Panax ginseng

Licorice (Gan Cao) 3-6gms Glycyrrhiza uralensis

Jujube Dates (Da Zao) 3-5pcs Zizyphus jujuba

Properties and Actions:

a) Treats the Lesser Yang (Shao Yang) channel (Gall Bladder and Triple Warmer)

B) Harmonizing: regulates the Liver and Spleen functions, addresses combined Yin-Yang symptoms of External and Internal, Excess and Deficiency, and Hot and Cold.

Indications: Treats symptoms that may have begun with acute-External complex and have penetrated to an intermediate, lingering stage. Thus there may be alternating fever and chills, stuffy full feeling in the chest, bitter flavor in the mouth, dizziness, lack of appetite, fatigue and nausea. It can be used for lingering colds, coughs, bronchitis and asthma. Because of its broad action it can also be considered for conditions such as malaria, cholecystitis, hepatitis, jaundice and irregular menstruation. Recently it is being viewed as a good general immune tonic and has been studied and beneficially employed for the treatment of HIV and AIDS conditions.

Tongue: thin white coat

Pulse: wiry and tight

Variations:

1. To strengthen immunity add Astragalus (Huang Qi) 9-12 gms, Schizandra (Wu Wei Zi) 6-9gms, Ligustrum (Nu Zhen Zi) 6-9gms.

2. For malaria add Dichroa Root (Chang Shan) and Cardamom Seed (Cao Guo).

3. For Yin Deficiency add Tortoise Shell (Bie Jia) and Wormwood (Qing Hao).

4. For bloating with abdominal pain add Corydalis (Yan Hu Suo), Cyperus (Xiang Fu) and Immature Bitter Orange (Zhi shi).

Jade Screen Powder (Yu ping feng san)
Astragalus (Huang Qi) 10-15gms Astragalus membranaceus

White Atractylodes (Bai Zhu) 9-12gms Atractylodes alba

Ledebouriella (Fang Feng) 9-12gms Ledebouriella seseloides

Properties and Actions:

a) Tonifies Qi, strengthens the Wei Qi

B) Internal Cold and Deficiency

c) Anti-hydrotic, corrects involuntary and spontaneous perspiration

Indications: For lowered body resistance to colds and flus, spontaneous and involuntary perspiration, pale complexion. It can be considered for common colds, influenza, allergic and chronic rhinitis.

Tongue: light red with a thin white coat

Pulse: weak and floating

Variations:

1. For chronic or allergic rhinitis add Magnolia Flower (Xin Yi Hua) and Xanthium Fruit (Cang Er Zi).

2. For spontaneous perspiration add Ephedra Root (Ma Huang Gen) and Light wheat (Fu Xiao Mai: Triticum aestivum).

Ding chuan tang (Treat Asthma Decoction)
Ginkgo Seed (Bai Guo) 3-7pcs Ginkgo biloba

Ephedra (Ma Huang) 6-9gms Ephedra sinica

Perilla Seed (Zi Su Zi) 9-12gms Perilla frutescens

Tussilago (Kuan Dong Hua) 9-12gms Tussilago farfara

Apricot Seed (Xing Ren) 9-12gms Prunus armeniaca

Mulberry Bark (Sang Bai Pi) 9-12gms Morus alba

Scutellaria (Huang Qin) 6-9gms Scutellaria baicalensis

Pinellia (Ban Xia) 9-12gms Pinellia ternata

Licorice (Gan Cao) 3-6gms Glycyrrhiza uralensis

Properties and Actions:

a) Clears Lung Heat

B) Expectorant for asthma

Indications: Asthma caused by Heat in the Lung, chronic bronchitis, bronchial asthma, pulmonary emphysema possibly with accompanying thirst, restlessness, fever, headache, spontaneous perspiration.

Tongue: red with yellow coat

Pulse: slippery and rapid

Eriobotrya and Ophiopogon Combination(Qing zao jiu fei tang)
Mulberry Leaf (Sang Ye) 3 gms Mori alba

Gypsum (Shi Gao) 10 gms Gypsum fibrosum

Gelatin (E Jiao) 2.4 gms Asini gelatinum corii

Ophiopogon (Mai Men Dong) 3.6 gms Ophiopogonis japonicus

Sesame (Hu Ma Ren) 2.4 gms Sesami indica

Ginseng (Ren Shen) 2 gms Panax Ginseng

Apricot Seed (Xing Ren) 2 gms Pruni Armeniacae

Eriobotrya (Pi Pa Ye) 3 gms Eriobotryae japonicae

Licorice (Gan Cao) 2 gms Glycyrrhizae uralensis

Properties and Actions:

a) Moistens the Lung and treats Dryness

B) Tonifies Qi

c) Lubricates, cools and nourishes Essence of the Lung

Indications: Symptoms include dry cough with no phlegm, fever, headache, dry throat and nostrils. May be considered for symptoms of upper respiratory infections, hemoptysis, cough with influenza, asthma.

Tongue: red and dry with a thin white coat

Pulse: weak, thin and thready

Ephedra Decoction (Ma huang tang)*
Ephedra(Ma Huang) 6-9gms Ephedra sinica

Cinnamon Twig (Gui Zhi) 6-9gms Cinnamomum cassia

Apricot Seed (Xing Ren) 6-9gms Prunus armeniaca

Prepared Licorice (Zhi Gan Cao) 3-6gms Glycyrrhiza Uralensis

Properties and Actions:

a) Warm stimulating diaphoretic

B) Dispels External Wind-Cold

c) Anti-asthmatic.

Indications: It is used for Greater Yang (Tai Yang) conditions, with Excess conformation, fever, chills with intolerance of Cold, lack of perspiration, general aching feeling throughout the body, headache, asthma. With appropriate presentation it can be considered for a wide variety of upper respiratory conditions including the common cold, asthma, cough and bronchitis.

Tongue: thin white coat

Pulse: floating and slow

Contraindications: It is a warming and stimulating formula and not suitable for those with Internal weakness and Deficiency or for those with the common cold caused by External Wind-Heat attack.

Variations:

1. For arthritic Wind-Cold-Damp condition add White Atractylodes (Bai Zhu); this is

called Ma huang jia zhu tang

2. For common cold with perspiration, headache, nasal obstruction, cough with phlegm, eliminate Cinnamon Twig (Gui Zhi). This is called San ao tang.

Ma Huang and Apricot Seed Combination (Ma xing shi gan tang) This contains Ephedra (Ma Huang), Apricot Seed (Xing Ren), Licorice (Gan Cao) and Gypsum (Shi Gao) 10-20gms. Because of the addition of Gypsum (Shi Gao) it relieves Internal Heat and thirst. It is useful for common cold with fever, pneumonia, bronchitis, bronchial asthma, cardiac asthma, whooping cough, measles and hemorrhoids.

Ephedra, Aconite and Asarum Combination (Ma huang fu zi xi xin tang)
Ephedra (Ma Huang) 6-9gms Ephedra sinica

Prepared Aconite (Fu Zi) 3-6gms Aconitum carmichaeli

Wild Ginger (Xi Xin) 1-3gms Asarum heterotropoides

Properties and Actions:

a) Clears External Wind-Cold and induces diaphoresis

B) Tonifies Yang

Indications: For External Wind-Cold (common cold and influenza) with Yang Deficiency. This formula is indicated when there is Cold and Deficiency and may be tried when other formulas seem to be not strong enough. Symptoms include fever, severe cold intolerance, pale complexion, weakness and cold extremities.

Contraindication: Not for individuals with Yin Deficiency.

Major Blue Dragon (Da qing long tang) adds 10-20gms of Gypsum (Shi Gao) to help reduce Internal fever and Heat and 3-6gms of Fresh Ginger (Sheng Jiang) to eliminate External Wind and Cold. It is for more severe fever with restless irritability, intolerance of Cold, headache, muscle-aches, lack of perspiration, asthma, thirst and edema. The pulse is floating, tight and possibly rapid. The tongue has a thin white or yellow coat. This contrasts with the indications of Minor Blue Dragon (Xiao qing long tang) with symptoms of less severe fever with watery phlegm, allergic rhinitis, labored asthmatic breathing
Ophiopogon Combination (Mai men dong tang)
Ophiopogon (Mai Men Dong) 15-20gms Ophiopogon japonicus

Pinellia (Ban Xia) 6-9gms Pinellia ternata

Ginseng (Ren Shen) 3-6gms Panax ginseng

Rice (Jing Mi) 15-20gms Oryza sativa

Licorice (Gan Cao) 3-6gms Glycyrrhiza uralensis

Properties and Actions:

a) Nourishes Stomach and Lung Yin

B) Antitussive, lowers the Qi

Indications: Cough with little or no phlegm, hiccup, thirst, dry throat. It can be considered for TB, wasting lung diseases with accompanying dryness, bronchitis.

Tongue: red tip

Pulse: weak and rapid

Variations:

1. For Lung Yin Deficiency add Glehnia (Bei Sha Shen), Solomon's Seal (Yu Zhu), Asparagus Root (Tian Men Dong).

2. For Stomach Yin Deficiency add Dendrobium (Shi Hu) and Trichosanthes Root (Tian Hua Fen).

Ophiopogon and Trichosanthes Combination
(Mai men dong yin si)

Ophiopogon (Mai Men Dong) 7gms Ophiopogon japonicus

Pueraria (Ge Gen) 3gms Pueraria lobata

Licorice (Gan Cao) 1gms Glycyrrhiza uralensis

Ginseng (Ren Shen) 2gms Panax ginseng

Unprepared Rehmannia (Sheng Di Huang) 4gms Rehmannia glutinosa

Trichosanthes Root (Tian hua fen) 2gms Trichosanthes kirilowii

Poria (Fu Ling) 6gms Poria cocos

Bamboo Leaf (Zhu Ye) 1gms Phylostachys nigra

Anemarrhena (Zhi Mu) 3gms Anemarrhena asphodeloides

Schizandra (Wu Wei Zi) 1gms Schizandra chinensis

Properties and Actions:

a) Expectorant

B) Tonifies the Yin of the Lung

Indications: It clears evil Phlegm and moistens Dryness of the Lung. It can be used for chronic bronchitis, tuberculosis, chronic coughing, and coarse skin caused by diabetes.

Tongue: dry tongue with thin yellow coat

Pulse: rapid and thin

Ginseng and Astragalus Combination (Bu zhong yi qi tang)*
Astragalus (Huang Qi) 6-15gms Astragalus membranaceus

Ginseng (Ren Shen) 6-9gms Panax ginseng

White Atractylodes (Bai Zhu) 9-12gms Atractylodes alba

Licorice (Gan Cao) 3-6gms Glycyrrhiza uralensis

Dang Gui (Dang Gui) 6-9gms Angelica sinensis

Black Cohosh (Sheng Ma) 3-6gms Cimicifuga foetida

Bupleurum (Chai Hu) 6-9gms Bupleurum falcatum

Citrus Peel (Chen Pi) 3-6gms Citrus reticulata

Properties and Actions:

a) Tonifies Qi of the Spleen and Stomach

B) Raises the Yang

c) Detoxifies

Indications: It may be considered for chronic fatigue and weakness where sub-acute feverish or inflammatory symptoms arise as a result of physical exertion or stress. Symptoms include aversion to cold, poor appetite, preference for warmth including warm food and drink, general tiredness and weakness, shortness of breath, spontaneous perspiration, slow speech, a tendency to huddle up, thirst, loose stool. The complexion tends to be shiny and pale, the tongue light with a thin white coat and the

pulse weak and inflated.

This is traditionally considered the supreme tonic of Chinese herbalism. Besides tonifying Qi and Blood, the addition of Bupleurum (Chai Hu) and Cimicifuga(Sheng Ma) combine both anti-inflammatory properties with ascending qualities, which assists the Yang. The formula is designed to treat a condition of exhaustion where the Yang of the Middle and Upper Warmer collapses down into the Yin of the Lower Warmer. The result is a weakening of the immune system where energetically the Yang is unable to circulate and ascend so that it is unable to adequately protect itself from External pathogenic influences. The formula is therefore indicated for intermittent fevers and prolapse and perhaps bleeding of the Internal organs because of weakness and exhaustion.

Tongue: Pale, scalloped on the edges

Pulse: Thin and weak

Lonicera and Forsythia Combination (Yin qiao san) *
Honeysuckle and Forsythia Powder (Yin Qiao San)

Source: Systematic Differentiation of Warm diseases (Wen bing tiao bian)

Honeysuckle (Jin Yin Hua) 9-15gms Lonicera japonicae

Forsythiae (Lian Qiao) 9-15gms Forsythia suspensae

Platycodon (Jie Geng) 3-6gms Platycodon grandiflori

Burdock Seed (Niu Bang Zi) 9-12gms Arctii lappa

Field Mint (Bo He) 3-6gms Mentha haplocalycis

Schizonepetae (Jing Jie) 6-9gms Schizonepetae tenuifoliae

Prepared Soybeans (Dan Dou Chi) 3-6gms Glycine max

Black Bamboo Leaf (Dan Zhu Ye) 3-6gms Lophatheri gracilis

Phragmitis (Sheng Lu Gen) 15-30gms Phragmitis communis

Licorice (Gan Cao) 3-6 gms Glycyrrhizae uralensis

Preparation: Originally it was prepared by first cooking the Phragmitis (Lu Gen) long enough for the aroma to become strong. The other herbs are ground into a powder and taken in 9gm doses with the decoction. Today the entire formula is taken in decoction, or more commonly it is taken in patent pill form. If cooking, only add Bo He Mint (Bo He)

for the last five minutes.

Properties and Actions:

a) Diaphoretic, disperses External Wind-Heat

B) Alterative, antibiotic and antiviral, clears Internal Heat and relieves toxicity

Indications: It can be used for upper respiratory tract infections, colds, influenza with fever with slight or no chills, headache, thirst, cough, sore throat, acute bronchitis, measles, epidemic parotitis, acute endometritis, and early stage encephalitis or meningitis.

Tongue: red tipped with a thin, white or yellow coat

Pulse: rapid and floating

Note: This is a cooling formula with some mild nourishing properties. One practitioner favors its use along with or in place of antibiotic drugs when they are to be taken long term as in the treatment of certain venereal diseases and Lyme's disease.

Japan Is on High Alert as a Virus Infiltrates Bird-Heavy Regions

Jan 3 2011
http://www.nytimes.com/2011/01/04/health/04global.html?_r=4

Japanese bird sanctuaries, poultry farms and zoos went on high alert last month after several species of migratory birds in different regions were found dead of what appeared to be H5N1 avian influenza.

The virus frightened flu specialists when it resurfaced in Hong Kong in 2003 and quickly spread throughout Asia and along bird migratory routes to Europe and Africa. It has not mutated to spread among humans, though it still kills them occasionally — Egypt reported its 38th death last month.

According to articles in the Japanese press gathered by ProMED, which monitors disease outbreaks, a hooded crane was found dead of H5N1 on the Izumi Plain in Kagoshima Prefecture in southern Japan. The plain is Japan's largest wild crane wintering site, and the prefecture is the nation's top poultry-raising area.

Meanwhile, in Tottori, several hundred miles north, a wild tundra swan was found on a house balcony dying of what was tentatively identified as the flu virus found on a poultry farm about four miles away. That set off a search of the area, turning up 23 more dead birds, which are being tested.

Farther north, in Toyama Prefecture, a dead mute swan led to inspections of nearby poultry farms and a decision by a park in Hyogo Prefecture, on Japan's Inland Sea, to stop displaying its white storks, a national treasure, for fear that they would come into contact with infected wild birds.

Title: Cambodian Bird Flu-85% mortality rate
Description: *h5N1*

S.C.O.W.L. - March 11, 2011 05:33 AM (GMT)

http://www.infowars.com/cambodias-deadly-v...mortality-rate/

March 10, 2011

Ladies and Gentlemen, the next Black Death, a global pandemic of catastrophic proportions, has reared its ugly head in the Far East, home to many pandemic viruses. This time it is not a 30 per cent death rate, it is an 85 per cent death rate. It is called the Cambodian Avian Flu virus.

Avian Flu has been around for centuries. So have other pandemics. But an 85 per cent mortality rate?

Let us not invent, let us use the World Health Organization's communications:

Avian influenza – situation in Cambodia

9 February 2011 – The Ministry of Health of Cambodia has announced a new confirmed case of human infection with avian influenza A (H5N1) virus.

Japan to slaughter 410,000 chickens for bird flu

1/24/2011 5:19:20 AM ET
http://www.msnbc.msn.com/id/41225346/ns/us_news-environment/

TOKYO — An official says bird flu has been detected on a farm in southern Japan and its 410,000 chickens are to be slaughtered.

Miyazaki agricultural official Masuhiro Nozaki says five dead birds on the farm were confirmed infected with the H5 strain of bird flu late Sunday. Nozaki said more tests were under way to determine whether it was the virulent H5N1 subtype.

Nozaki said Monday that Japan will send some 170 ground troops to Miyazaki to help local authorities contain the spread of bird flu. Cars driving in and out of the area were being disinfected and the movement of chickens and eggs from farms in the area was banned.

S. Korean quarantine officials find dead owls affected by bird flu

December 10, 2010
http://www.oananews.org/view.php?id=145472

SEOUL, Dec. 10 (Yonhap) - South Korean quarantine officials found two dead eagle owls infected with the virulent strain of bird flu in the central western part of the country on Friday. The farm ministry, however, said that the discovery of the owls did not mean South Korea was affected by the disease since no domestically raised ducks and chickens have become sick from the highly contagious influenza. Exports of poultry will not be affected by the discovery, it stressed. The wild ...

S.Korea reports first bird flu outbreak since 2008

Dec 31 2010
http://www.breitbart.com/article.php?id=CN...&show_article=1

South Korea on Friday confirmed its first outbreak of bird flu for more than two years, with more than 100,000 birds slaughtered as authorities bid to contain the lethal virus.

Two poultry farms, one in the central city of Cheonan and the other in the southwestern city of Iksan, were confirmed to have been contaminated by the H5N1 virus, the agricultural ministry said.

It marked the first time since April 2008 that the country has been hit by avian influenza, it said.

"All the 10,700 ducks at the farm in Cheonan and 17,000 breeding chickens at the farm in Iksan have already been culled and buried, together with 92,000 chickens raised at nearby farms," the ministry said in a press statement.

Both farms have been placed under quarantine, with movements of vehicles and people restricted.

It comes after Seoul confirmed three cases of the virulent H5N1 bird flu strain from wild migratory birds that arrived in the country for the winter earlier in December.

Health authorities have stepped up inspections of wild birds and urged poultry businesses to take extra precautions such as erecting nets around their farms to keep out wild birds.

Yoo Man-Keun, a senior official in Cheonan City, said migrant birds were suspected of having transported the virus.

"Migrant birds are coming down to farms as they are unable to find food at their natural haunts," Yoo told journalists. "We've put up scarecrows to scare them away, but all to no avail."

South Korea has been hit by avian influenza three times, with the last outbreak in April 2008.

In 2008, South Korea had to cull more than eight million birds to curb the virus, resulting in damages estimated at 200 billion won (194 million dollars at the time).

In the country's 2003-2004 outbreak, 5.28 million birds were culled, while a 2006-2007 outbreak resulted in 2.8 million birds being destroyed.

Four people were confirmed to have been infected with the bird flu virus in late 2003 in South Korea but they showed few symptoms, health authorities said.

The avian influenza outbreak is likely to further strain the country's health system which has already been struggling to contain swine flu and foot-and-mouth disease (FMD) cases across the country.

A South Korean man has died from swine flu, becoming the country's first reported human death from the virus this winter, health officials said Thursday.

The 30-year-old man, who was taken to hospital after showing symptoms on Monday, died on Wednesday and tests showed he was infected with the A (H1N1) virus, the Korea Centers for Disease Control and Prevention said.

As of Friday, a total of 72 FMD cases have been reported across the country since November 29, prompting the culling of more than 580,000 cloven-hoofed animals including cattle and pigs in the worst-ever such outbreak.

The agriculture ministry has estimated losses due to the FMD outbreak at 400 billion won (355 million dollars).

View Full Version: H1N1 kills 1, authorities detect 89 bird flu spots

Title: H1N1 kills 1, authorities detect 89 bird flu spots
Description: *in Nile Delta*

TheUnhivedMind - December 15, 2010 04:05 AM (GMT)

H1N1 kills 1, authorities detect 89 bird flu spots in Nile Delta

Ahram Arabic Portal , Wednesday 8 Dec 2010
http://english.ahram.org.eg/NewsContent/1/...spots-in-N.aspx

Officials in the Nile Delta governorate of Menoufeia have declared a state of high alert following the death of an H1N1 patient and the detection of 89 infected areas.

The Nile Delta governorate of Menoufeia announced a state of high alert following the death of an H1N1 patient and the infection of two others on Monday.

Authorities have said they detected 89 highly infected areas with the bird flu. Experts say all infected cases were among home-bred birds and authorities added that the infection spread is being managed by the slaughtering of all infected birds.

Hisham Yousef, a ministry of health official in Menoufeia, said that hospitals also announced a state of high alert and readiness to receive patients suspected of either H1N1 or bird flu. Doctors have been trained to detect the cases and transfer them to central hospitals. Samples are also immediately sent to the central labs for examination.

17 000 birds killed for fear of bird flu

The ministry of Agriculture on Friday [12 Nov 2010] ordered the killing of 17 000 ducks and geese over fears that the LPAI virus detected (H5N2) [see comment] could mutate into the high pathogenic H5N1.

The infection was detected on a poultry farm in Parchim, in Germany's state

Mecklenburg-West Pommerania [N central Germany], during a routine check visit. No signs of clinical disease were detected.

The last time avian influenza was reported in Germany was in 2006, on the Island Ruegen [In the Baltic Sea. where -- in Feb-Mar 2006 -- a large number of wild swans, ducks, geese, birds of prey, as well as some cats and a stone marten were found to have H5N1 infection; see archived 20060214.0489 and 20060310.0761. - Mod.AS].

Low pathogenic AI viruses found in poultry stocks

Low pathogenic avian influenza virus subtype H5 has been detected on a farm with free-range poultry flock in Parchim, Mecklenburg-Vorpommern [Mecklenburg - West Pommerania].

This farm participates voluntarily in the national AI monitoring program.

During these investigations, the antibody for H5 was found in several blood samples. To clarify these findings, the statutory swab samples were taken from living animals and examined for virus particles and low pathogenic influenza A virus subtype H5 was detected. This finding by the State Office for Agriculture, Food Safety and Fisheries has been confirmed today [11 Nov 2010] by the National Reference Laboratory at the Friedrich-Loeffler-Institute, while ruling out highly pathogenic virus.

<http://poultrymed.com/>

[A confirmation of the designation, by the laboratory, of the LPNAI detected in Parchim as H5N2, would be appreciated. Previous LPNAI cases in Germany were, reportedly, related to H5N3.

For the definition of low pathogenicity notifiable avian influenza (LPNAI), see <http://oie.int/eng/normes/mcode/en_chapitre_1.10.4.htm>. - Mod.AS

The interactive HealthMap/ProMED map for Mecklenburg-Vorpommern, Germany, is available at <http://healthmap.org/r/0g4j> - CopyEd.EJP]

TheUnhivedMind - November 18, 2010 05:33 PM (GMT)

Hong Kong Quarantines Bird Flu Woman, Will Check Poultry Markets

By Marco Lui and Tatiana Lau - Nov 18, 2010 9:22 AM GMT+0000
http://www.bloomberg.com/news/2010-11-17/h...try-market.html

A Hong Kong woman who contracted H5N1 bird flu, the first case in the city since 2003, has been quarantined in intensive care and the government will inspect poultry markets over the next few days.

There was no indication of human-to-human transmission of the influenza and eight close contacts of the 59-year-old woman are showing no symptoms, Secretary for Food and Health York Chow told reporters in Hong Kong today.

The woman visited China Oct. 23 to Nov. 1 with her husband and daughter, and didn't have contact with live poultry or farms there, the Centre for Health Protection said in a statement posted on the government website. The Hong Kong government raised its flu response level to "serious," Chow said yesterday.

"We think the risk of avian influenza in Hong Kong is not that significantly higher than before," Chow said. "But since there is one case, we have to be very careful as it might actually point out its source of infection, which might give rise to another case."

While health officials cannot be certain about where the woman caught the disease, they see a "high probability" it was outside of Hong Kong, Chow said.

The women visited a poultry market in China and ate chicken, according to her husband, Thomas Tsang, controller of the Centre for Health Protection, said yesterday.

The patient visited Shanghai, Nanjing and Hangzhou on her trip. She returned to Hong Kong Nov. 1, showed flu symptoms one day later and entered hospital on Nov. 14 with persistent fever, the government said.

Her 60-year-old husband recovered from a runny nose and cough, the statement said.

Six people died in Hong Kong in a 1997 bird flu outbreak that prompted health authorities to cull all of the chickens and ducks in the city.

Title: BIRD FLU JUMPS TO PIGS
Description: *[IN TIME FOR ECONONIC COLLAPSE?!?!]*

craig-oxley - October 14, 2010 01:31 AM (GMT)

Bird flu jumps to pigs

15:38 07 September 2010 by Deborah MacKenzie
http://www.newscientist.com/article/dn1941...ps-to-pigs.html

The H5N1 bird flu virus may be evolving the ability to spread from mammal to mammal, says a team who have discovered that pigs in Indonesia have been infected with the disease since 2005. It's one step in the frightening chain of events that could lead to human transmission and a pandemic.

The H5N1 bird flu kills 60 per cent of the people it infects. However, most infections occur after direct contact with an infected bird and the disease does not appear to spread well between humans. As long as human to human transmission remains rare, the virus cannot cause a flu pandemic.

This could change. One way the virus could develop the ability to spread among humans is to first infect pigs, which have many biochemical similarities to humans. Flu viruses adapted to pigs have less trouble adapting to humans than do bird flu viruses – one pig-adapted virus caused the swine flu pandemic in 2009.

Chairul Nidom of Airlangga University in Surabaya, Indonesia, and colleagues in Japan, have been tracking H5N1 in pigs since 2005 in Indonesia, the country hardest hit by the avian flu virus. They now report that between 2005 to 2007 when the avian flu peaked, 7.4 per cent of 700 pigs they tested also carried H5N1. There have been sporadic reports of H5N1 in pigs, but this is the first time the extent of the problem has been measured.
Poultry to pig

In each case, the virus in pigs closely resembled H5N1 from nearby outbreaks in

poultry, suggesting it has jumped from the bird to the pig population. That and the small proportion of pigs infected suggests the virus cannot yet spread between pigs. "If the virus was better adapted to pigs it would have spread like wildfire," says Ab Osterhaus of the University of Rotterdam in the Netherlands, a flu expert not involved in the research.

Since 2007, avian flu outbreaks have diminished in poultry and in people in Indonesia and the investigators found that the the rate of infection in pigs has similarly dropped. Although pigs are still carrying signs of recent infection.

This means the virus could still be spreading and evolving because the team discovered, to their surprise, that infected pigs show no symptoms. "H5N1 viruses could easily evade detection as they spread through Indonesia in asymptomatic pigs," warn Nidom and colleagues.

And there are worrying indications that H5N1 is already evolving. Nidom says that in one pig, the virus had developed the ability to bind to a molecule present in the noses of both pigs and humans. That's exactly the kind of change that could allow it to spread between people.

"This shows we should keep a close watch on pig flu, as it can change rapidly," warns Osterhaus. The European Union is heeding the call and is funding a scientific collaboration called FLUPIG, to study how bird flu adapts to pigs and how pig flu spreads to people. It will meet for the first time later this month.

craig-oxley - October 14, 2010 01:33 AM (GMT)

All I'll say is that if you're worried about Bird Flu then I suggest you stock your house up with Japanese Honeysuckle, Chrysanthemum flower and Mung beans amongst the typical herbal medicines such as Olive leaf etc. Garlic is very good but if you have a fever and extreme heat in the lungs its no good and you need the dramatic cooling of Honeysuckle and Chrysanthemum. Of course the Ozone machine etc will also be of use.

Bird flu outbreak in Romania, EU's first in a year

(AFP) BUCHAREST — The first outbreak of the deadly H5N1 bird flu in Europe for a year has been identified in a backyard poultry farm in Romania, the European Commission said Tuesday.

The outbreak, in Tulcea county, close to the Ukrainian border, was discovered on Monday and prompted immediate security measures, the EU's executive arm said in a statement.

These include the killing of all poultry in the infected farm and the establishment of a three kilometre (two mile) protection zone and a wider "surveillance zone" around the farm with strict controls on movements in or out.

"The presence of the virus was confirmed on two hens that were found dead on a small private farm," Raul Balogh, spokesman of the Romanian Sanitary and Veterinary Authority, told AFP.

"No other case has been discovered since," he added.

Balogh said tests are regularly conducted on poultry in the Danube delta, given the proximity of migratory birds, considered to be carriers of the virus.

Romania was hit by massive bird flu outbreaks in 2005 and 2006, when more than a million poultry were slaughtered.

Avian influenza or "bird flu" is a highly contagious viral disease which primarily affects birds, but on rare occasions can also be contracted by humans and other mammals.

The strain of avian influenza which is currently causing concern is the highly pathogenic H5N1 which has affected many countries worldwide, including parts of Asia, Africa and Europe.

H5N1 can spread rapidly through poultry flocks and wild birds are considered to be contributing to its spread around the globe. It does not jump easily from birds to humans.

However around 290 people have died of the human form of avian flu since 2003, according to the World Health Organisation.

The Romanian case is the first detection of the highly avian influenza H5N1 in the European Union in a year.

The last case, confirmed in March 2009, was discovered in a wild duck shot during a hunt near Starnberg, in Bavaria, southern Germany.

On Sunday at least 117,000 chickens were destroyed in northern Bangladesh after an avian flu outbreak on one of the country's largest poultry farms.

What the f--k this is nothing but a food shortage creation, its also a form of economic warfare.

craig-oxley - September 14, 2010 09:06 PM (GMT)

Yes people don't see this as a form of food warfare. They demonise a food, product and then remove it with acceptance through conditioning the sheople ready for this. You noticed in the past how they've claimed a bird or two has got H5N1 and then they've culled a complete farm of animals. Based on false tests done to suit and promote fear. Also remember how its

been highlighted that they usually have a big sacrifice of animals to appease the Gods prior to a big event or war coming.

Urgency needed in (bird flu) pandemic preparation: U.S. official

Wed, Apr 21 2010

HANOI (Reuters) – The task of preparing for flu pandemics remains urgent, and the world must guard against complacency in the wake of the (swine flu) H1N1 outbreak, which appears less deadly than a potential bird flu pandemic, a U.S. health official said.

Participants in a ministerial conference on influenza in Hanoi, “felt the need to re-commit” to the effort, Assistant Secretary of State for Oceans and International Environmental and Scientific Affairs Kerri-Ann Jones said on Wednesday.

About 17,000 people have died from laboratory-confirmed cases of H1N1 but the World Health Organization, which declared the H1N1 flu a pandemic last June, has said the real death toll is likely to be many times higher.

Initial fears that the pandemic would kill millions have turned out to be unfounded so far. Orders for vast quantities of vaccines are being renegotiated.

Experts, however, fear that if the more deadly H5N1 bird flu virus mutates to become easily transmissible between humans it could lead to such a pandemic.

“We still continue to be in a period of urgency,” Jones told a news conference.

“There was some sense that when a pandemic did occur it was H1N1 and we were lucky, even though there was loss of life, which is always tragic, it was not as tragic or as virulent as H5N1 could be,” she later added.

“The sense is that that event may have led to some sense of: we’re over-reacting, we’re

over-preparing." The tone and message from the conference about re-commitment was: "Let's not slip into complacency," she said.

View Full Version: Could Obama’s visit to Krakow spark a bird flu

Title: Could Obama’s visit to Krakow spark a bird flu
Description: *pandemic?*

craig-oxley - April 17, 2010 01:47 PM (GMT)

Could Obama’s visit to Krakow spark a bird flu pandemic?

April 16, 2010 by Jane Burgermeister

President Obama will fly to Krakow for the state funeral of President Lech Kaczynski almost one year to the day when he visited Mexico City in a trip that coincided with a swine flu pandemic outbreak.

Obama was in Mexico City on April 16th and 17th, 2009.

An archaeologist, Felipe Solis, who showed Obama around Mexico City’s museum came down the following day with “flu-like symptoms” and died seven days later, sparking a swine flu scare.

Obama will be attending the funeral of Kaczynski in Wawel Castle on April 17th and 18th, 2010, almost one year exactly to the day.

Is there any chance of a bird flu pandemic breaking out this time?

Will the globalists attempt another bioterrorism attack in Krakow?

It cannot be ruled out given the evidence that the globalists like to follow regular spatial, numerological and temporal patterns.

In addition, WHO and pharmaceutical companies have said they anticipate a bird flu pandemic in the near future.

The UK and French governments have cancelled swine flu vaccines – but only to purchase bird flu vaccines.

Apart from an interval of almost one year exactly, there are other parallels with Obama's visit to Mexico City and his visit to Krakow that suggest some major event might occur whether a bird flu pandemic or a false flag nuclear attack.

Firstly, the massed ranks of the world's media will be present for the funeral of Lech Kaczynski – and the corporate media's presence in Mexico City last April was a key factor in creating the enormous theatre and scare mongering around the swine flu pandemic when, in reality, the virus was mild.

Also, the setting of the funeral, the Royal Castle of Wawel, is rich in symbolism for the globalists.

Wawel Castle is the home of the Polish crown jewels: the Mexican National Museum visited by Obama last April housed the treasures of the Aztec empire, including the Aztec Sun Stone.

It appears that the globalists seek to make contact with the eternal and sacred source in external works of art and in historical buildings belonging to royal families and dynasties.

While most sacred traditions and religions such as Platonism, Christianity, Buddhism, Islam, Hinduism emphasise that the eternal and sacred is interior to our spirits, and can be accessed by meditation and intuition, aided by symbols and rituals, the globalists appear to believe they must look outside themselves for the sacred and physically travel to sacred places and enact rituals and rites to activate magical psychic powers.

It seems that the globalists consider Helena Blavatsky's esotericism cult art, involving rites and incantations for controlling spirits to be an ideology or dogma, and that they follow the same rituals, the same rites, and the same numerological and temporal patterns, over and over again.

The globalists like to see themselves as the heirs of the great civilisations of the Mayans, Egyptians and Greeks, Polish dynasties ec but there is evidence they project onto these civiliasations their own whimsical views.

Wawel Castle was the coronation site of Polish kings, and is now the representative building of the Polish state.

By taking control of Wawel Castle after decapitating the Polish elite in an engineered plane crash, the globalists could attempt to crown themselves symbolically as the leaders of Poland in a secret ceremony far from the prying eyes of the world, and to ask the occult forces to assist them in their plan for world domination by unleashing world war three or a bird flu pandemic.

Wawel Castle overlooking the Vistula river is a spectacular setting under the open sky,

and the globalists like to re-enact ancient rituals and ceremonies of their cosmic struggle to take control of the globe in vast indoor and outdoor theatres.

There is evidence that the massacre of the Polish elite was planned over a long period of time and that Kaczynski's funeral will be held in Wawel castle only to allow the globalists to participate in an occult ceremony there.
Wawel Royal Castle is the burial place of the greatest of Polish kings, heroes and leaders, including Marshal Józef Pi•sudzki, the architect of Poland's independence after 123 years of partition. Kaczynski's achievements pale in comparison.
Poland will mourn not so much his death as the death of leading generals, the central bank governor and the security chief.

Almost the entire top tier of the globalist politicians and royal families will be attending the funeral at Wawel, anxious to bathe themselves in the borrowed glory of Polish heroes.

In a ceremony that is reminiscent of a Shakespeare play, the very people who will benefit most from the plane crash, will be mourning the victims.

Shakespeare probes the character of deceit in his plays – and also the disastrous personal and social consequences of „Vaulting ambition, which o'erleaps itself."

The globalists need only read Shakespeare's Macbeth to find out what happens to those who driven by intense ambition overstep the invisible laws and limits set by the gods or God, and murder the innocent.

First Vietnam bird flu death in 2010

http://www.nst.com.my/Current_News/NST/art...icle/index_html
2010/02/26

HANOI: A 38-year-old woman has become the first victim of bird flu in Vietnam in 2010, bringing the country's toll from avian influenza to 58, the health ministry said Friday.

The woman died Tuesday in the southern province of Tien Giang after two days of unsuccessful hospital treatment, said the ministry in an online statement.

The victim had killed and cooked sick waterfowl, the statement added. Vietnam's last death from the H5N1 virus was in December.

At present, outbreaks of bird flu among poultry have been reported in five provinces.

Vietnam ranks second after Indonesia for the highest bird flu death toll, according to the World Health Organization.

The H5N1 virus typically spreads from birds to humans via direct contact, but experts fear it could mutate into a form easily transmissible between humans, with the potential to kill millions in a pandemic. -- AFP

View Full Version: Scientists bioengineer a lethal bird flu & seasona

Title: Scientists bioengineer a lethal bird flu & seasona
Description: *flu mutation [CLEVER, NOT!]*

craig-oxley - February 26, 2010 04:58 PM (GMT)

Scientists bioengineer a lethal bird flu and seasonal flu mutation

Wednesday, 24 February 2010 12:02

Scientists have used reverse genetics to make 254 possible new viruses after mixing H5N1 bird flu and the H3N2 seasonal flu virus, and found that three of these were "extremely virulent", according to a recent study published in the Proceeding of National Academy of Sciences.

Studies showing that the bird flu can be genetically mixed with seasonal H3N2 flu to create a deadly combination were published as early as 2008. While the bird flu is very deadly, killing around 60% of the humans it infects, it does not spread easily between people. The H3N2 virus, on the other hand, can easily spread but usually not deadly.

It was this lethal combination of bird flu and H3N2 seasonal flu viruses that Baxter created in its biomedical facilities in Austria in February 2009 when it contaminated 72 kilos of the seasonal flu with the live bird flu virus, so nearly sparking a global bird flu pandemic. Given that Baxter has to follow biosafety level 3 regulations, an accidental contamination can be virtually ruled out.

A pandemic emergency level 6 declaration by WHO triggers contracts that Baxter and other pharmaceutical companies have with governments to supply billions of dollars of inadequately tested and potentially harmful vaccines. Furthermore, under a pandemic emergency level 6, police can force people to take the vaccination or go into quarantine.

The finding of the latest study appear to be being used to hype the threat of the emergence of a lethal swine flu and bird flu hybrid even though the study did not focus on the swine flu virus.

"Our findings highlight the importance of surveillance programs to monitor the emergence of human H5 reassortant viruses," said one of the scientists.

Abstract

The spread of avian H5N1 influenza viruses around the globe has become a worldwide public health concern. To evaluate the pathogenic potential of reassortant viruses between currently cocirculating avian H5N1 and human H3N2 influenza viruses, we generated all the 254 combinations of reassortant viruses between A/chicken/South Kalimantan/UT6028/06 (SK06, H5N1) and A/Tokyo/Ut-Sk-1/07 (Tok07, H3N2) influenza viruses by reverse genetics. We found that the presence of Tok07 PB2 protein in the ribonucleoprotein (RNP) complex allowed efficient viral RNA transcription in a minigenome assay and that RNP activity played an essential role in the viability and replicative ability of the reassortant viruses. When the pathogenicity of 75 reassortant H5 viruses was tested in mice, 22 were more pathogenic than the parental SK06 virus, and three were extremely virulent. Strikingly, all 22 of these viruses obtained their PB2 segment from Tok07 virus. Further analysis showed that Tok07 PB1 alone lacked the ability to enhance the pathogenicity of the reassortant viruses but could do so by

cooperating with Tok07 PB2. Our data demonstrate that reassortment between an avian H5N1 virus with low pathogenicity in mice and a human virus could result in highly pathogenic viruses and that the human virus PB2 segment functions in the background of an avian H5N1 virus, enhancing its virulence. Our findings highlight the importance of surveillance programs to monitor the emergence of human H5 reassortant viruses, especially those containing a PB2 segment of human origin.

Research in mice suggests avian and seasonal flu virus could combine

Last Updated on Tuesday, 23 February 2010 20:06

Deadly Hybrid Flu Possible

By Randy Dotinga

(HealthDay News) -- Research in mice suggests the avian flu virus and the ordinary seasonal flu virus could combine to create a new deadly kind of flu, researchers say. A single bit of genetic material from the seasonal virus converted the avian flu -- officially known as H5N1 -- into a very dangerous form, the scientists report in a study published in the Feb. 22-26 online edition of the Proceedings of the National Academy of Sciences. "Some hybrids between H5N1 virus and seasonal influenza viruses were more pathogenic than the original H5N1 viruses. That is worrisome," study senior author Yoshihiro Kawaoka, a virologist at the University of Wisconsin-Madison, said in a news release. Avian flu, also known as bird flu, has killed 262 people, according to the World Health Organization, but it hasn't become very infectious between people. The researchers warn that swine flu -- H1N1 -- could also play a role in viral combinations. "With the new pandemic H1N1 virus, people sort of forgot about H5N1 avian influenza. But the reality is that H5N1 avian virus is still out there," Kawaoka said. "Our data suggests that it is possible there may be reassortment between H5N1 and pandemic H1N1 that can create a more pathogenic H5N1 virus." View Full Version: THREAT OF BIRD FLU PANDEMIC HYPED

Title: THREAT OF BIRD FLU PANDEMIC HYPED

craig-oxley - February 11, 2010 04:43 PM (GMT)

THREAT OF BIRD FLU PANDEMIC HYPED

Wednesday, 10 February 2010 14:37

The World Organization for Animal Health based in Paris is spreading fear concerning the spread of the bird flu infection to humans in Vietnam.

The possibility of transmission of infection from birds to humans remains high during the Vietnamese New Year festival which takes place on February 14 because live poultry and poultry products are handled extensively, maintains the OIE.

The closest so far that the world has come to a bird flu outbreak was in February 2009 when Baxter contaminated 72 kilos of vaccine material with the live bird flu virus and sent it to 16 labs.

WHO supplied by the lethal bird flu virus to Baxter, and a WHO scientist, Professor Bruno Lina, is engaged in research in Lyon to make the swine flu more lethal, according to a report in Nature.

Vietnam has reported at least four outbreaks from different provinces in January according to OIE.

View Full Version: Cannabis to protect you from H1N1

Title: Cannabis to protect you from H1N1
Description: *this amazing herb should legal then*

Ken Ardel - November 24, 2009 04:42 AM (GMT)

http://www.thefreelibrary.com/Cannabis+Sci.....-a0201615432

Cannabis Science: Can Cannabis-Based Drugs Slow the H1N1 "Swine Flu" Pandemic?

SAN FRANCISCO -- The World Health Organization declared a swine flu pandemic Thursday, raising its pandemic warning from phase 5 to 6, making swine flu the first global flu epidemic in 41 years. Now that H1N1 "Swine Flu" has been elevated to pandemic status, with reports of outbreaks in Asia, the Middle East and Europe, San Francisco, USA-based Cannabis Science Inc. (OTCBB

: CBIS) CEO
Steven Kubby urges public health officials around the world to "take
medical cannabis seriously."

According to the company, which specializes in cannabis research and development for medical purposes, the world may have at its disposal a means of combating the affects of this deadly disease. Dr. Robert J. Melamede, Director and Chief Science Officer for CSI reports, "Research into use of whole cannabis extracts and multi-cannabinoid compounds has provided the scientific rationale for medical marijuana's efficacy in treating some of the most troubling diseases mankind now faces, including infectious diseases such as the flu and HIV,
autoimmune diseases such as ALS (Lou Gehrig's Disease

), multiple sclerosis, arthritis, and
diabetes, neurological conditions such as Alzheimer's, stroke and brain injury, as well as numerous forms of cancer."

Evolution-Slimming.com/Immanise
Relieve Your Cold
Use Our Online Tips & Advice To Help Relieve Cold & Flu Symptoms!
www.benylin.co.uk/Cold

Dr. Melamede went on to say, "The high lethality of some strains of flu can be attributed to the excessive inflammatory response driven by Tumor Necrosis Factor

(TNF

). Endocannabinoids
are nature's way of controlling TNF activity. Phytocannabinoids can mimic the natural endocannabinoids to prevent excessive inflammatory immune responses."

Upon hearing that WHO had elevated the swine flu to pandemic status, CSI's CEO Steve Kubby said, "Governments all over the world ought to seriously consider the advantages of medical cannabis."

On Wednesday, WHO said 74 countries had reported nearly 27,737 cases of swine flu, including 141 deaths. There are over 90 confirmed cases in the United States, with reports of infections in 11 states, and one U.S. fatality, a 23 month old child in Texas. Symptoms include a high fever, body aches, coughing, sore throat and severe respiratory congestion

.

Chief Science Officer for CSI Dr. Melamede believes the potential for cannabinoids

that
naturally prevent excessive inflammatory immune responses is enormous. He stated, "Based upon recent discoveries regarding the role that endocannabinoid system plays in maintaining human health, we may have a unique solution to the looming threat posed by deadly influenza strains that we believe, if implemented, could save millions of lives."

About Cannabis Science, Inc.

Cannabis Science, Inc. is at the forefront of medical marijuana research and development. The Company works with world authorities on phytocannabinoid science targeting critical illnesses, and adheres to scientific methodologies to develop, produce, and commercialize phytocannabinoid-based pharmaceutical products. In sum, we are dedicated to the creation of cannabis-based medicines, both with and without psychoactive

properties, to treat disease and
the symptoms of disease, as well as for general health maintenance.

Forward-Looking Statements

This Press Release includes forward-looking statements within the meaning of Section 27A of the Securities Act of 1933 and Section 21E of the Securities Act of 1934. A statement containing works such as "anticipate," "seek," "intend," "believe," "plan," "estimate," "expect," "project," "plan," or similar phrases may be deemed "forward-looking statements" within the meaning of the Private Securities Litigation Reform Act of 1995. Some or all of the events or
results anticipated by these forward-looking statements may not occur. Factors that could cause or contribute to such differences include the future U.S. and global economies, the impact of competition, and the Company's reliance on existing regulations regarding the use and development of cannabis-based drugs. Cannabis Science, Inc. does not undertake any duty nor does it intend to update the results of these forward-looking statements.

craig-oxley - December 13, 2009 04:16 PM (GMT)

Just remember one thing though my friend. It is Knight of Malta, George Soro's who is desperate to get the mass sheople puffing on Cannabis. This is of course the foot in the door for hard drugs like the British SIS, Heroin and of course their CIA's Cocaine. Please don't forget Equestrian Order of the Holy Sepulchre of Jerusalem's, Don Juan 'Afsmackistan' Carlos of Spain and his control over the Worldwide Heroin trade. All in preparation for the new Western World Society within the World Company Limited. A society known as the Post Industrial Zero Growth Society.

map - December 13, 2009 04:25 PM (GMT)

great info as always craig...

if you don't mind, i will start using 'Afsmackistan' now :lol:

craig-oxley - December 16, 2009 03:44 PM (GMT)

What I say on here is for everyone to utilise and highlight elsewhere.

Wolveshater - December 16, 2009 04:07 PM (GMT)

I've memorized Craig's awesome rants to the letter.. If I was a wee bit younger I'd Canoe on over and have a spot of tea with the man...

Etznab - December 22, 2009 07:00 AM (GMT)

;)

Etznab - December 22, 2009 07:14 AM (GMT)

to Craig's response I've smoke pot...on a daily bases but recently i've stopped. But I've never had the urge to step thru that imaginary door many people seem to see that leads to harder drugs. I think most seem to stumble on the harder drugs by accident or just seem to want t get higher and higher which is pretty irresponsible in my eyes. schools don't teach that anymore, Pot is not a gateway drug to other drugs human desire for harder and better things that make us feel out of this wold or w.e reason they seem to try other drugs now that's the issue. Were only thought to say no to drugs, i don't know about you but never have i looked at a egg and thought it was a brain. unless i wasn't getting good sh*t(pun intended). Parents these days aren't even prepared to how to teach children about what drugs do what and how to handle the situation of finding their child using or becoming addicting to a stronger drug. EDUCATION is key in order for teens and adults to understand the consequences of harder drugs, excluding of course natural plant the so happen to have and effect on human perception of reality by either setting on fire or ingesting. harder drugs need to be chemically processed to be made like heroin, crack, cocaine, and prescription pills. therefore why cannabis is still illegal because it might just be the only drug people will only enjoy to use, it cures about everything, the hemp plant would put the timber industry into a complete halt, and it

cant be tax. further more chemically processed drugs are cheaper to obtain, are stronger highs except for cocaine which i think is still more expansive then but a 5 dollar baggie of marijuana, since were not even allowed to cultivate our own 32 states allow the medical use for cancer patients and chronic patients, and cultivation for one user and that user needs to share that harvest with 2 or 3 other patients who need it, but to do that one needs to get a license...were still been tracked and put into paperwork for our habits....shame. so to end this i doubt these mafiosi secret society want people to start puffing up marijuana to lead into other drugs. they dont want them to start puffing marijuana because then they wouldn't have the forerunner for the drug war on dope since the alcohol prohibition is done they need a new face to slander and marijuana is the fall man. a beautiful plant with numerous uses, that can help many countries created jobs and bring them out of their economic dept but the big rats up top know this and will make sure this does not happen but can any one guess?.....please at least try..... by scaring parents, uneducated kids on the negative effects of drugs, by believing what the teacher planner gives them, but not using real facts and real stories of what educated people who know whats actually going on. but i guess its a losing battle these scumbags have a hand in everything and anything and there seems nothing we can do about this. but try ad educate the people ourselves or the ones who are willing to listen instead of remembering their childhood brainwashing say no drugs, tobacco is wacko, Dare to say no, and the every famous I'm above the influence. which then confuse the child's fragile mind gets confused by their music videos, movies, TV's, mags, and the to top it off their friends who are just as confused and don't seem to know whether smoking pot is enough and if the ecstasy pill does make you feel friendly, horny, and energetic. but the poor soul seems to forget that your blood temp boils over and you cook from the inside out. but ey middle school never thought us too busy showing videos of how herpes looks like on a human body, and how a vagina looks like giving birth but thats a story for another day :)

JordanBrett - December 23, 2009 02:00 AM (GMT)

cannabis is supposed to protect the body from multitudes of viruses and bacteria

Soldiers Get Mass Swine Flu Shots Before Holidays

Published on 12-13-2009 Email To Friend Print Version
http://news.yahoo.com/s/ap/20091211/ap_on_..._army_swine_flu

Thousands of Army recruits in training must line up at least once more before heading home for the holidays, this time for mass inoculations by the hundreds against swine flu.

The Army's largest training camp, just outside Columbia, S.C., and other posts are hurrying to finish the shots before the year-end break. More than 40,000 soldiers in advanced and basic training across the country head home over the next two weeks in a massive troop movement known as "block leave," Army officials said.

"We have been very aggressive in trying to assure the safety of our soldiers," said Maj. Soo Hee Kim-Delio, the Army physician in charge of the inoculations at Fort Jackson. "Our basic training population is at particularly high risk."

Swine flu, also known as 2009 H1N1, has proved to be similar to seasonal flu but a bigger threat to children and young adults. Many of the trainees are in their late teens and early 20s.

The soldiers are also vulnerable because of the physical stress of basic training and from living at close quarters with hundreds of other recruits, Kim-Delio said. When they return home, they may rub shoulders with a host of relatives or be around children fresh from exposure at school.

Fort Jackson recorded the Army's first death from complications of swine flu when Spc. Christopher Hogg of Deltona, Fla., died Sept. 10 from pneumonia due to H1N1

influenza, authorities said.

Fort Jackson started the shots about two weeks ago and expects to vaccinate as many as 9,000 soldiers by the end of this week and another 2,000 by the middle of next week. The trainers who remain on post, the Army's medical work force, family members, pregnant women and those with certain medical conditions such as asthma also will get the shots for a total of about 15,000 doses, Kim-Delio said.

Overall, the Department of Defense purchased 2.7 million doses of the H1N1 vaccine, which it is trying to deliver to soldiers, sailors, airmen and Marines around the globe before the end of the year, department spokesman Col. Wayne Hachey said.

At Fort Knox, Ky., home of the Army's Armor School, about 13,000 soldiers have been vaccinated for the swine flu, but the post won't get another shipment of doses until January. Capt. Franklin Hogue, who is in charge of the flu program there, said they have vaccinated approximately 70 percent of their troops.

At the Army's sprawling Fort Campbell, on the Kentucky-Tennessee line, over 7,000 soldiers have been vaccinated, according to Laura Boyd, a spokeswoman for Blanchfield Army Community Hospital. Another 5,000 doses have been given to families, retirees, schoolchildren and others in the community.

Flu shots are mandatory for all active duty men and women unless they have a medical condition such as an egg allergy, officials said.

"It's just one more shot in a long list of shots," Staff Sgt. David Gavula said after rolling up his sleeve for a swine flu shot at this post's vaccination clinic.

Gavula, of North Kingstown, R.I., also got a seasonal flu shot several months ago. But if left to his own devices, "I probably wouldn't bother to do it," the 26-year-old infantry soldier said with a shrug.

View Full Version: NICOTINE CAN STOP CYTOKINE STORM

Title: NICOTINE CAN STOP CYTOKINE STORM
Description: *[IS THIS WHY THEY'RE BANNING CIGS??]*

craig-oxley - May 15, 2009 01:34 AM (GMT)

Now you know the reason possibly why so many people have been bought off cigarettes in reality. Many people who smoke cigarettes are actually the low lifes of society which the Maltese actually want rid of as a whole. So they must make a campaign to get everyone off smoking so they can get their kill shots and more into the direct populance their targetting also relying on this lower classes bad eating and drinking habits making their bodies the perfect solution for viral attack. We knew something was very fishy with the cigarette hatred all of a sudden. This was making them so much money. Also I heard once that smoking helps draw metals out of the nervous system, if true then smoking would protect against the MEDCOM chemtrails. Theres no doubt about it, the chemtrail program is biological warfare! All those who smoke currently I suggest you either carry on or utilise an organic pure tobacco only. -Craig

Swine Flu? Smoke em if you got it; Nicotine can stop Cytokine Storm

By Administrator
Tuesday, April 28th, 2009 at 11:42 pm
http://coloyan.com/blog/2009/04/28/swine-f...-if-you-got-it/

What often kills people who catch Swine Flu is not the virus itself but the body's immune system reaction which is called a cytokine storm. Ironically this often occurs in young, healthy people with good immune systems which is why the Swine Flu seems to be more dangerous to people between 20-50.

“If a cytokine storm occurs in the lungs, for example, fluids and immune cells such as macrophages may accumulate and eventually block off the airways, potentially resulting in death”

While this may sound completely insane, there have been studies showing that nicotine can reduce a cytokine storm and the ensuing inflammation. One such article detailing this information was “Body Blazes” by Lisa Melton published in Scientific American in June 2006. For a full text of the article click here:

QUOTE

HOW NICOTINE STOPS INFLAMMATION COULD LEAD TO NEW DRUGS

Body Blazes
Lisa Melton
Scientific American; Jun2006, Vol. 294 Issue 6, p24-24, 1p, 1 color
http://www.coloyan.com/media/nico.txt

* Nicotine has undergone * an image overhaul, at least biomedically. In the past few years researchers have found that the substance can alleviate symptoms of ailments such as Alzheimer's disease and ulcerative colitis. Just how nicotine battles these foes, however, has remained unclear. Now, by studying sepsis, Luis Ulloa of North Shore University Hospital in Manhasset, N.Y., has evidence elucidating nicotine's biochemical pathways that could lead to more potent anti-inflammatory drugs.

Sepsis, the most lethal of inflammatory conditions, is a bacterial invasion of the bloodstream. The third leading cause of death in the developed world, it accounts for nearly 10 percent of overall deaths in the U.S. every year. Infection causes part of the damage, but what makes patients critically ill is their own fiercely aggressive immune response. Macrophages churn out huge quantities of proinflammatory cytokines. This exaggerated immune response leads to tissue damage, and eventually the patient dies of cardiovascular dysfunction and multiorgan failure.

Ulloa and his collaborators have found something remarkable: nicotine can shut down this overshooting inflammatory response, to the point of reversing sepsis in mice. As far as anti-inflammatory treatments go, this is powerful stuff. "Nicotine taps into the body's own potent anti-inflammatory mechanisms," Ulloa explained in February at a Novartis Foundation meeting in London. "That is the beauty of our approach. By using nicotine, we are copying physiological mechanisms that have been selected by evolution to modulate the immune system."

Specifically, nicotine mimics acetylcholine, the Cinderella of neurotransmitters. Largely ignored over the years, acetylcholine has been catapulted into a starring role, linking the nervous and the immune

systems. Through acetylcholine the nervous system controls the inflammatory fires that constantly crop up in our bodies. Receptors for acetylcholine reside not only on nerve cell endings but also on immune cells. Nicotine binds and activates these receptors, allowing cross talk between the brain and immune system.

"This is something quite phenomenal," comments Wouter de Jonge of the Academic Medical Center Amsterdam, who studies how macrophages respond to acetylcholine. "Smokers suffering from ulcerative colitis seemed to benefit from their habit, so there were hints that nicotine could ameliorate inflammatory diseases, but nobody could get a handle on it," he notes.

Now Ulloa's group may have provided an explanation for the positive effects that nicotine has on illnesses as diverse as schizophrenia, Alzheimer's, Parkinson's disease, Tourette's syndrome and ulcerative colitis. In laboratory experiments, Ulloa demonstrated that nicotine latches onto the nicotinic receptors on macrophages and stops them from spewing out inflammatory cytokines. This clampdown is brutally effective. The researchers also identified the specific receptor subtype, the alpha-7 acetylcholine receptor, that nicotine binds in macrophages to stop cytokine production.

But as a drug, nicotine is fraught with toxicity issues. Apart from its addictive nature, it can lead to cardiovascular problems and contribute to cancer. "No one is looking to use nicotine to treat inflammation," Ulloa says. "We want to design specific compounds that will target this receptor to take advantage of nicotine's anti-inflammatory effects while eluding its collateral toxicity."

"This is one of the great stories in immunology in the past few years—no question about it," remarks Mitchell Fink, an expert in critical care medicine at the University of Pittsburgh. A selective nicotinelike compound may be a promising therapy not only for sepsis but for a whole slew of chronic conditions, including heart disease, cancer and diabetes. The task at hand is to find the best surrogate for nicotine. Ulloa's petri dishes are the ones to watch.

A NICK OF NICOTINE

As a potent anti-inflammatory, nicotine can damp down a dangerous immune response. But it is too risky as a treatment. Fortunately, substitutes may exist. Pharmaceutical firms have developed nicotinelike drugs, such as GTS-21, that were designed to stimulate the alpha-7 acetylcholine receptors in the brains of patients with Alzheimer's disease. But the clinical trials failed to show a clear benefit, and the drugs were dropped. The compounds may have been unable to cross the blood-brain barrier—which would actually be a plus for an anti-inflammatory, because then it could target the periphery and avoid the brain. Researchers have begun testing such substitutes to combat inflammation.

QUOTE

Holy fucking shit. I shit you not, and you can reserach my user ID# to see my very last posts...I felt strangely drawn to smoke while in the midst of this flu (yep, I had it) and I was coughing up a storm so bad that I could hardly breathe. I actually smoked kreteks (clove cigarettes) only a few of them a day, and it really helped me out a lot. I could breathe better and got well within a few days afterwards. I'm not even a smoker, but intuition or an angel or something led me to the smoke shop when I was sick as a dog. I just woke up with an inclination to get some smokes and did it. Then, I was able to put the unsmoked ones right in the trash soon as I was well.

Abstract

Nicotine (NT) treatment impairs T-cell receptor (TCR)-mediated signaling, leading to the arrest of T cells in the G1 phase of the cell cycle and inhibition of the antibody plaque-forming cell (AFC) response to sheep red blood cells (SRBC). This paper summarizes some of the previous findings related to cigarette smoke/NT and the immune response, and presents preliminary evidence suggesting that mice chronically treated with NT (0.5 mg/day/kg body weight) have a depressed inflammatory response in the turpentine-induced abscess model of inflammation. This ability of nicotine to attenuate an inflammatory response may also be the cause of reduced mortality of chronically nicotine-treated mice from acute influenza A pneumonitis. Moreover, in LEW rats, decreased anti-SRBC AFC responses were also observed after intracerebroventricular (ICV) administration of relatively small concentrations of NT (28 •g/day/kg body weight)

which, when given peripherally, did not affect the AFC response. In vitro the addition of NT to T cells increased protein tyrosine kinase (PTK) activity and intracellular Ca2+ concentration [Ca2+]i. These results support the hypothesis that NT alters immune responses by directly interacting with T cells, as well as indirectly through brain-immune interactions.

craig-oxley - May 15, 2009 02:00 AM (GMT)

Yes this is very interesting.

My own story is I am 55 years of age and I am in very good shape. I took up smoking when I was about 15, that makes it about 40 years. In my lifetime, I have only had a cold about 2 or 3 times, never had the flue or fever.

My friends and family are constantly coming to me and asking me what I am doing and looking for advise. As soon as I inform them of a product I am taking, they go out and buy it immediately. I am fairly knowledgable when it comes to health related issues and I am very careful with what I eat. But the paradox that has them perplexed is I smoke. Not heavy, but I do enjoy 3 or 4 mini pipe tobacco cigars per day.

Something always stuck in my mind. I remember viewing a documentary several years ago that dealt with the Black Plaque in the middle ages. There was a priest (what inside information, did he know) who survived living right in the midst of everyone dying all around him. What was reported is he burned smoke type candles all around his home.

No doubt, when the governments are up to such a heavy campaign targeting smoking. There is another hidden agenda.
If they were so interested in our health, they would not only put the warning labels on cigarettes. It would also be on chocolate bars, candy and a whole host of other products.

Another interesting fact about smoking is, it is a psychic inhibitor. The psychic realm all around us is loaded with entities, who can and do influence a non spiritually advanced person. A non spiritually advanced person, who is opened to the psychic realm can recieve quite a shock and be fearful. A fearful person can be easily controlled.

I.M.O., this anti-smoking campaign is a two pronged attack.
1) In preperation for their biological attack.
2) To allow their astral allies, stronger influence.

All things considered, they certainly are nasty little assholes, but they are also spiritually immature kiddies. They will be getting a good spanking shortly. There is much more going on behind the scenes then you can imagine.
Endgame is interesting, yes.

William

Chi - May 15, 2009 06:40 PM (GMT)

I actually smoke and although there are many serious side effects, im sure there is also a few benefits in it than people may think, like stated in the original post.

Can you recommend any tobacco that would still be nice for a proper smoker but as natural as tobacco. I understand that part of my addiction to them is the chemicals inside, but are there any good natural tobaccos that you know of?

Alexandra - May 15, 2009 09:55 PM (GMT)

I think that smoking tobacco probably doesn't hurt anyone, it's what they add to it.

AntiSionist - May 28, 2009 08:17 PM (GMT)

Real, good untainted tobacco was smoked by the Native Americans. Guess how long they lived and how little grey hairs some of their elders had?

Douglas Willinger - May 28, 2009 10:45 PM (GMT)

> **QUOTE** (Alexandra @ May 15 2009, 09:55 PM)
>
> I think that smoking tobacco probably doesn't hurt anyone, it's what they add to it.

Largely true, though smoking coca leaves (not concentrated cocaine) would probably be safer.

As for nicotine's benefits what about a patch or gum?

craig-oxley - May 28, 2009 11:36 PM (GMT)

The idea is not the nicotine but infact the effect direct into the lung. Therefor a

patch wouldn't be direct into the lungs if at all?!. Conclusion patches would do nothing against pandemic cytokine.

Douglas Willinger - May 29, 2009 02:50 AM (GMT)

> **QUOTE** (craig-oxley @ May 28 2009, 11:36 PM)
>
> **The idea is not the nicotine but infact the effect direct into the lung. Therefor a patch wouldn't be direct into the lungs if at all?!. Conclusion patches would do nothing against pandemic cytokine.**

Then how about a dilute nicotine inhaler?

Or a Tobacco vaporizer?

craig-oxley - May 29, 2009 03:51 AM (GMT)

Whats the point? Why not just smoke some pure tobacco in cigarette or bung system? Use your nebulisers for the properly made Colloidal Ionic Silver and Ozone Waters.

Douglas Willinger - May 29, 2009 04:28 AM (GMT)

> **QUOTE** (craig-oxley @ May 29 2009, 03:51 AM)
>
> **Whats the point? Why not just smoke some pure tobacco in cigarette or bung system? Use your nebulisers for the properly made Colloidal Ionic Silver and Ozone Waters.**

To avoid smoke while providing the substance into the lungs.

By pure Tobacco you undoubtedly mean something unlike the adulterated crap in most cigarettes:

(from my blog "Freedom of Medicine and Diet")

http://freedomofmedicineanddiet.blogspot.c...cigarettes.html

http://freedomofmedicineanddiet.blogspot.c...right-leaf.html

http://freedomofmedicineanddiet.blogspot.c...previously.html

http://freedomofmedicineanddiet.blogspot.c...01_archive.html

But would you prescribe the Virginia Bright Leaf variety or a more natural variety?

zenmodi - May 29, 2009 10:25 AM (GMT)

very interesting

AntiSionist - May 29, 2009 09:45 PM (GMT)

In the bird flu Craig you said this.

Posted: May 27 2009, 10:30 AM
Remember Swine Flu supposedly kills via Cytokine Storm and is not immune suppressant quite the opposite effect happens. -Craig

You said supposedly. So are you saying that swine flu doesn't harm via cytokine storm? Does that mean we shouldn't bother smoking tobacco then? I'm having trouble understanding.

AntiSionist - May 29, 2009 09:51 PM (GMT)

Here's something interesting.

http://answers.yahoo.com/question/index?qi...03182940AANbh33

Is there a brand that sells pure tobacco cigarettes?

Best Answer - Chosen by Asker
I don't know if they still make them, Players Navy cut.
Dunham,
Balkin Sobranie, or Sobranie Black Russian.
American Spirit
Nat Sherman

PURE TOBACCO OR ANY KIND OF TOBACCO CAN INSTANTLY KILL YOU!! YOUR TEETH WILL ROTT, GET LUNG CANCER AND HAVE A HOLE IN YOUR THROAT YOU WILL NEVER ENJOY LIFE TO THE FULLEST
PLUS IT IS D-I-S-G-U-S-T-I-N-G !!!!!!!!!!!!!!!!!!! eeeeewwwwwww!!!!!!!!!!!!

CommanderKeen - May 29, 2009 10:11 PM (GMT)

before I quit ,I smoked lucky strike many years then I switched to American spirit and if you can even find a difference between crap and crap I would say American Spirit are the worst of all. However, smoking makes as much sense as hitting a hammer into your face. Also I prefer the singing of the blackbirds to a heavy smokers cough in the morning...

Alexandra - June 11, 2009 07:08 PM (GMT)

You know, now that I think of it...my mother smoked from the time she was 14 until just before my dad died...she was 50...I remember her having pneumonia (but still working) when I was a child, but other than that I don't recall her having a cold or the flu.

On the other hand, my sister has asthma, and if she smokes it makes it a lot worse.

trk - October 12, 2009 09:29 PM (GMT)

No buts! Syrian president bans smoking in public

http://hosted.ap.org/dynamic/stories/M/ML_...ml&SECTION=HOME

Syria's president on Monday issued a decree banning smoking in public places, joining an anti-smoking trend already under way in other Arab countries.

The ban also includes a rare restriction in the Arab world: limiting places where Syrians can indulge in the hubbly bubbly - water pipes known locally as argileh.

President Bashar Assad's decree, which will go into effect in six months, bans smoking in restaurants, cafes, cinemas, theaters, schools, official functions and on public transport. Offenders will be fined 2,000 Syrian pounds - about $45.

Syria had taken steps before to try to restrict smoking, including a 1996 decree issued by Assad's late father, Hafez, that banned smoking in government institutions, hospitals and at the airport.

But the ban was often flouted and not strictly enforced. The younger Assad recently issued a law that banned the sale of tobacco to those under the age of 18.

Monday's decree is a much more sweeping measure reflecting Syria's desire to join other Arab countries struggling to control smoking with bans and anti-smoking campaigns.

Such laws are not easily enforced in the tobacco-loving Arab world, where people light up in offices, universities, taxis and even hospitals and where smoking has long been a social imperative and a rite of passage for young men. Packs can cost as little as 50

cents.

The decree issued by Assad, a British-trained eye doctor, also bans the favorite Mideast pastime - smoking water pipes - except in well-ventilated and designated areas. Also outlawed are tobacco advertising and the sale and import of sweets and toys modeled after tobacco products.

Health Minister Rida Saeed said authorities were working on campaigns that explain to the public "the health hazards of smoking and the environmental, economic and social vices of smoking."

Egypt, Lebanon, the United Arab Emirates - and most recently Iraq - have imposed similar restrictions on smoking, but the bans vary in scope and enforcement.

Emirates authorities have banned smoking in public places and indoors, including water pipe smoking in certain places such as restaurants in residential neighborhoods.

Last year, Egypt, one of the top 15 smoking countries in the world, launched a campaign of visual warnings about tobacco's dangers, including a requirement that cigarette labels carry images of the effects of smoking.

Iraq's government in August unveiled sweeping curbs on smoking after parliament ratified the World Health Organization Framework Convention on Tobacco Control, which requires governments to fight smoking.

Turkey banned indoor smoking earlier this year, leading a man to shoot a restaurant owner to death after being asked to put out his cigarette.

Keith - October 12, 2009 09:53 PM (GMT)

remember too that there is something SACRED about blowing and inhaling smoke. breath is the one of the most sacred, yet simple actions that we perform

Keith - October 12, 2009 09:58 PM (GMT)

100 dead as PNG declares health emergency: report

9 Sept 2009
http://www.google.com/hostednews/afp/artic...SUrN1-n0uhPK7bg

PORT MORESBY — Papua New Guinea on Thursday raced to contain a triple outbreak of cholera, flu and dysentery which has claimed at least 100 lives and prompted a health emergency, a report said.

Health inspectors were ordered to close schools and markets, dig toilets and restrict people's movements in remote parts of three provinces, The National newspaper said, as the World Health Organisation and Australia provided help.

The impoverished Pacific nation declared the emergency on Wednesday after the deaths doubled in a week. Earlier fears of a "mystery flu" proved unfounded after the virus was confirmed as seasonal influenza.

"Under this direction, all health professionals, government agencies and NGOs in this life-saving mission are empowered to improve hygiene and sanitation and contain the diseases in affected areas," Health Minister Sasa Zibe said.

Australia's foreign aid agency AusAID, quoting WHO figures, said 20 people had died from cholera -- the country's first outbreak in decades -- and 243 people had suspected cases.

The National said at least 51 people had died from flu, among more than 3,000 cases, and another 29 had been killed by dysentery. Health officials could not be reached to confirm the figures.

The country's WHO representative, Eigil Sorensen, said the situation was "concerning".

"It is concerning because of the general weakness of the health care system," Sorensen told AFP.

"It's like a litmus test to see how able they are to cope with such a situation. This is a big challenge."

AusAID said it had sent water purification tablets, protective clothing, water containers and rehydration salts, as well as an environmental health expert and logistical support.

PNG officials have warned the outbreaks were proving hard to control as they were in isolated areas, with the worst-hit Menyamya district some eight hours' rough drive from PNG's second city of Lae.

"This is the worst such crisis we have seen here," Morobe provincial health adviser Theo Likei said last week.

Forced vaccinations, quarantine camps, health care interrogations and mandatory "decontaminations"

Published on 08-28-2009 Email To Friend Print Version
By Mike Adams - Natural News
http://www.naturalnews.com/026934_health_p...quarantine.html

The United States of America is devolving into medical fascism and Massachusetts is leading the way with the passage of a new bill, the "Pandemic Response Bill" 2028, reportedly just passed by the MA state Senate and now awaiting approval in the House. This bill suspends virtually all Constitutional rights of Massachusetts citizens and forces anyone "suspected" of being infected to submit to interrogations, "decontaminations" and vaccines.

The entire population of the USA is now but one pen stroke away from being subjected to mandatory swine flu vaccinations at gunpoint.

It's also sets fines up to $1,000 per day for anyone who refuses to submit to quarantines, vaccinations, decontamination efforts or to follow any other verbal order by virtually any state-licensed law enforcement or medical personnel. You can read the text yourself here: http://www.mass.gov/legis/bills/sen…

Here's some of the language contained in the bill:

(Violation of 4th Amendment: Illegal search and seizure)

During either type of declared emergency, a local public health authority… may exercise authority… to require the owner or occupier of premises to permit entry into

and investigation of the premises; to close, direct, and compel the evacuation of, or to decontaminate or cause to be
decontaminated any building or facility; to destroy any material; to restrict or prohibit assemblages of persons;

(Violation of 14th Amendment; illegal arrest without a warrant)

…an officer authorized to serve criminal process may arrest without a warrant any person whom the officer has probable cause to believe has violated an order given to effectuate the purposes of this subsection and shall use reasonable diligence to enforce such order. [Gunpoint]

(Government price controls)

The attorney general, in consultation with the office of consumer affairs and business regulation, and upon the declaration by the governor that a supply emergency exists, shall take appropriate action to ensure that no person shall sell a product or service that is at a price that unreasonably exceeds the price charged before the emergency.

“Involuntary Transportation” (also known as kidnapping)

Law enforcement authorities, upon order of the commissioner or his agent or at the request of a local public health authority pursuant to such order, shall assist emergency medical technicians or other appropriate medical personnel in the involuntary transportation of such person to the tuberculosis treatment center.

$1,000 / day in fines

Any person who knowingly violates an order, as to which noncompliance poses a serious danger to public health as determined by the commissioner or the local public health authority, shall be punished by imprisonment for not more than 30 days or a fine of not more than one thousand dollars per day that the violation continues, or both.

Forced vaccinations

Furthermore, when the commissioner or a local public health authority within its jurisdiction determines that either or both of the following measures are necessary to prevent a serious danger to the public health the commissioner or local public health authority may exercise the following authority: (1) to vaccinate or provide precautionary prophylaxis to individuals as protection against communicable disease…

Forced quarantine for those who refuse (illegal imprisonment without charge)

An individual who is unable or unwilling to submit to vaccination or treatment shall not be required to submit to such procedures but may be isolated or quarantined pursuant

to section 96 of chapter 111 if his or her refusal poses a serious danger to public health or results in uncertainty whether he or she has been exposed to or is infected with a disease or condition that poses a serious danger to public health, as determined by the commissioner, or a local public health authority operating within its jurisdiction.

Arrest for refusal to be “decontaminated”

If an individual is unable or unwilling to submit to decontamination or procedures necessary for diagnosis, the decontamination or diagnosis procedures may proceed only pursuant to an order of the superior court… During the time necessary to obtain such court order, such individual may be isolated or quarantined pursuant to section 96 of chapter 111 if his or her refusal to submit to decontamination or diagnosis procedures poses a serious danger to public health or results in uncertainty whether he or she has been exposed to or is infected with a disease or condition that poses a serious danger to public health.

Interrogation

When the commissioner or a local public health authority within its jurisdiction reasonably believes that a person may have been exposed to a disease or condition that poses a threat to the public health, in addition to their authority under section 96 of chapter 111, the commissioner or the local public health authority may detain the person for as long as may be reasonably necessary for the commissioner or the local public health authority, to convey information to the person regarding the disease or condition and to obtain contact information… If a person detained under subsection (1) refuses to provide the information requested, the person may be isolated or quarantined pursuant to section 96 of chapter 111 if his or her refusal poses a serious danger to public health…

Forced isolation and quarantine
An order for isolation or quarantine may include any individual who is unwilling or unable to undergo vaccination, precautionary prophylaxis, medical treatment, decontamination, medical examinations, tests, or specimen collection and whose refusal of one or more of these measures poses a serious danger to public health or results in uncertainty whether he or she has been exposed to or is infected with a disease or condition that poses a serious danger to public health.

Forced entry into any home or building…

There’s a lot more in this bill, including language that allows Mass. police to enter any home or building without a search warrant, to destroy any object or building they suspect may pose a threat to public safety, to order the closing and / or decontamination of any facility using highly toxic chemical decontamination agents, and

to arrest, detain and interrogate anyone who gets in their way.

Meanwhile, all state law enforcement and medical personnel are granted complete immunity from prosecution for their part in violating your Constitutional rights. So if they violate your right to due process, or they accidentally destroy your home, or they kill your family dog because they suspect it might be infected, you have absolutely zero recourse.

Under this bill, Massachusetts becomes a medical police state. There is no debating it. It's all written, clear as day, in this law: The citizens of Massachusetts will have no rights, period. The Constitution is ancient history. You are now the property of the State.

Kiss your freedoms goodbye

Massachusetts, it seems, has never met a vaccine it didn't like. This is the same state that rounded up the parents of schoolchildren who hadn't been vaccinated, then corralled them into a courtroom (with attack dogs standing guard outside) and forced vaccine injections onto all the schoolchildren under the threat of jail time for parents who resisted.

Remember, readers, that this is all taking place in the "land of the free," a nation that former President George Bush claimed was so envied around the world that terrorists attacked America because they "hate freedom" and wanted to destroy our way of life. But terrorists need no help attacking freedom as long as Massachusetts is in the vaccine game, because this latest form of "gunpoint medicine" destroys freedom for everyday Americans in a way that terrorists could have never hoped to accomplish with all the bombs in the world.

Massachusetts, it seems, has done what terrorists could not: It has turned "free" Americans into medical slave subjects who no longer have any freedom to decide the details of their own medical care. All options have been stripped from them but one: The Big Pharma option. That's the one that involves using untested, unproven and potentially dangerous vaccines that could paralyze you or even kill you. All to defend you against a virus that's so weak, almost anyone with decent levels of vitamin D and basic nutrition can resist the virus without incident.

But Massachusetts, as you'll see below, is just the beginning. It turns out that the whole nation could soon find itself under a similar forced vaccination policy…

Isolation camps, forced vaccinations and more

In 2006, former President George Bush signed into law the Public Readiness and Emergency Preparedness Act (PREP). It gives power to the Secretary of the U.S. government's Health and Human Services department (HHS) to declare any infectious disease a "national emergency" and therefore require mandatory vaccination of the

entire population. Because of the existence of this PREP Act, the entire population of the USA is now but one pen stroke away from being subjected to mandatory swine flu vaccinations at gunpoint.

Those who resist such vaccines will be arrested and taken away for “isolation” in domestic prison camps. They can’t just leave vaccine refusers free to live among the population, of course, because that would send the message that anyone can refuse the vaccines without consequence. So they’ll arrest those who refuse the vaccine, labeling them “a threat to national security” (enemies of the state) and imprison them without trial, without charges and without any legal representation whatsoever.

Meanwhile, all those who take part in enforcing these crimes against the American people will be granted complete immunity. From the HHS website: “[the Secretary may] issue a declaration… that provides immunity from tort liability (except for willful misconduct) for claims of loss caused, arising out of, relating to, or resulting from administration or use of (vaccine or other pharmaceutical) countermeasures to diseases, threats and conditions determined by the Secretary to constitute a present, or credible risk of a future public health emergency…”

There are other laws already on the books that strip Americans of virtually all Constitutional rights in a “pandemic emergency” scenario. One such act is The Pandemic and All-Hazards Preparedness Act (S. 3678), which probably merits another article altogether.

Have no illusions: At the stroke of a pen, the Constitutional rights of all Americans will be immediately suspended. Mandatory vaccinations and “decontaminations” will kick in and the mass arrest of resisters will begin. There will be no court, no trial, no jury and no due process. Your actions will be dictated to you by a law enforcement officer or a health care worker who has been granted complete immunity, so if you just happen to get kicked around a bit (or shot), there’s really nothing you can do about it.

Some might argue these are necessary actions to save a nation from a deadly pandemic. And yet they forget that the pandemic has been intentionally allowed to worsen by censoring information about vitamin D and natural remedies that could stop it. Somebody at the top, in other words, wants this pandemic to get really bad, perhaps because it allows them to invoke precisely the draconian response I’ve outlined in this article. Seizing power in a Democracy cannot be accomplished by simply declaring war on the rights of the People. Rather, a situation must be engineered where the People are so desperate that they beg to be controlled. Releasing a pandemic into the wild is the perfect way to accomplish precisely that.

Timing

None of these laws will be invoked before the vaccines are ready in large numbers, of

course. Part of the purpose in all this is to prop up Big Pharma profits with massive vaccination efforts, so until the vaccines are actually available, don't expect to see any declarations of a public emergency.

It might take until October or November before the vaccines are readily available in sufficient quantity to inject just half the U.S. population. But once that milestone is reached, a declaration of a pandemic emergency is imminent. Trust me on this point: They won't let all those hundreds of millions of vaccines sit around unused; they'll make sure they get injected into the People as soon as possible, because that's the only way to justify making more.

So the sequence of events we're likely to see here are:

#1) Waiting on vaccine manufacturing to procure at least 150 million doses in the U.S. Probable timeframe = October.

#2) Hyping up a few local swine flu breakouts in schools in order to justify step #3. Probable timeframe = November / December.

#3) Declaring a full-blown national emergency and announcing mandatory vaccinations for everyone (to use up the vaccines that are now available). Probable timeframe = January / February / March.

#4) If the disease continues to spread, this is when you'll see forced entry into homes and buildings, forced "decontamination" sprayings, widespread arrests and forced quarantine of resisters, Martial Law and a complete crackdown on freedoms (especially in the inner cities). This will likely continue through the winter until Spring arrives, bringing the sunshine that will suppress the virus around the May 2010 timeframe.

All this is written in black ink. It's already part of the pandemic response plan. Body bags, FEMA camps and much more.

Two years ago, this was all the domain of conspiracy theory "wingnuts." Now it's State law. Now it's being openly discussed in security conferences and health care meetings. What will we do when the hospital beds are full? How will we accomplish the "involuntary transportation" of those who are infected? Are there enough zip-tie handcuffs to go around? How do we disarm and arrest citizens who refuse to be vaccinated? How do we prevent National Guard troops from becoming infected themselves?

These are the questions circulating now at high levels, all across the world. And the answers are always the same: Abandon freedoms. Strip the People of any rights. Dictate from the top down and arrest anyone who gets in your way.

Welcome to the Land of the Free. I hope you are prepared for what looks to be coming,

because this isn't America anymore, folks. This is Amerika, and the Constitutional rights you thought you had are about to be written right off the books.

Deadly Dog Flu Spreads

Jennifer Viegas, Discovery News Print
http://dsc.discovery.com/news/2009/08/18/d...nine-virus.html

Aug. 18, 2009 -- Canine influenza, the potentially deadly H3N8 virus commonly known as dog flu, is spreading.

So far the virus has led to the death of one dog last week, closed down the kennel at Virginia's Fairfax County Animal Shelter, and, according to experts, is now affecting dogs in at least four other states: Colorado, New York, New Jersey, and Pennsylvania.

While the reason for the shelter outbreak, which killed a 15-year-old whippet owned by a clinical technician and sickened 26 dogs, remains unknown, it's possible that one or more infected dogs from Philadelphia or D.C. introduced the illness to Virginia.

"Dogs often move in and out of shelter systems over long distances, such as via breed and rescue groups," Edward Dubovi, director of the virology center at Cornell's Animal Health Diagnostic Laboratory, told Discovery News.

"Boarding kennels and even elite doggie day care centers can also result in cases, since, as for kennel cough spread, the virus is highly contagious and dogs may catch it from one another," added Dubovi.

He first isolated the canine influenza virus in 2004, after University of Florida researchers sent him fluid and tissue samples from greyhound race dogs that had died from a then mysterious respiratory illness at a Florida racetrack.

Dubovi and his team determined the cause was the H3N8 equine flu virus, which

jumped from horses to dogs. In addition to spreading from dog to dog, canines can also catch it from humans, who may have come into contact with infected animals.

The illness has not yet sickened any people.

Symptoms in dogs can include fever, lethargy, loss of appetite and a respiratory infection that may last a few weeks. One to five percent of victims die from related hemorrhagic pneumonia.

Although 30 states have reported cases over the past five years, Dubovi said outbreaks are "usually sporadic and then die out."

"For example, we've seen outbreaks in San Diego, Los Angeles and Pittsburgh, but those all ended," he explained.

As officials work to contain the Virginia cases, nearby states and cities are also on guard.

Tara deNicolas, a spokesperson for the Washington Humane Society, told Discovery News, "No cases are currently in our shelter."

She added, "We're being very proactive, however, and are ordering tests whenever any possible symptoms surface."

A "Dark Winter" for Public Health: Meet Homeland Security's New Bioterror Czarina

Published on 08-28-2009 Email To Friend Print Version
By Tom Burghardt
http://antifascist-calling.blogspot.com/

In the wake of the 2001 anthrax attacks, successive U.S. administrations have pumped some $57 billion across 11 federal agencies and departments into what is euphemistically called "biodefense."

Never mind that the deadly weaponized pathogen employed in the attacks didn't originate in some desolate Afghan cave or secret underground bunker controlled by Saddam.

And never mind that the principal cheerleaders for expanding state-funded programs are Pentagon bioweaponeers, private corporations and a shadowy nexus of biosecurity apparatchiks who stand to make a bundle under current and future federal initiatives.

Leading the charge for increased funding is the Alliance for Biosecurity, a collaborative venture between the Center for Biosecurity of the University of Pittsburgh Medical Center (UPMC) and Big Pharma.

Speaking at the World Economic Forum in Davos, Switzerland in January 2005, former U.S. Senate Majority Leader William Frist, a Bushist acolyte, baldly stated that "The greatest existential threat we have in the world today is biological" and predicted that "an inevitable bioterror attack" would come "at some time in the next 10 years."

Later that year, Frist and former House Speaker Dennis Hastert (R-IL) covertly inserted

language into the 2006 Defense Appropriations bill (H.R. 2863) that granted legal immunity to vaccine manufacturers, even in cases of willful misconduct. It was signed into law by President Bush.

According to Public Citizen and The New York Times, Frist and Hastert benefited financially from their actions; the pair, as well as 41 other congressmen and senators owned as much as $16 million in pharmaceutical stock. SourceWatch revealed that "the Biotechnology Industry Organization (BIO) is purported to be the key author of the language additions. This trade association represents virtually all major vaccine manufacturers."

The Senate Majority Leader's alarmist jeremiad at Davos was seconded by Dr. Tara O'Toole who added, "This [bioterrorism] is one of the most pressing problems we have on the planet today."

Really? Not grinding poverty, global warming or the lack of access by hundreds of millions of impoverished workers and farmers to clean water, an adequate diet, health care or relief from epidemic levels of preventable diseases such as malaria, tuberculosis or diarrhea, but "bioterrorism" as narrowly defined by securocrats and their academic accomplices.

But Dr. Victor W. Sidel, a founder of Physicians for Social Responsibility (PSR) and an outspoken critic of the Bioweapons-Industrial-Complex challenged O'Toole's hysterical paradigm.

Sidel made the point that there is a fundamental conflict between the state's national security goals and health care providers' professional responsibilities to patients. He wrote in 2003 that "military, intelligence, and law enforcement agencies and personnel have long histories of secrecy and deception that are contrary to the fundamental health principles of transparency and truthfulness. They may therefore be unsuitable partners for public health agencies that need to justify receiving the public's trust."

In this context, the choice of O'Toole as the Department of Homeland Security's (DHS) Undersecretary of Science and Technology is troubling to say the least. As former CEO and Director of UPMC's Center for Biosecurity, critics charge that O'Toole's appointment will be nothing short of a disaster.

No ordinary policy wonk with an impressive résumé and years as a government insider, O'Toole is a key player advocating for the expansion of dual-use biological weapons programs rebranded as biodefense.

Subverting the Biological Weapons Convention

The resuscitation of American bioweapons programs are facilitated by their secretive and highly-classified nature. Under cover of academic freedom or intellectual property

rights, the U.S. Bioweapons-Industrial-Complex has largely been outsourced by the state to private companies and contractors at top American corporations and universities.

Efforts to strengthen the Biological Weapons Convention (BWC) by the inclusion of verification language into the treaty and regular inspection of suspect facilities by international experts have been shot-down since 2001 by the Bush and now, the Obama administrations. Why?

Primarily because the United States view onsite measures as a threat to the commercial proprietary information of multinational pharmaceutical and biotechnology companies as well as to America's reputedly "defensive" biological programs; initiatives that continue to work with nature's most dangerous and deadly pathogens.

In fact, the problem of the dual-use nature of such research is a conundrum facing critics who challenge the break-neck expansion of concealed weapons programs. Simply put, military activities can be disguised as commercial research to develop medical countermeasures without anyone, least of all the American people, being any the wiser.

Highly-trained microbiologists deployed across a spectrum of low-key companies, trained for academic, public health, or commercial employment are part of the dual-use problem. Who's to say whether scientists who genetically-manipulate pathogens or create Frankenstein-like chimera disease organisms (say, synthesized Marburg or Ebola virus as has already been done with poliovirus in a U.S. lab) are engaged in treaty-busting weapons research or the development of life-saving measures.

And what about the accidental, or more sinisterly, the deliberate release of some horrific new plague by a scientist who's "gone rogue"? As researcher Edward Hammond pointed out:

British researchers pled guilty in 2001 to charges that they improperly handled a genetically engineered hybrid of the viruses causing hepatitis C and dengue fever. British authorities characterized the virus as "more lethal than HIV". 'Dengatitis' was deliberately created by researchers who wanted to use fewer laboratory animals in a search for a vaccine for Hepatitis C. Under unsafe laboratory conditions, the researchers created and nearly accidentally released a new hybrid human disease whose effects, fortunately, remain unknown; but which may have displayed different symptoms than its parents and thus been difficult to diagnose, and have required a new, unknown treatment regime. (Emerging Technologies: Genetic Engineering and Biological Weapons, The Sunshine Project, Background Paper No. 12, November 2003) A new report by the Center for Arms Control and Nonproliferation has charged that despite restrictions under the BWC prohibiting the development, production, stockpiling and use of weaponized disease agents such as anthrax, smallpox or plague, as well as

equipment and delivery systems intended for offensive use, the rapid growth of "biodefense and research programs over the last decade" has placed "new pressure" on efforts to curb the development of banned weapons listed in the treaty.

In an interview with Global Security Newswire Gerald Epstein, a senior fellow with the hawkish Center for Security and International Studies (CSIS) told the publication, "When one is doing bioresearch and biodefense, one has to be careful to not overstep the treaty itself."

He cited the U.S biodefense effort Project Bacchus--an investigation by the Defense Threat Reduction Agency to determine whether it was possible to build a bioweapons production facility using readily available equipment--as an instance where questions were raised if the treaty had been violated.

The type of biodefense activity that is most likely to raise questions regarding treaty compliance is "threat assessment," the process of determining what type of biological attacks are most likely to occur, he told Global Security Newswire. A dangerous biological agent could inadvertently be developed during such research, Epstein said. (Martin Matishak, "Biodefense Research Could Violate Weapons Convention, Report Warns," Global Security Newswire, August 20, 2009)
But Pentagon bioweaponeers did more than build "a bioweapons productions facility using readily available equipment." They built banned weapons. According to Jeanne Guillemin, author of Biological Weapons: From the Invention of State-Sponsored Programs to Contemporary Bioterrorism, the Pentagon and CIA made and tested a model of a Soviet anthrax bomb and created an antibiotic-resistant strain of anthrax.

After consulting with scientists who strongly suggested that the CIA anthrax bomb project would violate the BWC, "CIA lawyers decided the project was within the allowed realm of defensive research," Guillemin revealed. Project Clear Vision, a joint investigation by the CIA and the Battelle Memorial Institute, under contract to the Agency, reconstructed and tested a Soviet-era anthrax bomblet in order to test its dissemination characteristics. The Agency "decided the same" for the small, fully functional bioweapons facility built under the rubric of Project Bacchus.

The third initiative, Project Jefferson, led to the development of an antibiotic-resistant strain of anthrax based on a Soviet model. After the outgoing Clinton administration hesitated to give the CIA the go-ahead for the project, the Bush regime's National Security Council gave the Pentagon permission. "They believed" Guillemin wrote, "the Pentagon had the right to investigate genetically altered pathogens in the name of biodefense, 'to save American lives'."

Shortly thereafter, the Pentagon authorized the Defense Intelligence Agency (DIA), one of the most secretive and heavily-outsourced Defense Department branches, to re-create the deadly anthrax strain.

What the scope of these programs are today is currently unknown. We do know however, that based on available evidence the Department of Homeland Security, the Defense Department and the oxymoronic Intelligence Community, using the Department of Health and Human Services (HHS) and the U.S. Department of Agriculture (USDA) as a cover, continue to investigate the feasibility of transforming nature's most deadly pathogens into weapons.

In close coordination, the United States government and their outsourced corporate partners are spending billions of dollars on research and simulation exercises, dubbed "disaster drills" by a compliant media, to facilitate this grisly trade.

Secrecy and Deceit

That the official bioterror narrative is a preposterous fiction and swindle as even the FBI was forced to admit during its much-maligned Amerithrax investigation, is hardly worth a second glance by corporate media beholden to the pharmaceutical industry for advertising revenue; call it business as usual here in the heimat.

As we now know, the finely-milled anthrax powder which killed five people and shut down representative government didn't come from the Afghan-Arab database of disposable Western intelligence assets known as al Qaeda, but rather from deep within America's own Bioweapons-Industrial-Complex, to wit, from the U.S. Army Medical Research Institute of Infectious Diseases (USAMRIID) at Ft. Detrick in Maryland. But such troublesome and inconvenient truths are barely worth a mention by "respectable" media, e.g. the corporate stenographers who sold two imperialist military adventures to the American people.

Indeed, a credible case can be made that without the anthrax attacks, the fear levels gripping the country in the wake of the 9/11 terrorist events--and the subsequent clamp-down that followed, from the USA Patriot Act to the indefinite detention and torture of "terrorism" suspects, and from warrantless wiretapping to the demonization of dissent--may very well have been impossible.

It is difficult not to conclude that from the beginning of the affair, there was a clear intent on the part of the anthrax terrorist(s) to draw a straight line between 9/11 and the anthrax mailings. From there, it was but a short step to stitching-up a case for "regime change" in Iraq. The media's role in this criminal enterprise was indispensable for what Salon's Glenn Greenwald has called "the single greatest, unresolved media scandal of this decade." As Greenwald points out,

During the last week of October, 2001, ABC News, led by Brian Ross, continuously trumpeted the claim as their top news story that government tests conducted on the anthrax--tests conducted at Ft. Detrick--revealed that the anthrax sent to [former

Senator Tom] Daschle contained the chemical additive known as bentonite. ABC News, including Peter Jennings, repeatedly claimed that the presence of bentonite in the anthrax was compelling evidence that Iraq was responsible for the attacks, since--as ABC variously claimed--bentonite "is a trademark of Iraqi leader Saddam Hussein's biological weapons program" and "only one country, Iraq, has used bentonite to produce biological weapons." (Glenn Greenwald, "Vital unresolved anthrax questions and ABC News," Salon, August 1, 2008)
Despite ABC News' claims that their information came from "four well-placed and separate sources," they were fed information that was patently false; as Greenwald avers, "No tests ever found or even suggested the presence of bentonite. The claim was just concocted from the start. It just never happened."

And as we will shortly explore below, the dubious "Dark Winter" and "Atlantic Storm" bioterror exercises designed by Dr. Tara O'Toole freely drew from the neocon's sinister playbook, right down to the weaponized smallpox supplied to al Qaeda by Saddam.

Whether or not one buys the current permutation of the "lone nut" theory, this one alleges that Dr. Bruce Ivins, a vaccine specialist employed by USAMRIID, was the anthrax mailer; the fact is, when all is said and done the attacks, to use a much over-hyped phrase, were an inside job.

And like other "lone nuts" who have entered the parapolitical frame at their own peril, Ivins isn't around to refute the charges.

The Alliance for Biosecurity: Insiders with a Mission and (Very) Deep Pockets

Before being pegged by the Obama administration to head DHS's Science and Technology division where she will oversee the department's billion dollar budget, with some 45 percent of it going towards chemical and bioweapons defense, O'Toole, as previously mentioned, was the CEO and Director of UPMC's Center for Biosecurity, a satrapy which describes itself as "an independent organization dedicated to improving the country's resilience to major biological threats."

How "independent"? You make the call!

According to their web site The Alliance for Biosecurity is "a collaboration among the Center for Biosecurity and 13 pharmaceutical and biotechnology companies whose mission is to work in the public interest to improve prevention and treatment of severe infectious diseases--particularly those diseases that present global security challenges."

Alliance partners include the usual suspects: Bavarian Nordic; Center for Biosecurity of UPMC; Cangene Corporation; DOR BioPharma, Inc.; DynPort Vaccine Company LLC, a CSC company; Elusys Therapeutics, Inc.; Emergent BioSolutions; Hematech, Inc., a subsidiary of Kyowa Kirin; Human Genome Sciences, Inc.; NanoViricides, Inc.; Pfizer

Inc.; PharmAthene; Siga Technologies, Inc.; Unither Virology LLC, a subsidiary of United Therapeutics Corporation. Rounding out this rogues gallery are associate members, the spooky Battelle Medical Research and Evaluation Facility and the Lovelace Respiratory Research Institute.

Among the chief activities of the Alliance is lobbying Congress for increased funding for the development of new drugs deemed "countermeasures" under the Project BioShield Act of 2004, previously described by Antifascist Calling as a particularly grotesque piece of Bushist legislative flotsam.

The Alliance avers that "the United States faces unprecedented risks to national security ... by the clear and growing danger of bioterrorism or a destabilizing infectious disease pandemic," and that "our nation's vulnerability to biothreats is so severe" due to the fact that "most of the vaccines and medicines that will be needed to protect our citizens do not now exist." Therefore, countermeasures needed to mitigate nebulous biothreats never spelled out once in the group's literature "will likely require several years and several hundred million dollars each to successfully develop and produce." (emphasis added)

An Alliance report, The State of Biosecurity in 2008 and Proposals for a Public/Private Pathway Forward, charts a course for "improving and accelerating" efforts to "develop medical countermeasures (MCMs) for the nation's Strategic National Stockpile (SNS)."

Under the Project Bioshield Act of 2004, Congress authorized $5.6 billion over ten years "to purchase MCMs for the SNS." Funds were allocated for the procurement of the anthrax vaccine as well as for "therapeutic antibodies for inhalational anthrax, a botulism heptavalent antitoxin, a smallpox vaccine, and several products for radiological and nuclear threats, obligating a total of about $1.9 billion of the $5.6 billion BioShield fund."

In 2006 as I noted previously, Congress created the Biomedical Advanced Research and Development Authority (BARDA) within the Department of Health and Human Services (HHS). BARDA was authorized to spend some $1.07 billion over three years for MCMs, "only $201 million has been provided by Congress through FY 2008" noted the Alliance, "approximately one-fifth of the authorized level."

According to an "independent economic analysis" carried out by (who else!) the Alliance's academic partner, the Center for Biosecurity, "it would require $3.4 billion in FY 2009 to support one year of advanced development."

"Similarly" according to the organization, "the original appropriation of $5.6 billion for Project BioShield is equally insufficient to ensure that once MCMs are developed there will be funds available to procure them and maintain the stockpile." Indeed, "this level of funding would need to be sustained for many years." You can bet however, that

Alliance lobbyists are busy as proverbial bees in pressuring Congress to fork over the dough!

The report state's that Alliance goals necessarily entail instilling "a sense of urgency ... with Congress" by hyping the "bioterror threat." But there's much more here than a simple cynical exercise at preparing the "public diplomacy" ground through academic and industry "message force multipliers" that will enable Congress to shower Big Pharma with a veritable tsunami of cash. A "risk-tolerant culture" should be promoted within BARDA, one that "understands the realities, risks, timelines, and costs of drug development."

The "risks" to whom and for what purpose are not enumerated, but one can be certain that a "risk-tolerant culture" crafted by industry insiders will come at the expense of the health and safety of the American people, one that pushes potential legal liability should things head south onto the taxpaying public.

The stealth nature of Alliance recommendations are clearly spelled out when they aver that "stakeholders" should "focus more on the potential biothreats and the corresponding countermeasures, rather than the price tag" and that BARDA, ostensibly a public agency, should be packed with insiders "who have drug development and manufacturing experience." This will lead to the development of "a culture that is focused on partnering with industry and academia."

But the bottom line as always, is the corporatist bottom line for Alliance shareholders! How else can one interpret their statement that emerging "biothreats" are all the more dire today now that "interest of the public and private capital markets in biodefense has declined over the last 2-3 years." What better way then, to beef-up those sagging capital markets than to install an industry-friendly individual at DHS with a documented track record of overplaying the "bioterror threat."

Dark Winter

O'Toole was the principal designer of two "tabletop" bioterror preparedness drills, the 2001 Dark Winter exercise and the 2005 Atlantic Storm run-through; both were criticized by scientific experts as fabrications of an alleged threat of a smallpox attack mounted by al Qaeda.

Reviewing Milton Leitenberg's 2005 report, Assessing the Biological Weapons and Bioterrorism Threat, published the U.S. Army War College's Strategic Studies Institute, protein chemist Dr. Eric Smith wrote the following:

Of note is Leitenberg's dissection of the process of assessment as practiced through bioterrorism threat scenarios conducted by the US government and private think tanks. Exercises like Dark Winter, which modeled an "aerosolized" smallpox attack, Top Off 2

and 3, both on pneumonic plague strikes, and Atlantic Storm, an exercise that purported to show an al Qaida group manufacturing a dry powder smallpox weapon, were rigged. In the cases of Dark Winter and the Top Offs, transmission rates of disease were sexed up beyond historical averages so that "a disastrous outcome was assured" no matter any steps taken to contain outbreaks. Eight pages are reserved to pointedly condemn the Atlantic Storm exercise on a host of sins which can generally be described as a bundle of frank lies and misinformation coupled with a claimed terrorist facility for making smallpox into a weapon that even state run biological warfare operations did not possess. And once again, juiced transmission rates of disease were employed to grease theoretical calamity. The reader comes to recognize the deus ex machina--a concoction or intervention added to dictate an outcome, in these cases very bad ones--as a regular feature of the exercises. However, the results of the same assessments--the alleged lessons learned--have never been reported with much, if any, skepticism in the media. (Eric Smith, "A Vaccine for the Hype: Milton Leitenberg's new 'Assessing the Biological Weapons and Bioterrorism Threat," Global Security, National Security Notes, March 31, 2006)
In criticizing "the fancy that such attacks are easy and one of the most catastrophic threats faced by the American people," Smith denounces the alarmist scenarios of Dark Winter and Atlantic Storm's designers--people like Dr. Tara O'Toole and the coterie of industry insiders and other well-paid "experts"--as guilty of perpetrating a massive "fraud ... and a substantial one" on the American people.

While one of Atlantic Storm's architects proclaimed "this is not science fiction" and that "the age of Bioterror is now..." Leitenberg and Smith denounce O'Toole's spurious claims as "not the least bit plausible."

Leitenberg wrote that "well before October-November 2001, the spectre of 'bioterrorism' benefitted from an extremely successful sales campaign." Indeed, hyped-up scenarios such as Dark Winter and Atlantic Storm that place "weapons of mass destruction" in the hands of shadowy, intelligence-linked terror outfits like al Qaeda provided "inflated predictions that ... were certainly not realistic. Much worse, in addition to being wrong, inflated predictions were counterproductive. They induced interest in BW in the wrong audiences."

But the implausible nature of the scenarios deployed in national exercises hardly prohibited the Bioweapons-Industrial-Complex from concocting scarecrow-like straw men designed to sow terror amongst the American people while extracting regular infusions of cash from Congress.

Among the eight exercises analyzed by Leitenberg between 1998-2005, he found that each and every one were fraudulently designed and the threat of bioterrorism had been framed as a rationalization for "political action, the expenditure of public funds for bioterrorism prevention and response programs," that could "not occur without it." This is "not benign," Leitenberg concludes.

A second consequence of sexed-up "bioterror" drills have even more ominous implications for the immediate future. Because of national security state perceptions that mitigation of catastrophic bioterrorism is of supreme importance for national survival--perceptions reinforced by academic, corporate and militarist peddlers of crisis--"the US biodefense research program appears to be drifting into violation" of the Biological Weapons Convention. This is a menacing development and has happened, I would argue precisely because the evaluation process which justifies research into biological weapons threat capabilities and scenarios, are repackaged to conceal the offensive thrust of this research as wholly defensive in nature, which it certainly is not.

How else would one explain ongoing research funded by the National Institutes of Health to study botulism toxin, "with the added qualification" Smith points out, that because the protein toxin is "unstable, therefore there will be collaboration with other researchers to stabilize it." The NIH grant "means preparing a much more effective botulinum toxin than had been available before."

Smith goes on to cite "another problematical breakout" offered by two scientists to study the "aerobiological" characteristics of the lethal Marburg and Ebola viruses. How this is "defensive" in nature, in keeping with research restrictions under the Biological Weapons Convention, is another instance of a backdoor move to kick-start illicit bioweapons development.

According to Smith, the study "looks to define how the organisms can be aerosolized, an instance of research into examining vulnerability in the complete absence of a verified threat." But I would argue that showering taxpayers dollars into such dark and troubling research tributaries deploy hyped-up threats as cover for the development of illegal weapons.

When her nomination was announced in May, Rutgers University and homeland security critic Richard Ebright told Wired,

"This is a disastrous nomination. O'Toole supported every flawed decision and counterproductive policy on biodefense, biosafety, and biosecurity during the Bush Administration. O'Toole is as out of touch with reality, and as paranoiac, as former Vice President Cheney. It would be hard to think of a person less well suited for the position."

"She was the single most extreme person, either in or out of government, advocating for a massive biodefense expansion and relaxation of provisions for safety and security," he adds. "She makes Dr. Strangelove look sane." (Noah Shachtman, "DHS' New Geek Chief is a Bioterror 'Disaster,' Critics Charge," Wired, May 6, 2009)
And Dr. Smith told Wired that exercises designed by O'Toole and her colleagues show her to be "the top academic/salesperson for the coming of apocalyptic bioterrorism which has never quite arrived."

As noted above, "[She's] most prominent for always lobbying for more money for biodefense, conducting tabletop exercises on bioterrorism for easily overawed public officials, exercises tweaked to be horrifying," Smith told Wired.

But Smith goes even further and denounces O'Toole as an industry shill who "has never obviously appeared to examine what current terrorist capabilities have been... in favor of extrapolating how easy it would be to launch bioterror attacks if one had potentially unlimited resources and scientific know-how." It's a "superb appointment if you're in the biodefense industry and interested in further opportunity and growth."

"Alternatively" Smith avers, O'Toole's appointment is "a disaster if threat assessment and prevention" has "some basis in reality."

Not that any of this matters in Washington. The Senate Homeland Security and Governmental Affairs Committee led by "independent Democrat" and arch neocon Sen. Joseph Lieberman, voted to send her nomination to the full Senate July 29.

craig-oxley - August 16, 2009 03:59 PM (GMT)

THE ACUTE STAGE

AGE - Arsenicum-iodatum/Gelsemium/Eupatorium 30 - A combination remedy - this has historically been used as a prophylactic, although no trials have been carried out to date. It is used as soon as any symptoms develop or after contact - one 3 times a day until symptoms improve.

Aconite 30 - Sudden onset from cold winds or getting chilled. Fever and chill, restlessness and anxiety, good at the first stage of cold or flu.

Belladonna 30 - The No. 1 remedy for sudden fevers. Patient is burning, red and hot. Eyes may be glassy and the pupils dilated. Thirsty for refreshing drinks. Inflamed sore

throat, throbbing headache, better lying down, worse touch, jarring or movement.

Bryonia 30 - Keynote: any movement causes pain - wants to be still. Painful dry cough. Headache and pains, better from pressure and worse movement. Irritable and thirsty for cold drinks.

Camphora 30 - Icy coldness - yet doesn't want covers on - but is sensitive to cold - wants cold drinks. A state of sudden collapse, wants carers present during the hot stage of fever. Anxious.

Eupatorium perfoliatum 30 - intense aching in back, limbs and especially bones - which feel broken. Sore skin and muscles, shivering, chills. Thirst for cold water but may vomit food, drink and bile. Headache with nausea, sore chest with cough.

Nux Vomica 30 - Extreme chilliness - shivery, cannot get warm despite heat. May have fever but feels freezing inside. Aching limbs and gastric problems - nausea. Better from sleep, hot drinks, strong pressure and being left alone.

Gelsemium 30 - Aching, tiredness and weakness felt especially in muscles and limbs. Drowsy, dull, apathetic, dizzy and trembling. Heavy eyelids with bruising headache from the neck to head and forehead. Chill and heat. No thirst.
AFTER INFLUENZA

Tuberculinum Aviare 200 - Practitioners use this remedy for clearing up symptoms after flu, especially when the lungs have been affected, Coughs are irritating, incessant and tickling. There is great debility and weight loss and lack of appetite. This remedy braces up the whole organism, reduces coughs and brings back the appetite. 3 doses in 12 hours. One of the following may also be needed:

China - continued debility and chilliness - anaemic and weak with desire to stretch and move. Worse on alternate days.

Kali Phosphoricum - General weakness with spasm - the slightest labour seems like a heavy task.

Phosphoric Acid - Chronic fatigue after flu. Better from warmth, sleep. Feels apathetic, dull, settled despair, indifferent to everything. Low continued fevers. The above can be taken either in a 6C potency 3 times a day or a 30 potency twice a day.

Description: *A Chronology*

craig-oxley - August 11, 2009 04:34 PM (GMT)

Biological Warfare and the National Security State: A Chronology

Published on 08-10-2009 Email To Friend Print Version
By Tom Burghardt
http://antifascist-calling.blogspot.com/20...d-national.html

The history of bioweapons research in the United States is a history of illicit--and illegal--human experiments.

From the Cold War to the War on Terror, successive American administrations have turned a blind eye on dubious research rightly characterized as having "a little of the Buchenwald touch."

While the phrase may have come from the files of the Atomic Energy Commission as Pulitzer prize-winning journalist Eileen Welsome revealed in her 1999 book, The Plutonium Files, an investigation into secret American medical experiments at the dawn of the nuclear age, it is as relevant today as the United States pours billions of dollars into work on some of the most dangerous pathogens known to exist in nature.

That Cold War securocrats were more than a little concerned with a comparison to unethical Nazi experiments is hardly surprising. After all, with the defeat of the Axis powers came the triumphalist myth-making that America had fought a "good war" and had liberated humanity from the scourge of fascist barbarism.

Never mind that many of America's leading corporations, from General Motors to IBM and from Standard Oil to Chase National Bank, were sympathizers and active collaborators with the Third Reich prior to and even during World War II, as documented by investigative journalists Charles Higham in Trading With The Enemy, and Edwin Black in IBM and the Holocaust. Like much else in American history, these

were dirty little secrets best left alone.

Soon enough however, these erstwhile democrats would come to view themselves as mandarins of a new, expanding American Empire for whom everything was permitted. In this context, the recruitment of top German and Japanese scientists who had conducted grisly "medical" experiments whilst waging biological war against China and the Soviet Union would be free of any moralizing or political wavering.

As the Cold War grew hotter and hotter, America's political leadership viewed "former" Nazis and the architects of Japan's Imperial project not as war criminals but allies in a new undertaking: the global roll-back of socialism and the destruction of the Soviet Union by any means necessary.

This tradition is alive and well in 21st century America. With the September 11, 2001 terrorist attacks and subsequent anthrax mailings as a pretext for an aggressive militarist posture, the national security state is ramping-up research for the production of genetically-modified organisms for deployment as new, frightening weapons of war.

According to congressional testimony by Dr. Alan M. Pearson, Director of the Biological and Chemical Weapons Control Program at the Washington D.C.-based Center for Arms Control and Non-Proliferation, with very little in the way of effective oversight or accountability, tens of billions of dollars "have been appropriated for bioweapons-related research and development activities." Pearson reveals that approximately $1.7 billion "has been appropriated for the construction on new high containment facilities for bioweapons-related research."

By high containment facilities I mean facilities that are designed for work with agents that may cause serious or potentially lethal disease through exposure to aerosols (called Biosafety Level 3 or BSL-3 facilities) and facilities that are designed for work with agents that pose a "high individual risk of life-threatening disease, which may be transmitted via the aerosol route and for which there is no available vaccine or therapy" (called Biosafety Level 4 or BSL-4 facilities).

Prior to 2002, there were three significant BSL-4 facilities in the United States. Today twelve are in operation, under construction, or in the planning stage. When completed, there will be in excess of 150,000 square feet of BSL-4 laboratory space (as much space as three football fields). The number of BSL-3 labs is also clearly growing, but ascertaining the amount of growth is difficult in the absence of accurate baseline information. There are at least 600 such facilities in the US. (Alan M. Pearson, Testimony, "Germs, Viruses, and Secrets: The Silent Proliferation of Bio-Laboratories in the United States," House Energy and Commerce Committee, Subcommittee on Oversight and Investigations, October 2007)

Chillingly, one consequence of this metastatic growth "is that the very labs designed to

protect against bioweapons may become a source for them." As the 2001 anthrax attacks amply demonstrated, the threat posed by a biological weapons' incident may be closer to home than any of us care to think. Pearson writes, "Nor should we ignore the possibility that a US biologist may become disgruntled or turn rogue while working in one of these labs."

According to Edward Hammond, the Director of the now-defunct Sunshine Project, while "biological arms control is currently in ... its worst crisis since the signing of the Bioweapons Convention (BWC) in 1972," the American Bioweapons-Industrial Complex has "embarked on the exploitation of biotechnology for weapons development." Indeed, Hammond relates that active programs utilizing genetic engineering techniques have "been employed in offensive biowarfare programs in order to make biowarfare agents more effective."

But increases in state subsidies for such work have generated new risks to the public. A recent Government Accountability Office (GAO) report faulted the Centers for Disease Control and Prevention (CDC) for lax security at three of the nation's five BSL-4 labs currently in operation that "handle the world's most dangerous agents and toxins that cause incurable and deadly diseases." Agents such as Ebola, Marburg and smallpox are routinely studied at these facilities. And yet, as GAO auditors found,

Select agent regulations do not mandate that specific perimeter security controls be present at BSL-4 labs, resulting in a significant difference in perimeter security between the nation's five labs. According to the regulations, each lab must implement a security plan that is sufficient to safeguard select agents against unauthorized access, theft, loss, or release. However, there are no specific perimeter security controls that must be in place at every BSL-4 lab. While three labs had all or nearly all of the key security controls we assessed, our September 2008 report demonstrated that two labs had a significant lack of these controls. (Government Accountability Office, Biosafety Laboratories: BSL-4 Laboratories Improved Perimeter Security Despite Limited Action by CDC, GAO-09-851, July 2009)

As Global Security Newswire revealed in June, a "recently completed inventory at a major U.S. Army biodefense facility found nearly 10,000 more vials of potentially lethal pathogens than were known to be stored at the site."

The 9,220 samples--which included the bacterial agents that cause plague, anthrax and tularemia; Venezuelan, Eastern and Western equine encephalitis viruses; Rift valley fever virus; Junin virus; Ebola virus; and botulinum neurotoxins--were found during a four-month inventory at the U.S. Army Medical Research Institute of Infectious Diseases at Fort Detrick, Md., according to Col. Mark Kortepeter, the center's deputy commander. (Martin Matishak, "Thousands of Uncounted Disease Samples Found at Army Biodefense Lab," Global Security Newswire, June 18, 2009)

The GSN report states that while "half of the newfound material was destroyed after being recorded," inventory control officer Sam Edwin told reporters that "the other half was deemed worthy for further scientific use, cataloged, and stored in the center's containment freezers."

More pertinently, what happens when the state itself turns "rogue" and under cover of national security and the endless "war on terror" creates the "acute risk" in the form of out-of-control laboratories "designed to protect against bioweapons" that instead, have "become a source for them"?

Bioweapons and National Security: A Chronology

Source Notes: This chronology has drawn from dozens of books, articles and declassified government documents in its preparation. Notable in this regard is Michael Christopher Carroll's Lab 257: The Disturbing Story of the Government's Secret Germ Laboratory; Linda Hunt, Secret Agenda; Bob Coen and Eric Nadler, Dead Silence: Fear and Terror on the Anthrax Trail; the National Security Archive's documentary history of U.S. Biological Warfare programs and The Sunshine Project.

* August 1945: Operation Paperclip, an Office of Strategic Services (OSS) program to import top Nazi scientists into the United States. Linda Hunt relates in her book, Secret Agenda, that Reich Health Leader (Reichsgesundheitsführer) Dr. Kurt Blome, was saved from the gallows due to American intervention. Blome admitted he had worked on Nazi bacteriological warfare projects and had experimented on concentration camp prisoners with bubonic plague and sarin gas at Auschwitz. After his acquittal at the 1947 Nuremberg Doctors' Trial, Blome was recruited by the U.S. Army Chemical Corps and advised the Pentagon on biological warfare. Walter Paul Emil Schreiber, a Wehrmacht general who assigned doctors to experiment on concentration camp prisoners and disbursed state funds for such experiments was another Paperclip recruit; in 1951, Schreiber went to work for the U.S. Air Force School of Medicine. Hubertus Strughold, the so-called "father of space medicine" discussed--and carried out--experiments on Dachau inmates who were tortured and killed; Strughold worked for the U.S. Air Force. Erich Traub, a rabid Nazi and the former chief of Heinrich Himmler's Insel Riems, the Nazi state's secret biological warfare research facility defects to the United States. Traub was brought to the U.S. by Paperclip operatives and worked at the Naval Medical Research Institute and gave "operational advice" to the CIA and the biowarriors at Ft. Detrick.

* September 1945: General Shiro Ishii's Unit 731, a secret research group that organized Japan's chemical and biological warfare programs is granted "amnesty" by Supreme Allied Commander in the Pacific, General Douglas MacArthur in exchange for providing America with their voluminous files on biological warfare. All mention of Unit 731 is expunged from the record of The Tokyo War Crimes Tribunal. During the war, Unit 731 conducted grisly experiments, including the vivisection of live prisoners, and

carried out germ attacks on Chinese civilians and prisoners of war. According to researcher Sheldon H. Harris in Factories of Death: Japanese Biological Warfare 1932-45 and the American Cover-Up, Unit 731 scientists performed tests on prisoners with plague, cholera, smallpox, botulism and other infectious diseases. Their work led to the development of what was called a defoliation bacilli bomb and a flea bomb used by the Imperial Army to spread bubonic plague across unoccupied areas of China. The deployment of these lethal munitions provided the Imperial Army with the ability to launch devastating biological attacks, infecting agriculture, reservoirs, wells and populated areas with anthrax, plague-infected fleas, typhoid, dysentery and cholera. Rather than being prosecuted as war criminals, Unit 731 alumni became top bioweapons researchers. Ishii himself became an adviser at USAMRIID at Ft. Detrick.

1950: A U.S. Navy ship equipped with spray devices supplied by Ft. Detrick, sprayed serratia marcescens across the San Francisco Bay Area while the ship plied Bay waters. Supposedly a non-pathogenic microorganism, twelve mostly elderly victims die.

* Early 1950s: Army biological weapons research begins at the Plum Island Animal Disease Center (PIADC). Vials of anthrax are transferred from Ft. Detrick to Plum Island. This information is contained in a now declassified report, "Biological Warfare Operations," Research and Development Annual Technical Progress Report, Department of the Army, 1951.

* 1951: Racist experiments are carried out. U.S. Army researchers deliberately expose African-Americans to the fungus Aspergillus fumigatus to discern whether they are more susceptible to infections caused by such organisms than white Europeans. Also in 1951, black workers at the Norfolk Supply Center in Virginia were exposed to crates contaminated with A. fumigatus spores.

* 1952: According to 1977 hearings by the Senate Select Committee on Intelligence and the Subcommittee on Health and Scientific Research into Project MKULTRA, we discover the following: "Under an agreement reached with the Army in 1952, the Special Operations Division (SOD) at Fort Detrick was to assist CIA in developing, testing, and maintaining biological agents and delivery systems. By this agreement, CIA acquired the knowledge, skill, and facilities of the Army to develop biological weapons suited for CIA use."

* 1953: Frank Olson, a chemist with the Army's top secret Special Operations Division at Ft. Detrick was involved with biological weapons research and was tasked to the CIA for work on MKULTRA. In 1953, as Deputy Acting Head of Special Operations for the CIA, Olson is a close associate of psychiatrist William Sargant who was investigating the use of psychoactive drugs as an interrogation tool at Britain's Biological Warfare Centre at Porton Down. After being dosed with LSD without his knowledge by Dr. Sidney Gottlieb, the Agency's liaison to Ft. Detrick, Olson undergoes a severe psychological crisis. The scientist begins questioning the ethics of designing biological

organisms as weapons of war. This does not sit well with his Agency and Army superiors. On November 24, 1953, Olson and a CIA minder, Robert Lashbrook, check into New York's Staler Hotel. He never checked out. According to Lashbrook, Olson had thrown himself through the closed shade and window, plunging 170 feet to his death. But because of his knowledge of CIA "terminal experiments" and other horrors conducted under MKULTRA, the Olson family believes the researcher was murdered. When Olson's son Eric has his father's body exhumed in 1994, the forensic scientist in charge of the examination determines that Olson had suffered blunt force trauma to the head prior to his fall through the window; the evidence is called "rankly and starkly suggestive of homicide." Norman G. Cournoyer, one of Olson's closet friends at Ft. Detrick also believes the scientist was murdered. When asked by the Baltimore Sun in 2004 why Olson was killed, Cournoyer said, "To shut him up. ... He wasn't sure we should be in germ warfare, at the end."

* 1955: Following a CIA biowarfare test in Tampa Bay, Florida, the area experiences a sharp rise in cases of Whooping Cough, including 12 deaths. The Agency had released bacteria it had obtained from the U.S. Army's Chemical and Biological Warfare Center at the Dugway Proving Grounds.

* 1956-1958: More racist experiments. The U.S. Army conducted live field tests on poor African-American communities in Savannah, Georgia and Avon Park, Florida. Mosquitoes were released into neighborhoods at ground level by "researchers" or by helicopter; residents were swarmed by the pest; many developed unknown illnesses and some even died. After the tests, Army personnel posing as health workers photographed and tested the victims, then disappeared. While specific details of the experiments remain classified, it has been theorized that a strain of Yellow Fever was used to test its efficacy as a bioweapon.

* 1962: A declassified CIA document obtained by the National Security Archive relates the following: "In November 1962 Mr. [redacted] advised Mr. Lyman Kirkpatrick that he had, at one time, been directed by Mr. Richard Bissell to assume responsibility for a project involving the assassination of Patrice Lumumba, then Premier, Republic of Congo. According to Mr. [redacted] poison was to have been the vehicle as he made reference to having been instructed to see Dr. Sidney Gottlieb in order to procure the appropriate vehicle." Gottlieb was the chief scientific adviser for the CIA's MKULTRA program.

* June 1966: The U.S. Army's Special Operations Division dispenses Bacillus subtilis var niger throughout the New York City subway system. More than a million people were exposed when Army operatives dropped light bulbs filled with the bacteria onto ventilation grates.

* December, 1967: The New York Times reports, "Fatal Virus Found in Wild Ducks on L. I." A virus never seen before in the Western hemisphere, began with ducks in Long

Island at a site opposite Plum Island; the virus devastates the area's duck industry and by 1975 has spread across the entire continent.

* 1971: The U.S. Department of Agriculture proclaims that "Plum Island is considered the safest in the world on virus diseases." USDA's proof? "There has never been a disease outbreak among the susceptible animals maintained outside the laboratory since it was established."

* 1975: PIADC begins feeding live viruses to "hard ticks," including the Lone Star tick (never seen outside Texas prior to 1975). The Lone Star tick is a carrier of the Borelia burgdorferi (Bb) bacteria, the causal agent of Lyme Disease. The first cases of the illness are reported in Connecticut, directly across from the facility. Current epidemiological data conclusively demonstrate that the epicenter of all U.S. Lyme Disease cases is Plum Island. It is theorized that deer bitten by infected ticks swam across the narrow waterway separating the island from the mainland.

* September 1978: A PIADC news release relays the following: "Foot and Mouth Disease has been diagnosed in cattle in a pre-experimental animal holding facility at the Plum Island Animal Disease Center." A documented outbreak has occurred.

* 1979: An internal investigation of the FMD incident reveals massive, widespread failures in the containment systems at PIADC. A USDA Committee report recommends that "Lab 101 not be considered as a safe facility in which to do work on exotic disease agents until corrective action is accomplished."

* 1979: Despite containment failures and poor practices, USAMRIID undertakes the investigation of the deadly Zagazig 501 strain of Rift Valley Fever at PIADC. Producing symptoms similar to aerosolized hemorrhagic fevers such as Marburg and Ebola virus, the Army inoculates sheep that should have been destroyed as a result of the FMD outbreak with an experimental Rift Valley Fever vaccine. The experiments are conducted outdoors, in violation of the lab's primary directive prohibiting such work. During a 1977 Rift Valley outbreak in Egypt, some 200,000 people are infected and 700 others die excruciating deaths. A survey of blood serum taken before 1977 proved that the virus was not present in Egypt prior to the epidemic. By 2000, rampant outbreaks of the disease have occurred in Saudi Arabia and Yemen with the virus poised to unfurl its tentacles into Europe.

* 1982: A Federal review begun after the FMD outbreak concludes: "We believe there is a potentially dangerous situation and that without an immediate massive effort to correct deficiencies, a severe accident could result... [L]ack of preventive maintenance, [and] pressures by management to expedite programs have resulted in compromising safety."

* 1983: Six PIADC workers test positive for African Swine Fever virus. The workers are

not notified of the test results which are conducted clandestinely during routine annual physical exams.

* 1991: USDA privatizes PIADC. A New Jersey firm, Burns & Roe Services Corporation low bids other competitors and is awarded the contract. In cost-cutting moves, the contractor scales back on safety and security measures in place for decades.

* June 1991: An underground cable supplying Lab 257 shorts out but is not replaced since there is no money left in the budget.

* August 1991: Hurricane Bob, a category 3 storm similar to Hurricane Katrina, slams into Plum Island, knocking down overhead power lines that connect Lab 257. The underground cable which was Lab 257's primary power source has not been repaired. Freezers containing virus samples defrost, air seals on lab doors are breached and animal holding room vents fail. PIADC's "fail safe" mechanism of "air dampers" to seal off the facility also fail. Melted virus samples mix with infected animal waste on lab floors as swarms of mosquitoes fill the facility.

* September 1991: The USDA denies that any system failures occurred during the hurricane. Whistleblowing workers in Lab 257 at the time of the blackout are fired in further cost-cutting moves and several subsequently develop mysterious undiagnosed diseases.

* 1992: The Occupational Safety and Health Administration (OSHA) and the Environmental Protection Agency (EPA) cite PIADC with hundreds of safety violations. When OSHA returned five years later, none of the violations have been corrected and discover 124 new violations.

* July 1992: Although USDA officially denies that PIADC conducts biological warfare research, fourteen officials from the Joint Chiefs of Staff and the Pentagon visit Plum Island. Internal documents reveal that that the visit was "to meet with [Plum Island] staff regarding biological warfare." According to Carroll, "the visitors were part of the Arms Control and Disarmament Agency reviewing the dual-use capabilities of the facility."

* Spring 1995: Lab 257 is closed. Although scheduled to be fully decontaminated and demolished in 1996 Carroll reports: "Lab 257 still stands today, rotting from weathered decay, harboring who knows what deep within."

* August 1999: The first four human cases of West Vile virus, a mosquito-borne pathogen never diagnosed in North America are diagnosed on Long Island. Horse farms within a five-mile radius of one another, directly opposite Plum Island, report horses dying following violent seizures. An investigation reveals that 25% of the horses in this small, localized area test positive for West Nile. The outbreak begins in August 1999 when birds, including half the exotic bird species in the Bronx Zoo begin dying

mysteriously. The virus has an affinity for birds and the vector is soon identified as the mosquito. In 1999, the disease was confined to the New York City area, however by 2002, the Centers for Disease Control reports all but 6 of the lower 48 states reported West Nile virus in birds, mosquitos, animals or human populations. CDC estimates that some 200,000 people are infected nationally. During the initial outbreak in 1999, veterinary pathologist Tracey McNamara suspected a casual relationship between the bird die-offs and the human cases; CDC rebuffs her concerns. Through her persistent efforts, it is determined that the virus was indeed West Nile, a pathogen that had never been seen in North America. The CDC announces that West Nile virus was in the nation's blood supply when transplant patients who had no prior exposure to the pathogen develop the disease. The USDA's response? Deny, deny, deny? However, Jim House, a former PIADC scientist, believes that West Nile samples existed prior to 1999 on Plum Island. He told Carroll, "There were samples there, and it wasn't answered clearly to the public. They didn't honestly tell how many samples they had and that's when people started to get upset. When Carroll filed a Freedom of Information Act request for a catalog of germs held in the Plum Island virus library, he was turned down on grounds of "national security."

* September 1999: The New York Times reports that due to "the growing threat of biological terrorism" against America's food supply, USDA "is seeking money to turn the Plum Island Animal Disease Center ... into a top security laboratory where some of the most dangerous diseases known to man or beast can be studied."

* 1999: A Cold War-era document is declassified proving that in the early 1950s USAMRIID shipped twelve vials of weaponized anthrax (enough to kill one million people) to PIADC. In 1993 Newsday revealed that previously unclassified documents demonstrated Pentagon plans to disrupt the Soviet economy by spreading diseases to kill pigs, cattle and horses.

* 1999: Plans to "upgrade" PIADC by building a BSL-4 lab are killed when Congress pulls funding after a public outcry.

* September 2001: After the anthrax attacks, despite USDA denials that anthrax was ever present on the island, FBI investigators include the following questions in their polygraph examination of scientists under investigation: "Have you ever been to Plum Island?" "Do you know anyone who works at Plum Island?" "What do they do there?"

* December 2002: The New York Times reports "a three-hour power failure at the Plum Island Animal Disease Center last weekend renewed concerns about the safety of the high-security government laboratory." According to the Times, "the loss of power and failure of all three backup generators raised fears for the first time that the containment of infectious pathogens could have been seriously compromised at the laboratory."

* June 2003: President George W. Bush transfers control of PIADC to the Department

of Homeland Security. The airspace over the island is unrestricted and the gates leading to Lab 101 remain open and unguarded.

* May 2004: In a sign that work on Plum Island is being shifted to "other sites," including those run by private contractors, DHS announces an $18 million grant to study Rift Valley fever, avian influenza and brucellosis.

* August 2004: DHS confirmed that an FMD outbreak "had spread briefly" in "two previously undisclosed incidents earlier this summer," The New York Times reports. A DHS spokesperson said the virus remained "within the laboratory's sealed biocontainment area" and that there "had be no risk" to human or animals. An investigation into the cause "was continuing."

* 2004: At the Medical University of Ohio, a researcher is infected with Valley Fever at the center's BSL-3 facility; Valley Fever is a biological weapons agent.

* February 2005: University of Iowa researchers conduct unauthorized genetic engineering experiments with the select agent Tularemia (rabbit fever). The Sunshine Project reports that researchers mixed genes from Tularemia species and introduced antibiotic resistant characteristics into the samples.

* March 2005: When a containment facility fails, workers at the University of North Carolina at Chapel Hill are exposed to tuberculosis when the BSL-3 "fail-safe" systems malfunction; a blower pushes contaminated air out of the work cabinet, infecting the workroom. The facility had been inspected one month prior to the accident by U.S. Army.

* Summer 2005: At the same Ohio facility a serious accident occurs when workers are infected with an aerosol of Valley Fever.

* October-November 2005: Dozens of samples thought to be harmless are received by the University of California at Berkeley. In fact, they are samples of Rocky Mountain Spotted Fever, a BSL-3 bioweapons agent due to its transmission as an aerosol. The samples are handled without adequate safety precautions; however, the community is never notified of the incident.

* August 2005: The whistleblowing watchdog group Tri-Valley Cares obtains documents in May 2009 proving that the Lawrence Livermore National Laboratory had conducted "restricted experiments" with "select biological agents" at the facility. In 2005, LLNL "inadvertently" released anthrax at the lab in another incident that lab officials attempted to cover-up; five individuals were infected with the deadly pathogen.

* April 2006: Three Texas A&M "biodefense" researchers are infected with Q Fever, a biological weapons agent. Rather than reporting the incident to the CDC as required by law, Texas A&M officials cover-up the accident.

* August 2006: DHS announces that PIADC is "not on the rebuilding list" and a new site to study infectious diseases is being considered.

* January 2009: DHS announces that the new National Bio and Agro-Defense Facility will be built in Manhattan, Kansas.

* July 2009: Government Accountability Office investigators charge that DHS relied on "a rushed, flawed study" to locate the $700 million research facility for highly infectious pathogens "in a tornado-prone section of Kansas." Among other concerns, the GAO cites DHS's "flawed and outdated methodology" in its criticism. Those concerns are: "the ability of DHS and the federal government in general to safely operate a biosafety facility such as the proposed NBAF; the potential for a pathogenic release through accidents, natural phenomena, and terrorist actions; our May 2008 testimony that concluded that DHS had not conducted or commissioned a study to determine whether FMD research could be conducted safely on the U.S. mainland; natural phenomena such as tornadoes, earthquakes, and hurricanes that could cause catastrophic damage to the NBAF and result in the release of a pathogen; the possibility that an infected mosquito vector could escape, allowing a pathogen such as Rift Valley Fever virus to become permanently established in the United States; the economic effects of a release or a perceived release on the local, state, and national livestock industry."

Suspect H5N1 Case in Tanta, Egypt

September 22, 2008
http://www.recombinomics.com/News/09220801/H5N1_Tanta.html

Britain's Ministry of Health in Egypt in the emergence of a new human case of bird flu, a 45-year-old woman West province.

The official said the Egyptian Health Ministry in a statement today that the Directorate of Medical Affairs Western Province received notification from the hospital admitted the arrival of Mahala housewife called Huda Noah Shish share the status of the village of Tanta suffer from very high temperature and bone pain after taking a sample of blood for analysis labs Central show bird flu.

The above translation describes a suspect H5N1 case in Egypt. There have been no confirmed cases this season, but birds in the area have tested positive for H5N1 and the above translation suggests she has also tested positive.

H5N1 has been endemic in Egypt, in spite of an aggressive vaccine program. Last season a vaccine resistant strain arose, but none of the human sequences from last season have been released, so the relationship between the new sub-clade, which was found in Egypt and Israel, and the human cases from last season remain unclear.

More information on the latest cases, and release of sequences from last season, would be useful

H1N1 Tamiflu Resistance Spread Through Southern Hemisphere

September 24, 2008
http://www.recombinomics.com/News/09240801...Y_Southern.html

The meeting reviewed the data and scientific findings gathered during the 2007-2008 influenza season in the Northern Hemisphere and new data from the Southern Hemisphere 2008 season.

The above comments are from a recent WHO meeting on oseltamivir (Tamiflu) resistance in H1N1 seasonal flu linked to H274Y. The document includes NA and HA phylogenetic analysis of many of these recent isolates. As seen in the NA tree, all isolates in the upper arm have H274Y. This branch corresponds to the “Northern EU” branch released previously. As can be seen in the recent tree, the isolates in this branch represent Tamiflu resistance at the beginning of this year in the northern hemisphere, as well as recent isolates from the southern hemisphere (see list below). The earlier tree, which had many isolates from Japan, had a higher percentage of H274Y positive isolates that were not in the “Northern EU” branch (see second list below).

In the more recent tree, the majority of H274Y positive isolates form a distinct branch, which is also true for 2007/2008 public sequences from isolates in the United States, as well as isolates from Turkey, France, and South Africa (see third list below). Thus, there is one dominant Brisbane/59 sub-clade, which has produced the majority of the reported H274Y isolates, but there are additional examples in each tree representing independent acquisition of H274Y. These independent acquisitions may be linked to recombination with the dominant sub-clade.

This dominant sub-clade also gave rise to the dominant sub-clade in South Africa, which has a cluster of changes in the HA sequence near the receptor binding domain at position 190. Two of the Seychelles isolates have these changes in HA, but are not markers as having H274Y. One is listed in the NA tree, but it does not map with the South African sequences, suggesting it is a reassortant, or mislabeled.

In either event, the new phylogenetic trees show that the dominant H1N1 subclade is widespread in the northern and southern hemisphere, suggesting it will reappear in H1N1 infections in the upcoming season.

Re-emergence of Fujian H5N1 in Southeastern Russia

September 26, 2008
http://www.recombinomics.com/News/09260801...jian_Again.html

The new form of the virus of bird flu is discovered in the Khasan and The [khankayskom] The [proimorya] regions.

Probably, to new infection littoral is obliged to Vietnam or Laos

According to him in the seaside edge for the first time in Russia was, precisely, set reliable barrier to bird flu in April of this year, when the center of infection was discovered in one of the farmer economies it was Ussuri.

The above translation describes new bird flu outbreaks in southeastern Russia. The translations do not identify the infected birds or provide direct comments on the identity of the bird flu, but the comparison to outbreaks in southeast Asia and comments on the earlier outbreak in the spring, strongly suggest the Fujian strain of H5N1 has re-emerged in Russia at locations along the coast in areas adjacent to China and North Korea (see satellite map).

Full sequences from an isolate from the outbreak in the spring have been released. The HA is clade 2.3.2, while the remaining seven gene segments are clade 2.3.4. These sequences are virtually identical to multiple isolates from northern Japan from Akita, Hokkaido, and Aomori. Although South Korea has not released sequences, media reports indicate the H5N1 from the spring Korean outbreak are also closely related to the published sequences.

The spring outbreaks in the whooper swans in Japan were linked to migration to the north. Although Russia reported excessive poultry deaths in Kamchatka over the summer, H5N1 outbreaks were denied.

The recent report on the re-emergence of H5N1 in the Primorie region in Russia suggests unreported H5N1 is also circulation in China, Korea, and Japan.

More detail on the Russian outbreaks would be useful.

QUOTE

New Trivalent Vaccine Targets H1N1 Tamiflu Resistance

September 24, 2008
http://www.recombinomics.com/News/09240802..._Trivalent.html

Last year, Baker explained, two of the three strains of influenza did not match well, so the vaccine only matched the strains going around by 44 percent, as opposed to typical goals of 70 percent to 90 percent.

As a result, all three of the flu strains whose components are included in this year's vaccine are new.

The above comments on the new seasonal flu trivalent vaccine are confusing, because the statements imply that one of the three targets was a match, yet it is being changed this season. The confusion however, is due to the characterization of last years H1N1 target, Solomon Island/3 (clade 2A), as a match, when there was little Solomon Island in circulation last year. It had been replaced by Brisbane/59 (clade 2B) and Hong Kong/2562 (clade 2C). However, all three clade 2 sub-clades were grouped together because of cross reactivity with ferret antisera, which was linked to growth of the

target viruses in eggs. Brisbane/59 grown in eggs cross reacted with antisera against clade 2A, 2B, and 2C. However, when the same virus was grown in mammalian MDCK cells, the titer against Brisbane (2B) was 320 and dropped to 40 for 2C and was below detection for clade 2A and clade 1. Thus, when grown in mammalian cells the clade 2 sub-clades were antigenically distinct, as expected from phylogenetic analysis, yet all were classified as “Solomon Island-like” and considered a match. However, since they were not a match, and Solomon Island was no longer circulating, this seasons target was changed to Brisbane/59 (clade 2B).

The H1N1 mismatch last year may have contributed to the dominance of Tamiflu resistance, which was primarily circulating on a Brisbane/59 sub-clade. This sub-clade became dominant in northern Europe, leading to Tamiflu resistance above 60% in Norway and high levels in other European countries including France and western Russia. Recently released phylogenetic trees of 2008 isolates from the northern and southern hemisphere indicate that the sub-clade is still dominant and the level has risen to 100% in South Africa and Australia.

The circulation of this sub-clade, coupled with rapid change near the receptor binding domain in isolates in South Africa and Seychelles, raises concerns that the northern hemisphere vaccine target of Brisbane/59 will have limited activity because of these changes which appeared in the summer of 2008.

The target for the 2009 southern hemisphere have been announced, and the H1N1 target remains Brisbane/59, raising concerns that the reduced effectiveness of the vaccine for this seasons northern hemisphere will be extended to next seasons southern hemisphere, keeping H1N1 evolution one step ahead of the H1N1 vaccine. These concerns are compounded by current statements that clade 2B and clade 2C are antigenically indistinguishable, which is not the case when targets are grown on mammalian cells. Thus, the reliance on antigenic cross reactivity, in spite of clear phylogenetic differences as well as differences in isoaltes grown on mammalian cells, increases concerns that vaccine targets will continue to trail influenza evolution.

QUOTE

Increases in H1N1 Tamiflu and Relenza Resistance?

September 25, 2008
http://www.recombinomics.com/News/09250801...K_Increase.html

Of 55 influenza A (H1N1) viruses that were collected and analyzed during May 18–September 19, one came from the United States, 44 from South America, five from Europe, and five from Asia.

Of the 86 influenza A (H1N1) viruses received from 14 countries and analyzed for oseltamivir resistance, 40 (46.5%) were resistant.

Only five of the influenza A (H1N1) viruses that were analyzed were from the United States; two of these viruses were resistant to oseltamivir.

Of these isolates, 185 were sensitive to zanamivir, and two required additional testing.

The above comments from tomorrow’s MMWR detail neuraminidase inhibitor resistance during the 2008 flu season in the southern hemisphere. Most of these samples appear to be from South America and the levels of H274Y are 46.5%. Moreover, almost all are the Brisbane/59 strain, raising concerns that the strain will reappear in the upcoming season in the northern hemisphere.

Although the level was below the 100% recorded for South Africa and Australia, the level is markedly higher than the level recorded for Europe last season, providing additional evidence for selection of Brisbane/59 sub-clade(s) carrying H274Y.

Moreover, the additional testing on two of the isolates for zanamivir (Relenza) resistance, raises concerns that the two isolates in the United States (Pennsylvania and New Jersey), which were mixtures of wild type and Q136R/K, represented the early emergence of Relenza resistance in Brisbane/59.

The publishing of a MMWR report by the CDC in the northern hemisphere's "off" season, highlights the concern over the increasing resistance to neuraminidase inhibitors, Tamiflu and Relenza. These anti-virals are the first line defense against pandemic influenza, and the increasing levels of resistance in H1N1, which has homology with the N1 in H5N1, remains a cause for concern.

Fixing H1N1 Tamiflu Resistance Worldwide

September 29, 2008
http://www.recombinomics.com/News/09290803..._Fix_World.html

The newly released WHO report on oseltamivir resistance in the southern Hemisphere leaves little doubt that H274Y is being fixed in Brisbane/59 clade 2B. Although there are some pockets of H1N1 that are not Tamiflu resistant, many countries are reporting frequencies approaching 100% including South Africa (129/129), Cameroon (2/2), El Salvador (7/7), United States (2/3), Uruguay (6/7), United Kingdom (1/1), Australia (25/26), New Caledonia (3/3), New Zealand (1/1), Philippines (10/11).

These latest results strongly suggest that H274Y is quickly becoming fixed in Brisbane/59, and this version of H1N1 is widespread. Although the numbers in countries in the northern hemisphere are low, these numbers should increase markedly as the influenza season starts in the northern hemisphere. It is likely that Tamiflu will have little utility for treating H1N1 in areas were Brisban/59 is dominant. If H1N1 becomes common in these areas, there will be serious concerns over the utility for the use of Tamiflu to blunt an H5N1 pandemic, because of the homology between the N1 in H1N1 and H5N1.

The worldwide fixing of H274Y is an increasing cause for concern.

QUOTE

Fixing H1N1 Tamiflu Resistance In the Philippines

September 29, 2008
http://www.recombinomics.com/News/09290802...hilippines.html

In South Africa, a total of 283 A(H1N1) viruses have been isolated during the 2008 influenza season as of 9 September.

Of those, 129 isolates have been tested for oseltamivir resistance by the National Institute of Communicable Diseases (NICD) and 100% were found to be resistant to oseltamivir by genotypic analysis.

In Australia, 25 of 26, Argentina, 11 of 25, Chile, 6 of 44 A(H1N1) viruses analysed showed the specific neuraminidase mutation (H274Y) associated with oseltamivir resistance, respectively.

WHO has also received reports from NICs in other parts of the world; In the Russian Federation, 9 of 20, and Philippines, 10 of 11 A(H1N1) viruses tested were found to be resistant, respectively.

The above comments provide additional updates on Tamiflu resistance in the southern hemisphere and indicate that resistance is at or near 100% in South Africa (129/129), Australia (25/26), and the Philippines (10/11).

The levels suggest the Tamiflu resistance is becoming fixed in the above countries, and will likely become fixed in new versions of clade 2B that emerge in the upcoming season, in spite of targeting Brisbane/59 in the current vaccine for the northern hemisphere and the upcoming vaccine for the southern hemisphere.

QUOTE

Fixing H1N1 Tamiflu Resistance

September 29, 2008
http://www.recombinomics.com/News/09290801/H274Y_Fix.html

The recently released phylogenetic HA and NA trees from recent H1N1 isolates raise concerns that oseltamivir (Tamiflu) resistance (H274Y) is becoming fixed in H1N1 seasonal flu. The recent sequences include isolates from Africa and South America, which are largely evolving versions of the dominant Brisbane/59 (clade 2B) sub-clade with H274Y. However, there is also evidence of additional independent introductions, indicating Tamiflu resistance is evolving through two mechanisms. One involves evolution of the dominant sub-clade, while he other involves movement of H274Y from the dominant sub-clade, to other clade 2B sub-clades, raising concerns that H274Y will soon be fixed in H1N1.

Evidence for fixing comes from the 100% incidence in H1N1 in South Africa and Australia. However, the additional isolates indicate that the frequency of H274Y H1N1 continues to climb, suggesting the change offers a selective advantage. This advantage may create even higher frequencies in the upcoming season because of earlier mismatches with the H1N1 vaccines used last season, and the evolution of H1N1 I the previous season.

The recent HA sequences from Seychelles have the same non-synonymous changes seen in isolates from South Africa, raising concerns that the effectiveness of the Brisbane/59 vaccine that is being introduced this season will have limited utility. Last season the H1N1 target was Solomon Island/3 (clade 2A), which was no longer in circulation. Although various reports characterized the clade 2B

isolates as Solomon Island like, this designation was largely dependent on poor reference vaccines which cross reacted with virus grown in eggs, but the same virus grown in mammalian cells had limited cross reactivity. Thus, the clade 2A and clade 2B isolates could be readily distinguished via phylogenetic analysis as well as antigenic analysis, which led to a change in the H1N1 vaccine target this season (to clade 2B from clade 2A).

However, the mismatch last season facilitated the expansion of Brisbane/59-like isolates, including those with H274Y. This dramatic increase in the H1N1 genetic reservoir with H274Y, which creates concern that the frequency of H274Y will continue to increase as H1N1 continues to evolve.

QUOTE

Respiratory Illness On Prince of Wales Island Alaska

October 3, 2008
http://www.recombinomics.com/News/10030801/PoW_Alert.html

The State Health Department and U.S. Centers for Disease Control are investigating an outbreak of a respiratory illness on Prince of Whales Island.

Health department officials are reporting 26 suspected or confirmed cases of the unknown illness in communities like Craig and Klawock.

Officials say seven people have been hospitalized.

Symptoms of the illness include a severe dry cough and a fever above 101 degrees.

The above comments describe an outbreak of respiratory disease on Prince of Wales Island. The involvement of the CDC as well as the location of the island in southeastern Alaska under a major migratory bird route is cause for concern.

Earlier this year there were major outbreaks of H5N1 in South Korea, northern Japan, and southeastern Russia. All outbreaks involved a reassorted Fujian strain of H5N1 (HA is clade 2.3.2 and the other seven genes were clade 2.3.4). The dead whooper swan signaled spread to the north over the summer, including regions of Alaska. Birds in Alaska are now migrating south, increasing concerns regarding respiratory disease in regions frequented by waterfowl, such as Prince of Wales Island.

The lack of a diagnosis remains a cause for concern. More information on these patients and testing, including influenza A, would be useful.

QUOTE

Suspect Fujian H5N1 Returns to South Korea

October 4, 2008
http://www.recombinomics.com/News/10040801...ian_Return.html

South Korea on Saturday reported a suspected bird flu outbreak at a duck farm in Yesan city, south of Seoul

Initial tests at the suspected farm, home to 5,000 ducks, had given positive readings for the avian virus, it said.

The government plans to slaughter all birds in the farm as a pre-emptive measure.

Although the above comments lack detail, it is likely that the initial positive readings will be confirmed, and the confirmed bird flu will be Fujian H5N1 related to the H5N1 in the region last spring. The outbreak is in the same area (see satellite map) which largely targeted domestic waterfowl. The H5N1 was a reassortant, with a clade 2.3.2 HA and clade 2.3.4 for the other seven gene segments. It was the largest H5N1 outbreak in South Korea repoorted to date and included a soldier/culler who was H5 PCR positive, but the H5N1 was denied by South Korea. Closely related sequences were reported for whooper swans in multiple locations in northern Japan, as well as domestic poultry in Primorie, in southeastern Russia. Recently local media in Russia described a more extensive outbreak, but it remains unclear in the additional regions were H5N1 positive recently, or last spring.

However, the spring outbreak signaled the movement of H5N1 to the north via wild bird infections. Although H5N1 was not reported in northeastern Siberia or Alaska, excessive poultry deaths were reported in Kamchatka. Birds that migrated north in the spring, would be returning to the region at this time, so an outbreak in waterfowl in South Korea at this time of the year would not be unexpected. Similar outbreaks in the region have been reported in 2003, 2006, and 2007, so the current outbreak was expected.

Of note, a respiratory disease has been reported in Prince of Wales Island in Alaska, which is a region in North America frequented by migratory birds at this time of year.

More detail on the outbreak in South Korea (and enhanced surveillance in Japan, Russia, and China) would be useful.

Big Danger of Epidemic of Bird Flu in Uzbekistan: Head of National Centre of Influenza

09.10.08 20:20
http://news.trendaz.com/index.shtml?show=n...1315766&lang=EN

Uzbekistan, Tashkent, 8 October / corr TrendNews Zhukov / ¿The case of bird flu of neither people nor animals has been fixed in the territory of Uzbekistan up to present,¿ Ravshan Rakhimov, Head of National Centre of Influenza said at UNICEF¿s workshop in Tashkent.

¿However, danger is very great because the ways of migration of wild birds passes via country¿s territory. These birds are main carriers of virus. Besides, the facts of disease were registered earlier in the neighboring countries. The Ministry of Health and Ministry of Agriculture and Water Industry directed large forces to prevent such cases,¿ Uzbek official said.

An operative headquarter on prevention of bird flu was set up under the Ministry of Health in October, 2007. Leading veterinaries, employees of customs and border committees and specialists of other departments joined the staff of headquarter. Import of poultry meat into Uzbekistan from Bulgaria, Kazakhstan, Russia, Romania and Turkey was banned temporarily according to the order of Government of the Republic in autumn last year, Republican Centre of Sanitary and Epidemiologic Control told TrendNews.

Autumn migration of water birds from north to south can worsen the situation, Uzbek scientists said. The State Conservancy Committee imposed a temporary ban on hunting of wild birds. Explanatory work is conducted amongst the hunters.

Birds have already been fixed by employees of the State Committee in five large natural reservoirs of the country. These reservoirs are Aydarkul lake in Sirdarya region, Jiltirbas, Sarikamish and Sudache lakes in Kara-Kalpak Republic, as well as Kok-Darya system of lakes, located in this Autonomous Republic.

Bird Flu Returns to Germany

09.10.2008
http://www.dw-world.de/dw/article/0,2144,3702691,00.html

Bird flu has returned to Germany, with the H5N1 influenza virus breaking out among farm ducks in the eastern state of Saxony, officials said Thursday.

It was the first proven appearance of the disease this year in Germany. Officials said they had sealed off the farm and planned to slaughter the whole flock of ducks at Goerlitz, near the Polish border.

The property contains more than 1,000 birds, mainly turkeys and geese.

Germany's national animal health laboratory on the Baltic island of Riems said the find was "somewhat surprising" as the infection alert had been reduced to moderate after an outbreak was beaten last December.

Then, officials launched the largest-ever bird cull in Germany, exterminating a massive 160,000 geese over a weekend in Wachenroth, Bavaria.

It remained unknown what proportion of wild birds in Germany were infected, a spokeswoman said.

None of Germany's neighbours are currently reporting any H5N1 detections, with the virus having recently shown up in Asia, from which scientists believe it had earlier spread to both Europe and Africa with migratory wild birds.

The virus can be deadly for humans if hygienic precautions are not followed. Human-to-human transmission of the virus has only occurred in very isolated cases and chiefly in Asia.

Scientists fear the virus could mutate into an easily transmittable human disease causing a pandemic. The H5N1 strain of the bird flu virus has killed more than 200 people worldwide since 2003.

Bird flu variations

In August, US scientists raised the prospect that a bird flu strain other than H5N1 could mutate to infect humans.

"Since their introduction into land-based birds in 1988, H9N2 avian influenza A viruses have caused multiple human infections and become endemic in domestic poultry in Eurasia," a study published in the journal of the Public Library of Science had said.

"This particular influenza subtype has been evolving and acquiring characteristics that raise concerns that it may become more transmissible among humans.

"Our results suggest that the establishment and prevalence of H9N2 viruses in poultry pose a significant threat for humans."

Avian Bird Flu: What to Expect and How to Prepare (Full Version)

130 min - Mar 13, 2008

[dohtml]<embed style="width:400px; height:326px;" id="VideoPlayback" type="application/x-shockwave-flash" src="http://video.google.com/googleplayer.swf?docId=-1675161298831679693&ei=bmbvSPixF4auiALMu9nnDg&q=scott+johnson&hl=en" flashvars=""> </embed>[/dohtml]

http://video.google.com/videoplay?docid=-1675161298831679693

In recent years, the specter of the Avian Bird Flu has been hanging over mankind like a sharp sword. 'Experts' have repeatedly stepped to a news microphone to warn that human deaths could reach into the hundreds of millions worldwide - a death carried by birds in their global migratory patterns. A TV show entitled “Fatal Contact” even aired, depicting so many fatalities that their bodies were carried away in dump trucks. When this show aired back in May of 2006, I was actually on a 14 city tour of America entitled: 'Avian Flu: Killer of Millions?'. This teaching is an updated version of that presentation. This teaching covers so much more than Avian Flu and can be used as an 'icebreaking' education tool for both saved and unsaved who may not understand these issues. I endeavored to present the big picture with this presentation & point people to our only hope for any calamity: Jesus Christ. Recently I have gotten several confirmations that the 'Avian Flu Pandemic' card is soon to be played, and in reality it is long overdue. Topics will include: Proof the Illuminati telegraphs their punches prior to cataclysmic events, Why Avian Flu is the perfect vehicle for world depopulation, What the globalist elite are planning for Americans, Why the Avian Flu could be a repeat of the Spanish Flu of 1918 that killed millions!,

Vaccinations and injectable microchips regarding the Avian Flu, potential kill rates, food shortages, forced vaccinations, project bioshield, and quarantines. I will also extensively cover proactive steps you can take to protect your families and yourself. For a complete listing of the recommendations I made on this presentation go to: http://media.sermonaudio.com/mediapdf/31008191211.pdf Mild Silver Protein Website is at: http://www.dr-johnson.com The previous DVD of this presentation is available at: http://cuttingedge.org/detail.cfm?ID=1313

HPAI H5N1 Confirmed in Saxony Germany

October 10, 2008
http://www.recombinomics.com/News/10100801...ony_Fujian.html

In the establishment affected there are 800 geese, 550 ducks, 60 chicken and 24 turkeys.

There were no movements of animals into or out of the holding concerned within the last 21 days.

The detection of HPAI H5N1 was performed in relation to routine laboratory investigation.

With several animals referring to the bird flu virus were present. “It was not only a duck”, said district administrator long one.

The above comments from the recently file OIE report, and the media translation described the HPAI H5N1 outbreak in Saxony (see satellite map) . The H5N1 PCR positive was initially found in one duck, but the media report indicates more birds have tested positive, and throat swabs have been collected with humans linked to he outbreak.

The finding of HPAI H5N1 increases the likelihood that the H5N1 will be clade 2.3 (Fujian) although the outbreak may be a re-emergence of the clade 2.2 (Qinghai / Uvs Lake strain), which was widespread in Europe, including Germany, last season.

Clade 2.3 was reported last spring for South Korea, Japan, and Russia, which included wild bird outbreaks in Japan and Russia, raising concerns of migration of cladxe 2.3 to Europe this season.

Sequence data on these new infections in Germany would be useful.

QUOTE

Additional Worldwide Fixing of H1N1 Tamiflu Resistance

October 19, 2008
http://www.recombinomics.com/News/10190802...Additional.html

In South Africa, a total of 306 A(H1N1) viruses have been isolated during the 2008 influenza season as of 6 October.

Of those, 225 isolates have been tested for oseltamivir resistance by the National Institute of Communicable Diseases (NICD) and 100% were found to be resistant to oseltamivir by genotypic analysis

In Australia, 47 of 59, Argentina, 15 of 33, Chile, 10 of 79, Kenya, 1 of 4, New Caledonia, 7 of 7, New Zealand, 2 of 2, and Uruguay 13 of 16 A(H1N1) viruses analysed showed the specific neuraminidase mutation (H274Y) associated with oseltamivir resistance, respectively.

WHO has also received reports from NICs in other parts of the world; in Algeria, 4 of 13, Canada, 1of 2, Ghana 5 of 13, Guatemala, 4 of 5, Honduras, 5 of 8, Ivory Coast, 2 of 5, the Netherlands, 1 of 2, Nigeria, 1 of 1, Senegal 10 of 10 and the United States of America, 3 of 7 A(H1N1) viruses tested were found to be resistant, respectively.

The above comments describe a global expansion of H274Y in H1N1. In South Africa, where the dominant HA sequence has acquired five changes in proximity to position 190 (H3 numbering), 225/225 sequenced isolates have H274Y in NA. Other countries at 100% oseltamivir resistance include New Caledonia (7/7), New Zealand (2/2), Nigeria (1/1), Senegal (10/10). Countries with resistance at 50% or higher include Australia (47/59), Uraguay (13/26), and Canada (1/2), indicating the resistance is spreading worldwide.

Recent HA sequences from Kenya have two tandem changes, G604A and G605A, which are present in the South African and Seychelles isolates, signaling additional recombination. Two adjacent tandem changes (C610T and G617A) match H1N1 from the 1940's, while the fifth change (A599G) is in a recent clade 2C isolate from Hong Kong. Four of the five changes produce non-synonymous changes flanking the receptor binding domain position at 190 (N187S, G189N, A193T).

The sequences with the cluster of changes evolved from the Brisbane/59 sub-clade that was dominant in northern Europe in 2007/2008. The result from South Africa suggests this sub-clade continues to evolve and expand. Some countries still have other H1N1 sub-clade in circulation, but the countries reporting H274Y levels at or near 100% of H1N1 isolates suggests this change will soon be fixed in H1N1 worldwide.

QUOTE

H5N1 Returns to Bangladesh

October 19, 2008
http://www.recombinomics.com/News/10190801...esh_Return.html

Veterinary officials confirmed bird flu in a poultry farm in Naogaon on September 29, the first case since the last one detected in a Tangail farm four months ago.

'The detection indicates that the virus is still active and may spread to other places,' chief veterinary officer and director of the Department of Livestock Services Salehuddin Ahmed said.

The above comments describe the re-emergence of H5N1 in Bangladesh. The re-emergence is not unexpected, but there has been no OIE report filed on the outbreak, which is mandatory for H5 and H7 infections of poultry.

There has been somewhat of a decline in the reporting of H5N1 in birds because Indonesia and Egypt have declared H5N1 endemic and report less frequently. Other countries do not report H5 and H7 in wild birds. However, the number of countries which disregard mandatory reporting is on the rise and much of the detail on H5N1 outbreaks goes unreported.

More information on the outbreak(s) in Bangladesh would be useful.

QUOTE

Endemic H5N1 Confirmed in Saxony Germany

October 20, 2008
http://www.recombinomics.com/News/10200801...mic_Saxony.html

8.10. confirmation AI H5N1 by national reference lab, sequencing ongoing – first results indicated the presence of a HPAIV almost identical to the strain found in a tufted duck (Aythya fuligula) from the lake of Bautzen in 2006

The above comments from a report on the H5N1 and H5N3 outbreaks in Saxony strongly suggest that H5N1 is endemic in Germany and is circulating largely undetected. In 2006 there were three distinct sub-clades circulating in Germany, including one sub-clade which was also found in Switzerland, France, and the Czech Republic. Although this sub-clade was reported in multiple countries in early 2006, it has not been reported since. The recent detection of this sub-clade in 25 free range birds in Saxony indicates it has been circulating undetected in Germany for over 2 years.

Reports of H5N1 from Germany since the summer of 2007 have been limited to outbreak involving sub-clade 2.2.3, which is easily distinguished from the 2006 isolates in Germany.

However, in early 2007 clade 2.2.3 isolates began acquiring NA G743A, which had been limited to the 2006 isolates that included A/tufted duck/Germany/R1240/06. G743A was appended onto multiple clade 2.2 genetic backgrounds in early 2007, and clade 2.2.3 with G743A was widely detected in Europe after the summer 2007 outbreaks.

The detection of 2008 isolates with sequence closely related to the tuft duck isolate above suggests that this sub-clade may have been circulating undetected in late 2006 / early 2007 and may have been the donor sequence for the acquisition of G743A.

The detection of the 2006 sequence in 2008 strongly suggests that H5N1 is endemic in Germany and throughout Europe.

QUOTE

Early Emergence of H1N1 in the United States

November 08, 2008
http://www.recombinomics.com/News/11080801...1_US_Early.html

The week 44 influenza report by the CDC this season had much in common with the week 44 report for last season. Most of the confirmed influenza cases were influenza A, most of the sub-typed influenza A isolates were H1N1, and most of the H1 was in the western (Pacific) region.

Last season the first US isolates with H274Y were in Hawaii and collected on October 22. Although these isolates were Brisbane/59, they were not the dominant sub-clade, which was confirmed with isolates in Arizona collected in early December. In the US, the overall frequency of H274Y was lower than many countries in Europe, in part because many of the isolates in the western US (especially Hawaii) were clade 2C (Hong Kong), and no H274Y was reported in clade 2C isolates in the US (although H274Y positives were reported in China as early as mid-2006).

The dominant sub-clade with H274Y was more dominant in several European countries, including Norway and France, where frequencies approached 50% of H1N1 isolates. However, this level approached or reached 100% in the summer of 2008. Most notable was South Africa, were 225/225 isolates were H274Y positive. The positives were dominated by a version of H1N1 that had acquired a number of changes clustered around the receptor binding domain, which raised concerns that the current vaccine, which targets Brisbane/59, will have reduced efficacy.

Moreover, recent isolates from Hong Kong raise concerns that the levels of H274Y may be increasing in clade 2C. Three sets of HA and NA sequences from isolates collected in late spring or the summer of 2008 were H274Y positive and these isolates had evidence of exchange of genetic information between clade 2B and 2C. One of the isolates had a clade 2C HA and a clade 2B NA, indicating it was a reassortant. Similarly, one of the changes near the receptor binding domain in the South African sequences is also on the HA of clade 2C. Thus, the sequences from Hong Kong raise concerns regarding H274Y in clade 2C, and the H274Y positive sub-clade may appear in the western US early in the season.

Early indications from the UK and Canada also raise concerns regarding H274Y, since the first H1N1 isolate in Canada and the first 3 isolates in UK were Tamiflu (oseltamivir) resistant, suggesting early H1N1 isolates in the US may be clade 2B and clade 2C, but both sub-clades may have high levels of H274Y.

The CDC week 44 report was silent on H274Y levels, which may trail sub-type data. However, HA and NA sequences from early H1N1 isolates in the US would be useful.

QUOTE

Rapid Evolution of Vaccine Resistant H5N1 in Cairo Egypt

November 09, 2008
http://www.recombinomics.com/News/11090801...tion_Cairo.html

HA sequences from last season's Egyptian cases were recently released at Genbank by NAMRU-3. Most of the sequences were related to isolates from the 2007/2008 season, including two isolates with the 3 BP deletion (Egypt/2289-NAMRU-3/2008 and Egypt/2546-NARMRU-3/2008), as well as four isolates related to the milder cases in southern Egypt (Egypt/10211-NAMRU3/2007, Egypt/1980-NAMRU3/2008, Egypt/2514-NAMRU3/2008, Egypt/3158-NAMRU3/2008).

One of the cases, however, was related to the vaccine-resistant strain that began to emerge in late 2007 in vaccinated flocks. The vaccine resistant strain had a large number of non-synonymous changes, raising concerns that the resistance was being driven by poorly matched vaccines. These changes were first reported by the National Veterinary Labs (NLQP), followed by a similar sequence in Israel, and sequences by the Capua lab and NAMRU-3 (see list below).

The fatal case (30F) in Cairo (Egypt/3300-NAMRU3/2008), had the changes seen in the vaccine resistant poultry isolates, as well as a large number of additional non-synonymous changes, raising concerns of rapid evolution away from the vaccine targets. Included in the additional changes in the human case were S134L (position 134 is deleted in the isolates with the 3 BP deletion), D159N and A161T which create a new glycosylation site at position 159, L194I (between receptor binding positions 190 and 196), Q196K (Q196R is receptor binding domain change in Iraqi cluster), and A242T which creates a glycosylation site at position 240 (all of the above positions use H3 numbering).

The dramatic increase in non-synonymous changes, overlaid onto the changes reported earlier in poultry isolates, raises concerns of accelerated H5N1 evolution in Egypt, which may be linked to the vaccine program.

More information on sequences of recent poultry isolates would be useful.

H5N1 Spread to Xayabury Laos

November 10, 2008
http://www.recombinomics.com/News/11100801...1_Xayabury.html

Donmai village, Xayabury, XAYABURY
Date of start of the outbreak 27/10/2008

Affected population backyard poultry (114 chickens and 41 ducks)

real-time PCR - 30/10/2008 – Positive

The above comments from today's OIE report from Laos describe a confirmed H5N1 outbreak in Xayabury. This outbreak follows two earlier outbreaks in northern Laos, and is followed by a confirmed outbreak in northern Thailand, less than two hundred miles southwest of the above outbreak (see satellite map).

These outbreaks in northern Laos and northern Thailand are likely to be related to each other and outbreaks in northern Vietnam. Recent reports have described a number of clade 2.3.4 reassortants in northern Vietnam. These genes are related to 7 of the 8 gene segments in wild bird isolates in Japan (HA is clade 2.3.2), which are closely related to poultry isolates in South Korea and Primorie, which were reported earlier this year.

The recent outbreaks signal migration of wild birds into the region, which will likely lead to reported outbreaks in the regions described above.

QUOTE

Thailand confirms fresh bird flu outbreak

Agence France-Presse | 11/10/2008 5:37 PM
http://www.abs-cbnnews.com/world/11/10/08/...rd-flu-outbreak

BANGKOK - Thailand's agriculture ministry said Monday that it had confirmed an outbreak of bird flu on a backyard farm in the north, six months after the kingdom was declared free of the deadly virus.

The H5N1 strain of avian influenza was found in a dead chicken in Sukhothai province, prompting the slaughter of 270 other birds nearby.

"There are no reports of any people sick from bird flu," Agriculture Minister Somsak Prisanananthakul told a press conference.

"We are now investigating whether the new outbreak was caused by ourselves or an outbreak from a neighbouring country," he added.

The surrounding area will be monitored for 21 days and Thailand will inform the World Organization for Animal Health, Somsak said.

Thailand, the world's fourth-largest exporter of poultry, has slaughtered millions of birds to halt the spread of the virus.

It has confirmed 25 human cases, 17 of them fatal, since the first outbreak of the deadly H5N1 strain of

avian influenza in January 2004. The last human fatality was in August 2006.

The H5N1 strain has killed 245 people worldwide since late 2003, according to World Health Organization figures, and experts fear it could mutate into a form easily transmissible between people, sparking a deadly global pandemic.

as of 11/10/2008 5:37 PM

QUOTE

H5N1 Spread in Thailand Raises Surveillance Concerns

November 11, 2008
http://www.recombinomics.com/News/11110801...lok_Spread.html

During the months of August and September, bird-flu virus was reportedly spreading in Sawankalok District before it was recently detected again in a nearby district.

The bird flu outbreak that was first detected in Sukhothai's Thung Saliam district has spread to the neighbouring Sawankhalok district where 30 chickens died yesterday from the deadly avian virus in Moo 2 of Tambon Nai Muang, an informed source said.

The above comments from media reports provide additional linkage between the spread of H5N1 in northern Laos and the spread in northern Thailand. Laos filed an OIE report on H5N1 spread in late August / early September, and filed another report yesterday on a third location, less than 200 miles from the outbreak reported in an OIE report from Thailand (see satellite map). The media reports on Thailand indicate H5N1 has been circulating there since August at multiple locations, denials in ProMed notwithstanding.

H5N1 in both countries is not a surprise. When H5N1 exploded out of China in later 2003 / early 2004, the clade 1 H5N1 was present throughout southeast Asia (Vietnam, Thailand, Laos, Cambodia). Therefore, the concurrent appearance of H5N1 in northern Thailand and northern Laos is not a surprise, and it is likely that H5N1 is also currently circulating in northern Vietnam and China, although neither country has filed recent reports.

Updated reports from these countries would be useful.

QUOTE

Further Spread of H5N1 in Northern Thailand

November 12, 2008
http://www.recombinomics.com/News/11120804...pread_More.html

Another outbreak of bird flu was detected in Nong Chang district yesterday, prompting a mass culling of infected chickens amid resentment among poultry breeders.

Provincial livestock officials disinfected bird flu-hit Ban Hua Khao, where the chickens died of unknown causes, culled scores more chickens and collected the carcasses for lab tests.

Despite all efforts to contain bird flu, Sukhothai was hit again as the deadly virus was discovered on a fighting cock farm in Sawankhalok yesterday.

Samples of blood and droppings from fighting cocks bred by farmer Pinyo Ketnil were collected for a second lab test following the first last week.

The above comments describe the spread of H5N1 in northern Thailand. Reports yesterday confirmed H5N1 at two locations, and the above comments indicate the H5N1 infections have spread (see satellite map). The reports from Thailand come as Laos and Vietnam have also reported confirmed H5N1 outbreaks in the past few days.

In addition to the recent confirmed cases, official and media reports describe earlier outbreaks in August and September. However, the latest flurry of reports suggests infections are spreading.

Similarly, Indonesia has confirmed a fatal H5N1 infection in Semerang, and is doing addition tests on another fatal pneumonia case in Bandung.

These recent reports suggest human and poultry outbreaks will continue to rise in the near term.

QUOTE

Symptoms in Neighbors of H5N1 Confirmed Case in Semarang

November 12, 2008
http://www.recombinomics.com/News/11120803..._Neighbors.html

Dinas Kesehatan of the City (ET AL) Semarang took the sample of three neighbours DS, casualties died with suspect bird flu. The three people who were taken the sample of his blood it was known experienced the high fever.

The three people who were taken the sample of his blood, namely Wd (8), Jf (10), and Ks (35). The taking of the sample of the blood was carried out, last Sunday (9/11).

Because since the death of casualties, there was his one resident that underwent treated inap in RSUP Kariadi Semarang since the last four days. Results of the temporary analysis, his resident was affected by the typhus illness.

The above translations describe symptoms in three neighbors of the H5N1 confirmed fatal case in Semarang. In addition, another resident with symptoms has been hospitalized, but diagnosed as typhus. In the past, several patients initially diagnosed as typhus were subsequently H5N1 confirmed. In addition, the index case from one of the three clusters, which each included one confirmed H5N1 case, was also diagnosed with typhus. Therefore, the information on the laboratory basis for the typhus

diagnosis would be useful.

In addition to the testing of the seven family members or neighbors described above, investigators are assessing students at the senior high school of the fatal case.

More information on these subjects would be useful.

QUOTE

Fatal H5N1 Case Confirmed in Semarang Indonesia

November 12, 2008
http://www.recombinomics.com/News/11120801...1_Semarang.html

Agus Suryanto, who headed the team of doctors treating the patient, said the girl was from the city of Semarang, 250 miles east of Jakarta. She died late last week after 10 days of hospitalization.

Local health agency chief Tatik Suryanti said test results from two laboratories in the capital came back positive Wednesday.

The above comments describe a confirmed H5N1 fatality in Semerang, Indonesia. The case is being reported locally and by AP, but has yet to be acknowledged by the government of Indonesia or WHO. International Health Regulations require Indonesia to notify WHO 24-48 hours after lab confirmation, and WHO generally issues a situation update within 24-48 hours after receiving notification from the affected country.

Several months ago Indonesia stated that they would not issue timely reports of confirmed human cases. However, WHO maintained that a lack of public announcements by Indonesia did not preclude Indonesia from notifying WHO, in accordance with regulation.

However, there has been no timely situation updates on confirmed cases since the Indonesian announcement, indicating that Indonesia was out of compliance, or WHO was withholding announcements on confirmed human cases. The change of policy followed the denial of several clusters which signaled human to human transmission.

This behavior by Indonesia and WHO continues to be hazardous to the world's health. Indonesia has the highest number of confirmed cases, the highest case fatality rate and has withheld sequence data from human and bird H5N1 isolates.

The lack of response by the international community remains a cause for concern.

QUOTE

H5N1 Confirmed in Nghe An Vietnam

November 12, 2008
http://www.recombinomics.com/News/11120802/H5N1_Nghe_An.html

A bird flu outbreak has been confirmed in Nghe An, a central province of Vietnam, the local newspaper Liberty Saigon reported on Wednesday, citing a statement from the provincial People's Committee.

The outbreak was spotted at the Dien Hong commune, causing the death of nearly 1,000 poultry.

Specimens from the dead poultry have recently been tested positive to the bird flu virus strain H5N1, according to the statement.

The above comments confirm H5N1 in central Vietnam. These reports follow confirmation of H5N1 in northern Laos and Thailand, raising concerns of endemic H5N1 in the region (see satellite map). Additional reports indicate the H5N1 was been poultry sonce August. During this time period, Bengalsdesh also reported H5N1 in poultry, raising surveillance issues in adjacent country.

Similarly, local health officials have confrmed H5N1 in a fatal infection in Semarang, whoch once again raise reporting issues in Indonesia.

H5N1 reporting issues remain a hazard to the world's health.

QUOTE

H1N1 Tamiflu Resistance Clade Exchanges in Hawaii

November 28, 2008
http://www.recombinomics.com/News/11280802...Y_X_Hawaii.html

Twenty of 21 influenza A (H1N1) viruses tested were resistant to oseltamivir

The above comment from this week's CDC report includes information on the 19 isolates tested since the prior report, and all 19 have H274Y. The level of H274Y in clade 2B (Brisbane/59), was expected to be at or near 100% based on initial reports from Europe and Canada, as well as earlier reports from countries in the southern hemisphere where resistance was at or near 100% for the 2008 season.

However, in the United States the vast majority of H1N1 isolates were from the Pacific region and the highest levels were in Hawaii, where clade 2B and clade 2C (Hong Kong) were co-circulating last season. Last season all clade 2C isolates were amantadine resistant, but none were oseltamivir resistant (H274Y). Moreover, the level of H274Y in clade 2B was low.

Therefore, the report that all 19 of the most recent H1N1 were resistant, raises concerns that H274Y levels were increasing in clade 2C, if there were significant numbers of clade 2C isolates in the initial reports.

Recently, Hong Kong reported an increase in H274Y levels, but the 17.% reported for the 3rd quarter was far below the rate in the US and Europe which was at or near 100%. The high levels in the United State raise concerns that the high level of H274Y in clade 2B is leading to increases in co-circulating clade 2C through an exchange of genetic information, either via reaasortment or recombination

More information on clade 2C representation in the first 21 H1N1 isolates tested would be useful.

Bird flu outbreak in Assam, culling operations on

November 29th, 2008 - 1:46 pm ICT by ANI -
http://www.thaindian.com/newsportal/india-..._100125064.html

Kamrup (Assam), Nov 29 (ANI): Authorities in Assam have started culling chicken and ducks since Friday following a fresh outbreak of bird flu in poultry.

According to official reports samples have been sent to laboratories in Bhopal and some have tested positive for the H5N1 stain.

We have started culling the birds, till now we have found 61 birds with the infection, we have killed them and buried them also, said Moloy Bharali, a culling officer.

Culling officers are going from house to house urging the villagers to hand over their poultry.

The villagers have also been promised a compensation of 20 rupees per chicken, 50 rupees per hen, 35 rupees for a duckling and 70 rupees for a duck.

Villagers like Mohammad Muktar though initially reluctant, gave away their poultry when culling officers made them understand the consequences.

We are dependent on these birds and chickens for a livelihood. Poor people like us sell the eggs and make a livelihood and if these birds are killed, we will make huge loses, but we have given the birds to the officers because we understand that it would be dangerous if the infection catches human beings, said Muktar.

According to official reports, over 30,000 chickens and ducks would be slaughtered in the next three days in 20 villages, after one of them was hit by bird flu.

India has not reported any human infections so far, though the first outbreak in poultry was reported in 2006 in Maharashtra.

Experts fear the H5N1 strain could mutate into a form easily transmitted from person to person, leading to a pandemic. (ANI)

QUOTE

H1N1 Tamiflu Resistance Levels Increase in Hong Kong

November 28, 2008
http://www.recombinomics.com/News/11280801...K_Increase.html

CHP analysis of the July to September this year, 836 samples of influenza A H1N1 virus, there were 144 pairs of Tamiflu resistance

In the second quarter and first quarter of this year, only 15.7 and 11.8 percent of drug-resistant H1N1 samples.

H1N1 virus of amantadine resistance, from 16.9 percent in the first quarter of this year, surged to 70.5 percent in the third quarter.

The above translation describes increasing antiviral resistance in Hong Kong. In the past few years the frequency of amantadine resistance (S31N) in clade 2C (Hong Kong strain) has been at 100%, so the increase from 16.9% to 70.5% in the first and third quarter of this year likely represents an increase in clade 2C levels. Similarly, the increase in H274Y from 11.8% to 17.2% over the same period likely represents a significant increase in H274Y in clade 2B (Brisbane/59).

However, these increases may represent clade 2B acquiring S31N, and clade 2C acquiring H274Y via reassortment or recombination. Three pairs of HA and NA sequences from Hong Kong were released. All three had a clade 2C HA and also had H274Y in NA, but one of the NA sequences was 2B, indicating the H274Y in the clade 2C isolate, A/HongKong/942/2008, was due to reassortment. Similarly D354G, which is present on all public 2C NA sequences, is also on all 2B sequences from the dominant 2B sub-clade (which has now been found worldwide).

Thus, Hong Kong which has clade 2B and 2C co-circulating, may have higher levels of genetic exchanges that move resistance from one genetic background to another. Last season clade 2B and 2C were co-circulating in Pacific region in the United States, but resistance exchanges were not reported (all H274Y was on clade 2B and all S31N was on clade 2C). However, H274Y levels in the United States were low last season.

In contrast, the week 47 report from the CDC indicates 20/21 H1N1 isolates this season have H274Y and the majority of H1N1 isolates have been in the Pacific region, with highest levels in Hawaii raising the possibility that like Hong Kong, H274Y may have moved from clade 2B to clade 2C.

Release of amantandine resistance levels for H274Y would help determine if this is the case, which can also be determined directly through phylogenetic analysis. Therefore, release of these sequences or amantadine status would be useful.

QUOTE

H1N1 Tamiflu Resistance Levels in US Raise Concerns

November 27, 2008
http://www.recombinomics.com/News/11270805...S_Concerns.html

Since October 1, 2008, 21 influenza A (H1N1), five influenza A (H3N2), and eight influenza B viruses from eight states have been tested for antiviral resistance; however, 71% of the viruses tested were from only two states. Twenty of 21 influenza A (H1N1) viruses tested were resistant to oseltamivir.

Only one state has reported local influenza activity during the 2008-09 season in the United States to date, thus the number of virus specimens available for antiviral resistance testing is limited in both overall number tested and in the number of states that have submitted specimens. Currently, data on antiviral resistance, as well as the limited information on which influenza virus types or subtypes will circulate during the season, are insufficient to provide an indication of the prevalence of oseltamivir or adamantane (amantadine and rimantadine) resistance at a national or regional level. CDC has solicited a representative sample of viruses from WHO collaborating laboratories in the United States, and more specimens are expected as influenza activity increases.

The above comments continue to delay announcements on anti-viral resistance levels and suggest that the levels of 100% resistance to amantadimes in H3N2 ,and 100% resistance to oseltamivir in clade 2B H1N1 ignore the recent history of these two seroptypes.

The high level of resistance to amantadines in H3N2 has been widespread for several years, and all reported results in Europe and the United States this season reflect 100% resistance. The same is true for oseltamivir resistance in clade 2B. In addition to the high levels in the United States, the initial data in Europe and Canada support levels at or near 100%, so the limited testing in the United States is unlikely to represent an unusual frequency for clade 2B.

However, the finding of H274Y in 20/21 isolates in the United States, which appear to be largely from Hawaii, raise concerns that levels of Tamiflu resistance in clade 2C may be spiking higher. Last season all reported H274Y in the United States was in clade 2B and most clade 2C was in western states, with highest levels in Hawaii. Thus, the high frequency in this weeks report suggests there is a high level in clade 2C, if that sub-clade was well represented in the initial testing.

Of the 101 H1N1 isolates reported to date, 75 are in the Pacific region, and the highest level of influenza in the United States is Hawaii, suggesting most of the H1N1 reported to date is from Hawaii. The level of clade 2C can be determined from the amantadine resistance levels, since last season all clade 2C was resistant, but only six of the initial H1N1 isolate have been tested for amantadine resistance this season.

These high levels of H274Y in H1N1 in initial reports from the United States, Canada, and Europe are not likely to decline in the near term, and the high frequency of H1N1 in the United States in general, and the western states in particular, indicate more rapid testing of the existing isolates would be useful for predicting near term levels of H274Y in clade 2B and clade 2C.

In addition to concerns over physicians treating H1N1 patients with oseltamivir, there are concerns that the H274Y in H1N1 will be acquired by H5N1, either through reassortment or recombination. One reported clade 2C isolate in Hong Kong has acquired N1 with H274Y via reassortment. Moreover, that polymorphism has jumped to multiple clade 2C, clade 1, and clade 2B backgrounds, suggesting recombination between these sub-clades is common, which may also drive an increase level of H274Y in clade 2C, as well as new sub-clades which may develop in the future.

Moreover, this dramatic rise in H274Y in H1N1 seasonal flu increases the likelihood of dual infections with H5N1 infected patients, leading to an increase in the level of H274Y in H5N1.

In Indonesia, the number of such individuals controlled with oseltamivir may be markedly higher than the

reported cases, and widespread H274Y in H5N1 could significantly increase the likelihood of a catastrophic pandemic.

QUOTE

Novel H5N1 At Qinghai Lake Nature Reserve

November 27, 2008
http://www.recombinomics.com/News/11270804...ghai_Novel.html

Recently H5N1 sequences from the Qinghai Lake Nature Reserve collected in June, 2008 have been released at Genbank. Qinghai Lake was the site of a massive wild bird die-off in May, 2005. Although multiple species were infected, including five described in the initial OIE report, most of the infections were in bar headed geese, which can travel 1000 miles in 24 hours. A novel strain of H5N1 was isolated (Qinghai strain, clade 2.2), which subsequently spread to Kazakhstan, Russia, and Mongolia in the summer of 2005, followed by 50 countries west of China in the following 12 months.

Although H5N1 was also reported in Qinghai Province a year later, the outbreak at Uvs Lake in the summer of 2006 led to the widespread distribution of the Uvs Lake strain, a clade 2.2.3 derivative of the Qinghai strain. The Uvs Lake strain migrated to South Korea and Japan at the end of 2006 followed by the Middle East and Europe in 2007 and west Africa in 2008.

Moreover, the outbreaks in Japan, South Korea, and Russia in the spring of this year were linked to wild birds, including migratory whooper swans, which were infected with the Fujian strain (clade 2.3) of H5N1, leading to concerns of spread of the Fujian strain into the same countries affected by the Qinghai strain.

However, the H5N1 at Qinghai Lake this year ,A/environment/Qinghai/1/2008(H5N1), was not the Qinghai (clade 2.2) or Fujian (clade 2.3) strains. Instead, the H5N1 was closely related to H5N1 found in poultry and swine in northern China in 2003. Moreover, the isolate had a PB1 gene which was an exact match of low path PB1 in mallards from northern China isolated in 2006 (A/mallard/SanJiang/113/2006(H6N2)). Exact matches were also found for PB2 with A/chicken/Hubei/wn/2003 (H5N1) and A/swine/Shandong/2/2003(H5N1), as well as PA with the swine sequence and NP with the chicken sequence.

Since the level of this novel H5N1 (clade 0) at Qinghai Lake and elsewhere is unknown, the potential for this strain to distribute remains unclear. The sequences which exactly match that H5N1 isolates from 2003 have not been reported in the past five years and the identity in these large internal genes suggests there has been little interaction with other H5N1 isolates. However, the HA cleavage site of RERRRKKR has appeared on an Egyptian clade 2.2 genetic background in 2008 isolates in the Nile Delta suggesting additional H5N1 may have been circulating beyond China, but has gone undetected.

Germany recently isolate H5N1 that is virtually identical to 2006 isolates in Germany, which have circulated undetected between early 2006 and late 2008, highlighting limitations in current surveillance approaches. Recently, new H5N1 outbreaks were reported in Vietnam and Thailand in southeast Asia, as well as Bangladesh and India in south Asia, which reflect H5N1 migration into the area.

Release of sequences from these outbreaks so they can be compared to the novel H5N1 isolates from the Qinghai Lake Nature Reserve would be useful.

QUOTE

WHO Monitoring H5N1 In Makassar Indonesia

November 27, 2008
http://www.recombinomics.com/News/11270803...kassar_WHO.html

Two district in Makassar, each Panakkukang Makassar and now is under the monitoring of the World Health Organitation (WHO). Both these areas are considered prone to the spread of bird flu, as poultry traders into place.

This is revealed in the meeting between the Mayor, A Herry Iskandar consultant with the WHO, Omai M. Through Omai, the WHO expressed Makassar to help in tackling the spread of the bird flu virus.

The above translation describes interest by WHO regarding H5N1 in Makassar, the site of a 19 person cluster. Although official reports maintain that these patients were H5N1 negative, the first seven tested were PCR positive base on local lab tests, as were the dying poultry in the region.

Usually H5N1 in birds is monitored by FAO, while human cases are monitored by WHO. Although the above translation describes H5N1 in poultry, and media reports indicate that the recent and future flu simulations in patients in Makassar are unrelated to the large cluster, the direct involvement of WHO on monitoring H5N1 in the region is more reassuring that WHO announcements regarding the news blackout on human H5N1 cases in Indonesia.

QUOTE

H1N1 Tamiflu Resistance in England Approaches 100%

November 27, 2008
http://www.recombinomics.com/News/11270802/H274Y_UK_93.html

Fourteen of fifteen A (H1) specimens tested in the same time frame are
resistant to oseltamivir but sensitive to zanamivir and amantadine. The majority of these resistant viruses come from the south west of England with the remaining from Wales and northern England. Two influenza A (H1) isolates have been found to be resistant to oseltamivir in Scotland this season. Four further influenza A(H1) isolates are undergoing resistance testing at the moment.

Since week 40/08 57 viruses have been characterised: nine A/Solomon Island/3/2006 (H1)-like which is similar to the vaccine strain, two A (H1) Brisbane/59/2007 (H1N1)-like (vaccine strain) and 46 A (H3) A/Brisbane/10/2007 (H3N2)-like (vaccine strain).

The above comments from this week's influenza report from England indicate two additional isolates (from Wales and northern England) have been tested and both had H274Y. The four additional H1N1 isolates are being tested. Thus, since the report of 9/10 resistant isolates in England, 5/5 isolates in England have H274Y, as do 2/2 isolates from Scotland, indicating resistance levels are approaching 100%.

Similar results are being reported in the United States, where 19/19 of the most recently reported results also have H274Y. Both countries reported resistance levels close to 10% of H1N1 last season, so the increase to almost 100% is dramatic, but not unexpected, because similar levels were seen over the summer for several countries in the southern hemisphere, with South Africa being the most notable with H274Y in all 215 H1N1 isolates tested.

Although there was some heterogeneity in the South Africa isolates, all traced back to the Brisbane/59 sub-clade that was dominant in Europe and the United States. The above serological characterization

of the H1N1 in England may reflect this heterogeneity, but release of the sequences would allow for phylogenetic analysis which demonstrated that the Solomon Island strain (clade 2A) was not circulating last year and is unlikely to be circulating this year. However, further evolution of the dominant Brisbane sub-clade, or emergence of new sub-clades is expected, since there were multiple introductions of H274Y onto Brisbane genetic backgrounds last season, which was most common in Japan, but present worldwide. Moreover, Hong Kong released three clade 2C sequences with H274Y, raising concerns that H274Y levels in clade 2C were also on the rise this season. Over the summer, H274Y levels in H1N1 rose to more than17%, while amantadine resistance levels rose to 70% in Hong Kong.

Release of sequence data for H1N1 in Engalnd and the United States would be useful.

QUOTE

H5N1 Confirmed in Assam India

November 27, 2008
http://www.recombinomics.com/News/11270806..._Confirmed.html

Official circles here said that the Bhopal-based High Security Disease Diagnostic Laboratory (HSADL) confirmed this evening the outbreak of the disease among the domesticated fowls of Thakuria Chuba of Rajabazar village under Hajo Revenue Circles of Kamrup district.

reports of unusual death of fowls have also been received from parts of Sarpara village of Palasbari in the same district.

The Directorate of Veterinary and Animal Husbandry here received reports of unusual death of domesticated birds from Thakuria Chuba, a locality inhabited by 25 families, on November 21. In the locality 87 fowls were reported dead on November 21. Of the birds, 62 were adult ones.

The next day, 66 birds were reported dead (48 adults), followed by 92 (56 adults) on November 23, 20 (12 adults) on November 24, 27 (19 adults) on November 25 and 32 (17 adults) on November 26. It is believed that at present there are around 100 fowls left in the locality, said the sources.

The above comments confirm H5N1 in the deaths of 297 birds near Hajo in the Kamrup district of Assam. Suspect H5N1 is also reported near Palasbari (see satellite map).

Assam has not confirmed H5N1 previously, although adjacent West Bengal and Bangladesh reported major outbreaks at the beginning of this year, when unusual poultry deaths were also reported in Assam. Recently Bangladesh reported confirmed H5N1 in Naogon, about 175 miles southwest of the outbreak in Hajo (see satellite map).

The death of 3/4 of the poultry near Hajo suggests additional outbreaks will be reported.

H5N1 Spread in Assam India

December 1, 2008
http://www.recombinomics.com/News/12010801...sam_Spread.html

27,000 chicken were culled at Rangiya Circle in Kamrup (Rural) district to prevent spread of the disease to other districts.

3,000 chicks were culled at Gerua and Abhaypur

The above comments suggest that H5N1 has spread in the Kamrup district in Assam, India. Last week confirmed H5N1 positives were at Hajo circle and 20 villages were scheduled for culling. However, there were also unusual poultry deaths in Sapara Village near Paliburi (see satellite map), and the number of villages slated for culling has increased to 50, which is well beyond the initial 3 or 5 km radius of the confirmed cases in Thakuria Chuba of Rajabazar.

The spread of H5N1 in the area is not unexpected. India has recently acknowledged the role of migratory birds in the spread of H5N1, based in part by the sequence relationship between the outbreaks in India and those of migratory birds in Russia and Mongolia (Clade 2.2 Qinghai starin). Moreover, the last major outbreak in India (West Bengal) and adjacent Bangladesh began almost exactly ne year ago, when migratory birds began arriving in the region, where they winter.

Bangladesh has also recently reported confirmed H5N1.

QUOTE

H5N1 Transport and Transmission By Wild Birds

December 2, 2008
http://www.recombinomics.com/News/12020802/H5N1_TT_WB.html

While it is not impossible that this outbreak in Assam in northeast India might be due to migratory birds, there is as yet very little evidence for them playing a meaningful part in the epidemiology of this disease, in fact, rather to the contrary, as commercial movements of poultry and such have been found to be the consistent cause.

The above remarks on the current outbreak of H5N1 in Assam, India ignore the temporal and spatial data, as well as sequence data, which support a wild bird origin for the spread of H5N1 west of China, including south Asia, since the outbreak at the Qinghai Lake Nature Reserve in the spring of 2005. Prior to that outbreak H5N1 had been reported in wild birds, but the direction of transmission was unclear, due in part to the frequent poultry outbreaks of H5N1 in China and countries to the east of China.

In May, 2005 China reported large scale deaths of long range migratory birds at Qinghai Lake. One hypothesis, which was published in detail on ProMED held that the deaths at Qinghai Lake represented “wild birds as victims” and the spread from Qinghai Lake was unlikely because “dead birds don’t fly”. However, the nature reserve at Qinghai Lake is large, with well over 100 species of birds representing 100’s of thousands of birds.

The initial OIE report described five H5N1 infected species of long range migratory birds, including bar-headed geese, which can migrate 1000 miles in 24 hours, allowing for significant spread by birds that were lethally infected. Moreover, low path H5 is present in wild migratory birds offering cross-reactive

immunity to H5N1. Therefore, many H5N1 produced mild symptoms or were asymptomatic in waterfowl. The outbreak at Qinghai Lake represented a new sub-clade (2.2 or Qinghai strain), which allowed the spread to be monitored by phylogenetic analysis of the sequences from the isolates. The sequences had many of the hallmarks of highly pathogenic avian influenza from Asia, including a polybasic cleavage site in HA, and 20 aa deletion in NA, a 5 aa deletion in NS. Moreover, clade had a number of distinguishing markers, including a distinctive HA polybasic cleavage site of GERRRKKR, as well as E627K in PB2, which had not been previously reported in H5N1 in birds (prior H5N1 isolates with E627K were mammalian, which was also true for seasonal flu).

Since clade 2.2 was associated with waterfowl deaths, following its spread was relatively straightforward, even in the absence of confirming sequence data. After the May / June outbreak at Qinghai Lake, farms in northwest China reported H5N1 outbreaks in waterfowl in June, suggesting the clade 2.2 at Qinghai Lake did not burn itself out. This was confirmed by a large outbreak of H5N1 in wild bird and poultry near Chany Lake in Russia in July. The H5N1 was sequenced and was clade 2.2. Moreover the isolates included a healthy crested grebe, providing direct evidence for asymptomatic infection of migratory birds. Previously Russia had not reported HPAI H5N1, which was also true of Kazakhstan, which also had H5N1 in adjacent regions in August, 2005.

In addition to the outbreaks in Russia and Kazakhstan in August, 2005, Mongolia reported wild bird deaths at the remote Erhel Lake. Bird conservation groups aided in the investigation and the comments on results linked to Erhel Lake were telling. Initial comments expressed doubts that the dead birds would be H5N1 positive, because the number of dead birds was markedly lower than Qinghai Lake. Even after initial data showed that the dead waterfowl was H5 positives, doubts were expressed that the H5 birds would be H5N1 infected. After the birds were H5N1 confirmed, doubts were expressed that H5N1 would spread, because cloacal swabs from healthy birds were H5N1 negative.

However, H5N1 had clearly migrated into Erhel lake, and the negative data on healthy birds was not compelling because the H5N1 testing was initially designed to detect H5 in dead or dying poultry, which would have a higher viral load and individual tissues with signs of pathology could be assayed. Moreover, although detection of H5N1 in healthy birds was a challenge, H5N1 had been isolate from a asymptomatic crested grebe at Chany Lake.

The ability of the testing procedures to detect H5N1 in infected birds was experimentally tested. Although the birds had been experimentally infected, most H5N1 detection was limited to nasopharyngeal swabs. Cloacal swabs were negative for H5N1 isolates, and generally negative in PCR tests. Virus isolation from nasopharyngeal swabs was limited to a 24 hour period several days post-infection. PCR tests detected H5 for a slightly longer time period, but most daily collections post infection were negative.

Thus, detection of H5N1 in healthy wild birds is rare, especially when cloacal swabs or fecal samples are collected. However, Russia published a Mission report in the 2005 outbreak and found H5N1 in hunter killed birds including over two dozen wild bird species. These data once again demonstrated that H5N1 was widespread in wild birds, but detected under a limit set of circumstances.

Russia reported multiple outbreaks in southern Siberia in the summer of 2005, raising concerns that H5N1 would spread to Europe, the Middle East, and Africa as birds migrated south from Russia and Mongolia via well characterized flyways.

The concerns were realized in the following months. H5N1 was first reported in the Volga Delta in late August, followed by outbreaks in Romania, Turkey, and Ukraine in late 2005.

However, the most compelling data was the detection of H5N1 in a healthy teal in the Nile Delta in December, 2005. Although the level of H5N1 was too low for isolation of the virus, repeated extraction and amplification of the RNA yielded HA and NA sequences which were Qinghai H5N1 and most closely related to H5N1 in Austria. In December, 2005 all countries in western Europe, including Austria, denied H5N1 infection, as did countries in the Middle east and Africa.

In late 2005, family members in eastern Turkey began developing bird flu symptoms. Four siblings were transferred to Van and three were unconscious. Initial throat swabs were negative, but as siblings died, fluid from their lungs were H5N1 positive and sequence analysis showed that these were clade 2.2. Human cases were subsequently confirmed in Iraq, Azerbaijan, Egypt, and Djibouti. All were clade 2.2.

In January, 2005 reports of confirmed H5N1 in wild birds and poultry were submitted by countries in Europe and the Middle East and by the spring of 2005 approximately 50 countries reported confirmed H5N1. All isolates were clade 2.2 and many countries, especially in Europe, reported H5N1 exclusively in wild birds.

This sequence of events was repeated a year later. In the summer of 2006 there was a massive H5N1 outbreak at Uvs Lake in Mongolia and adjacent areas in southern Russia. H5N1 is not a reportable disease in wild birds and neither country filed an OIE report, but media reports indicted the bird deaths were on a par with Qinghai Lake and sequences from Mongolia and Russia (Tyva) were published. The sequences represented one of the clade 2.2 sub-clades circulating in eastern Europe and south Asia in 2006 (clade 2.2.3), but additional changes were found in these isolates, which phylogenetically defined a Uvs Lake strain. These sequences were subsequently reported in South Korea and Japan at the end of 2006, followed by Kuwait in early 2007.

Although the Uvs Lake strain was not reported in Europe at the end of 2006 or beginning of 2007, it appeared in wild birds in the summer of 2007. Following a poultry outbreak in the Czech Republic, H5N1 was reported in wild birds in Germany at multiple location in four states, as well as wild birds in the Czech Republic and France. Although all isolates were the Uvs Lake strain, each location had unique sequences indicating that a common poultry source was not responsible for the multiple outbreaks. Earlier, in 2007 the outbreaks in Bernard Mathew turkeys in England was virtually identical (99.96% identity) with sequences from Hungary, where the same country had operations, demonstrating the level of identity expected for isolates from a common source. This level of identity was not present in the multiple wild bird isolates. Thus although all were the Uvs Lake strain, all were due to independent introductions, which was also reported for multiple outbreaks in Nigeria in 2006, which were initially speculated to be due to trade.

In late 2007 / early 2008 the Uvs Lake strain spread throughout Europe. Recently released sequences from a German wild bird outbreak in Bavaria in the summer of 2007, as well as free range turkeys in England at the end of 2007, and wild swans in England at the beginning of 2008 were all the Uvs Lake strain, but each outbreak represented an independent introduction.

Thus, sequence analysis can easily distinguish between a common source or independent introductions, but this type of analysis is rare for countries like India or Bangladesh. A recent report on the 2007 outbreak in Bangladesh had only one full sequence. Although all HA cleavage sites were clade 2.2, the lack of full sequences precluded determination of whether the multiple outbreaks were due to independent introductions. For the outbreaks that began at the end of 2007 in Bangladesh, no sequences have been made public, but are clade 2.2 and closely related. However, it is unlikely that the level of identity is above 99.9% as was seen in the England / Hungary isolates which were linked by the same company with facilities in both countries.

Thus, which sequence data from the current outbreak in India is unlikely to be forthcoming, sequence analysis of prior outbreaks in Europe, the Middle East, Africa, and south Asia support independent introductions of clade 2.2 by resident or migratory birds.

QUOTE

Additional H5N1 Spread in Assam India

December 2, 2008
http://www.recombinomics.com/News/12020801...Additional.html

bird flu is suspected to have spread over new areas, including Sarpara (near Mirza), Rangamati and Bongra Kachuniapara villages in the district, said Kamrup Deputy Commissioner RC Jain.

According to sources, unnatural death of the birds has been reported from Rangamati and Sarpara since a few days back. Over 100 hens and cocks were found dead in Bongra Kachuniapara today, sources said.

The above comments describe likely additional spread of H5N1 into new areas. After confirmation of H5N1 30 km west of Guwahati, culling activities have expanded well beyond the initial radius of 3 km, 5 km, or 10 km (see updated map). The poultry deaths at these additional locations are not a surprise. Large numbers of birds migrate into the area at this time, and H5N1 has also been confirmed recently in Bangladesh.

One year ago both countries experienced massive outbreaks in the region, and poultry deaths were described in Assam. Additional poultry deaths in the region are expected.

H5N1 Spread In Malda West Bengal

December 14, 2008
http://www.recombinomics.com/News/12140801...lda_Spread.html

At Satghoria village in Malda's Narhatta gram panchayat, Abul Hossain's 52 and Maheboob Zahed's 23 chickens died in the past two days. Habibur Rahaman of the same locality had lost 16 birds, Anzor Sheikh had 14, Fuju Sheikh 15, Naju Sheikh 13, Namima Bibi 12 and Md Ismail had lost five chickens. Around 25 chickens died in the village even today, spreading panic among villagers.

Bishan Chowdhury, the pradhan of Narhatta gram panchayat, said: "The chickens first get stricken with drowsiness and then die suddenly. We have brought it to the notice of the animal resources department. This incident has been going on for the past one week or so."

Villagers complained that there was no one to remove the dead chickens.

"Children can be seen playing with them Dogs feast on them and the remains dirty the place," one of them said.

"After receiving reports of chicken deaths from Satgharia, an animal resources development team was sent there. They collected samples from both dead and live chickens. We'll send the samples to Bhopal for confirmation," he added. No culling will commence before bird flu is confirmed, the ADM said.

Later, similar deaths began to be reported from other villages also."

The above comments describe the likely spread of H5N1 in Malda, West Bengal. Additional detail is provided for initial reports, followed by a response indicating samples will be collected for testing. Moreover, additional outbreaks in the area are reported (see 2009 map).

Malda had an early H5N1 last season, confirmed in late January (see 2008 map). Like this year, initial poultry deaths were not reported, which appear to have begun in December, 2007, but the first confirmation was in mid-January. Villagers were eating the dead chickens and wild birds in the region were also dying. Culling was delayed until H5N1 was confirmed. Eventually, birds were culled if excessive bird deaths were noted and the culling extended into adjacent states, including Assam and Meglahaya.

This season poultry deaths were reported in November, and culling has been extended to regions with unnatural poultry deaths, as well as border regions in Meglahaya.

However, the delays in culling lead to a rapid expansion locally because the dead birds are not properly destroyed, and the H5N1 spreads to dogs, jackals, and wild birds.

The deaths in Malda are close to a confirmed outbreak across the border in Naogaon, Bangladesh, and more outbreaks are expected in Bangladesh, West Bengal, Assam, Meglahaya, and adjacent areas as the temperature begins to drop, leading to more efficient transmission of H5N1.

QUOTE

H5N1 In and Around Dhaka Bangladesh

December 14, 2008
http://www.recombinomics.com/News/12140804/H5N1_Dhaka_3.html

Bangladesh has released a Ministries of Fisheries and Livestock bird flu update, dated December 13, 2008. Comparison of farms culled before December 3, 2008 to the latest update identifies three new cullings in the past 10 days, which are in Narsingdhi, Pallabi, and Dharmrai. All three locations are in or around Dhaka (see satellite map).

Three outbreaks in the Dhaka area (including Pallabi, which is in Dhaka) this early in the season are cause for concern. There had been rumors of H5N1 in multiple locations in Bangladesh, which is confirmed in the reports of December 3 and 13. Dhaka is near Tripura, which reported outbreaks in the spring of 2008 and has recently issued an alert raising concerns of H5N1 infections from Bangladesh.

Moreover, the only confirmed human H5N1 case in Bangladesh or India was a child from the slums of Dhaka, who recovered earlier this year. Assam has reported as many as 150 symptomatic patients earlier, but the December 11 Ministry of Health report included 70 patients hospitalized in Rampur, as well as 90 URI cases in Barpeta.. Concerns have been increased by reports of four symptomatic cullers in Chirang.

The rapid spread of H5N1 in Assam and increases in the number of symptomatic patients, coupled with three outbreaks in and around Dhaka, Bangladesh are causes for concern.

QUOTE

Symptomatic H5N1 Cullers in Chirang Assam Raise Concerns

December 14, 2008
http://www.recombinomics.com/News/12140803...ng_Cullers.html

Four people, including two veterinary officials involved in the culling operations, were put under surveillance and blood samples collected after they complained of fever and cold in western Chirang district of Assam.

“We have sent blood samples of four people to a laboratory in New Delhi to ascertain if they had contracted the bird flu virus.

The above comments on four symptomatic cullers in Chirang raise additional concerns regarding H5N1 transmission to people in Assam, India. A recent Ministry of Health report details the status of URI patients which includes and increase from 60 to 90 in URI patients in Barpeta as well as and increase from 14 to 70 hospitalized patients in the Rampur area (see updated map).

Although bird flu has been said to have been excluded in these patients, they remain under observation and the criteria for exclusion, beyond a lack of link with poultry, remains unclear.

The cullers in Chirang obviously have a link, but detail on their symptoms and testing also remain unclear.

Last season India only reported H5N1 in poultry, which is also true for earlier outbreaks. However, piles of dead crows were filmed adjacent to dead poultry in West Bengal while jackals and dogs died after eating dead or dying poultry in Tripura.

Moreover, Bangladesh confirmed H5N1 in dead crows as well as a child in a Dhaka slum, who recovered. The human case was confirmed in routine testing of samples long after the patient recovered, raising concerns of mild cases linked to the H5N1 outbreaks in Bangladesh and India. It is also unclear if the child in Bangladesh developed pneumonia, which appears to be one of the criteria used in India.

The detail on testing of suspect human cases in India remains obscure. Poultry positives appear to be classified in limited and delayed testing in Bhopal using a rapid test, which is not very sensitive. Moreover, all of the initial positives in Assam were on tissue samples from dead birds, raising additional concerns regarding sensitivity of tests on serum or swabs (such as the "blood test" cited above).

Thus, the frequency and sensitivity of testing in India remains suspect, as the number of suspect patients continues to increase.

QUOTE

H5N1 Poultry Deaths Cause Panic In Malda West Bengal

December 15, 2008
http://www.recombinomics.com/News/12150801...alda_Panic.html

Hasnara Begum, the Narhatta gram panchayat member, said the chicken deaths have created panic among the villagers

Over 5,000 birds died in Satghoria, Budhia, Sabji Para, Sadhya Para and adjoining areas during the past one week

Idani Bibi of Budhia said she had lost 110 chickens last night. “We have dumped them in a field half-a-kilometre away.” The Narhatta gram panchayat member, who lives in Budhia, said eight chickens died in her house today. “We suspect that the birds are dying because of flu.

The dead birds are being dumped in an open space and the stench is pervading the air. The dogs and cats are feasting on them. Many fear that the villagers may get affected.

Sit said his department did not have the figures of dead chickens. “Our team had visited Satghoria to collect blood samples but we are not aware of the deaths in Budhia.”

The above comments describe the explosion of chicken and duck deaths in the English Bazar region of Malda in West Bengal (see update map). Earlier reports described 200-250 deaths in one village and a lack of response from officials. The sudden death and casual discard of the birds created concerns since children were playing with the carcasses which were also being eaten by dogs.

As happened last season, the official response was slow. One media report indicated officials said there were only four deaths in one village and one in another, and officials took three samples for testing. Some reports indicate that blood samples were collected, which generally produce false negatives.

The above comments indicate that the delays have led to an explosion of deaths in multiple villages, yet officials maintained that there will be no culling until H5N1 is confirmed in Calcutta.

In neighboring Assam, outbreaks have been confirmed throughout the Valley, and there is talk of culling all birds in the Brahmaputra Valley, which runs through the entire width of Assam.

Similarly, H5N1 is spreading in Bangladesh, with outbreaks in the north near West Bengal and multiple outbreaks in and around Dhaka, where a child was H5N1 confirmed last season.

In Assam, there are 90 URI cases in Barpeta, 70 hospitalized patients in Rampur, and symptomatic cullers in Chirang, as Assam borrows ventilators.

Moreover, all of this activity is in December, when the daytime temperature is in the 70’s or 80’s.

The accelerating H5N1 spread and associated symptomatic patients increase concerns.

QUOTE

H1N1 Tamiflu Resistance in the United States Increases to 98%

December 15, 2008
http://www.recombinomics.com/News/12150804/H274Y_US_98.html

Forty-five of 46 influenza A (H1N1) viruses tested were resistant to oseltamivir

Twenty-five influenza A (H1N1) and five influenza A (H3N2) viruses were tested for adamantane resistance. All influenza A (H1N1) viruses were sensitive to the adamantanes. All influenza A (H3N2) viruses tested were resistant to the adamantanes.

Limited data on antiviral resistance, as well as the uncertainty regarding which influenza virus types or subtypes will circulate during the season, make it too early to make an accurate determination of the prevalence of influenza viruses resistance to oseltamivir or the adamantanes (amantadine and rimantadine) nationally or regionally at this time.

The above comments from the week 49 report on influenza in the United States extend and confirm earlier data, and once again highlight the mismatch between the frequencies of antiviral resistance in the US, and the CDC recommendations which discourage use of amantadines and encourage oseltamivir.

Currently amantadine resiatnce in H3N2 remains at 100%, while similar frequencies (currently 98%) are found for oseltamivir resistance in H1N1.

Most of the influenza in the US is influenza A 408/507, and most of the influenza A is H1N1 (157/175). Last season the level of osletamivir resistance in the US was closer to 10% because clade 2C was in circulation, which had no oseltamivir resistance, but was 100% amantadine resistant. Moreover, most of the oseltamivir resistance (H274Y) in H1N1 was limited to a specific 2B sub-clade.

However, this 2B (Brisbane/59) sub-clade achieved dominance in the southern hemisphere in 2008, and now represents almost all clade 2B in North America and Europe. Thus, now all tested H1N1 in the US and Europe is amantadine sensitive and oseltamivir resistance.

H3N2 has maintained its resistance to amantadine, and in Europe H3N2 is dominant. However, in the US H1N1 is dominant, so the level of oseltamivir resistance is much higher than amantadine resistance, and the CDC recommendations remain mismatched.

QUOTE

H5N1 Confirmed In Malda West Bengal

December 15, 2008
http://www.recombinomics.com/News/12150806..._Confirmed.html

"The laboratory test in Bhopal has confirmed the presence of the H5N1 virus in the dead birds," Sridhar Ghosh, the senior official in West Bengal's Malda district where the outbreak was found, told Reuters.

The confirmation of H5N1 in Malda is not a surprise. Over 5000 chickens and ducks had died suddenly in te past few days and the infections had spread to multiple villages (see satellite map). Moreover, Malda is on the border of Bengladesh and two outbreaks hade been confirmed in northern Bangladesh. In addition, multiple outbreaks were confirmed near Dhaka as well as throughout Assam.

However, this is the first time that confirmed H5N1 has been dramatically spreading in Bangladesh and two districts in India. Last season by the tie H5N1 was confirmed in Tripura, activity in West Bengal and Bangladesh was significantly reduced.

The confirmation in West Bengal is also early in the season. Temperatures in the area are still in the 80's. Last season most of they spread was in the cooler months of January and February.

Thus, the confirmation of the H5N1 explosion of cases in Malda is cause for concern, as are the symptomatic patients in Barpeta, Rampur, and Chirang in Assam.

QUOTE

H5N1 Confirmed Near Phnom Penh Cambodia

December 15, 2008
http://www.recombinomics.com/News/12150803...mbodia_PPP.html

THE government over the weekend called on villagers in Kandal province to take precautions following a new outbreak of bird flu that infected a 19-year-old man in Cheung Koeub commune last week.

The outbreak occurred in Kandal province's Kandal Steung district on the outskirts of Phnom Penh, and is the first confirmed infection of the deadly H5N1 virus in Cambodia this year, the Ministry of Health and the World Health Organisation said in a joint statement.

He said the patient, currently being treated at Calmette Hospital, began to show bird flu symptoms of fever, cough, muscle aches and a sore throat on November 28. Infection was confirmed on Thursday after testing at the National Influenza Center in Phnom Penh.

"The disease has not threatened his life because we treated it in time.

The above comments confirm H5N1 in poultry on the outskirts of Phnom Penh (see updated map), where a human case (19M) was recently confirmed. The ProMED report on the patient indicated he developed symptoms on November 28 and was seen at a local clinic on November 30 and October 2. The symptoms were a fever, sore throat, and muscle aches.

Since there was no reported H5N1 in poultry at the time, and the last H5N1 case in Cambodia was in June, 2007, the likelihood that the patient was promptly treated with oseltamivir is remote. The H5N1 link was discovered on December 11 through a screening program of high fever cases.

Thus, the H5N1 infected patient had an upper respiratory infection (URI) much like the symptoms of

patients in Assam, raising concerns of the spread of mild H5N1 in Cambodia and India, in the absence of testing.

Information on the treatment of the recovering patient in Cambodia as well as testing of surveyed patients in Assam, India would be useful.

QUOTE

Fatal H5N1 in Asyut Egypt

December 15, 2008
http://www.recombinomics.com/News/12150807/H5N1_Asyut.html

Samiha Salem from a village in the central Egyptian province of Asyut caught the disease after exposure to sick household poultry,

Salem began suffering symptoms a week ago, after two of the household ducks died and the remainder of the flock was slaughtered in the house.

Salem was subsequently admitted to hospital with a high fever, vomiting and diarrhea, and then transferred to intensive care. She was treated with the antiviral drug tamiflu, but suffered a pulmonary infection and respiratory failure, and died on Monday.

The above comments describe a fatal H5N1 infection in central Egypt (see 2009 map). The timing of the infection is similar to last season, when cases were reported in December, which were mostly fatal. The recent frequency of H5N1 in Egypt is unclear, because H5N1 has been declared endemic, so OIE filings are only required on a six month schedule.

Egypt has implemented a robust vaccine program, but widespread vaccine resistant H5N1 was reported last December. This resistant strain was also found in Israel in early 2008.

H5N1 in Egypt is very heterogeneous and has become more complex each season. Recently, human sequences from last season were released.

Release of sequences from the current case would be useful.

QUOTE

Massive H5N1 Outbreak in Jiangsu China

December 16, 2008
http://www.recombinomics.com/News/12160801...su_Massive.html

The deadly H5N1 strain of the virus was discovered on a chicken farm in Dongtai city and in another farm in Haian county both in eastern Jiangsu province, the ministry said in a statement posted on its website today.

The discovery prompted local agricultural authorities to step up vaccinations, while culling 377,000 chickens in the area around the farms.

The spread of the virus had not been detected in any other areas around the two farms, it said.

The above comments describe a large H5N1 outbreak in Jiangsu province in China (see updated map). The report does not say when the outbreak began, but a ProMED report last month described large numbers of dead poultry at the same locations cited above, as well as adjacent provincesgg prices). Moreover, local media reports indicate shipments have been made to a number of cities in the area, including Shanghai. These local media reports also descibe large numbers of dead birds in the area.

Last year at this time there was confirmed human to human H5N1 transmission in Jiangsu, about 100 miles from these outbreaks. Mainland China's last OIE report was in July, in association with H5N1 in Guangdong province. Hong Kong has just filed a report on the recent outbreak there.

This large outbreak in China follows reports of confirmed outbreaks in Assam and West Bengal India and Bangladesh, as well as human cases in Indonesia, Cambodia, and Egypt, raising significant vaccination and surveillance issues.

QUOTE

Novel H5N1 Migrating Through China?

December 16, 2008
http://www.recombinomics.com/News/12160802...ngsu_Novel.html

Preliminary analysis by ministry experts indicated the virus could have been spread by birds migrating through the area, and that it was a different type from the variety usually found in the southern part of the country.

A ministry laboratory yesterday was testing samples of the virus to see if it had mutated.

The above comments indicate the H5N1 isolated in Jiangsu is not the Fujian strain (clade 2.3), which has spread throughout southern China. Last season a sub-clade (2.3.2) was found in wild birds in Hong Kong as well as whooper swans in Japan, but it is unlikely that clade 2.3.2 would be considered a "different type" since it circulates in southern China.

More likely chances would be the Qinghai (clade 2.2) strain, or a novel (clade 0) strain identified at Qinghai Lake this season. Although the Qinghai strain does circulate in southern China, most assays use fecal samples that rarely detect clade 2.2. For the 2005/2006 there were 404 H5N1 isolates identified by researchers in Hong Kong, and only one was the Qinghai strain. The Qinghai strain is more commonly isolated from nasopharyngeal swabs from live birds, or tissue extracts from dead or dying birds.

However, a recent ProMED report which cited the two confirmed regions in Jiangsu province also noted that birds with similar symptoms were found in multiple provinces in China, raising concerns that a novel strain that was not well covered by the current vaccines may be circulating, which could be the clade 0 strain isolated from a fecal sample at Qinghai Lake. It was most closely related to sequences in circulation five years ago, which were related to isolates from 1997.

Media reports indicate an OIE report has been filed. Additional information, including sequences data on the “different type” of H5N1 in Jiangsu would be useful.

craig-oxley - December 17, 2008 06:09 AM (GMT)

QUOTE

H5N1 Spread To Central Assam India

December 16, 2008
http://www.recombinomics.com/News/12160803...am_Central.html

Meanwhile, poultry samples from Karbi Anglong have also been sent to the Bhoopal-based High Security Animal Disease Diagnostic Laboratory (HSADL) for testing following reports of unusual death of poultry in some parts of the district.

The above comments strongly suggest that H5N1 has migrated into the central region of Assam (see updated map). H5N1 has already been confirmed at the northwest and northeast regions of the country, and H5N1 in Karbi Anglong would begin to fill in the region in the middle.

Other media reports have cited unusual poultry deaths in multiple regions, including additional districts in the west and east. Confirmation in India is slow, and culling activity has already been curtailed in four regions due to a shortage of Tamiflu.

Thus, confirmation in more areas is expected. The expectations are also supported by confirmed H5N1 in West Bengal and Bangladesh. The West Bengal outbreak expanded rapidly, and now there are reports of hundreds of crows dying and villagers eating the dead poultry, which is a repeat of events 12 months ago in West Bengal.

H5N1 has also been confirmed in Jiangsu, China, which has been linked to migratory birds. However, the H5N1 is said to be usual for southern China, suggesting it is either the Qinghai strain (clade 2.2), which is the strain that migrated to India and Bangladesh last season, or a novel strain (clade 0), isolated at Qinghai Lake over the summer.

Since birds at Qinghai Lake migrate to India and Bangladesh for the winter, the rapidly spreading H5N1 in India and Bangladesh may be this novel strain.

Therefore, sequence data on the H5N1 in Indian and Bangladesh would be useful.

QUOTE

South African H1N1 Tamiflu Resistance in the United States

December 17, 2008
http://www.recombinomics.com/News/12170803...ster_SA_US.html

The United States CDC has released HA H1N1 sequences from isolates collected over the summer and the beginning of this season. In week 43 the CDC characterized the first H1N1 isolate for antiviral resistance. It was oseltamivir sensitive but amantadine resistance, which was the pattern for all clade IIC (Hong Kong) isolates reported last season. That isolate appears to be A/California.07/2008, which matched the resistance pattern above and phylogenetic analysis clearly demonstrated it was clade IIC and closely related to clade IIC isolates collected in the US last season. The isolate was collected September 4, 2008.

All 44 H1N1 isolates tested after the IIC isolate above appear to be clade IIB (Brisbane) because all are oseltamivir resistant and amantadine sensitive. This high level of resistance was seen over the summer in South Africa, where reports on the first 225 H1N1 isolates tested were oseltamivir resistance.

Several months ago 8 HA sequences and 8 NA sequences from South Africa have also been released at Genbank. All sequences evolved from the IIB sub-clade that was dominant in several countries in Europe, including Norway, where H274Y frequencies exceeded 65%. This dominant sub-clade also had D354G, which had been present previously in clade IIA and IIC. The acquisition by IIB appeared to offer a selective advantage because all NA sequences in South Africa had this change.

In addition, the dominant HA sequence from South Africa had a cluster of changes near the receptor binding domain positive 190 (H3 numbering). These five changes were found in a variety of H1N1 isolates. Two were present in H1N1 isolates from Kenya, two were in H1N1 isolates from the 1940's, and one was in clade IIC in Hong Kong, suggesting acquisitions linked to a series of recombination events.

This cluster of changes is present in the HA isolate collected over the summer in Washington, A/Washington/05/2008, demonstrating the movement of these changes from South Africa to the northern hemisphere and increasing the likelihood that this rapid evolution will be present in the H1N1 isolates in the United States this season, which has created a mismatch between antiviral recommendations and resistance in circulation in the United States this season..

Four of these five changes also produce 3 non-synonymous changes, which may decrease the effectiveness of the current H1N1 vaccine, which targets the Brisbane clade IIB target, but the isolate used did not have the recent changes.

Release of additional HA and NA sequences from this season would be useful. It is likely that the 100% levels of resistance in clade IIB in the United States will continue, and the level of the South Africa sub-clade would be of interest.

QUOTE

Dead Crows In Malda West Bengal Raise H5N1 Concerns

December 17, 2008
http://www.recombinomics.com/News/12170804...alda_Crows.html

Hundreds of crows have died since yesterday in Budhia village at Norhatta in English Bazaar block, the spot where more than 3,500 chickens died of Bird Flu, causing panic among the people.

The villagers suspect that the dead crows might have eaten the carcass of the Bird Flu affected chickens. The CMOH, Malda, Mr Srikanta Roy, said that this could be a possibility.

Despite the situation, there is no awareness campaign at Norhatta against consumption of chicken. Children could be seen playing around with the dead crows that had simply fallen off the trees in the area. It may be noted that the local gram panchayat yesterday decided to inform people that they should not eat chicken.

Mostaq Mian, a resident of Budhia village, said that despite warnings, the people are consuming the dead chickens.

The above description of crows dying in Malda (see 2009 map) and villagers eating the dead poultry repeats events described in January when H5N1 was discovered in Birbhum, just to the south in West Bengal (see 2008 map). The dead crows raise concerns of local spread by wild birds or wild animals. Although there is little doubt that the crows are H5N1 infected, India has never reported H5N1 in any host other than dead or dying poultry.

Last season crows also died in Bangladesh, which were H5N1 confirmed. In addition, dogs and jackals died in Tripura after eating infected birds, adding to concerns that these outbreaks offer opportunities for spread and evolution in mammalian hosts.

The same is true for the villagers eating the birds, which can lead to transmission which birds are prepared. Symptomatic villagers were largely just observed last season, and those that did not develop pneumonia were not tested. The same appears to be true for symptomatic patients in Assam.

However, as was seen in the recent confirmed case in Cambodia, or prior cases in Egypt, H5N1 can cause milder disease that does not lead to pneumonia.

Thus, the hundreds of dead crows create additional concerns that are not addressed by testing in India.

QUOTE

12/17/08 00:41
http://www.antara.co.id/en/arc/2008/12/17/...u-patient-dies/

Suspected birdflu patient dies

Tangerang (ANTARA News) - A suspected birdflu patient of Bintaro, Tangerang, Banten, known by her initials as Su (24) died on Tuesday.

Su's aunt, Sumiati, said before she died her niece was intensively treated at Sari Asih hospital in Ciledug, Tangerang.

She said Su initially had breathing problems, cough and a high fever and as her condition worsened her family then took her to the nearest hospital.

"However she finally died after being treated in the hospital for three days," she said.

Su's body was taken to Punggelan in Banjarnegara, Central Java, for burial.

The head of the Tangerang health service, Hari Heryanto, said his office could not as yet confirm if the cause of Su's death was birdflu virus.

"Her blood sample is still being examined and the result of laboratory tests is needed to confirm if the cause is really the virus," he said.

The district of Tangerang which is located west of capital city Jakarta has been known as an endemic area and recorded the highest number of birdflu cases so far totalling 17 that led to 15 deaths.

QUOTE

Is Novel H5N1 Migrating Through China Clade 0 or 7?

December 17, 2008
http://www.recombinomics.com/News/12170801...iangsu_0_7.html

For the problems of the Jiangsu Provincial Department of Agriculture and Forestry animal husbandry and veterinary department of the Ministry of Agriculture immediately sent to sample the professional sector detection testing, the results of a surprise: The emergence of the virus in the past and the south of different avian influenza virus.

When a reporter asked led to the emergence of this new virus causes, Chunxi said that the movement of migratory birds suspected to be caused by the source of the virus - the year before in such a situation occurred in Shanxi Province.

The above translation offers a few additional clues on the novel H5N1 in Jiangsu province. This translation and other reports suggest the sequence is from the past and the above mentions an outbreak in Shanxi.

The Shanxi reference likely refers to a 2005 outbreak, which involved a novel H5N1 that was vaccine resistant. OIE reports indicated three different vaccines were used to try to control the massive spread. Media reports of an outbreak in Vietnam suggest it was clade 7, which would have been related to the H5N1 isolated from the 2005 outbreak in Shanxi. The HA sequence also had many changes near the receptor binding domain.

Alternatively, the reference to the past may be linked to the clade 0 H5N1 isolate at Qinghai Lake in June of this year. The isolate was closely related to 2003 Hubei/Shandong sequences, which were related to 1997 sequences from Hubei, which were close to the clade 0 Guangdong goose, the first H5N1 isolated in China in 1996.

Thus, the above translation suggests the H5N1 in Jiangsu is either clade 0 or clade 7. Both clades have cause human infections in the past. Clade 0 caused the 1997 outbreak in Hong Kong and clade 7 killed the first confirmed H5N1 fatality in China (Beijing 2003).

Thus, both possibilities represent the re-emergence of older H5N1 isolates that would be poorly unrecognized by current vaccines.

The OIE report may define the clade, but both are cause for concern. The possibility that the same clade is in India and Bangladesh also remains open.

Egypt confirms 23rd bird flu human death

www.chinaview.cn 2008-12-16 04:47:17 Print
http://news.xinhuanet.com/english/2008-12/...nt_10509902.htm

CAIRO, Dec. 15 (Xinhua) -- An Egyptian girl died of bird flu on Monday, bringing the death toll of the human cases of bird flu in the populous country to 23, the Egyptian MENA news agency reported.

Samiyah Salem, who was from a village in the southern Egyptian governorate of Asyut, died Monday evening, Health Ministry spokesman Abdel-Rahman Shahin was quoted as saying.

The 16-year-old girl, who contracted the fatal disease after exposure to infected household poultry in her house, was the 51st case of human bird flu in the country.

She was sent to hospital for treatment on Saturday after suffering from fever and breathing problems, said the spokesman, adding the death is the first in the past eight months after the 22nd human death on April 11.

Egypt reported its first H5N1 virus in dead poultry in February 2006 and the first human case in March of the same year.

Bird flu detected in Belgian farms

www.chinaview.cn 2008-12-24 05:06:18 Print
http://news.xinhuanet.com/english/2008-12/...nt_10550266.htm

BRUSSELS, Dec. 23 (Xinhua) -- Emergency measures have been taken after an outbreak of bird flu was detected in two farms in northern Belgium, Belgian media reported on Tuesday.

Control tests showed last Friday that some ducks and geese in a farm in Bocholt, which borders the Netherlands, were infected with the H5 bird flu virus. The same virus was also detected in a farm in Buggenhout in the province of East Flanders.

The H5 virus is not dangerous to human beings and is different from the H5N1 variant, which has killed more than 200 people since it surfaced in 2003.

The Belgian Federal Food Agency, which supervises the safety of the food chain, has ordered emergency measures to be taken in the two farms and surrounding areas.

Some 5,000 animals had to be slaughtered as a precautionary measure and all poultry within a radius of one kilometer of the farms must be kept indoors. Transport of poultry is forbidden for 21 days.

Bird flu suspected in Denmark

Dec 23, 2008
http://www.straitstimes.com/Breaking%2BNew...ory_317704.html

COPENHAGEN - A FLOCK of free-range chickens on a farm in south-western Denmark is suspected of being infected with bird flu, the Danish Veterinary and Food Administration said on Monday.

'The suspicion arose following unexpected results in blood tests done as part of routine checks for bird flu,' the agency said in a statement.

The agency added that it had isolated the flock pending further tests. Results would take a few days, it said. -- REUTERS

QUOTE

H5N1 Culling Accelerates In Bangladesh

December 24, 2008
http://www.recombinomics.com/News/12240801...desh_Culls.html

Bangladesh starts bird cull

The above headline on H5N1 in Bangladesh is somewhat misleading. In the past month there have been multiple outbreaks in Bangladesh, which signals a significant H5N1 expansion in the upcoming weeks and raises questions about the recent lack of confirmations in Assam and West Bengal in neighboring India (see updated map).

The spread of H5N1 in Bangladesh has been well documented in updates from the Ministry of Fisheries and Livestock, as well as situation updates from WHO, and OIE reports.

After the outbreak in Naogaon in October, which was detailed in an OIE report, the South-East Asia Regional Office of WHO issued a December 8 situation update describing the Naogaon outbreak as well as unnatural poultry deaths in Rangpur, which was influenza A confirmed but not yet sero-typed. However, MOFL issued a December 3 update which indicated culling had taken place at two farms in Rangpur, indirectly confirming H5N1(255 birds culled and confirmed in OIE report).

That was followed by December 13 update with three outbreaks north of Dhaka (3540 birds culled), followed by a December 16 outbreak that was also north of Dhaka (4440 birds culled). WHO SEARO then issued a December 20 update describing these outbreaks (Rangpur, Narsingdi, Gazipur, Natore).

MOFL then issued a December 20 update with the Natore culling ((665 birds , which was followed by a December 23 update which included culling (945 birds) in Gaibandha and Kurigram.

The three most recent outbreaks are near the confirmed outbreaks in Malda in West Bengal, as well as western Assam outbreaks. However, as the reporting in Bengladesh accelerates, India is claiming that the poultry deaths in adjacent areas are due to Newcastle Disease instead of H5N1. Over 30,000 birds were culled in Malda (Englishbazar and Old Malda blocks) and hundreds of crows died, but excessive poultry deaths 5-10 miles away in other Malda blocks (Ratua I, Gajole, Manikchak) were said to be due to Newcastle Disease. Sera were collected for routine testing, but sera are rarely positive for high path H5N1 because birds die before antibody levels rise to the detectable level. Similar results were reported in adjacent districts in West Bengal, raising serious questions about testing and reporting H5N1 in India.

Thus, confirmed H5N1 in Bangladesh is on the rise, as expected as the temperature drops and more birds migrate south, yet India is claiming that the bird deaths in Assam and West Bengal are not due to H5N1. Almost exactly one year ago birds began dying in Birbhum, but H5N1 was not confirmed until mid-January, when over 100 villages in Birbhum were H5N1 infected (see 2008 map) and H5N1 in West Bengal and Bangladesh rose to record levels.

The latest news from India suggests a significant increase in H5N1 outbreaks in the near term.

QUOTE

Emergence and Fixing of H1N1 Tamiflu Resistance

December 24, 2008
http://www.recombinomics.com/News/12240802/H274Y_US_Fix.html

The recent release of H1N1 HA and NA sequences from this season in the United States, coupled with the release of HA sequences from isolates collected last season in Norway, allows for phylogenetic analysis and polymorphism tracing to detail the fixing of H274Y in clade IIB (Brisbane/59).

Earlier analysis indicated that the widespread distribution of H274Y was linked to the emergence of a dominant sub-clade, which included isolates in Norway, where H274Y levels in H1N1 exceeded 65%. Previously, H274Y had been reported in clade IIC (Hong Kong) in China, followed by clade I (New Caledonia) in the United States and United Kingdom, followed by clade IIB in Hawaii. However, although H274Y could jump from one genetic background to another, which is most easily explained by recombination, the ealier isolates did not become dominant.

However, when H274Y jumped to a sub-clade with tandem NA changes, D344N and D354G, which had been found in earlier IIC isolates, frequencies of H274Y rose. The jump of these two polymorphisms to clade IIB led to H274Y dominance in Norway, as well as high levels in several countries in northern Europe.

Over the summer, the dominance rose to 100% in South Africa. Those isolates had the tandem NA changes, but they also had a stretch of 16 BP near position 190 in the receptor binding domain, which was in the dominant sub-clade in the United States, and also found in H1N1 isolates from the 1940's. This stretch encoded for A193T, which is found in all of the public clade IIC sequences from the United States this season.

Moreover, 49 out of 50 H1N1 isolates in the United States are resistant, suggesting this sub-clade is widespread. The published sequences are from isolates in Hawaii, Texas, Pennsylvania, and Wisconsin, as well as a Washington state isolate collected over the summer, which had the cluster of changes in the South African sequences.

The presence of A193T may have influenced influenza serotypes in the United States and Europe. Only one public European sequence from last season contained A193T. It was not present in the more than 30 HA sequences from Norway, or other sequences from several European countries, but is in last season's dominant sub-clade in the United States last season, and all clade II isolates published for this season. In the United States, most influenza is H1N1 and all but one was clade IIB, while in Europe most influenza A is H3N2.

Release of H1N1 sequences from Europe and Canada would be useful.

These sequences likely have A193T also since H274Y is fixed in clade IIB in these locations.

Suspect H5N1 Cluster Near Semarang Indonesia

December 21, 2008
http://www.recombinomics.com/News/12210801...Semarang_4.html

One villager from Kedunguter, Karangtengah Subdistrict, of Demak with the initials TUR, 12, was forced to be run off with to the regional Hospital (RSD) Sunan Kalijaga Demak. His article, that was relevant was indicated suspect bird flu.

the condition for the patient could worsen because he showed the sign was similar to the bird flu illness, like the hot body high that was accompanied breathlessly

the patient was detected having the decline in leucocytes or white blood cells, so as his body immunity continued to decrease , he said. According to him, the patient suspect this bird flu experienced breathless, as well as the temperature of the hot body high.

two the previous day the patient could direct contact with his property poultry that died

The above translation describes a hospitalized child with bird flu symptoms, which developed after handling poultry that died. The poultry in the area was H5N1 confirmed. The area is between Demak and Semarang and close to another suspect case (50F) from the same sub-district (see updated map).

In addition to the two suspect cases in Karangtengah, there were two fatal cases on the east side of Sermarang. Thus, all four cases were within a few miles of each and have been reported over the past month.

The initial fatal case (15F) was lab confirmed, yet the Ministry of Health denied the positive lab results. Thus, although there have been four suspect cases, including two fatalities, in a relatively small area with H5N1 confirmed poultry, none of the patients in this geographical cluster are WHO confirmed cases.

Although there were two recently confirmed cases in Indonesia in Riau and East Jakarta, clusters have been under-reported, including familial clusters where the index case was mis-diganosed as having lung inflammation, dengue fever, and typhus. All index cases died, as did the H5N1 confirmed family member, yet none of the index cases are official cases and none of the confirmed cases are official clusters. After these three clusters were reported, Indonesia imposed a news blackout. Moreover, a large cluster in Makassar, which involved PCR confirmed cases, was also denied.

Thus, the continuing lack of confirmation of familial or geographical clusters remains a cause for concern.

QUOTE

Confirmed H5N1 Spread to Natore Bangladesh

December 22, 2008
http://www.recombinomics.com/News/12220801...1_Natore_9.html

The December 20 update from the Ministry of Fisheries and Livestock in Bangladesh includes an additional culling in Natore. The cumulative number of birds culled increased by 665, suggesting the outbreak is in a small backyard holding. The western border of Natore is 20 miles from the Murshidabad border in West Bengal (see updated map), and another 20 miles from the border with Birbhum, the first district to report H5N1 last season (see 2008 map).

Both Mushidabad and Birbhum have recently reported excessive poultry deaths, while Malda has confirmed H5N1, which has resulted in the culling of over 20,000 birds. Moreover, Malda reported hundreds of dead crows and excessive poultry deaths in blocks to the north of the confirmed outbreak in Englishbazar.

The confirmed H5N1 in Natore, Bangladesh near the West Bengal border suggests addition spread of H5N1 will be reported in the near term.

QUOTE

Uvs Lake H5N1 Migrates to Chany Lake in Siberia

December 22, 2008
http://www.recombinomics.com/News/12220802...Chany_Gull.html

H5N1 sequences from a gull (Larua canus) at Chany Lake, A/common gull/Chany/P/2006 were recently released at Genbank. The isolate was collected on July 18, 2006 and phylogenetic analysis indicates it is closely related to the Uvs Lake strain (clade 2.2.3), which was collected a month earlier during a massive wild bird outbreak at Uvs Lake in Mongolia.

This strain was subsequently detected in South Korea and Japan at the end of 2006 / beginning of 2007 and the Chany Lake sequence is most closely related to a subset from South Korea collected from a fecal sample near a poultry outbreak as well as from poultry.

The Uvs Lake strain subsequently appeared in Kuwait in early 2007. In Kuwait, the Uvs Lake strain, like isolates in Russia, Egypt, Ghana, and Nigeria acquired G743A on NA. The Uvs Lake strain was subsequently found in wild birds in the Czech Republic, Germany, and France during the summer of 2007. In the fall and winter Uvs Lake spread throughout Europe and all public sequences have G743A.

In addition, sequences from a 2005 isolate from Kazakhstan were released, and these sequences are also related to the Uvs Lake sequences, suggesting the Kazakhstan sequences, from June, 2005 gave rise to the Uvs Lake sequences from the outbreak a year later.

These wild bird sequences help trace the movement of H5N1, and predict the emergence of new sub-clades, as well as the evolution of existing sub-clades.

The current outbreaks in India and Bangladesh are also likely related to these sequences. All prior outbreaks in India, Bangladesh, Afghanistan, and Pakistan have been clade 2.2.3, although the public sequences from Pakistan, Afghanistan, and India in 2006 are not the Uvs Lake strain of clade 2.2.3.

The recently release 2006 sequences from Russia or 2005 sequences from Kazakhstan help trace (see 2005 map) the evolution of H5N1, which is important for vaccine development. Therefore release of

sequences soon after isolation is preferable to release 2-3 years after the fact.

QUOTE

Uvs Lake H5N1 Precursors in Kazakhstan

December 22, 2008
http://www.recombinomics.com/News/12220803...Kazakhstan.html

Kazakhstan recently released sequence data at Genbank from an H5N1 infected chicken, A/chicken/Astana/6/2005. This sequence is related to the Uvs Lake strain, which is a clade 2.2.3 variant isolated a year later at Uvs Lake in Mongolia, and adjacent Tyva in Siberia. Thus, although the Kazakhstan sequences were released more than three years after the fact, the data plays an important role in mapping out the origins and spread of Qinghai H5N1 that subsequently lead to first ever reports of H5N1 in over 50 countries west of China.

The Qinghai strain (clade 2.2) was first detected at the Qinghai Lake Nature Reserve in May of 2005. The massive outbreak in long range migratory birds raised concern that H5N1 would spread rapidly out of China because the nature reserve hosted over 100 species of wild bids and was at the intersection of several major flyways.

However, various conservation groups maintained that “dead birds don’t fly” and the lethal infections would burn out at Qinghai Lake. The major flaw in this prediction was the ability of these birds to fly long distances. Most of the infections were in bar headed geese, which could fly 1000 miles in one day. Thus, even if a bird was lethally infected, if asymptomatic for one day, the H5N1 could migrate 1000 miles. Moreover, the movement of the virus was not dependent on a single host. An H5N1 positive brid could move the virus 1000 miles and then infected another bird, which could move the H5N1 another 1000 miles.

The first hint that H5N1 did not die out came from northwestern China in June, when waterfowl began dying in to distinct locations. However, those sequences were not released, so the involvement of the Qinghai strain was indirect (most H5N1 does not kill waterfowl, so the death of ducks and geese suggested the H5N1 was the Qinghai strain).

The May outbreak was followed by reports from Chany Lake in Siberia in mid-July. Waterfowl (dead, dying, and asymptomatic) was H5N1 positive for the Qinghai strain demonstrating that the virus did not burn itself out. Kazakhstan also filed an OIE report on August 2, describing an outbreak at Pavoldar, which began July 23, 2005.

However, conservation groups maintained that wild bird migration to the north happened prior to July or August, so the H5N1 in Russia and Kazakhstan were examples of “wild birds as victims” and had been infected by the H5N1 transported to farms in the area. The OIE reports from Russia cited wild birds as the cause, but the conservation groups maintained that the poultry infected the wild birds.

The characterization sheet of the H5N1 Astana indicated the sample was collected in June, 2005. The sequence is clearly a Qingahi sub-clade (2.2.3). Thus, in 2005 the H5N1 had migrated north earlier, and was already in Astana in June. Moreover, this early movement to the north and west helps explain the spread in Russia and Kazakhstan, which was reported in areas to the west of Chany Lake, which was used by conservation groups to deny the involvement of migratory birds, since they were not migrating from east to west in August. False negatives in Mongolia were also used to deny the role of migratory birds in teh spread of H5N1.

However, the latest sequence demonstrated that although H5N1 was a reportable disease, there was no mention of the June outbreak in the August 2 OIE report, which was the “first report of H5N1 in

Kazakhstan," as was the Russia report in July. Therefore, the recent sequences demonstrate that lack of an H5N1 report does not always correlate with the lack of H5N1 (see satellite map).

The Kazakhstan sequence also impacts subsequent spread. In the summer of 2006 there was a massive wild bird outbreak at Uvs Lake in Mongolia, which was on a par with the outbreak a year early. The relationship of the Kazakhstan sequence to the Uvs Lake sequence indicates it was in circulation in Kazakhstan a year prior to the outbreak in June of 2006 in Mongolia and Tyva or Chany Lake in July of 2007, which once again demonstrates surveillance and reporting shortfalls.

The shortfalls are somewhat like the H5N1 that was detected in a healthy teal in the Nile Delta in December, 2005. At that time western Europe and Africa were denying any H5N1, yet the teal sequence matched cat and poultry H5N1 reported in Austria in early 2006. Since the wild birds are migrating south in December, the sequences in Egypt in 2005 indicated that H5N1 had been in Austria in 2005.

Similar shortfalls are found in India. The bar-headed geese and many additional species at Qinghai Lake winter in India and although H5N1 has been detected in Qinghai province every year since 2005, India has never reported H5N1 in wild birds. This season, warnings are being issued, but there have been no confirmations in migratory birds. Recently, India confirmed H5N1 in dead crows in Guwahhati. However, dead crows have been associated with H5N1 poultry outbreaks in India since 2006.

Recently, India also acknowledged dead wild birds in the jungles of Karbi Anglang and Nagaland, yet H5N1 has yet to be confirmed. Confirmation failures in wild birds are largely linked to testing procedures. The Qinghai strain is at very low levels in cloacal swabs. Wild birds experimentally infected with the Qinghai strain have detectable shedding in nasopharyngeal swabs, while cloacal swabs are negative. Thus, India's reliance on serum and cloacal swabs leads to false negatives and failures to confirm.

Therefore, the Kazakhstan sequences, released more than three years after the fact help explain the role of wild birds in the transport and transmission of H5N1, which is important for current outbreaks, where false negatives are still being reported for the Qinghai strain in wild birds in India and Bangladesh.

QUOTE

Confirmed H5N1 Spread to Kurigram Bangladesh

December 22, 2008
http://www.recombinomics.com/News/12220806...Kurigram_2.html

Livestocks officials on Monday night started culling birds in 500 square metres area of a house of Balatari village of Kurigram municipality after they detected the bird flu virus .

District livestocks official Nazrul Islam told bdnews24.com they would kill hens, ducks and pigeons and the eggs in every house in .

The above comments describe a confirmed H5N1 outbreak in Kurigram, Bangladesh. Kurigram is in the northeast tip of Bangladesh, so it is only 10-15 miles from the borders of Cooch Behar, Assam, and Meghalaya (see zoomed map). This outbreak comes days after the outbreak in Natore, and suggests H5N1 is widespread in Bangladesh, Assam, West Bengal, and neighboring districts.

Bangladesh was able to confirm the H5N1 on the same day as the collection, in marked contrast to India, which collects samples or carcasses and sends them to Bhopal for a series of tests. The delay in testing in India has cast serious doubts about negative test results and announcements of control and lack of reports of excessive poultry deaths.

Some media reports are even claiming that the confirmed cases in Assam are not really H5N1, even though the confirming letters are posted on the government website.

The large number of confirmed outbreaks in Bangladesh, Assam, and West Bengal (see updated map) suggest more confirmations will be reported in the near term.

QUOTE

Hospitalized Malda Health Care Workers Raise H5N1 Concerns

December 22, 2008

local reports said four boys, between 12 to 14 years, had fallen ill in the locality and their sickness was yet to be identifed. The boys were volunteering in culling operation.

At least four culling personnel were taken ill during culling and mopping operations in Malda last evening. One of them Mohd Ellius was admitted to the isolation ward for observation. According to the Malda CMOH, Dr Srikanta Roy, Mohd Ellius was suffering from abdominal pain.

Two others, one Mohd Sazzad from Satgharia and another person with the same name, from Sujapur, who were working as labourers, fell ill.

Including two employees in the hospital and the Malda Sadar Mulpur was admitted to primary health center

The above comments describe illness associated with cullers in Malda, as well as two hospital workers (see Malda map). It is unclear if the two sets of cullers described above are the same four people, and there is little information on symptoms, so the relationship of their illness to the culling remains unclear.

However, concern is increased by the hospitalization of two hospital workers. More information on their symptoms and linkage, if any, to cullers would be useful.

QUOTE

Confirmed H5N1 Spread Accelerates In Bangladesh

December 23, 2008
http://www.recombinomics.com/News/12230801...Accelerate.html

"Some 9,950 birds of the farms and the household and nearby areas of the country's western Natore, central Gazipur, eastern Narsingdi, and northern Gaibandha and Kurigram districts were culled this month," he said.

The above comments from the Bangladesh MOFL identify yet another recent outbreak, in Gaibandha (see zoomed map). This outbreak has yet to appear on the daily update, which reported Kurigram yesterday and Natore over the weekend. Thus, the three outbreaks in the past few days clearly signal an increase in H5N1 activity in northern Bangladesh, flanked on the west by West Bengal and on the east by Assam and Meghalaya.

The latest outbreak is only about 20 miles from the Meghalaya border and 30 miles from South Dinajpur in West Bengal. The number of recent outbreaks, and proximity to West Bengal and Assam, suggests

both Indian provinces have more activity than is being reported.

Malda in West Bengal confirmed H5N1 in Englishbazar and is culling over 30,000 birds. The death of hundreds of crows suggests H5N1 will spread to adjacent blocks and Bangladesh and excessive poultry deaths have been reported in adjacent blocks (Ratua I, Gajole, and Manikchak), yet the dead birds are not being tested or culled. Instead blood is being collected for routine surveillance, which is almost always negative because the birds die before H5N1 antibodies reach detectable levels. The outbreak in Englishbazar was detected by a rapid test, which measures RNA levels in swabs or tissue samples. Similarly, all initial positives in Assam were tissue based.

Instead of testing, the bird deaths are attributed by Newcastle Disease, which produces symptoms similar to bird flu and is commonly diagnosed to hide or ignore H5N1 outbreaks. Similarly, media reports indicate birds are being buried and not tested for H5N1 based on visual diagnosis of Newcastle Disease. Thus, the H5N1 outbreaks are being cover up, literally and figuratively.

In contrast, Bangladesh is confirming H5N1 quickly. In Kurigram, H5N1 was confirmed in the morning on two hens, and culling began by evening. However, in spite of this rapid response, H5N1 spread is accelerating.

Thus, like last season, the spread of H5N1 is accelerating as winter approaches, and India is trying to control the spread by minimal and inappropriate testing or misdiagnosis.

More outbreaks (see updated map) are expected.

QUOTE

H1N1 US Sequences Maintain Dominance Polymorphisms

December 23, 2008
http://www.recombinomics.com/News/12230802...4Y_US_2009.html

The CDC has deposited HA and NA sequences at Genbank, which will be available shortly (see list below). As expected, all are clade IIB (Brisbane) and have H274Y. One sequence from August, A/Missouri/06/2008, was also released and it is the only oseltamivir sensitive isolate. However, it is clade IIC, and like the clade IIC isolates in the US last season and over the summer, it is adamantidine resistant and oseltamivir sensitive.

The new sequences have evolved from the dominant sub-clade in circulation last season, and have changes that led to dominance last season and in the 2008 season for the southern hemisphere. As noted earlier, one US sequence from the summer had the clustered changes near the position 190 receptor binding domain. The current sequences have one of the polymorphisms in that cluster A193T.

Most of the new sequences formed a branch that included Memphis/03/2008 and Hawai/02/2008. The new isolates on this branch were from Hawaii, Texas, and Pennsylvania, so more samples are required to see the full distribution of this sub-clade.

However, the sequences from these initial isolates indicate that the changes that initiated dominance last season, have been maintained over the summer and into the new season. These dominance changes were acquired via recombination from clade IIC sequences.

Mass awareness campaign on against bird flu

30 Dec 2008
http://www.hindu.com/thehindu/holnus/099200812300922.htm

New Delhi (IANS): Indian health officials were beginning a mass awareness campaign to prevent recurrence of bird flu after culling of over 400,000 poultry in the two affected states of West Bengal and Assam.

As many as 421,057 birds have been culled so far in the two states, health ministry officials said.

“We are creating public awareness by telecasting and broadcasting messages through local channels and All India Radio about avian influenza to check the problem,” an official said.

The official said they were also interacting with village people and spreading awareness by making public announcements in the affected areas.

“We are carrying out intensive campaigning by announcements and also through interactions. This is one way of checking that bird flu doesn't spread to new areas,” he added.

"We are scaling up mopping-up operations in those areas where culling activities have been completed in Assam and West Bengal," the official said

QUOTE

Widespread H1N1 Tamiflu Resistance in Canada

January 4, 2009
http://www.recombinomics.com/News/01040902...Widespread.html

all of the A/H1N1 isolates were resistant to oseltamivir due to the H274Y mutation (resistance = 100% or 5/5). The resistant isolates were from NS, ON and BC.

To date this season, 19 influenza isolates in BC have been sub-typed as A/H1 and were assessed genotypically for oseltamivir resistance using an SNP assay. Fourteen isolates tested positive for the H274Y mutation (resistance = 100% or 14/14), with the other 5 specimens still pending confirmatory testing. These specimens were from community-based cases of ILI

The above comments from the week 51 report from Canada confirm H1N1 Tamiflu resistance is at 100% in Canada and widespread. Although most of the testing has been in British Columbia, where 83% of reported influenza is H1N1, samples from Ontario and Nova Scotia have also been tested and all have H274Y.

The results in Canada parallel those in the United States where 64 of 65 H1N1 isolates had H274Y. The sole sensitive sample was clade 2C isolated in California on September 4, 2008 as indicated in the sequence, A/California/07/2008, released by the CDC. The other released sequences, from Hawaii, Texas, Pennsylvania, and Wisconsin were clade 2B and had H274Y. Thus, like Canada, all clade 2B isolates have had H274Y and the resistance is also widespread in the United States, where more than 90% of influenza A isolates were H1N1.

Similar frequencies in H1N1 were also seen in Europe, where most reported data is from the UK. However, all H1N1 isolates from Scotland, Wales, Norway, and Sweden also had H274Y, although most reported influenza A in Europe has been H3N2.

The high frequency of H1N1 in the United States had led to a CDC advisory on oseltamivir usage in the United States.

Since the H274Y was acquired by homologous recombination, the large reservoir of H274Y in H1N1 seasonal flu has serious implications for the utility of oseltamivir in the control of H5N1 pandemic influenza, which can acquire H274Y in patients co-infected with H5N1 and H1N1

QUOTE

China alert over bird flu death

By James Reynolds
BBC News, Beijing
Wednesday, 7 January 2009
http://news.bbc.co.uk/1/hi/world/asia-pacific/7815872.stm

A relative mourns the first person to die of the virus for nearly a year
China has issued an alert against bird flu following the death of a 19-year-old woman from the disease.

The woman died after she came into contact with poultry in a market in central Hebei province.

Since the outbreak of bird flu in 2003, 21 people in China have died. Worldwide, 247 people have died.

But this is China's first bird flu death in almost a year, and the authorities here have reacted by declaring a bird flu alert.

Officials have shut down and disinfected poultry markets in Hebei.

In a statement the World Health Organization said it was concerned by the death of the 19-year-old woman, Huang Yanqing.

But it said this single case did not change its risk assessment.

The Chinese health ministry has said that that it will step up its attempts to monitor the disease.

Efforts to keep an eye on bird flu in China are important because this country has the world's biggest poultry population.

Any mass outbreak here would have serious consequences for China and for neighbouring countries.

QUOTE

H1N1 Tamiflu Resistance In England Approaches 100%

Recombinomics Commentary 17:46
January 7, 2009
http://www.recombinomics.com/News/01070904/H274Y_UK_100.html

Forty influenza A (H1) specimens have been tested for anti-viral drug resistance since week 40/08, 39 of these were resistant to oseltamivir.

The above comments from the week 1 report from the UK provide additional evidence that H274Y is fixed in H1N1. The sole sensitive isolate was reported in the first 10 isolates tested. Since those initial tests, all 30 samples have had H274Y. This pattern is similar to reports of H274Y levels in the United States where 72/73 isolates have H274Y. The sole sensitive isolate was among the first 2 tested, so all 71 tested since the initial report have had H274Y. Similarly, the small number of H1N1 isolates tested in Scotland, Norway, Sweden, and Israel have H274Y, as do all 19 reported results in Canada. The recent WHO report on initial results for the northern hemisphere indicated that 13/14 isolates from Japan had H274Y and sequence analysis of the three isolates showed that they matched the dominant sequence in the United States.

These initial data fro this season support the fixing of H274Y in H1N1 in circulation in the northern hemisphere. Although data has not been widely disseminated for Russia and China, two countries with high frequencies of H1N1, the results released these far from North America, Europe, and Japan in Asia support H274Y levels approaching 100%.

QUOTE

H1N1 in Japan Matches the United States

January 7, 2009
http://www.recombinomics.com/News/01070903...Y_Japan_US.html

October 2008 to 28 elementary school students three years of a class (enrollment 40) of 25 influenza-like symptoms, but missed out for 14, was taken in closed classes. The doctor and two medical institutions, the A rapid diagnostic kits for avian flu was confirmed that the type of research.

HA gene is one of three amino acid substitution (G204V, A208T, H211R) are, NA gene is an indicator of the stock H275Y oseltamivir resistance is recognized by amino acid substitution, M2 and the stock index of amantadine-resistant gene S31N amino acid substitution could not be accepted.

The above translation describes an influenza outbreak among elementary school students in October, 2008 in Sendai, Japan. The Japan NIH report includes phylogenetic analysis of HA, NA, and MP of three isolates (A/Sendai/103/2008, A/Sendai/104/2008, A/Sendai/105/2008) from the students.

The three isolates are identical to each other and are the Brisbane/59 sub-clade 2B with H274Y. The HA sequences have three changes flanking position 190 (H3 numbering). These three changes, G189V, A193T, H196R, match the three changes in isolates collected this season from Hawaii, Texas, and Pennsylvania, which supports the data released by WHO indicating H274Y levels in Japan were approaching 100% in H1N1 isolates, as was seen in North America and Europe.

These results highlight the role of a dominant sub-clade in the spread and fixing H274Y. It is also notable that the R at position 196 matches the change in H5N1 isolates from a fatal cluster in Iraq. Position 196 is one of the receptor binding domain changes that increases affinity for gal 2,6 receptors relative to wild type H5N1.

The emergence of a distinct H1N1 sub-clade has led to the fixing of H274Y, which has significant implications for seasonal and pandemic flu because SNPs are readily exchanged by homologous recombination, and H274Y creates oseltamivir resistance in H1N1 and H5N1.

H1N1 Tamflu Resistance Near 100% In Japan

January 6, 2009
http://www.recombinomics.com/News/01060902..._Japan_100.html

WHO has received several reports from National Influenza Centres (NIC) in the northern hemisphere regarding influenza A(H1N1) virus resistance to oseltamivir for the beginning of 2008/2009 influenza season (week 41-44).

Among A(H1N1) viruses tested, 13 of 14 in the United Kingdom,1 of 1 in Israel, 1 of 1 in Ghana and 1 of 1 in Canada had the specific neuraminidase mutation (H275Y; numbered according to N1 sequence) associated with oseltamivir resistance.

Japan also reported that 13 of 14 A(H1N1) viruses tested were resistant.

The above comments are from the December 30, 2008 WHO report on oseltamivir resistance (H274Y in the northern hemisphere. The number of samples tested is low, because the report covers a very small time period at teh begiing of the flu season. Data from the UK has been updated at the UK website to 29/30. The only sensitive isolate was from the very beginning of the season. The same was true in the United States. The one sensitive sample was reported with one resistant sample in the first report. After that, the next 69 isolates had H274Y.

The same sequence of events will probably hold for Japan. As additional samples are collected, the frequency will approach 100%. The figures for Japan are somewhat surprising since last season there was a significant level of clade 2C (Hong Kong), which was oseltamivir sensitive. The same was true for Hawaii in the United States, but this season all reported H1N1 tests have had H274Y in Hawaii, suggesting clade 2B had gain dominance over clade 2C.

The data above for Japan indicates the same dominance had happened there, suggesting the frequency of almost 100% in Europe and North America extends to other northern countries in Asia, like Japan, China, and Russia.

Therefore, it seems likely that clade 2C may have been displaced throughout the northern hemisphere by clade 2B, which is now represented by a dominant sub-clade that has acquired and fixed H274Y

QUOTE

Clade 7 H5N1 In Beijing Raises Pandemic Concerns

January 6, 2009

Gene sequencing by the National Avian Influenza Reference Laboratory indicated that this virus is very similar to the avian influenza virus variant isolated in Shanxi in 2006.

A 19-YEAR-OLD Beijing woman who suffered the city's first human case of bird flu since 2003 has died, municipal health authorities said yesterday.

The sequencing comments above are from the OIE report on the H5N1 from the Jiangsu outbreaks last month, and are followed by the most recent confirmed human case in China (see updated map), who died yesterday. The “virus variant” is clade 7, as seen in phylogenetic analysis of A/chicken Shangxi/02/2006 in the latest WHO on vaccine targets. On the same branch is A/Beijing/01/2003, which was isolated from the first H5N1 confirmed case in mainland China.

It is likely that the latest case was also infected by clade 7 H5N1, which is vaccine resistant, because most vaccines target clade 1 or 2, which are significantly different than clade 7.

The details of the Jiangsu outbreaks are unclear. Some local media reports suggested the outbreak was large, and involved dead poultry that was shipped to market. Other reports acknowledged the H5N1 infection, but noted that the infected birds were asymptomatic and identified through routine screening.

However, if the latest case was fatally infected by clade 7 from an asymptomatic duck, then the potential for additional cases is high, because the virus can travel and disperse undetected. Moreover, since clade 7 is resistant to the most common vaccines, it could be widespread.

Clade 7 was also reported in Vietnam in August, and a clade 7 target was recently identified by the WHO. There currently is no clade 7 pandemic vaccine, and the selected target is only proposed as a target, as indicated in the most recent WHO vaccine update. The earlier presence of clade 7 in Vietnam may be related to the recent confirmed human case in northern Vietnam, which was announced today.

Thus, more detail about the H5N1 in Beijing and Vietnam, including sequence data from these isolates, as well as the WHO vaccine target, A/chicken/Vietnam/NCVD-016/2008, would be useful.

The presence of vaccine resistant H5N1 in asymptomatic ducks in Beijing would create significant pandemic concerns.

QUOTE

Likely H5N1 In Manipur Village With Hospitalized Patients

January 7, 2009
http://www.recombinomics.com/News/01070902...Manipur_27.html

they complained of severe headache, cough, while some felt unconscious after vomiting, the symptoms of which were similar to avian flu.

The findings suggested that the disease was “very close to avian influenza”.

“We found the symptom to be very similar to the avian influenza as many chicken were also found dead during the last few days in the village” said Dr. Piang. Villagers said 12 chickens died yesterday.

The above comments strongly suggest the poultry in the Misao Lhavom village near Churachandpur, Manipur (see updated map) is infected with H5N1. These infections are not a surprise because of the proximity of the village to confirmed H5N1 in adjacent countries or districts, or the excessive poultry deaths in southern Tripura.

The symptoms in the villagers are also consistent with H5N1. However, India has never reported H5N1 in humans or migratory birds, and these failures are testing related. Human H5N1 is detected with a throat swab, but the media reports describe blood collections from the patients and poultry.

Poultry also tests negative in blood tests because the birds die before antibody levels reach detectable levels. All initial H5N1 positive poultry in Assam was detected via tests on tissue samples, not serum samples.

The large number of patients with symptoms is unusual. In 2005 there were large numbers of symptomatic patients in central and northern Vietnam, but those were mild cases and details of test results were never disclosed.

The increase in the number of cases in Manipur is alarming, and serious testing is required.

QUOTE

Human to Human H5N1 Transmission In Beijing?

January 7, 2009
http://www.recombinomics.com/News/01070901...eijing_H2H.html

The Beijing Municipal Health Bureau said 116 people were in close contact with the victim.

One healthcare professional in contact with Huang contracted bird flu, but recovered, the bureau said.

The above comments describe transmission of H5N1 from the fatally infected patient to a health care work, which is a major red flag signaling an increase in transmission efficiency. Although other media sources acknowledged the fever and recovery in the health care work, none stated that the fever was due to an H5N1 infection.

Transmission to a health care worker is rare. Most H5N1 H2H transmission involves an index case and family members who are not trained in universal precautions, and have minimal protection. Therefore, independent confirmation of this transmission would be useful.

H5N1 cases in Beijing are also rare. The last confirmed case from Beijing was the first confirmed case in mainland China in 2003. That case was due to clade 7 H5N1, which is more common in the Beijing

area, which is why it is likely that the latest human case was also caused by clade 7. The most recent confirmed H5N1 in poultry in mainland China were two outbreaks in Jiangsu, and both were clade 7.

Clade 7 is of concern because it is distinct from other H5N1 that is associated with human infections. Clade 1 is in southeast Asia and caused human case in Vietnam, Thailand, and Cambodia between 2004-2005. Although it is still circulating in poultry in southeast Asia, there have been few of any recent clade 1 human cases. Clade 2.1 is circulating in Indonesia and account for all public sequences, although Indonesia has not released a human H5N1 sequence for the past two years. Clade 2.2 is carried by wild birds west of China, and have cause human infections in Turkey, Iraq, Azerbaijan, Egypt, Djibouti, Nigeria, Pakistan, and Bangladesh. Clade 2.3 has cause human cases in China, and more recently in Vietnam and Thailand.

However, prior to the latest case, the only reported clade 7 infection was in Beijing.

If the source of the H5N1 for the latest case was linked to the ducks purchased at the market, then it is possible that they were asymptomatically infected, which would also increase concerns.

Release of sequences from this case, as well as the Jiangsu outbreaks, would be useful as would clarification of the cause of the fever in the health care worker.

Now remember on H5N1 is a population control and good gene pool keeper. Do you think Chinese birds will be living healthy? No so they have the H5N1 switch on to cull them down. All hyped nonsense. -Craig

Vietnam finds H5N1 in smuggled Chinese birds

Mon Jan 12, 2009 9:52pm EST Email | Print | Share| Reprints | Single
http://www.reuters.com/article/asiaCrisis/idUSHAN380368

HANOI, Jan 13 (Reuters) - Vietnamese authorities have found the H5N1 bird flu virus in a batch of chickens smuggled over the border from China, officials said on Tuesday, warning that two northern provinces remained affected.

An official in the border province where the chickens were found did not say how many had been brought in illegally, but state media said eight out of 16 samples taken from the birds carried the virus.

"The samples were taken from chickens smuggled in from China that were confiscated by customs," the official at the Lang Son Provincial Animal Health Department told Reuters by telephone.

China, home to the world's biggest poultry population with hundreds of millions of farmers raise birds in their backyards, is seen as a crucial front in the global fight against bird flu.

Poultry smuggling is rife along the border between China and Vietnam, even though patrols have been stepped up. Last month the two countries wrapped up drawn out negotiations on demarcating their lengthy and porous border.

Both China and Vietnam have reported in recent weeks outbreaks of bird flu among poultry.

The disease can also infect people, although there have been no cases of human-to-human transmission.

A 19-year-old died in China of the avian flu strain after gutting ducks and in Vietnam an 8-year-old girl was in hospital about 150 km (90 miles) south of Hanoi with the disease after eating poultry that had died. Her 13-year-old sister died this month and a health official said it may have been from bird flu.

Vietnam's agriculture ministry said on Tuesday the bird flu outbreak still affected two northern provinces Thanh Hoa and Thai Nguyen. (Reporting by Nguyen Nhat Lam; Editing by John Ruwitch and Sanjeev Miglani)

Beijing bird flu victim's close contacts removed from medical observation

www.chinaview.cn 2009-01-12 19:32:57 Print
http://news.xinhuanet.com/english/2009-01/...nt_10646649.htm

BEIJING, Jan. 12 (Xinhua) -- Doctors have discharged from observation all 200 people who had been in close contact with a woman who died of bird flu in Beijing early this month, the Municipal Health Bureau announced on Monday.

The bureau also reported no new suspected bird flu cases as of midday Monday, after having surveyed at least 358,820 people on Sunday.

Beijing municipal health authorities started to monitor migrant workers and high-risk groups who had been involved in poultry farming, slaughtering, and sales, after they confirmed a 19-year-old woman was infected with bird flu and died in Beijing on Jan. 5.

Huang Yanqing, a native of eastern Fujian Province, was the first human bird flu case reported in Beijing since 2003, according to the municipal health bureau.

Huang fell ill on Dec. 24. Her condition deteriorated and she was admitted to hospital on Dec. 27.

She tested positive for the H5N1 strain of avian influenza. Ministry of Health experts determined that Huang was infected with bird flu.

Beijing Municipal Health Bureau said about 200 people, including the patient's 14 family members and neighbors, had been in close contact with the patient.

The municipal government launched bird flu prevention and control measures, including disinfecting and isolating the patient's house and wards she had used and issuing an alert to all medical institutions.

Fresh warning on China bird flu

Tuesday, 20 January 2009
http://news.bbc.co.uk/1/hi/world/asia-pacific/7839099.stm

A Chinese health expert has said that the country is likely to experience an upsurge in the number of human bird flu cases in the next month or two.

Shu Yuelong, from the National Centre for Disease Control and Prevention, said China needed to work harder at preventing bird flu outbreaks.

The warning came after the health ministry said a 16-year-old boy had died in central Hunan province.

The human form of bird flu has now claimed three lives this year.

An earlier BBC report said Mr Shu had suggested that China risked an epidemic in the next few months, but it later became clear that he was referring to an increased risk of an epidemic occurring.

New Year exodus

The BBC's Beijing correspondent Quentin Sommerville reports that winter and spring are prime bird flu seasons, when more than 70% of cases occur.

Millions of Chinese people are heading home for Chinese New Year, increasing the chances of infection, he says, and in spring, migratory birds carry the virus over great distances.

On Monday, the authorities announced that a woman in eastern Shandong province had died from bird flu.

And two weeks ago, a 19-year-old woman died in Beijing after handling ducks.

Meanwhile, a two-year-old toddler reported to have been in critical condition with the H5N1 virus has now recovered and is described as "stable".

Chinese and Hong Kong media have been reporting that the toddler's mother had died this month after exhibiting symptoms similar to bird flu, but her death has not been officially blamed on bird flu.

Neighbourly concern

The upsurge in bird flu deaths on the mainland is causing concern in Hong Kong, where consumers have been told not to eat poultry brought in from the Chinese mainland.

China's ministry of agriculture said on Sunday that no bird flu epidemics were detected in Shanxi and Henan provinces after the two-year-old's infection was confirmed.

Hong Kong's secretary for food and health, Dr York Chow, said this was a cause for concern.

"There are two main areas we are concerned about: one is that if there is no avian flu outbreak in poultry and yet there are human cases, does this mean the virus has changed?

"Secondly, we are worried about whether there are more so-called 'slightly infected' chickens that actually might be carrying the virus and transmitting the disease, and yet do not show any symptoms or die from those illnesses," Dr Chow said.

The ministry said China now faces "a grim situation" in bird flu prevention, threatened by frequent outbreaks in neighbouring countries, the Chinese state news agency Xinhua reported.

China has the world's biggest poultry population and is seen as critical in the fight to contain the H5N1 strain of the virus, which resurfaced in Asia in 2003, killing at least 247 people.

H5N1 does not transmit easily to humans but experts fear it could mutate and cause a worldwide pandemic.

India's West Bengal reports fresh bird flu outbreak

KOLKATA, India (Reuters) - Health and veterinary workers culled poultry in a densely populated eastern Indian state on Saturday after a fresh outbreak of H5N1 bird flu, officials said.

By ReutersJanuary 5, 2009
http://www.canada.com/topics/bodyandhealth...8b-6e8adc583428

KOLKATA, India (Reuters) - Health and veterinary workers culled poultry in a densely populated eastern Indian state on Saturday after a fresh outbreak of H5N1 bird flu, officials said.

The latest outbreak of the virus in poultry is the fourth in the state of West Bengal since 2007.

Bird flu first broke out in India in 2006. Millions of chicken and ducks have been culled

since to contain the virus, but it has resurfaced from time to time. India has reported no human infections.

West Bengal officials said they had begun culling about 60,000 poultry after the fourth outbreak was confirmed on Saturday near Siliguri town, bordering Bangladesh.

Culling operations in West Bengal to contain the third outbreak had ended barely a fortnight ago.

"We have sent 30 teams to kill chickens and ducks in the village where dead birds tested positive," Surendra Gupta, a senior government official, told Reuters.

Hundreds of thousands of birds had also been culled in India's northeastern Assam state and neighboring Meghalaya after bird flu was detected in November. Experts have warned that the H5N1 virus might mutate or combine with the highly contagious seasonal influenza virus and spark a pandemic that could kill millions of people across the world.

According to the World Health Organization, H5N1 bird flu has infected more than 390 people in 15 countries and killed at least 247 of them since the virus resurfaced in Asia in 2003.

Bird flu remains a threat to humans, U.N. says

By TIM JOHNSON
McClatchy Newspapers
http://www.kansascity.com/451/story/1041152.html

A handful of new human fatalities from bird flu underscore that the H5N1 virus has become entrenched in some countries, such as China, and that it still could mutate and flare into a global pandemic, U.N. officials said Wednesday.

China has reported five deaths from eight cases of bird flu so far this year.

U.N. advisers said that the victims had come into contact with infected poultry in scattered areas of China, and that the virus still wasn't contagious among humans. They cautioned against dismissing the H5N1 virus as a threat to humanity, however.

"We really shouldn't be complacent," said Vincent Martin, a senior technical adviser on

avian influenza in China for the Food and Agriculture Organization, a U.N. group based in Rome.

"If it happens, it will be really scary for everybody. The attention has been sort of waning during the years. ... Infection is still going on. Today, we are seeing people dying of the disease."

The deadly H5N1 strain of avian influenza began to infect humans in late 2003 and has spread to 15 countries, killing 254 of the 407 people who've contracted it.

Hans Troedsson, the chief representative of the World Health Organization in China, said the WHO hadn't changed its risk assessment of bird flu in China after the recent deaths, adding that the virus often spreads more easily in the winter months.

He said the prevalence of fowl in millions of backyards in rural China made eradicating the H5N1 virus difficult.

"The virus is well-entrenched and circulating in the environment," Troedsson said.

The officials, speaking at a forum for foreign correspondents, said "hot spots of infection" for H5N1 virus occurred in China, Indonesia, Vietnam and Egypt, where wild birds - largely shore and aquatic birds - carried the virus, sometimes infecting poultry.

Curiously, the human infections in China this year didn't follow a reported poultry outbreak, and Martin urged Beijing to enhance surveillance to ensure that outbreaks don't go unreported.

Public health experts fret that an influenza A virus, perhaps H5N1, could mutate or re-assort itself genetically to allow human-to-human transmission, becoming a global contagion that could threaten tens of millions of lives. Such contagions occur in cycles.

"It's always at certain intervals, and it's overdue," Troedsson said, adding that the last major flu outbreak occurred four decades ago and was known as the Hong Kong flu.

He said that a worst-case scenario for a flu outbreak would shut down airports worldwide, strain hospitals, severely disrupt food and water supplies, and lead to shortages of anti-viral medications. A best-case scenario might cause only 100,000 deaths, he added.

"We don't know which virus strain is going to do it," Troedsson said. "What's important for us is that governments continue to do their preparedness planning."

QUOTE

China confirms woman died of bird flu in Beijing

BEIJING/HONGKONG (Reuters) - A 19-year-old woman has died of the H5N1 bird flu virus in Beijing after coming into contact with poultry, health authorities in Beijing and Hong Kong said on Tuesday.

By ReutersJanuary 6, 2009
http://www.canada.com/topics/bodyandhealth...45-d031c7d9052c

BEIJING/HONGKONG (Reuters) - A 19-year-old woman has died of the H5N1 bird flu virus in Beijing after coming into contact with poultry, health authorities in Beijing and Hong Kong said on Tuesday.

This human H5N1 case would be China's first in almost a year. Experts said while the case was not unexpected as the virus is more active during the cooler months between October and March, it points to holes in surveillance of the virus in poultry.

With the world's biggest poultry population and hundreds of millions of farmers raising birds in their backyards, China is seen as crucial in the global fight against bird flu.

"The woman fell ill on December 24, was hospitalized on December 27 and died on Monday (at) 7.20 am," the Beijing Municipal Bureau said in a faxed statement.

Hong Kong's Center for Health Protection said the woman had had contact with poultry before falling ill.

China's official Xinhua News Agency earlier reported that the woman from eastern Fujian province had bought nine ducks at a market in Hebei province, which surrounds Beijing, and then gutted the birds.

She gave three ducks to her father, uncle and a friend and kept the other six ducks, the agency reported.

It added that 116 people, including the patient's 14 family members and neighbor and 102 medical workers, had been in close contact with the patient.

"In many parts of the world, human H5N1 cases are due to contact with infected poultry. A human case would confirm that there is poultry infection somewhere in the vicinity," said a virologist in Hong Kong who declined to be identified.

"It means that there are some leaks in surveillance in the poultry side (in China)," he said.

"Of course, we are approaching Chinese New Year and there is an increase in production, movement in poultry. That's why there's an increase in poultry infection."

The H5N1 remains largely a disease among birds but experts fear it could change into a form that is easily transmitted from person to person, and spark a pandemic that can kill millions of people worldwide.

Beijing has reported the case to the World Health Organization and health authorities in Hong Kong and Macau, and convened an emergency meeting to handle the bird flu case.

The WHO in Beijing said it had offered technical assistance.

Since the H5N1 virus resurfaced in Asia in 2003, it has infected 391 people, killing 247 of them, according to WHO figures released in mid-December.

The last human H5N1 death in China was in February last year when a 44-year-old woman died in the southern Guangdong province.

At least 20 people have died of bird flu in China to date.

In neighboring Vietnam, a five-year-old has been infected with bird flu, the first human case reported in the country this year, Vietnam's state-run television said on Tuesday.

Rapid H5N1 Clade 7 Evolution in Vietnam Raises Concerns

February 25, 2009
http://www.recombinomics.com/News/02250901... Evolution.html

Antigenic diversity is also present within clade 7 and viruses such as A/chicken/Vietnam/NCDV-03/2008 show reduced reactivity with antisera to clade 7 reference strain A/chicken/Vietnam/NCDV-016/2008.

The above comments are from the latest WHO update on H5N1 vaccine targets and represents concerns of a rapidly evolving clade 7 in Vietnam. The basis for the concern can be seen in the antisera table, where the vaccine against 016 has a titer of 320, which drops to 40 for 03. This drop is also suggested in the phylogenetic tree at the end of the report because of the length of each clade 7 node. Thus, even though both 016 and 03 are on the same branch, the length of each branch is relatively long, representing multiple changes.

Moreover, there are even more difference between the clade 7 in Vietnam and the clade 7 in China, represented by Shanxi/2. However, Shanxi/2 was from 2006 and China has already reported a clade 7 outbreak at the end of 2008, which likely has additional changes. Moreover, the clade 7 outbreak in poultry was followed by a spike in human cases, including A/Beijing/1/2009, which was almost certainly due to clade 7. The last human case in Beijing was in 2003 and was also clade 7, and clade 7 is common in poultry in areas surrounding Beijing.

The WHO report is glaringly silent on clade 7 in China. The Jiangsu outbreak was in December and sequences were generated last year because the OIE report noted the similarity with Shanxi/2. However, the Jiangsu poultry sequences are not on the tree and the only two human sequences from China in 2009 were from an infection with clade 2.3.4 or clade 2.3.2. There is not representation or comment on the other six confirmed cases, five of which were prior to the clade 2.3.2 infection. Moreover, the Beijing case began in 2008 and the sequences were described in general terms in media report sin early 2009.

The lack of any recent clade 7 sequences from China is cause for concern, as is the rapid evolution of clade 7 in Vietnam. In Vietnam, clade 7, clade 2.3.4, and clade 1 are co-circulating, providing

opportunities for co-infections which lead to reassortant and recombination. Similarly, in China clade 7, clade 2.3.4 and clade 2.3.2 are co-circulating, offer similar opportunities. In fact the clade 2.3.2 from wild birds in Hong Kong, as well as the outbreaks South Korea, Japan, and Russia is a reassortant with a clade 2.3.2 HA and clade 2.3.4 in the other seven gene segments. Recombination between the clades and sub-clades leads to rapid evolution and vaccine resistance.

Thus, in addition to limited or no cross reactivity between clade 1 or 2 with clade 7, the published data supports rapid clade 7 involvement within clade 7. Thus, the vaccine against a 2008 clade 7 isolates from Vietnam has poor cross reactivity with another 2008 clade 7 isolate from Vietnam.

This rapid evolution of clade 7 in Vietnam, coupled with the absence of data on the current clade 7 circulating in China increase pandemic concerns.

QUOTE

Shanxi H5N1 Clade 7 Changes Raise Pandemic Concerns

February 24, 2009
http://www.recombinomics.com/News/02240901...xi_Changes.html

China's National Avian Infleunza Reference Laboratory at Harbin have deposited two new gene sequences (HA and NS) for the clade 7 isolate, A/chicken/Shanxi/2/2006, from the 2006 outbreak in Shanxi. In addition to changes in several single nucleotide polymorphisms, the new HA sequence has the 3 BP deletion that is in two other clade 7 sequences from Hunan, A/chicken/Hunan/2246/2006 and A/chicken/Hunan/2292/2006. This deletion is also in 12 clade 2.2 sequences from Egypt, including human isolates from the 2006/2007 season as well as the 2007/2008. The sharing of the identical 3 BP deletion by isolates from two distinct H5N1 clades provides compelling evidence for acquisition via homologous recombination. Moreover, sequences with the 3 BP deletion, as well as other sequences from Egypt, including sequences from vaccine resistant isolates share additional polymorphisms with the Shanxi sequence.

The new interest in the Shanxi sequence by the National Labs at Harbin adds to the circumstantial evidence that most or all of the six confirmed cases not discussed in the recent WHO report on H5N1 vaccine targets are clade 7, which was also reported for the Jiangsu poultry outbreak in China at the end of the year.

Although the WHO report did not discuss clade 7 in China, the variation in clade 7 in Vietnam was discussed because of the low cross reactivity between 2008 clade 7 isolates. The reduced cross reactivity between clade 7 isolates from the same country and year signals rapid evolution of clade 7, and the limited cross reactivity with antisera directed against clade 1 or clade 2 increases concerns.

The concerns regarding the rapid evolution of clade 7 in Vietnam are increased by the failure of WHO to discuss the six confirmed cases in China, including the Beijing isolate. A/Beijing/1/2009, which was from a fatal infection that began just after the clade 7 outbreak in Jiangsu.

Moreover, the sharing of polymorphisms between vaccine resistant clade 7 in China, and vaccine resistant clade 2.2 in Egypt raises concerns that these polymorphisms are being exported from China via migratory birds, contributing to worldwide vaccine failure.

Release of the 2009 human H5N1 sequences in China, Vietnam, and Egypt would be useful.

QUOTE

Hospitalized Indonesian Paramedics Raise Pandemic Concerns

February 24, 2009
http://www.recombinomics.com/News/02240902...Paramedics.html

A doctor (anesthesiologist) and 4 paramedics of Dr Sutomo hospital Surabaya were quarantined due to bird flu-like symptoms on early February.

This is right after one Surabaya bird flu victim (St/18) was treated in that hospital. Further test revealed that the doctor and one of paramedic tested negative bird flu infection.

Up to last Sunday (22/2), three other paramedics are still in critical condition.

The above comments, from the Bird Flu Information Corner website raise additional concerns of unreported human to human H5N1 transmissions in Indonesia. The above health care workers are associated with the same facility where an H5N1 confirmed patient died in late January (see updated map). Although this is not an official case, hospital personal indicate H5N1 was confirmed, even though the patient did not have a history of contact with poultry.

If the patient and health care workers are H5N1 infected, they would represent one of the largest H5N1 clusters in Indonesia reported to date. Health care workers are rarely infected with H5H1 because they are aware of hazards H5N1 infected patients prevent. Moreover, they are quickly treated, so they rarely progress to a critical state. The report of three health workers in critical condition is alarming.

More information on the status of these patients and test results would be useful.

QUOTE

Hospitalized Indonesian Paramedics Raise Pandemic Concerns

February 24, 2009
http://www.recombinomics.com/News/02240902...Paramedics.html

A doctor (anesthesiologist) and 4 paramedics of Dr Sutomo hospital Surabaya were quarantined due to bird flu-like symptoms on early February.

This is right after one Surabaya bird flu victim (St/18) was treated in that hospital. Further test revealed that the doctor and one of paramedic tested negative bird flu infection.

Up to last Sunday (22/2), three other paramedics are still in critical condition.

The above comments, from the Bird Flu Information Corner website raise additional concerns of unreported human to human H5N1 transmissions in Indonesia. The above health care workers are associated with the same facility where an H5N1 confirmed patient died in late January (see updated map). Although this is not an official case, hospital personal indicate H5N1 was confirmed, even though the patient did not have a history of contact with poultry.

If the patient and health care workers are H5N1 infected, they would represent one of the largest H5N1 clusters in Indonesia reported to date. Health care workers are rarely infected with H5H1 because they are aware of hazards H5N1 infected patients prevent. Moreover, they are quickly treated, so they rarely progress to a critical state. The report of three health workers in critical condition is alarming.

More information on the status of these patients and test results would be useful.

QUOTE

WHO Hoarding of H5N1 Sequences Raise Pandemic Concerns

February 23, 2009
http://www.recombinomics.com/News/02230904...g_Concerns.html

Of the most recent isolates from China, A/Guangxi/1/2009 belongs to clade 2.3.2, the first human isolate from this clade. A/Hunan/2/2009, belonging to clade 2.3.4, shows genetic divergence from other viruses of this clade. Both viruses should be considered as potential vaccine strains pending further characterization.

The above comments are from the latest version of the WHO publication on H5N1 vaccine targets, “Antigenic and genetic characteristics of H5N1 viruses and candidate H5N1 vaccine viruses developed for potential use as human vaccines”, which was released earlier this month.

Although the comments, in conjunction with the HA phylogenetic tree at the end of the document, provide insight into the rapid evolution and divergence of H5N1 clades and sub-clades, the report is more notable for the data withheld than the data released.

In recent months, the increasing lack of transparency in reports on H5N1 outbreaks has reached an alarming level. China created concern when 8 confirmed cases of H5N1 were reported in January this year. The concerns were increased because China had not reported associated outbreaks in poultry. Prior to the spike in human cases, China reported two outbreaks of asymptomatic clade 7 H5N1 in poultry in Jiangsu in December, raising concerns that the human cases were also clade 7.

The WHO report is glaringly silent on six of the eight cases. As noted above, the two disclosed cases involve the Funjian strain (clade 2.3). One is linked to a more divergent clade 2.3.4. Previously, almost all human cases in China were clade 2.3.4. The other case is a different Fujian sub-clade, 2.3.2, which led to the first human isolate. However, this sub-clade has been isolated from wild birds in Hong Kong for the past three seasons, and was also isolated in Japan and southern Russia in the spring of 2008. South Korea has also isolated clade 2.3.2 from poultry, but has not released any sequence data. Moreover, a soldier / culler involved in the spring Korean outbreak developed bird flu symptoms and was PCR H5 confirmed. However, South Korea did not file a WHO report because they could not isolate the clade 2.3.2 virus. They argued that the soldier wasn’t clade 2.3.2 positive because the sub-clade had not previously been reported in human cases. The current WHO report shows that the sub-clade can fatally infect humans, which increases concerns because the virus is widespread in wild birds migrating along the East Asian flyway.

However, of greater concern is the WHO silence on the other 6 confirmed human cases in China. The virus isolated from the first case, A/Beijing/1/2009 was said to not have any human flu gene segments, indicating all eight gene segments had been sequenced in early January. Moreover, the sequences were characterized as having small differences with prior isolates from China. The likelihood that the sequence was clade 7 was increased when officials in Hong Kong indicated that the dead birds there were infected Fujian strains. Clade 2.3.2 was in the wild birds, while clade 2.3.4 was in the poultry washing ashore, signaling additional unreported outbreaks in China. However, the officials also said that the human cases in China were due to a strain from the north, strongly suggesting that the human infections were clade 7.

In the WHO report above, clade 7 was discussed because more outbreaks were reported in Vietnam, and the newer clade 7 isolates in Vietnam were distinct from earlier clade 7 isolates, although all isolates were from 2008. Moreover, the isolates in Vietnam were distinct from the previosuly reported clade 7 isolates in China, raising concerns that this clade was rapidly evolving and causing widespread

human infections in China.

However, WHO failed to comment on the other isolates from China, and these isolates, including A/Beijing/1/2009 were also not in the phylogenetic tree. The tree had an unprecedented number of recent isolates of interest that were lacking public disclosure of the underlying sequence. This lack of transparency has created concerns because it is well known that H5N1 transmission can be dramatically affected by a very small number of changes in the receptor binding domain, such as those seen in public clade 7 sequences.

In addition to withholding the sequences of the six isolates from China that are not on the tree, WHO regional labs are withholding an unprecedented number of sequences.

Prior to being designated a WHO regional lab, NAMRU-3 would promptly release human H5N1 sequences. However, this season there have been no sequences released, even though two 2009 isolates, A/Egypt/0001-NAMRU-3/2009 and A/Egypt/0585-NAMRU-3/2009 are listed on the WHO tree. These isolates are related to the vaccine resistant sequences reported last season, and raise concerns that there are additional receptor binding domain changes in the human isolates.

Similarly, NAMRU-3 has not released the sequence, A/Pakistan/540-NAMRU-3/2008 from the outbreak in Pakistan at the end of 2007. This outbreak involved one of the most extended human to human transmission chains reported to date for H5N1, yet the sequence of the only recovered isolate has been withheld. It is in the phylogenetic tree and is the first reported human case linked to the Uvs Lake strain the Qinghai sub-clade, 2.2.3, and was said to not have receptor binding domain changes, which would also be a first for a clade 2.2 extended human to human transmission chain. Moreover, the second reported human Uvs Lake isolate, A/Bangladesh/ 2070095/2008, has also been withheld.

In addition to the withholding of human isolates from China, Egypt, Pakistan, and Bangladesh, the novel clade 2.2.3 isolate from western Africa, A/chicken/Togo/CHEK2/2008 is also in the tree, but withheld.

In addition to the withholding of the human and bird clade 2.2 isolates, WHO has also withheld the various clade 7 isolates from Vietnam, A/chicken/Vietnam/NCVD-016/2008, A/chicken/Vietnam/NCVD-093/2008, and clade 7 vaccine target, A/chicken/Vietnam/NCVD-03/2008.

This withholding of important sequences, including those selected or recommended as vaccine targets is without precedent. Even Indonesia, which has a glaring lack of transparency in reporting H5N1 cases, has placed four recent human isolates, A/Indonesia/7379/2008, A/Indonesia/7272/2008, A/Indonesia/7261/2008, and A/Indonesia/8228/2008 on deposit at GISAID.

Thus, the increased hoarding of H5N1 sequences by WHO raises pandemic concerns and these scandalous actions are increasingly harder to justify.

Egypt confirms 59th human case of bird flu: WHO

www.chinaview.cn 2009-03-24 04:17:29 Print
http://news.xinhuanet.com/english/2009-03/...nt_11060323.htm

CAIRO, March 23 (Xinhua) -- A 38-year-old Egyptian woman has contracted the virus of bird flu, bringing the number of human cases of the fatal avian influenza in the country to 59, the World Health Organization (WHO) said Monday.

The woman came from the Elfath district in the central Egyptian governorate of Asyut, some 330 km south of Cairo, the WHO said in a press release on its website.

On March 14, the woman showed the symptoms of a fever and headache and was admitted to Assiut Fever Hospital for treatment, said the WHO, citing reports of the Egyptian Health Ministry.

"Infection with H5N1 avian influenza was confirmed on March 18 by the Egyptian Central Public Health Laboratory," the WHO said, adding she is in a stable condition.

Investigations indicated that she had contacted with dead and sick poultry.

Egypt is the most affected country by the deadly avian influenza outside Asia. It reported its first H5N1 virus in dead poultry in February 2006 and the first human case in March of the same year.

According to the latest statistics of the WHO, some 412 people in 15 countries and regions have contracted the virus and 256 of them died of the disease.

QUOTE

Two-year-old diagnosed with bird flu in Egypt

08:59 | 27/ 03/ 2009
http://en.rian.ru/world/20090327/120757737.html

CAIRO, March 27 (RIA Novosti) - A two-year-old girl has been diagnosed with bird flu in Egypt, a health ministry spokesman said on Friday.

Egypt's first case of bird flu was first recorded in 2006, and 60 people have since become infected with the deadly virus, 23 of them have died.

The girl, from the central Egyptian province of Qena, was hospitalized on Monday after displaying symptoms of the disease. On Thursday tests confirmed that she was infected with the deadly H5N1 strain.

She apparently became infected after coming into contact with sick poultry.

This is the second case of bird flu registered in the country in just over a week. On March 18, a 38-year-old woman from the Asyut province, to the south of Cairo, was diagnosed with bird flu.

As of March 23, a total of 412 bird flu cases had been registered worldwide since the virus was first detected in 2003, resulting in 256 deaths, according to the WHO.

Although there have been no incidences of human-to-human infection, experts fear that the bird flu virus may mutate into a form that could be easily transmitted from person to person, causing a global

pandemic.

QUOTE

Bird flu suspect dies in Pekanbaru

The Jakarta Post , Jakarta | Thu, 03/26/2009 2:44 PM | National
http://www.thejakartapost.com/news/2009/03...-pekanbaru.html

Two-year old Wahyu Ibnu Saputra, who has been treated for a suspected case of birdflu, died in isolation at Arifin Achmad Hospital in Pekanbaru, Riau, early Thursday morning.

Azizman Saad of the hospital's birdflu handling team told state news agency Antara that Wahyu had trouble breathing and lost consciousness before dying.

He said that six doctors worked to save the boy's life. Wahyu was pronounced dead at around 02:00 a. m..

Azizman said that the patient's condition was relatively stable on Wednesday morning, but quickly deteriorated during the evening.

Wahyu was admitted as a birdflu suspect last Friday, after being treated at another hospital for six days.

Azizman said the hospital has yet to announce whether the boy died of birdflu, as it is still waiting for the result of nasal and throat swab tests form the Health Ministry's laboratory in Jakarta. (dre)

QUOTE

H5N1 Cases in Egypt Raise Tamiflu Resistance Concerns

March 23, 2009
http://www.recombinomics.com/News/03230901...gypt_H274Y.html

Woman, age 38, began experiencing fever and headache March 14. She was admitted to Assiut Fever Hospital and given Tamiflu on March 14. Infection with avian influenza was confirmed March 18. The woman reported contact with dead and sick poultry. She was reported clinically free and in a good general condition on March 18.

The above detail on the most recent confirmed case in Egypt raises concerns that a mild H5N1 is circulating in Egypt at levels markedly higher than the reported cases. H5N1 testing is usually limited to symptomatic cases with a recent history of exposure to dead or dying poultry. Thus, if the above case had denied contact, hospitalization and testing would be unlikely and the symptoms could be mistaken for seasonal flu. Others may not seek medical attention and assume that the H5N1 infection is a mild infection not requiring medical attention.

None of the eight confirmed cases in 2009 in Egypt have died. Only one was in critical condition. The other seven had a mild course. Milder H5N1 likely leads to more exposure of others, because the patient is not immediately hospitalized and isolated. The increased exposure would not only the increase the likelihood of infecting others, but would also increase the likelihood of a second infection with H1N1 seasonal flu, which is almost exclusively Tamiflu resistant.

Tamiflu treatment of a patient co-infected with H5N1 and H1N1 carrying H274Y would apply pressure

toward the transfer of H274Y from the H1 on H1N1 to the H1 on H5N1, either via reassortment or recombination. In seasonal flu, both transfers have been reported, raising concerns of similar exchanges between H1N1 and H5N1.

H274Y has been reported to have been independently introduced onto three H1N1 sub-clades that have been recently circulating. Moreover, the level of H274Y in the most widely circulating sub-clade (clade 2B - Brisbane/59) has increased to levels approaching 100%.

Thus, the high levels of H274Y in H1N1, coupled with increased circulation of H5N1 in human populations in Egypt raises serious concerns about the emergence of Tamiflu resistant H5N1 that is more efficiently transmitted in human populations.

QUOTE

Confirmation of Global H1N1Tamiflu Resistance

March 23, 2009
http://www.recombinomics.com/News/03230902..._Confirmed.html

During this period, a total of 30 countries from all WHO regions reported oseltamivir resistance for 1291 of 1362 A(H1N1) viruses analysed. The prevalence of oseltamivir resistance was very high in the following countries/territory: Canada (52 of 52 tested), Hong Kong SAR (72 of 80), Japan (420 of 422), the Republic of Korea (268 of 269) and the United States of America (237 of 241).

The resistance prevalence was relatively low in China (6 of 44 tested). In Europe, H1N1 circulation was low during this period while the resistance prevalence was high: France (12 of 12tested), Germany (66 of 67), Ireland (9 of 10), Italy (16 of 16), Sweden (11 of 12) and the United Kingdom (61 of 62).

The above comments from the latest WHO update on Tamiflu resistance confirm that H274Y has become fixed in clade 2B (Brisbane/59) in the northern hemisphere, and similar levels will be expected in the upcoming flu season in the southern hemisphere. The only northern hemisphere country with lower levels is China, which is due to high levels of clade 2C. However, clade 2C has been largely replaced by 2B in all northern hemisphere countries, and many, especially those in Asia, previously had relatively high levels of clade 2C last year. Levels in the US were approximately 10% of H1N1, while this year levels are below 1%.

The dominance of clade 2B with H274Y not only creates treatment problems for patients with seasonal flu, but also raises concerns regarding the acquisition of H274Y by H5N1 via reassortment or recombination. Examples of exchanges between H1N1 clade 2B and clade 2C have been documented. One isolate from Hong Kong had a clade 2C HA and a clade 2B NA (with H274Y). Moreover, recombination has led to hitch-hiking of H274Y across multiple sub-clades (2C, 1, and 2B) as well as within each of the above sub-clades. Moreover, the H1N1 that led to the fixing of H274Y acquired additional clade 2C polymorphsms, including A193T, which is now present in all clade 2B isolates with H274Y.

This acquisition has been accompanied by additional changes in HA and NA, especially those that are adjacent to A193T. Multiple changes have been reported at positions 187, 189, and 196, an isolates with these changes have spread widely and rapidly, and are likely for vaccine resistance in Japan, Taiwan, and Italy.

The acquisition of these changes via recombination between H1N1 sub-clades raises concerns of H274Y acquisition in hosts co-infected with H1N1 and H5N1. These concerns have been increased by reports of mild H5N1 infections in Egypt. All eight H5N1 cases in 2009 have survived H5N1 infections, and the course of disease in several patients is short and mild, raising concerns of a significant number of unreported cases due to recovery with or without Tamiflu treatment for seasonal flu.

Acquisition of H274Y by H5N1 would create serious concerns, especially in countries like Indonesia, where the high case fatality rate suggests many milder cases are unreported.

QUOTE

Tamiflu Resistant H1N1 Vaccine Failures Raise Concerns

March 24, 2009
http://www.recombinomics.com/News/03240901...e_Failures.html

Deb Brandt, a physician assistant at Rapid City Medical Center's Urgent Care, said that on Wednesday, the clinic checked in 106 people in 11 hours. There were cases of strep, mono and plenty of influenza. Three other Rapid City clinics report a similarly busy schedule.

Brandt said about half of her patients who tested positive for influenza had their shots, but "most of the flu shots were early."

The above comments suggest that 50% of the flu patients in the Rapid City area served by the medical center had been vaccinated this season, and the vaccine failed to prevent infection. This figure is alarming, since the vaccination rate of the population is likely much lower than 100%, so the failure rate in those receiving the vaccine would be much higher than 50%.

The article suggested that the high failure rate was due a reduction in antibody levels in vaccinated patients, but vaccines fail because the circulating virus evolves away from the vaccine strain.

A media report on the article suggested that the failure rate may have been due to a resurgence of influenza B, which is not well matched with the current vaccine. However, South Dakota influenza data indicates that the level of influenza A is about 10 fold higher than influenza B for the season, and in the week prior to the report, the level of influenza A was still five fold higher than influenza B, suggesting that most patients were influenza A infected. Moreover, since the level of H1N1 is ten fold higher than H3N2, most of the cases would be oseltamivir resistant H1N1, because the levels of H274Y in H1N1 are near 100%.

Vaccine failure for H1N1 is supported by reports from other countries. In Italy, the first five confirmed H1N1 cases were Tamiflu resistant, and three of the five isolates were from vaccinated patients, supporting the failure rate described above in South Dakota.

Indirect evidence came from South Korea, were the vast majority of influenza cases were oseltamivir-resistant H1N1. Influenza exploded at the beginning of 2009, with ILI visits jumping to levels that were twice as high as last season.

Similar results were also reported in Japan, were school closings were widespread, and investigations in the fall identified oseltamivir resistant H1N1 as the etiological agent. Moreover, H1N1 testing of isolates produced reduced titers relative to Brisbane/59, the vaccine strain for this season.

Reports from Taiwan also indicated that vaccines failed in 70% of the H1N1 cases and Tamiflu resistant H1N1 dominated in collections after December, 2008.

Although vaccine failures in H1N1 have not been discussed in weekly reports from the CDC, a disclaimer was added in 2009, noting that cross reactivity with ferret reference sera was not always predictive of vaccine protection. This disclaimer came after failures had been reported in Asia.

These failures were not unexpected. Last season the H1N1 vaccine target changed from New Caledonia/20/1999 (clade 1) to Solomon Islands/3/2006 (clade 2A). However, last season circulating clade 2A had been replaced by clade 2B (Brisbane/59/2007) and clade 2C (Hong Kong/2652/2006), but the vaccine was called a “match” because the ferret reference sera was made against the Solomon Islands virus grown in eggs, and there was significant cross reactivity with clade 2B and 2C. Consequently, all of the clade 2 viruses were called “Solomon Islands-like” and antigenically indistinguishable. However, the three clade 2 sub-clades were easily distinguished phylogenetically because of a large number of synonymous and non-synonymous changes, and the antigenic differences were confirmed when a new reference sera was made using Brisbane/59 grown in mammalian cells. That reference sera had a titer of 320 against Brisbane, which fell to 40 for Hong Kong, and was <40 for Solomon Islands. Consequently, virus that was called “Solomon Islands-like” at the beginning of last season, was called “Brisbane-like” in early 2008. In addition, the vaccine target from this season was changed from Solomon Islands to Brisbane, acknowledging that the targets were anigenically distinct.

However, the Brisbane target was isolated in the summer of 2007 and by the fall, the clade 2B in circulation had already evolved away from the vaccine target, which was likely accelerated by the vaccine mismatch last season. Included in the evolution was H274Y, which was not present in the Brisbane strain. In addition, a second NA change, D354G, was also in the dominant strain that was oseltamivir resistant. Both of these changes had been reported previously in clade 2C, but not clade 2A.

Moreover, a subset in the osletamivir resistant strain also acquired A193T in HA. This change had been in earlier H1’s, including H1N1 in circulation in the 1940’s as well as H1N2 in 2003. However, it was also in clade 2C, including the prototype, Hong Kong strain, but none of the recent strains had been selected as the H1N1 vaccine target, so the acquisition of A193T in clade 2B signaled a significant change in US and UK isolates in late 2007. This change was also spreading to other countries in early 2008, prior to vaccine target selection for this season.

However, the 2007 Brisbane isolate was the target for the current season, as well as the upcoming 2009 season in the southern hemisphere. The importance of A193T became more obvious in the summer of 2008, when osletamivir resistance went to 100% in South Africa. The dominant strain evolved from the dominant oseltamivir resistant strain in the northern hemisphere and contained A193T, as well as two adjacent changes, N187S and G189N. This strain was also widespread in Australia, where oseltamivir resistance was also approaching 100%, yet these changes were not incorporated into the 2009 target for the southern hemisphere.

The importance of A193T and adjacent changes were more obvious in isolates from this season. Oseltamivir resistance in clade 2B was close to 100% and those isolates with H274Y also had A193T as well as 1 or 2 changes at flanking positions (187, 189, and 196). Each position had two or more changes in the 2008/2009 isolates. The version dominant in Japan, South Korea, Taiwan, and Italy had A193T paired up with G189A. The dominant strain in the US had A193T with G189V and H196R. Other versions were similar to the South African / Australia strain, but had G189S instead of G189N. Others had A193T with N187D or H196N. Thus, although all of the reported sequences for H274Y positive H1N1 this season had A193T plus one or two flanking changes, none were in the H1N1 target for 2008 or 2009. Moreover, the recently announced target for the 2009/2010 season is unchanged.

Thus, the failure to note the significant H1N1 changes last season and this season, in association with H274Y hitch-hiking, and in the selection of the vaccine target for next season, is cause for concern.

QUOTE

Accelerated H1N1 Tamiflu Resistance Via Vaccine Mismatch

March 25, 2009
http://www.recombinomics.com/News/03250902...match_2009.html

The Japan NIH has released a new NA phylogenetic tree of H1N1 this season. Included are nine isolates from 2009, which all map with the major sub-clade in Japan. The tree also includes isolates from South Korea which map to the same dominant branch. HA sequences from these isolates have A193T and the flanking polymorphism of G189A. These sequences are also in a small number of isolates from the US and match the first five H1N1 isolates from Italy, as well as isolates from Taiwan.

Also included are isolates from Japan that were associated with an elementary school in the fall, which matches the dominant H1N1 sub-clade in the US. HA sequences from these isolates have A1893T with G189V and H196R.

Japan NIH also released titers of 18 isolates against ferret reference anti-sera. These data clearly demonstrate significant drift of the recent isolates from last year's H1N1 vaccine target, A/Solomon Islands/3/2006 (clade 2A). However, last season there was little clade 2A in circulation, raising concerns that the drift was accelerated by a poorly matched vaccine. Although the 18 test antigens represented multiple recent sub-clades, with HA sequences with A193T plus one or two additional changes at flanking positions 187, 189, and 196, all had reductions in titers when tested with the clade 2A reference anti-sera. Two were reduced four fold, but the remainder had reductions ranging from eight to thirty-two fold.

Similar results were generated for clade 2C, which was represented by recent anti-sera against A/Shiga/8/2008. One isolate was reduced four fold while the rest were reduced eight to thirty-two fold. These lower titers help explain the spread of clade 2B in Asia, where clade 2C was widespread last season.

However, reduced titers were also seen for A/Brisbane/59/2007 (clade 2B), although results were more complex. Two reference sera were used. One was directed against Brisbane/59 grown in eggs and like last season, the anti-sera had significant cross reactivity with the reference sera as well as the recent isolates. The mammalian cell isolate however discriminated between the reference sera, especially for clade 2C, where the titer was reduced eight fold. This level of reduction was also seen for four of the test isolates. Three were the dominant sub-clade in Japan, while the other was the dominant sub-clade in the US. These titer reductions support reports of vaccine failures in Asia and North America.

The recent announcement that the H1N1 target for the 2009/2010 will remain unchanged raises concerns of more vaccine failures next season.

craig-oxley - April 19, 2009 05:57 PM (GMT)

Low-Path Bird Flu Confirmed in Kentucky

USAgNet - 04/16/2009
http://www.wisconsinagconnection.com/story...?Id=839&yr=2009

Low-pathogenic avian influenza has been found on a broiler breeder farm in western Kentucky belonging to Perdue Farms. The virus, responsible for a minimal drop in egg production in mid-March, has been identified as belonging to the H7 sub-type.

State and federal authorities are investigating a finding of suspected non-pathogenic or low-pathogenic avian influenza in a single broiler breeder farm in western Kentucky., according to Lex18. The strain poses minimal risk to human health and is not the highly pathogenic strain associated with human and poultry deaths in other countries.

State veterinarian, Robert C. Stout, has quarantined the farm, which produces hatching eggs for Perdue Farms Inc. Perdue plans to depopulate 20,000 chickens in two houses on the farm.

"The state and federal government and Perdue are acting aggressively to contain and eliminate the disease," Dr. Stout said. "There is no evidence that any infected poultry are in the human food supply as a result of this infection. We will do what is necessary to minimise the disruption to overseas trade."

"I have been in constant contact with state, federal and industry officials since this came to light," Agriculture Commissioner, Richie Farmer, said. "The people of Kentucky and our trading partners should rest assured that we are doing everything possible to address the situation."

The Kentucky Department of Agriculture is conducting surveillance on backyard flocks within a two-mile radius of the farm.

A minimal drop in egg production at the farm was noticed in mid-March. Perdue's veterinary services laboratory took samples from chickens at the farm and found antibodies for avian influenza. Testing by the National Veterinary Services Laboratory in Ames, Iowa, resulted in a presumptive positive finding for the H7 strain. Subsequent testing by NVSL and the Breathitt Veterinary Center in Hopkinsville confirmed the finding.

No virus has been isolated and no poultry deaths have been found in connection with the infection.

QUOTE

New bird flu cases suggest the danger of pandemic is rising

Infections in Egypt raise scientists' fears that virus will be spread by humans

By Geoffrey Lean, Environment Editor

Sunday, 12 April 2009
http://www.independent.co.uk/news/science/...ng-1667526.html

First the good news: bird flu is becoming less deadly. Now the bad: scientists fear that this is the very thing that could make the virus more able to cause a pandemic that would kill hundreds of millions of people.

This paradox – emerging from Egypt, the most recent epicentre of the disease – threatens to increase the disease's ability to spread from person to person by helping it achieve the crucial mutation in the virus which could turn it into the greatest plague to hit Britain since the Black Death. Last year the Government identified the bird-flu virus, codenamed H5N1, as the biggest threat facing the country – with the potential to kill up to 750,000 Britons.

The World Health Organisation is to back an investigation into a change in the pattern of the disease in Egypt, the most seriously affected country outside Asia. Although infections have been on the rise this year, with three more reported last week, they have almost all been in children under the age of three, while 12 months ago it was mainly adults and older children who were affected. And the infections have been much milder than usual; the disease normally kills more than half of those affected; all of the 11 Egyptians so far infected this year are still alive.

Experts say that these developments make it more likely that the virus will spread. Ironically, its very virulence has provided an important safeguard. It did not get much chance to infect other people when it killed its victims swiftly, but now it has much more of a chance to mutate and be passed on.

The WHO fears that this year's rise in infections among small children, without similar cases being seen in older people, raises questions about whether adults are being infected but not falling ill, so acting as symptomless carriers of the disease. Its investigation, due to start this summer, will see if this is happening by testing the blood of people who may have been in contact with infected birds, but who have not themselves become sick.

John Jabbour, who works with WHO in Cairo, told Reuters last week: "There is something strange happening in Egypt. Why in children now and not in adults? We need to see if there are sub-clinical cases in the community." He added that if the research did find such cases, they would be the first to be discovered anywhere in the world.

Though he stressed that there was still no evidence of the disease passing from person to person, other experts are also becoming alarmed. Professor Robert Webster, of St Jude Children's Research Hospital in Memphis, Tennessee – who is the world's leading authority on the disease – told The Independent on Sunday that, while he himself had not seen firm data, the WHO in Egypt was raising "a very, very important issue" which should receive "maximum attention". He added: "I hope to hell they are wrong. If this damn thing becomes less pathogenic, it will become more transmissible."

And Professor John Oxford, of Queen Mary, University of London, said that any evidence that H5N1 was becoming less deadly would be serious, as the greatest cause for concern was the disease's ability to spread.

Even a much less virulent strain of the virus could result in a devastating pandemic. Studies show that an outbreak that killed as few as 5 per cent of those it infected could still cause hundreds of millions of deaths around the world.

Bird flu Contagious, Humans Becoming More Susceptible

by Jim Brogan
Published: Apr 15, 2009 Share This Article | Send Us A Tip | Site Search
http://www.postchronicle.com/news/original...212223181.shtml

The highly contagious avian influenza (bird flu) is reported to have wiped out 150 million chickens and killed over 70 people in parts of the world, mainly South East Asia, in the past four years.

The bird flu virus is changing and it is developing strains and properties which could possibly increase the potential of it to infect humans from birds. The Center For Disease Control says that it was also developing into a strain which could become more contagious between humans.

New research explains that three H7N2 strains as well as two H7N3 strains of the influenza virus found in North America were seen to be able to latch themselves onto receptors in both birds and humans.

The research underlines the importance of monitoring the viruses so that the world might prepare itself for any deadly pandemics which could break out as a result of mutating influenza viruses.

The research was published by the respected medical journal the Proceedings of the National Academy of Sciences.

Egypt woman critically ill with bird flu

Web posted at: 4/16/2009 7:13:6
http://www.thepeninsulaqatar.com/Display_n...00904167136.xml

CAIRO: A 33-year-old woman has contracted bird flu, the 63rd recorded case since the first outbreak of the disease in Egypt in 2006 and the third in a week, the health ministry announced yesterday. The woman from the Kafr Al Sheikh province of northern Egypt is in critical condition and on an artificial respirator, state-run news agency MENA quoted a health ministry official as saying.

She first showed symptoms of the flu more than a week ago after being exposed to dead fowl thought to have been carrying the disease, the official said. Egypt has seen an increase in bird flu cases over the past month. The World Health Organisation (WHO) called last month for an investigation into why many of the victims have been young children.

Twenty-three people have died of bird flu in Egypt. Most of the victims have been young girls or women, who are generally in charge of looking after poultry in rural areas.

Vietnamese woman dies of bird flu

www.chinaview.cn 2009-04-24 22:21:55 Print
http://news.xinhuanet.com/english/2009-04/...nt_11252233.htm

HANOI, April 24 (Xinhua) -- Vietnamese Ministry of Health confirmed on Friday that a 23-year-old Vietnamese woman from northern Thanh Hoa province died of bird flu.

The woman developed symptoms similar to bird flu patients on April 16 and was taken to local hospital for treatment.

She died on April 22. Test by the National Institute of Infectious and Tropical Disease showed that she has contracted the deadly H5N1 bird flu virus.

The neighborhood that the woman hailed from has recently reported death of a large number of fowls for unknown reasons.

This is the fourth person who died of bird flu in Vietnam so far this year.

Bird flu besieging Vietnam yet again

Apr 25, 2009
http://www.whatistheword.com/2009/04/bird-...tnam-yet-again/

Is bird flu expanding its lethal tentacles in the sphere of Vietnam again? It seems so since in the recent days a Vietnamese woman has succumbed to the deadly force of bird flu and has died as a result. What's more important is that the very woman with this has become the country's fourth human victim of the disease this year. Well, before proceeding any more we should comprehend this deadly disease and its portentous effects.

Influenza A virus subtype H5N1, which is also known as "bird flu," A(H5N1) or simply H5N1, is a subtype of the Influenza A virus which can bring about illness in humans and many other animal species. A bird-adapted strain of H5N1, called HPAI A(H5N1) for "highly pathogenic avian influenza virus of type A of subtype H5N1″, is the causative agent of H5N1 flu, commonly known as "avian influenza" or "bird flu". It is enzootic in many bird populations, especially in Southeast Asian and is disastrously affecting human population too.

What led the Vietnamese woman to this calamitous consequence? According to

reports, the victim, Pham Thi Hao, fell ill on April 15 and was admitted to the provincial hospital last Tuesday with serious lung and heart infections which required her to be placed on a respirator. It ought to be mentioned that samples taken two days before her death were tested in Hanoi and exhibited that she was positive for the deadly H5N1 strain of the avian influenza virus. However, there is nothing to get astounded since Vietnam has the world's second-highest bird flu death toll after Indonesia, with 56 deaths.

The development in this incident was quite similar to that of three-year-old, Tran Cong Phuc, who died in southern Vietnam from the deadly H5N1 strain, on the last month. In accordance with the views of concerned doctors, he did have soup cooked from chickens which had died without prior notice.

What should be done to check the precarious expansion? According to both of World Health Organisation (WHO) and the UN's Food and Agriculture Organisation (FAO), it's urgent for Vietnam to keep a close eye on the bird flu situation to prevent more deaths. In addition, it should initiate mass awareness campaign.

Egypt reports 2 more human cases of bird flu

www.chinaview.cn 2009-05-21 03:59:15 Print
http://news.xinhuanet.com/english/2009-05/...nt_11409839.htm

CAIRO, May 20 (Xinhua) -- Two Egyptian boys have been confirmed of contracting bird flu on Wednesday, bringing the number of cases of the deadly avian influenza to 74 in the populous country, the Egyptian Health Ministry said.

Abdel Rahman Sabery, a 4-year-old boy from Daqahlia governorate in the Nile Delta, and Sameh Ayoub, a 3-year-old boy from Sohag inUpper Egypt were admitted to hospital on Wednesday suffering from symptoms of the virus, Health Ministry spokesman Abdel-Rahman Shahine said in a statement.

He added that the two boys' condition is stable after being treated with Tamiflu.

On Monday, a four-year-old Egyptian girl Nada Ahmed Reda from Daqahlia, north of Cairo, died after contracting the disease of the H5N1 bird flu virus, the 27th death case in the country.

Egypt is the most affected country by the virus outside Asia. It reported its first H5N1 virus in dead poultry in February 2006 and the first human case in March of the same year.

Most of the victims of the fatal virus in Egypt were young girls and women. Generally, they were in charge of looking after poultry in rural areas.

While the H5N1 virus rarely infects people, experts say they fear it could mutate into a form that people could easily pass to one another, sparking a pandemic that could kill many in a short time.

Northwest China province on avian flu alarm

Updated: 2009-05-21 13:24
http://www.chinadaily.com.cn/china/2009-05...ent_7918678.htm

XINING -- Northwest China's Qinghai Province is still on alarm Thursday, four days after an H5N1 avian flu outbreak was confirmed in one of its Tibetan counties, the local animal epidemic prevention authority said.

Altogether 121 migratory birds were found dead near the Genggahai Lake of Gonghe County in the Tibetan Autonomous Prefecture of Hainan on May 8. They tested H5N1 positive at China's National Avian Influenza Reference Laboratory on Sunday.

As of Wednesday, the number of dead birds had climbed to 200, the provincial animal epidemic prevention and treatment department said in a press release.

It said Gonghe County had killed 21,000 poultry and vaccinated another 23,000 to avoid infection, though no signs of bird flu had been observed on any farm so far.

The department has sent a team of specialists to help contain the outbreak in Gonghe.

The epidemic area has been sealed off as of Sunday. Four temporary checkpoints were set up on roads leading to the area to disinfect every passing vehicle and allow only epidemic prevention workers to enter.

Gonghe County, with 133 hectares of wetland, is a major stopping-off point for migratory birds.

Egypt reports 2 more human cases of bird flu

www.chinaview.cn 2009-05-28 17:12:10 Print
http://news.xinhuanet.com/english/2009-05/...nt_11449776.htm

CAIRO, May 28 (Xinhua) -- An Egyptian boy and a girl have been confirmed of contracting bird flu on Wednesday, bringing the number of cases of the deadly avian influenza to 76 in the populous country, local Al Ahram daily reported Thursday.

Ahmed Rabie Mohamed, a 4-year-old boy from Sharqeya governorate in the Nile Delta, and Hasnaa Abdul Allah, a 4-year-old girl from the same governorate, were admitted to hospital on Wednesday suffering from symptoms of the virus, the report said.

It added that the two children' condition is stable after being treated with Tamiflu.

Egypt is the most affected country by the virus outside Asia. It reported its first H5N1 virus in dead poultry in February 2006 and the first human case in March of the same year.

Most of the victims of the fatal virus in Egypt were girls and young women. Generally, they were in charge of looking after poultry in rural areas.

Though the H5N1 virus rarely infects people, experts said they fear it could mutate into a form that people could easily pass to one another, sparking a pandemic that maybe kill many in a short time.

Two Egyptian children have H5N1 bird flu - agency

26 May 2009 20:04:09 GMT
http://www.alertnet.org/thenews/newsdesk/LQ472010.htm

CAIRO, May 26 (Reuters) - Two four-year-old Egyptian children have contracted the highly pathogenic H5N1 bird flu virus, raising to 76 the number of cases reported in Egypt, the state news agency MENA reported on Tuesday.

Egypt has been hit harder by bird flu than any other country outside Asia and has seen a surge of cases in recent weeks.

The children, a boy and girl, were from different areas of Sharkiya province in the Nile Delta region. Both fell ill after coming into contact with birds with the virus.

The avian flu virus rarely infects people, but experts say they fear it could mutate into a form that humans could easily pass to one another, sparking a pandemic.

Most of those infected have previously been in contact with infected domestic birds in a country where 5 million households raise poultry as a significant source of food and income.

Since 2003, the H5N1 virus has infected more than 400 people in 15 countries and killed more than 250. It has killed or forced the culling of more than 300 million birds in 61 countries in Asia, the Middle East, Africa and Europe. (Writing by Edmund Blair, editing by Tim Pearce)

H5N1 Outbreak Among Wild Birds In Mongolia

From Patricia Doyle
5-28-9
http://www.rense.com/general86/h5n.htm

Hello Jeff - This is a similar scenario to April-June 2005 when migratory birds were infected with H5N1 in Qinghai Lake.

"The current co-circulation in China of both type A influenza viruses, namely the highly pathogenic H5N1 and the novel, human-adapted A (H1N1), is a matter of concern, particularly in view of China's huge pig ("mixing vessel") population (see [1] in ProMED-mail archive 20090509.1733)."

I cannot help but think that the second shoe is going to be dropping this Winter. I hope the human Swine Flu virus will not return in the Fall or if it does, I pray that it will not be a mutated, far more deadly form of the A-H1N1 virus.

Just as the Swine Flu AH1N1 adapted to infect humans after circulating in pigs for some time, so, too, the Avian Flu A H5N1 can adapt to humans on its own time table.

Patty

Outbreak of avian influenza among birds in Mongolia's Arkhangai Aimag

By Huo Wen

People's Daily, Xinhua News Agency report

(In Chinese - translation & summary Rappt. DS, edited)

Mongolia's Emergency Situations Agency announced today [25 May 2009] that, on 22 May, swans had died of unknown cause in Ogii Nuur Lake, in the Arkhangai Aimag [see commentary]. After analysis, the Mongolian National Livestock Infectious Disease Prevention and Control Center announced on [24 May 2009] that the swans died due to infection by H5N1 avian influenza. On 24 May [2009], the governor of Arkhangai Aimag ordered closure of the outbreak area.

http://world.people.com.cn/GB/1029/42354/9362065.html

--
communicated by:
ProMED mail rapporteur Dan Silver
The HealthMap/ProMED-mail interactive map of Mongolia is available at http://healthmap.org/r/00di. Arkhangai ("Northern Khangai") is one of the 21 aimags

(provinces) of Mongolia. It is located slightly west to the country's center, on the northern slopes of the Khangai Mountains (see map at ag, in the sum (district) of the same name (see map at http://upload.wikimedia.org/wikipedia/commons /0/01/Mongolia_Arkhangai_sum_map.png

The reported outbreak of HPAI H5N1 in wild swans in Mongolia follows China's notification of 17 May 2009 of an outbreak in "wild migratory" birds (no species identification available), reportedly detected in Qinghai on 8 May 2009 (see ProMED-mail archive no. 20090518.1869]. Remarkably, a rather similar scenario was seen in these territories in 2005 [see ProMED-mail archive no. 20070828.2815].

During late April-June 2005, an outbreak of HPAI H5N1 infection occurred among wild birds at Qinghai Lake in China. First identified in bar headed geese (_Anser indicus_), the disease soon spread to other avian species populating the lake. At the beginning of August 2005, the Mongolian authorities reported an outbreak in wild birds in Erhel lake, Alag-Ederne county, Huvsgel province, affecting wild ducks, geese and swans. According to a 2007 Chinese paper (ref 1), sequence analysis of 15 viruses from 6 avian species and collected at different times during the 2005 outbreak revealed 4 different H5N1 genotypes. Importantly, H5N1 viruses isolated in Mongolia, Russia, and Inner Mongolia were genetically closely related to one of the genotypes isolated during the Qinghai outbreak. As noted by the authors, this genotype virus also spread to some countries in Europe and Africa, suggesting its dominant nature.

The distance between Qinghai (China) and Arkhangai (Mongolia) exceeds 1500 km (932 mi).

The current co-circulation in China of both type A influenza viruses, namely the highly pathogenic H5N1 and the novel, human-adapted A (H1N1), is a matter of concern, particularly in view of China's huge pig ("mixing vessel") population (see [1] in ProMED-mail archive 20090509.1733).

Bird culling fails, disease spreads

http://www.thestatesman.net/page.news.php?...ess=1&id=256795

RAIGANJ, 4 JUNE: Residents of Kantore, Kasimpur and Chhotokantore villages in Hemtabad block of North Dinajpur are concerned as, even after culling and mopping, there are still several thousand birds in the Bird Flu affected villages which may be contaminated with the disease. Yet the North Dinajpur animal husbandry department has allegedly not made any response to the crisis.
After Bird Flu was detected in the area recently, the North Dinajpur animal husbandry department targeted to kill around 14,000 birds. This number later rose to 23,000. However, reportedly, there are another 3,000 birds in the villages. Everyday, ten to fifteen birds die of the disease. The villagers are concerned, as the culling effort did not do its job.
The pradhan of Hemtabad gram panchyat Mr Saifur Rahaman said: "After culling and mopping there are still around 2,000 birds in Kantore village. The culling teams did not check the houses of the village intensively during their work. Flu-affected birds are still dying here everyday and fresh tension has spread in our village. This problem was brought to the notice of the Joint BDO, Hemtabad, but no measure has been taken yet."
When asked, the deputy director of the North Dinajpur animal husbandry department Dr Sajal Bhuniya declined to comment.
The North Dinajpur DM Mr Ramanuj Chakraborty said: "The continuing presence of infected birds in such villages has been reported to us. After visiting the villages we will instruct the concerned department to take needful action immediately." ; SNS

Egyptian child contracts bird flu, 39 suspected cases reported

Bird flu confirmed in two Egyptian children

Chinese country on alert amid bird flu concerns
Egypt's 71st bird flu case confirmed in 3-year-old boy
Bird flu virus contracted by 4-year-old Egyptian boy

11:2802/06/2009
http://en.rian.ru/world/20090602/155144252.html

CAIRO, June 2 (RIA Novosti) - A child has been diagnosed with bird flu in Egypt and another 39 people have been hospitalized with suspected infections, a spokesman for the country's health ministry said on Tuesday.

A 4-year-old girl from the northern Egyptian province of Kafr El-Sheikh is currently in

stable condition and is being treated with antiviral drugs.

Egypt's first case of bird flu was recorded in 2006. Since then, 78 people are known to have contracted the H5N1 virus in the country, and at least 27 have died.

According to World Health Organization data, a total of 262 people have died worldwide since bird flu was first discovered in 2003.

Egyptian Media Reporting 80th Bird Flu Case

3305

Monday, June 08, 2009
http://afludiary.blogspot.com/2009/06/egyp...h-bird-flu.html

On Friday, Egyptian media reported on their 28th confirmed case of H5N1 bird flu for the year.

Two days later, on Sunday, they reported yet another case, their 80th to date, and 29th for 2009.

In 2008, Egypt only detected 8 human infections with the virus.

This sharp rise in the number of cases, plus a sharply reduced mortality rate, has some scientists wondering whether the virus is changing in Egypt.

Whether this jump in cases is as prominent as it seems, or if some of this rise stems from better surveillance and reporting, is unknown.

A hat tip to Commonground and Florida1 on Flutrackers for this, and other translations on this case.

Egypt announces No. 80 infection of bird flu, girl Dakahliya

6/7/2009 10:39:00 PM

CAIRO - Editor Masrawy - Sunday confirmed the incidence of human disease No. 80 of avian influenza in a girl named Nada Mohammed Abdulnabi, aged 4 years of Mitt iron Maniya victory Dakahlia province.

And Dr. Abdul Rahman Shaheen said the official spokesman for the Ministry of Health that the onset of symptoms the child had been on June 5, entered the hospital on

Saturday following which Egypt was suffering from a fever and was nominated after exposure to birds suspected of being infected with bird flu, noting that once the suspicion of being infected with the disease have been given the drug Tamiflu and the pathological condition of a stable and ongoing conversion of the hospital in the capital Cairo for further treatment.

It was Dr. Hamid Samaha, Chairman of the General Authority for Veterinary Services, Ministry of Agriculture has warned of the risk of increased incidence of "bird flu".

Bird flu virus can survive in buried birds' carcasses for 2yrs

17 June 2009
http://www.newspostonline.com/science/bird...s-2009061759479

Bird flu virus can survive for up to two years in the carcasses of buried birds, according to a new study.

Dr. Shannon Bartelt-Hunt, an environmental engineer at the University of Nebraska-Lincoln, says that the findings of the study indicate that waste managers need to be particularly careful with how they dispose and manage landfills containing infected birds.

"There are a lot of birds at landfills. If you think of landfills as reservoirs, you could have birds as vectors. Other animals could be vectors. Landfill personnel could be potentially exposed," ABC Online quoted Dr. Bartelt-Hunt as saying.

Bird flu is an H5N1 form of the influenza virus that mainly infects birds, including chicken, ducks and turkeys.

Whenever any bird gets infected with the virus, farmers usually kill the entire flock to subdue an outbreak.

Thus far, hundreds of millions of birds have been killed by the flu, or by efforts to control it.

Even though there are options for disposal like composting and burning, most carcasses often end up in landfills.

For the current study, Bartelt-Hunt and colleagues filled Petri dishes with leachate-the

liquid that drains from landfills, adding avian influenza to each dish.

The researchers then tested the mixtures at four different temperatures levels, three pH levels, and three levels of conductivity to test for the presence of heavy metals.

After 60 days, they were able to estimate how long the virus would remain infectious based on how quickly it was breaking down.

Reporting their findings in the journal Environmental Science & Technology, the researchers said that at colder temperatures and neutral pH levels, the virus was likely to survive the longest-sometimes for up to nearly two years.

“The assumption was that once it’s in the landfill, there’s no more question about whether it’s infectious. This is suggestive that carcasses will likely remain infectious when they’re placed in a landfill and for a period of time after that,” says Bartelt-Hunt.

The new work suggests that the bodies should get covered quickly to raise their temperature, or to make the landfill more acidic or basic to deactivate the virus as quicly as possible.

“In general, waste disposal is one of those things that’s just ‘out of sight, out of mind’. Once it gets there, people tend to think it’s just gone and they don’t have to worry about it … It’s hard to say if waste disposal is this huge unknown red flag out there, but I think having some consistent guidelines is important,” says Bartelt-Hunt. (ANI)

South Jakarta ::: A 5-year-old child dies of bird flu infection

http://birdflucorner.wordpress.com/2009/06...-flu-infection/

Mampang Prapatan, South Jakarta – Bird flu virus killed another victim in South Jakarta. A 5-year-old child victim, RA, resident of RT 07/03 Kel. Tegal Parang, died on early Friday (19/6).

Since 2005 until now, avian influenza H5N1 or bird flu virus has killed 11 victims from total 13 cases in South Jakarta.

Head of Livestock and Marine Subservice of South Jakarta, Chaidir Taufik said, RA was reported had been returned from his relatives in Sukabumi, West Java and then visited the other relatives in Pejaten Barat South Jakarta. During the stay in Sukabumi, numbers of chickens were reported suddenly died.

After returned from Pejaten Barat, the victim, the youngest of two siblings, experienced high fever in the next day (Monday, 8/6), and has received antipyretic drug from a health worker.

“Victim had improved once, but the fever came back on Saturday (13/6). Victim was then admitted to Triadapa hospital”, said Chaidir, Saturday (20/6).

Tegal Parang chieftain, Abdul Khalit added, after further examination at Triadapa hospital, victim was then allowed to return home. Three days after, the condition went worsen, accompanied with breathing difficulty. Victim was then rushed to Triadapa hospital again. Chest x-ray revealed liquid accumulation in the lung which suggested caused by bird flu infection.

“After being treated for 2 days, Triadapa hospital referred RA to Persahabatan hospital on Thursday (18/6). But the child passed away 4 hours after admission, or in early Friday. The body has been burried in Pejaten Barat public cemetary”, said vice chieftain of Tegal Parang, Gita Puspitasari.

After the fatality of RA, Livestock and Marine Subservice South Jakarta subsequently conducted bird sweeping around victim’s neighborhood.

New H3N2 flu variant detected in HK

www.chinaview.cn 2009-07-30 20:49:40 Print
http://news.xinhuanet.com/english/2009-07/...nt_11803913.htm

BEIJING, July 31 -- Hong Kong's health authorities announced Wednesday that a new variant of the H3N2 seasonal influenza virus has been found in the city.

The Brisbane strain has been the prevalent circulator of H3N2 in the past year, and the new variant is its direct descendent, said Thomas Tsang, controller of Hong Kong's Center for Health Protection (CHP).

"However, it has some genetic changes distinguishing it from the old Brisbane strain," he said.

He said it is normal for viruses to go through changes, adding that overseas health

authorities, including those in Canada, Britain and Australia, had also found the new variant.

Tsang said although vaccines provided for the northern hemisphere may not be a direct match for this new variant, they will still provide some protection against it.

Noting that vaccines will be widely available in Hong Kong in a month, Tsang appealed to high-risk groups, such as those with chronic diseases, the elderly and children, to get flu shots.

According to the CHP, H3N2 accounts for 43 percent of flu viruses circulating in Hong Kong, while A/H1N1 accounts for 49 percent.

Xinhua News Agency correspondents reporting from Hong Kong. (XHTV)

oooo she has Malard duck flu haha or is it Swan flu or maybe Turkey flu. -Craig

Girl hospitalized for suspected case of bird flu

Andi Hajramurni , The Jakarta Post , Makassar, South Sulawesi | Fri, 07/31/2009 8:14 PM | National
http://www.thejakartapost.com/news/2009/07...e-bird-flu.html

A 17-year-old girl was admitted Friday to the Wahidin Sudirohusodo Hospital in Makassar with what is suspected to be an H5N1 infection.

Hospital spokesman Khalid Saleh, said the teenager, identified as Rik, displayed symptoms of avian flu, including fever, cough, nausea and suffocation. She became sick after a number of chickens around her home suddenly died.

“A doctor who treated her said her temperature exceeded 39 degrees Celsius for three days and that she displayed other symptoms of avian flu,” Khalid said.

Rik is now receiving treatment in an isolation room, under the close watch of medical workers.

Head of the husbandry unit at the Makassar agriculture and maritime agency, Yulistiawati, said a government team had been assigned to conduct surveillance in Rik’s neighborhood in the Sudiang subdistrict in an effort to prevent the spread of the virus.

Avian flu has claimed the lives of over 100 people in the country, compared to just one

H1N1 death.

Minn. quarantines turkey flock due to bird flu

By CHRIS WILLIAMS , 08.06.09, 07:46 AM EDT
http://www.forbes.com/feeds/ap/2009/08/06/ap6748181.html

MINNEAPOLIS -- A commercial turkey flock in central Minnesota has been quarantined after routine testing discovered a strain of the avian flu virus, the state Board of Animal Health announced Wednesday.

Minnesota Board of Animal Health Assistant Director Dale Lauer stressed that the avian flu strain found at the Meeker County farm was different from the more lethal strain has caused problems in birds and humans mostly in Asia.

"It's probably apples and watermelons," he said. "It's completely different. It's a big, big difference."

Lauer, a veterinarian, said the strain of virus found at the farm didn't pose a threat to the general public but could cause mild symptoms in poultry workers.

He said the quarantined flock was showing no signs of illness, but if left unchecked the virus could morph into a form that could be lethal to the state's commercial poultry flocks. Minnesota is the nation's top turkey producing state.

Lauer would not identify the farm but said the flock and other flocks within three miles would stay under quarantine for six weeks while they are repeatedly tested for the virus. If the animals recover, he said, they could go back into the food supply.

He said the board's testing frequently finds blood evidence that domestic turkey flocks have been exposed to strains of the avian flu. The Meeker County flock was somewhat different in that testing found live virus.

"It simply means our testing methods are getting better," he said.

Domestic turkey operations can get the virus from wild turkeys and migrating water fowl, he said. He called the Meeker County incident another reminder for poultry producers to secure their flocks.

The Minnesota Health Department is monitoring about 20 poultry workers at the turkey farm because the strain of virus found there, H7N9, has been known to cause mild eye infections and mild respiratory problems in people who work with infected turkeys.

However, Joni Scheftel, state public health veterinarian for the Health Department, said none of the workers have shown any symptoms. "We haven't seen any problems at all," she said.

Lauer said the workers could stay on the job during the quarantine and wouldn't need protective gear beyond the boots, coveralls, masks and caps they usually wear.

Bringing the "Bio" War Home

Published on 08-03-2009 Email To Friend Print Version
http://antifascist-calling.blogspot.com/20...o-war-home.html
By Tom Burghardt

The 2001 anthrax attacks underscore the dangers posed to our health and safety by the Bioweapons-Industrial Complex.

The killer(s) employed a military-grade version of the deadly pathogen, a four-mutation blend of anthrax prepared at the government's test site at the remote Dugway Proving Ground in Utah. Based on available evidence it's a near certainty that the weapon came from stockpiles at the U.S. Army Medical Research Institute of Infectious Diseases (USAMRIID) in Ft. Detrick, Maryland.

Before the dust cleared prominent opposition politicians had been attacked, five people were murdered, 10,000 more were exposed and representative government ground to a halt as panic set in.

According to multiple media reports, federal investigators concluded that the anthrax spores in the letters addressed to former Senate leader Tom Daschle (D-SD) and Senate Judiciary Chairman Patrick Leahy (D-VT) could only have been produced in a state-run lab. The weaponized version of the pathogen contained as many as one trillion spores per gram, a concentration sufficient enough to kill half the American population if widely distributed.

But rather than giving pause to Pentagon weaponeers, Big Pharma who profit handsomely from vaccine production, the $100 billion agribusiness empire that drives research and the politicians who do their bidding, decades-long U.S. biowar programs have miraculously morphed overnight into a new growth industry: "biodefense."

What had once been Washington's dirty little secret has now blossomed into a $50 billion cash-cow for academic and corporate grifters, according to the Washington, D.C.-based Center for Arms Control and Non-Proliferation.

As the Bulletin of the Atomic Scientists pointed out last year, "massive U.S. biodefense spending and a buildup of high-containment laboratories throughout the country might have created an internal security risk that no outside terrorist group could ever duplicate. Nearly two dozen new federal and many more new private biosafety level 3 and 4 laboratories have been built in recent years, meaning a large cadre of scientists has access to extraordinarily lethal material."

Indeed, under the auspices of the Department of Homeland Security (DHS), the new National Biodefense Analysis and Countermeasures Center (NBACC) opened in 2008 at USAMRIID. The center conducts inherently dual-use classified research and is currently managed by the spooky Battelle National Biodefense Institute.

Under the rubric of preventing bioterrorism, one question that DHS has not answered is whether or not government scientists and private contractors will conduct illicit experiments that violate the Biological Weapons Convention?

We may never know. Claiming that research will not breach the BWC, DHS avers that a "Compliance Review Group" overseen by senior Homeland Security officials will monitor NBACC operations. However information, including the Review Group's reports on Center operations or accidents at the facility may not be available under the Freedom of Information Act under cover of national security.

While it is reasonable to protect the nation's food supply from mischief, including sabotage by terrorists or deranged individuals armed with dangerous pathogens, work on animal diseases should be done transparently and safely. This however, is not the approach favored by the Department of Homeland Security.

A culture of secrecy and cover-up permeates the agency; after all DHS answers to the militarized Office of the Director of National Intelligence (ODNI), the so-called security "czar" who oversees the 16-agency U.S. intelligence complex.

"Food security" under such conditions is hardly amenable to public accountabilty; it is however, a formula that can be highly detrimental to our health, safety and well-being.

National Bio and Agro-Defense Facility

When the Department of Homeland Security announced plans to phase out the Plum Island Animal Disease Center (PIADC) by 2015, the agency cited the need to "enhance our nation's capacity to assess potential threats to humans and animals alike."

Averring that the Plum Island facility "is near the end of its lifecycle" and "is too small to meet the nation's research needs," DHS now plans to open the National Bio and Agro-Defense Facility (NBAF) on the campus of Kansas State University in Manhattan, Kansas. Estimated to cost taxpayers some $700 million to construct, the department plans to have the site up-and-running by 2014.

The authority for building the new facility comes from Homeland Security Presidential Directive 9 (HSPD-9): Defense of Agriculture and Food. HSPD-9 mandates that the secretaries of Homeland Security, Agriculture, and Health and Human Services; the administrator of the Environmental Protection Agency and the heads of other "appropriate" federal departments and agencies "in consultation" with the director of the Office of Science and Technology Policy, "accelerate and expand the development of countermeasures against the intentional introduction or natural occurrence of catastrophic animal, plant, and zoonotic diseases."

According to a 2007 report by the Congressional Research Service:

The DHS foresees multiple uses and goals for the new facility: serving as a unique BSL-3 and BSL-4 livestock laboratory capable of developing countermeasures for foreign animal diseases; providing advanced test and evaluation capability for threat detection, vulnerability assessment, and countermeasure assessment for animal and zoonotic diseases; and supporting countermeasure licensure.

The research agenda for NBAF is to be at least partially based on current risk assessments and subject to change as the risk assessments change. The DHS predicts that the facility will focus on foot and mouth disease (FMD), classical swine fever, African swine fever, Rift Valley fever, Nipah virus, Hendra virus, contagious bovine pleuropneumonia, and Japanese encephalitis. (Dana A. Shea, Jim Monke and Frank Gottron, The National Bio- and Agro-Defense Facility: Issues for Congress, Congressional Research Service, RL42160, November 15, 2007)
A zoonotic disease is one that can easily be transmitted from animals to humans; examples include Rift Valley fever, Lyme Disease, West Nile virus, H1N1 and H5N1 influenza. These pathogens however, can also be deployed as plausibly deniable bioweapons, a point not addressed by government investigators.

"Countermeasure licensure" of course, is a formula for handing over the fruit of publicly funded research to unaccountable private corporations who stand to make hefty profits from the manufacture of vaccines.

More pertinently, will America's expanding "biodefense" industry serve as a cover for the manufacture of new weapons of war?

As Watergate-era congressional investigations and multiple media reports have conclusively demonstrated, for decades the Central Intelligence Agency and the

Pentagon employed far-right Cuban mercenaries to attack the economic and agricultural infrastructure of socialist Cuba.

Indeed, Newsday reported as far back as 1977, that "operatives linked to anti-Castro terrorists introduced African swine fever virus into Cuba in 1971. Six weeks later, an outbreak of the disease forced the slaughter of 500,000 pigs to prevent a nationwide epidemic."

The African swine fever virus deployed in the attack according to participants, was believed to have originated from stockpiles stored at the Plum Island Animal Disease Center and handed over to CIA-trained terrorists at Ft. Gulick, an Army base in the former Panama Canal Zone.

And in 1981 according to researcher William H. Schaap, Cuba was struck by a devastating epidemic of Dengue fever, "one of some 250 arthropod-borne viruses, or 'arboviruses,' diseases transmitted from one vertebrate to another by hematophagous arthropods--blood eating insects, usually mosquitoes."

"Dengue and other arboviruses" Schaap wrote, "are ideal as biological weapons for a number of reasons. Dengue, especially hemorrhagic dengue, is highly incapacitating; it can be transmitted easily through the introduction of infected mosquitoes; it will spread rapidly, especially in highly populated and damp areas."

Citing the simultaneous outbreak of the disease in three widely separated parts of Cuba and that it is "extremely unusual that such an epidemic would commence in three localities at once," and the absence of the disease on adjacent islands such as Haiti and the Dominican Republic, Schaap concludes that the pathogen was purposely introduced into Cuba as a bioweapon.

Indeed, Army researchers at Ft. Detrick had conducted dispersal studies of the Aedes aegypti mosquito--and Dengue fever--used in the 1981 attack against the island nation.

The epidemic which hit Cuba in May 1981 was of type 2 dengue with hemorrhagic shock. Except for the type 1 epidemic reported in 1977, this was the first major dengue outbreak in Cuba since 1944, and, most importantly, the first in the Caribbean since the turn of the century to involve hemorrhagic shock on a massive scale.

From May to October 1981 there were well over 300,000 reported cases, with 158 fatalities, 101 involving children under 15. At the peak of the epidemic, in early July, more than 10,000 cases per day were being reported. More than a third of the reported victims required hospitalization. By mid-October, after a massive campaign to eradicate Aedes aegypti, the epidemic was over. (William H. Schaap, "The 1981 Cuba Dengue Epidemic," Washington, D.C.: Covert Action Information Bulletin, Number 17, Summer 1982)

And if the past is any guide to future actions by the Pentagon and the so-called Intelligence Community, what can we infer from DHS's stated goal of standing-up NBAF as a center for assessing "potential threats to humans and animals alike"? As it turns out, quite a lot.

Government Accountability Office (GAO) investigators charge that DHS relied on "a rushed, flawed study" to justify its decision to locate the $700 million research facility for highly infectious pathogens "in a tornado-prone section of Kansas, according to a government report," The Washington Post reported July 26.

The dubious report in question, United States Department of Agriculture Biocontainment Feasibility Studies, Study Report: Plum Island Animal Disease Center, was commissioned by the U.S. Department of Agriculture (USDA) and prepared by the giant defense and security firm Science Applications International Corporation (SAIC).

Talk about feathering one's own nest! SAIC's Frederick, Maryland advanced technology division (near Ft. Detrick) has partnered-up with with a host of federal agencies including the U.S. Army Medical Research Institute for Infectious Diseases, the Pentagon's primary biowarfare research center.

Needless to say, the spooky firm has considerable clout in Washington. According to Washington Technology's "2009 Top 100 Federal Prime Contractors" list, SAIC clocks-in at number 7 (just behind KBR Inc.) with some $4,811,194,800 in revenue, the bulk of earnings coming from defense and security contracts with the federal government.

Last year however, a preliminary GAO report was unveiled during hearings before Congress' Subcommittee on Oversight and Investigations, Committee on Energy and Commerce. It was highly critical of the flawed reasoning behind DHS's NBAF decision and SAIC's report. Relying on USDA's 2002 study, GAO auditors found that the agency,

has neither conducted nor commissioned any study to determine whether work on foot-and-mouth disease (FMD) can be done safely on the U.S. mainland. Instead, in deciding that work with FMD can be done safely on the mainland, DHS relied on a 2002 U.S. Department of Agriculture (USDA) study that addressed a different question. The study did not assess the past history of releases of FMD virus or other dangerous pathogens in the United States or elsewhere. It did not address in detail the issues of containment related to large animal work in BSL-3 Ag facilities. It was inaccurate in comparing other countries' FMD work experience with that of the United States. Therefore, GAO believes DHS does not have evidence to conclude that FMD work can be done safely on the U.S. mainland. (Nancy Kingsbury, Managing Director Applied Research and Measurements, Government Accountability Office, High-Containment Laboratories: DHS Lacks Evidence to Conclude That Foot-and-Mouth-Disease Research Can Be Done Safely on the U.S. Mainland, Testimony Before the Subcommittee on Oversight and Investigations, Committee on Energy and Commerce,

House of Representatives, May 22, 2008, GAO-08-821T)
The SAIC review addressed a different issue: whether or not it is "technically feasible" to conduct such research on the U.S. mainland. GAO averred, "This approach fails to recognize the distinction between what is technically feasible and what is possible, given the potential for human error."

Citing "methodological problems" in SAIC's study, GAO auditors found that the report: "(1) did not assess the history of releases of FMD virus or other dangerous pathogens, (2) did not address in detail the issues related to large animal work in BSL-3 Ag facilities, and (3) was inaccurate in comparing other countries' FMD work experience with that of the United States."

GAO concluded that among the report's more glaring and obvious problems, "(1) the study used an ad hoc method to select its expert panel that was not necessarily free from bias; (2) the study report was written by a single third-party person under contract for that purpose who was not present during the panel discussions; and (3) no concern was taken to ensure that the expert panel members reviewed either the draft or the final version of the report. At least one expert panel member expressed disappointment with the slant of the report."

Indeed, the SAIC review failed to address the issue of past releases of FMD or other pathogens, nor did it assess "the general history of accidents within biocontainment facilities." No small matter when it comes to potential mischief or lax safety standards known to exist at such facilities.

According to GAO, "the study panel members we interviewed said that no data on past accidents with or releases of either FMD or other pathogens was systematically presented or discussed. Rather, the panel members recalled that they relied on their own knowledge of and experience with the history of releases in a general discussion."

In a follow-up report published in July 2009, GAO discovered that DHS's Environmental Impact Statement (EIS) was wholly inadequate and in fact, relied on flawed and outdated methodology to arrive at their conclusions. According to GAO auditors "Comments on the NBAF draft EIS included the following concerns:"

* the ability of DHS and the federal government in general to safely operate a biosafety facility such as the proposed NBAF;
* the potential for a pathogenic release through accidents, natural phenomena, and terrorist actions;
* our May 2008 testimony that concluded that DHS had not conducted or commissioned a study to determine whether FMD research could be conducted safely on the U.S. mainland;
* natural phenomena such as tornadoes, earthquakes, and hurricanes that could cause catastrophic damage to the NBAF and result in the release of a pathogen;

* the possibility that an infected mosquito vector could escape, allowing a pathogen such as Rift Valley Fever virus to become permanently established in the United States;
* the economic effects of a release or a perceived release on the local, state, and national livestock industry. (United States Government Accountability Office, Report to Congressional Committees, Biological Research: Observations on DHS's Analyses Concerning Whether FMD Research Can Be Done as Safely on the Mainland as on Plum Island, July 2009, GAO-09-747)

Indeed similar to the earlier USDA study, DHS's EIS failed to include even a cursory analysis of multiple releases of the FMD virus at Plum Island itself. No matter, full speed ahead!

Leading the charge to site NBAF at Kansas State University is the Kansas Bioscience Authority (KBA), a business and academic consortium chaired by former Democratic governor John Carlin. Plush with industry heavy-hitters such as the Midwest Research Institute (MRI), the lobby shop KansasBio, Symark LLC, a technology commercialization firm specializing in the biosciences industry, KBA is hell-bent on bringing NBAF to Kansas despite serious health and safety concerns.

According to a Kansas City Star report, Tom Thornton, the President and CEO of the Kansas Bioscience Authority told the newspaper "This nation needs to have one modern biocontainment lab that conducts research into these diseases to protect agriculture and protect public health."

Claiming that the GAO report was "biased," KBA's John Carlin asserted that "aside from using Dorothy as their science, they don't have much going for them." Thornton said the project would be built as a "vault inside a vault inside a submarine" to protect against the accidental release of germs and diseases.

In other words, move along...

DHS and USDA assert, despite historical evidence, that Foot-and Mouth-Disease (FMD) as well as research with other dangerous pathogens can be safely conducted on the U.S. mainland at its new agro-defense center. But if evidence from Britain is any guide on what to expect, the explosive growth of Biosafety Level 3 and 4 laboratories in the United States will only compound the problem.

In 2001 and 2007, FMD releases at Britain's Institute for Animal Health at Pirbright were traced to a leaking drain which allowed the disease to escape containment. Crumbling infrastructure is only one of a constellation of issues that led to the outbreaks, investigators discovered. Lax oversight and a culture of secrecy nearly devastated Europe's livestock.

According to Britain's National Audit Office, the direct cost of the 2001 outbreak to the public sector was estimated at over $5.71 billion and the cost to the private sector

clocked-in at over $9.51 billion. Indeed, when tourism and supporting industries were factored into the equation, total losses ballooned from $8.56 billion to $10.27 billion when movement into the countryside was restricted by the state, UK auditors estimated.

By the time FMD was eradicated in September 2001, more than six million animals had been slaughtered and the disease had spread to France, the Republic of Ireland, the Netherlands and Northern Ireland. A similar outbreak in 2007 fueled calls to close the facility.

This is not a problem confined to Britain, but is endemic to the entire bioweapons and "biodefense" complex globally, particularly here in the heimat.

Tip of a Sinister Iceberg

Bioweapons research, secrecy and contamination go hand in hand.

Despite soothing bromides from defense corporations, the military, the scientific community and the politicians who do their bidding, the accidental or planned release of selected pathogens into the environment for "research purposes" is an enduring legacy of America's Cold War biowar programs.

The experimentation on witting and unwitting subjects in a score of top secret Army and CIA programs underscore the sinister nature of the Bioweapons-Industrial Complex. Indeed, a 1994 GAO report, documented:

During World War II and the Cold War era, DOD and other national security agencies conducted or sponsored extensive radiological, chemical, and biological research programs. Precise information on the number of tests, experiments, and participants is not available, and the exact numbers may never be known. However, we have identified hundreds of radiological, chemical, and biological tests and experiments in which hundreds of thousands of people were used as test subjects. These tests and experiments often involved hazardous substances such as radiation, blister and nerve agents, biological agents, and lysergic acid diethylamide (LSD). In some cases, basic safeguards to protect people were either not in place or not followed. For example, some tests and experiments were conducted in secret; others involved the use of people without their knowledge or consent or their full knowledge of the risks involved. (Frank C. Conahan, Assistant Comptroller General, National Security and International Affairs Division, Human Experimentation, An Overview on Cold War Era Programs, General Accounting Office, September 28, 1994, GAO/T-NSIAD-94-266)
Despite efforts since the Watergate-era to uncover the extent of these programs, many remain classified to this day. The GAO found that the Central Intelligence Agency, more concerned with shielding their corporate partners' participation in illicit experiments with LSD and other psychoactive compounds "have made little effort to assist test participants by identifying test locations and participants in experiments conducted by

contractors." The Agency "in fact, has not released the names of 15 of the approximately 80 organizations that conducted experiments under the ... MKULTRA program because the organizations do not want to be identified."

One sinister Pentagon project, Operation WHITECOAT, was a secret U.S. Army weapons' testing program carried out between 1954-1973 on Seventh-day Adventist Church conscientious objectors who consented to the experiments, and over 2,300 Army soldiers who almost certainly were not provided anything approaching informed consent. Similar to cattle, sheep or pigs on Plum Island, test subjects were infected with agents such as Q Fever, yellow fever, Rift Valley fever, Hepatitis A, bubonic plague, Tularemia (rabbit fever) and Venezuelan Equine encephalitis.

Indeed, the range of experimentation on human subjects carried out by the U.S. biological weapons program makes for a very grim read. As Boston College sociologist Jeanne Guillemin wrote in her disturbing exposé,

The entire experimental legacy is dismaying, from the hundreds of dead monkeys at Fort Detrick to the spectacle of Seventh Day Adventist soldiers, the vaccinated volunteers in Project Whitecoat, strapped to chairs amid cages of animals in the Utah sunlight as Q fever aerosols are blown over them. Most chilling are the mock scenarios played out in urban areas: light bulbs filled with simulated BW agents being dropped in New York subways, men in Washington National Airport spraying pseudo-BW from briefcases, and similar tests in California and Texas and over the Florida Keys. (Jeanne Guillemin, Anthrax: The Investigation of a Deadly Outbreak, Berkeley: University of California Press, 1999, pp. 176-177.)
As Michael Christopher Carroll's stunning investigation of Plum Island, Lab 257 revealed, multiple releases of highly-contagious pathogens including Foot-and-Mouth-Disease and Rift Valley Fever, were systematically covered-up by the USDA and DHS.

Will it be any different at the new National Bio and Agro-Defense Facility? If one were to believe DHS, it would represent the triumph of hope over experience. This is not a rational starting point when it comes to experiments with highly-contagious pathogens.

America's corporate media however, seemingly impermeable to anything other than celebrity scandals and the crimes of official enemies, refuse to conduct in-depth investigations into the expansion of America's Bioweapons-Industrial Complex.

Despite government pronouncements, faithfully regurgitated by media stenographers to the public, available evidence suggests that the United States, as in the past, is pursuing the development of biological agents for use in a score of clandestine weapons programs.

Under cover of conducting research on the highly-contagious Foot-and-Mouth-Disease pathogen, a new and improved national laboratory equipped with BSL-3 and BSL-4

containment facilities, like their cohorts at the U.S. Army Medical Institute of Infectious Diseases at Ft. Detrick, Maryland in all probability will continue to investigate the efficacy of waging aggressive biological warfare on an adversary's food supply.

Sound far-fetched? If the evidence from Cold War-era CIA and Pentagon programs, well-documented accidents, illicit human experimentation as well as numerous examples of biological attacks against socialist Cuba are a guide to Washington's future behavior, better think again!

View Full Version: The Spanish influenza epidemic of 1918 was caused

Title: The Spanish influenza epidemic of 1918 was caused
Description: *by vaccinations*

craig-oxley - August 8, 2009 12:27 PM (GMT)

The Spanish influenza epidemic of 1918 was caused by vaccinations

August 6th, 2009
http://www.pandemicfluonline.com/?p=688#more-688

The article below from www.whale.to/vaccine recounts little known history of the 1918-1919 Spanish flu placing the cause of that pandemic with vaccines. Historical pandemic responses and their documented outcomes should be considered at this time if we are to avoid repeating—or possibly eclipsing—one of history's most lethal public health disasters. ~PandemicFluOnline

As has been stated before, all medical and non-medical authorities on vaccination agree that vaccines are designed to cause a mild case of the diseases they are supposed to prevent. But they also know and admit that there is no way whatsoever to predict whether the case will be mild or severe – even deadly. With this much uncertainty in dealing with the very lives of people, it is very unscientific and extremely dangerous to use such a questionable procedure as vaccination.

Many vaccines also cause other diseases besides the one for which they are given. For instance, smallpox vaccine often causes syphilis, paralysis, leprosy, and cancer. (See the chapters on smallpox and plagues.) Polio shots, diphtheria toxin-antitoxin, typhoid vaccine, as well as measles, tetanus and all other shots often cause various other stages of disease such as post-vaccinal encephalitis (inflammation of the brain,) paralysis, spinal meningitis, blindness, cancer (sometimes within two years,) tuberculosis, (two to twenty years after the shot,) arthritis, kidney disease, heart disease (heart failure sometimes within minutes after the shot and sometimes several hours later.) Nerve damage and many other serious conditions also follow the injections.

When several shots are given (different vaccines) within a few days or a few weeks apart, they often trigger intensified cases of all the diseases at once, because the body cannot handle such a large amount of deadly poison being injected directly into the bloodstream. The doctors call it a new disease and proceed to suppress the symptoms.

When poison is taken by the mouth, the internal defense system has a chance to quickly eject some of it by vomiting, but when the poisons are shot directly into the body, bypassing all the natural safeguards, these dangerous poisons circulate immediately throughout the entire body in a matter of seconds and keep on circulating until all the cells are poisoned.

I heard that seven men dropped dead in a doctor's office after being vaccinated. This was in an army camp, so I wrote to the Government for verification. They sent me the report of U.S. Secretary of War, Henry L. Stimson. The report not only verified the report of the seven who dropped dead from the vaccines, but it stated that there had been 63 deaths and 28,585 cases of hepatitis as a direct result of the yellow fever vaccine during only 6 months of the war. That was only one of the 14 to 25 shots given the soldiers. We can imagine the damage that all these shots did to the men. (See the chapter on What Vaccinations Did to Our Soldiers.)

The first World War was of a short duration, so the vaccine makers were unable to use up all their vaccines. As they were (and still are) in business for profit, they decided to sell it to the rest of the population. So they drummed up the largest vaccination campaign in U.S. history. There were no epidemics to justify it so they used other tricks. Their propaganda claimed the soldiers were coming home from foreign countries with all kinds of diseases and that everyone must have all the shots on the market.

The people believed them because, first of all, they wanted to believe their doctors, and second, the returning soldiers certainly had been sick. They didn't know it was from doctor-made vaccine diseases, as the army doctors don't tell them things like that. Many of the returned soldiers were disabled for life by these drug-induced diseases. Many were insane from postvaccinal encephalitis, but the doctors called it shell shock, even though many had never left American soil.

The conglomerate disease brought on by the many poison vaccines baffled the doctors, as they never had a vaccination spree before which used so many different vaccines. The new disease they had created had symptoms of all the diseases they had injected into the man. There was the high fever, extreme weakness, abdominal rash and intestinal disturbance characteristic of typhoid. The diphtheria vaccine caused lung congestion, chills and fever, swollen, sore throat clogged with the false membrane, and the choking suffocation because of difficulty in breathing followed by gasping and death, after which the body turned black from stagnant blood that had been deprived of oxygen in the suffocation stages. In early days they called it Black Death. The other

vaccines cause their own reactions — paralysis, brain damage, lockjaw, etc.

When doctors had tried to suppress the symptoms of the typhoid with a stronger vaccine, it caused a worse form of typhoid which they named paratyphoid. But when they concocted a stronger and more dangerous vaccine to suppress that one, they created an even worse disease which they didn't have a name for. What should they call it? They didn't want to tell the people what it really was — their own Frankenstein monster which they had created with their vaccines and suppressive medicines. They wanted to direct the blame away from themselves, so they called it Spanish Influenza. It was certainly not of Spanish origin, and the Spanish people resented the implication that the world-wide scourge of that day should be blamed on them. But the name stuck and American medical doctors and vaccine makers were not suspected of the crime of this widespread devastation — the 1918 Flu Epidemic. It is only in recent years that researchers have been digging up the facts and laying the blame where it belongs.

Some of the soldiers may have been in Spain before coming home, but their diseases originated in their own home-based U.S. Army Camps. Our medical men still use that same dodge. When their own vaccines (required for travel) cause vaccine diseases abroad they use this as grounds for a scare campaign to stampede people into the vaccination centers. Do you remember the Hong Kong Flu and the Asian Flu and the London Flu scares? These were all medically-made epidemics mixed with the usual common colds which people have every year.

Now (1976) we are being worked on again by the vaccine -epidemic makers in their effort to force another multi million dollar vaccine sale caper. Their con men have already talked President Ford into handing over $135 million dollars to start their vaccine racket. Even the insurance companies refused to become involved with such an obviously dangerous and crooked scheme. So, again the medical and drug con men induced the appropriate government officials to guarantee insurance against the, possible billions of dollars in law suits which could be brought against the vaccine promoters if the vaccine campaign is carried out as planned. It's a good thing Ford was voted out of office. It's too bad he wasn't "dumped" before he paid the poison squad the MONEY' to poison the whole population. However, we don't yet know if President Carter will be any better. Will he be held in the grip of the medical and drug dictatorship? Or will he investigate — learn the truth — reverse the decisions and make the vaccine makers return the money taken from the taxpayers under false pretenses?

The statement of the swine flu vaccine promoters to the effect that the vaccine is harmless, is false, and the statement that it will protect against flu is false. Fifty-six people died after the shots, some within 48 hours. There is confusion and disagreement among the doctors about all aspects of the vaccine, from the safety and effectiveness to the necessity for it, who should have it and who should be warned against it.

Their scare-head campaign cry is that the swine flu is like the 1918 flu which killed

20,000,000 people. They don't have any usable and provable blood samples from the 1918 flu epidemic to prove it. That was 58 years ago, and the doctors were just as confused and inefficient then as now. However, one thing is certain — the 1918 Spanish Influenza was a vaccine-induced disease caused by extreme body poisoning from the conglomeration of many different vaccines. The soldiers at Fort Dix who were said to have had Swine Flu had been injected with a large variety of vaccines like the vaccines which caused the 1918 flu epidemic. The flu epidemic at Fort Dix was in no way related to swine. There were no swine at camp (unless we want to sarcastically call the vaccine promoters who caused the diseases -"swine.")

To add to the confusion, the doctors tell the people that there are a lot of various kinds of flu; the one which the soldiers at Fort Dix had was AVictoria flu, there are other strains of flu virus, and also, that the swine flu vaccine which so many people have taken already will not protect them against the many other types of flu. This will be used as an "out" in case of law suits later on when more casualties begin to show up. The doctors will say that the vaccine failed because it was the wrong kind of flu for the vaccine. Of course, no one can prove it one way or the other because viruses are illusive, invisible organisms which are unstable and unpredictable. One dictionary definition of virus is "a morbid poison." The vaccines injected into the body are poison and cause the typical poison reactions. Virus (poison) does not fly around and attack people.

Therefore, there will be no swine flu epidemic unless the vaccine promoters make one like they did in the 1918 flu epidemic. It will not kill 20,000,000 people unless the people submit to the disease-producing shots. There are also, other causes of disease besides vaccines, such as bad food, which has been devitalized and contaminated with poison preservatives and artificial drug concoctions. There are many more causes of disease but no diseases are contagious(See the chapter on the germ theory).

Vaccine drives come and go as often as the vaccine promoters can cook up the slightest pretense of a reason.n Back in1957 they were trying to stir up a vaccination campaign for what they decided to call Asiatic flu. An editorial in the Herald and Express for August 29, 1957 was captioned, "Fear of Flu Propaganda." Part of the piece is as follows:

"What a tempest in a teapot has been blown up over the probability that this country will experience an epidemic of the Asiatic flu in the fall and winter months ahead.

"Even the United States Department of Health is stooge for the panic — and has issued statements which are frightening the public, rather than reassuring them by pointing out that this epidemic, while widespread, gives no indication of being any more dangerous than our usual flood of influenza-like colds when winter comes on.

"Those who read between the lines even wonder whether the whole thing might not be

a bit of super salesmanship on the part of those who are making and selling the vaccines which are being prepared.. . .”

I WAS AN ON-THE-SPOT OBSERVER OF THE 1918 INFLUENZA EPIDEMIC

All the doctors and people who were living at the time of the 1918 Spanish Influenza epidemic say it was the most terrible disease the world has ever had. Strong men, hale and hearty, one day would be dead the next. The disease had the characteristics of the black death added to typhoid, diphtheria, pneumonia, smallpox, paralysis and all the diseases the people had been vaccinated with immediately following World War 1. Practically the entire population had been injected “seeded” with a dozen or more diseases — or toxic serums. When all those doctor-made diseases started breaking out all at once it was tragic.

That pandemic dragged on for two years, kept alive with the addition of more poison drugs administered by the doctors who tried to suppress the symptoms. As far as I could find out, the flu hit only the vaccinated. Those who had refused the shots escaped the flu. My family had refused all the vaccinations so we remained well all the time. We knew from the health teachings of Graham, Trail, Tilden and others, that people cannot contaminate the body with poisons without causing disease.

When the flu was at its peak, all the stores were closed as well as the schools, businesses — even the hospital, as the doctors and nurses had been vaccinated too and were down with the flu. No one was on the streets. It was like a ghost town. We seemed to be the only family which didn’t get the flu; so my parents went from house to house doing what they could to look after the sick, as it was impossible to get a doctor then. If it were possible for germs, bacteria, virus, or bacilli to cause disease, they had plenty of opportunity to attack my parents when they were spending many hours a day in the sick rooms. But they didn’t get the flu and they didn’t bring any germs home to attack us children and cause anything. None of our family had the flu — not even a sniffle— and it was in the winter with deep snow on the ground.

When I see people cringe when someone near them sneezes or coughs, I wonder how long it will take them to find out that they can’t catch it — whatever it is. The only way they can get a disease is to develop it themselves by wrong eating, drinking, smoking or doing some other things which cause internal poisoning and lowered vitality. All diseases are preventable and most of them are cureable with the right methods, not known to medical doctors, and not all drugless doctors know them either.

It has been said that the 1918 flu epidemic killed 20,000,000 people throughout the world. But, actually, the doctors killed them with their crude and deadly treatments and drugs. This is a harsh accusation but it is nevertheless true, judging by the success of the drugless doctors in comparison with that of the medical doctors.

While the medical men and medical hospitals were losing 33% of their flu cases, the non-medical hospitals such as BATTLE CREEK, KELLOGG and MACFADDEN'S HEALTH-RESTORIUM were getting almost 100% healings with their water cure, baths, enemas, etc., fasting and certain other simple healing methods, followed by carefully worked out diets of natural foods. One health doctor didn't lose a patient in eight years. The very successful health treatment of one of those drugless doctors who didn't lose any patients will be given in the other part of this book, titled VACCINATION CONDEMNED, to be published a little later.

If the medical doctors had been as advanced as the drugless doctors, there would not have been those 20 million deaths from the medical flu treatment.

There was seven times more disease among the vaccinated soldiers than among the unvaccinated civilians, and the diseases were those they had been vaccinated against. One soldier who had returned from overseas in 1912 told me that the army hospitals were filled with cases of infantile paralysis and he wondered why grown men should have an infant disease. Now, we know that paralysis is a common after-effect of vaccine poisoning. Those at home didn't get the paralysis until after the world-wide vaccination campaign in 1918.

As has been stated before, all medical and non-medical authorities on vaccination agree that vaccines are designed to cause a mild case of the diseases they are supposed to prevent. But they also know and admit that there is no way whatsoever to predict whether the case will be mild or severe – even deadly. With this much uncertainty in dealing with the very lives of people, it is very unscientific and extremely dangerous to use such a questionable procedure as vaccination.

Many vaccines also cause other diseases besides the one for which they are given. For instance, smallpox vaccine often causes syphilis, paralysis, leprosy, and cancer. (See the chapters on smallpox and plagues.) Polio shots, diphtheria toxin-antitoxin, typhoid vaccine, as well as measles, tetanus and all other shots often cause various other stages of disease such as post-vaccinal encephalitis (inflammation of the brain,) paralysis, spinal meningitis, blindness, cancer (sometimes within two years,) tuberculosis, (two to twenty years after the shot,) arthritis, kidney disease, heart disease (heart failure sometimes within minutes after the shot and sometimes several hours later.) Nerve damage and many other serious conditions also follow the injections.

When several shots are given (different vaccines) within a few days or a few weeks apart, they often trigger intensified cases of all the diseases at once, because the body cannot handle such a large amount of deadly poison being injected directly into the bloodstream. The doctors call it a new disease and proceed to suppress the symptoms.

When poison is taken by the mouth, the internal defense system has a chance to quickly eject some of it by vomiting, but when the poisons are shot directly into the body, bypassing all the natural safeguards, these dangerous poisons circulate immediately throughout the entire body in a matter of seconds and keep on circulating until all the cells are poisoned.

I heard that seven men dropped dead in a doctor's office after being vaccinated. This was in an army camp, so I wrote to the Government for verification. They sent me the report of U.S. Secretary of War, Henry L. Stimson. The report not only verified the report of the seven who dropped dead from the vaccines, but it stated that there had been 63 deaths and 28,585 cases of hepatitis as a direct result of the yellow fever vaccine during only 6 months of the war. That was only one of the 14 to 25 shots given the soldiers. We can imagine the damage that all these shots did to the men. (See the chapter on What Vaccinations Did to Our Soldiers.)

The first World War was of a short duration, so the vaccine makers were unable to use up all their vaccines. As they were (and still are) in business for profit, they decided to sell it to the rest of the population. So they drummed up the largest vaccination campaign in U.S. history. There were no epidemics to justify it so they used other tricks. Their propaganda claimed the soldiers were coming home from foreign countries with all kinds of diseases and that everyone must have all the shots on the market.

The people believed them because, first of all, they wanted to believe their doctors, and second, the returning soldiers certainly had been sick. They didn't know it was from doctor-made vaccine diseases, as the army doctors don't tell them things like that. Many of the returned soldiers were disabled for life by these drug-induced diseases. Many were insane from postvaccinal encephalitis, but the doctors called it shell shock, even though many had never left American soil.

The conglomerate disease brought on by the many poison vaccines baffled the doctors, as they never had a vaccination spree before which used so many different vaccines. The new disease they had created had symptoms of all the diseases they had injected into the man. There was the high fever, extreme weakness, abdominal rash and intestinal disturbance characteristic of typhoid. The diphtheria vaccine caused lung congestion, chills and fever, swollen, sore throat clogged with the false membrane, and

the choking suffocation because of difficulty in breathing followed by gasping and death, after which the body turned black from stagnant blood that had been deprived of oxygen in the suffocation stages. In early days they called it Black Death. The other vaccines cause their own reactions — paralysis, brain damage, lockjaw, etc.

When doctors had tried to suppress the symptoms of the typhoid with a stronger vaccine, it caused a worse form of typhoid which they named paratyphoid. But when they concocted a stronger and more dangerous vaccine to suppress that one, they created an even worse disease which they didn't have a name for. What should they call it? They didn't want to tell the people what it really was — their own Frankenstein monster which they had created with their vaccines and suppressive medicines. They wanted to direct the blame away from themselves, so they called it Spanish Influenza. It was certainly not of Spanish origin, and the Spanish people resented the implication that the world-wide scourge of that day should be blamed on them. But the name stuck and American medical doctors and vaccine makers were not suspected of the crime of this widespread devastation — the 1918 Flu Epidemic. It is only in recent years that researchers have been digging up the facts and laying the blame where it belongs.

Some of the soldiers may have been in Spain before coming home, but their diseases originated in their own home-based U.S. Army Camps. Our medical men still use that same dodge. When their own vaccines (required for travel) cause vaccine diseases abroad they use this as grounds for a scare campaign to stampede people into the vaccination centers. Do you remember the Hong Kong Flu and the Asian Flu and the London Flu scares? These were all medically-made epidemics mixed with the usual common colds which people have every year.

Now (1976) we are being worked on again by the vaccine -epidemic makers in their effort to force another multi million dollar vaccine sale caper. Their con men have already talked President Ford into handing over $135 million dollars to start their vaccine racket. Even the insurance companies refused to become involved with such an obviously dangerous and crooked scheme. So, again the medical and drug con men induced the appropriate government officials to guarantee insurance against the, possible billions of dollars in law suits which could be brought against the vaccine promoters if the vaccine campaign is carried out as planned. It's a good thing Ford was voted out of office. It's too bad he wasn't "dumped" before he paid the poison squad the MONEY' to poison the whole population. However, we don't yet know if President Carter will be any better. Will he be held in the grip of the medical and drug dictatorship? Or will he investigate — learn the truth — reverse the decisions and make the vaccine makers return the money taken from the taxpayers under false pretenses?

The statement of the swine flu vaccine promoters to the effect that the vaccine is harmless, is false, and the statement that it will protect against flu is false. Fifty-six people died after the shots, some within 48 hours. There is confusion and disagreement among the doctors about all aspects of the vaccine, from the safety and effectiveness to the necessity for it, who should have it and who should be warned against it.

Their scare-head campaign cry is that the swine flu is like the 1918 flu which killed 20,000,000 people. They don't have any usable and provable blood samples from the 1918 flu epidemic to prove it. That was 58 years ago, and the doctors were just as confused and inefficient then as now. However, one thing is certain — the 1918 Spanish Influenza was a vaccine-induced disease caused by extreme body poisoning from the conglomeration of many different vaccines. The soldiers at Fort Dix who were said to have had Swine Flu had been injected with a large variety of vaccines like the vaccines which caused the 1918 flu epidemic. The flu epidemic at Fort Dix was in no way related to swine. There were no swine at camp (unless we want to sarcastically call the vaccine promoters who caused the diseases -"swine.")

To add to the confusion, the doctors tell the people that there are a lot of various kinds of flu; the one which the soldiers at Fort Dix had was AVictoria flu, there are other strains of flu virus, and also, that the swine flu vaccine which so many people have taken already will not protect them against the many other types of flu. This will be used as an "out" in case of law suits later on when more casualties begin to show up. The doctors will say that the vaccine failed because it was the wrong kind of flu for the vaccine. Of course, no one can prove it one way or the other because viruses are illusive, invisible organisms which are unstable and unpredictable. One dictionary definition of virus is "a morbid poison." The vaccines injected into the body are poison and cause the typical poison reactions. Virus (poison) does not fly around and attack people.

Therefore, there will be no swine flu epidemic unless the vaccine promoters make one like they did in the 1918 flu epidemic. It will not kill 20,000,000 people unless the people submit to the disease-producing shots. There are also, other causes of disease besides vaccines, such as bad food, which has been devitalized and contaminated with poison preservatives and artificial drug concoctions. There are many more causes of disease but no diseases are contagious(See the chapter on the germ theory).

Vaccine drives come and go as often as the vaccine promoters can cook up the slightest pretense of a reason.n Back in1957 they were trying to stir up a vaccination campaign for what they decided to call Asiatic flu. An editorial in the Herald and Express for August 29, 1957 was captioned, “Fear of Flu Propaganda.” Part of the piece is as follows:

“What a tempest in a teapot has been blown up over the probability that this country will experience an epidemic of the Asiatic flu in the fall and winter months ahead.

“Even the United States Department of Health is stooge for the panic — and has issued statements which are frightening the public, rather than reassuring them by pointing out that this epidemic, while widespread, gives no indication of being any more dangerous than our usual flood of influenza-like colds when winter comes on.

“Those who read between the lines even wonder whether the whole thing might not be a bit of super salesmanship on the part of those who are making and selling the vaccines which are being prepared.. . .”

I WAS AN ON-THE-SPOT OBSERVER OF THE 1918 INFLUENZA EPIDEMIC

All the doctors and people who were living at the time of the 1918 Spanish Influenza epidemic say it was the most terrible disease the world has ever had. Strong men, hale and hearty, one day would be dead the next. The disease had the characteristics of the black death added to typhoid, diphtheria, pneumonia, smallpox, paralysis and all the diseases the people had been vaccinated with immediately following World War 1. Practically the entire population had been injected “seeded” with a dozen or more diseases — or toxic serums. When all those doctor-made diseases started breaking out all at once it was tragic.

That pandemic dragged on for two years, kept alive with the addition of more poison drugs administered by the doctors who tried to suppress the symptoms. As far as I could find out, the flu hit only the vaccinated. Those who had refused the shots escaped

the flu. My family had refused all the vaccinations so we remained well all the time. We knew from the health teachings of Graham, Trail, Tilden and others, that people cannot contaminate the body with poisons without causing disease.

When the flu was at its peak, all the stores were closed as well as the schools, businesses — even the hospital, as the doctors and nurses had been vaccinated too and were down with the flu. No one was on the streets. It was like a ghost town. We seemed to be the only family which didn't get the flu; so my parents went from house to house doing what they could to look after the sick, as it was impossible to get a doctor then. If it were possible for germs, bacteria, virus, or bacilli to cause disease, they had plenty of opportunity to attack my parents when they were spending many hours a day in the sick rooms. But they didn't get the flu and they didn't bring any germs home to attack us children and cause anything. None of our family had the flu — not even a sniffle— and it was in the winter with deep snow on the ground.

When I see people cringe when someone near them sneezes or coughs, I wonder how long it will take them to find out that they can't catch it — whatever it is. The only way they can get a disease is to develop it themselves by wrong eating, drinking, smoking or doing some other things which cause internal poisoning and lowered vitality. All diseases are preventable and most of them are cureable with the right methods, not known to medical doctors, and not all drugless doctors know them either.

It has been said that the 1918 flu epidemic killed 20,000,000 people throughout the world. But, actually, the doctors killed them with their crude and deadly treatments and drugs. This is a harsh accusation but it is nevertheless true, judging by the success of the drugless doctors in comparison with that of the medical doctors.

While the medical men and medical hospitals were losing 33% of their flu cases, the non-medical hospitals such as BATTLE CREEK, KELLOGG and MACFADDEN'S HEALTH-RESTORIUM were getting almost 100% healings with their water cure, baths, enemas, etc., fasting and certain other simple healing methods, followed by carefully worked out diets of natural foods. One health doctor didn't lose a patient in eight years. The very successful health treatment of one of those drugless doctors who didn't lose any patients will be given in the other part of this book, titled VACCINATION CONDEMNED, to be published a little later.

If the medical doctors had been as advanced as the drugless doctors, there would not have been those 20 million deaths from the medical flu treatment.

There was seven times more disease among the vaccinated soldiers than among the unvaccinated civilians, and the diseases were those they had been vaccinated against. One soldier who had returned from overseas in 1912 told me that the army hospitals were filled with cases of infantile paralysis and he wondered why grown men should have an infant disease. Now, we know that paralysis is a common after-effect of vaccine poisoning. Those at home didn't get the paralysis until after the world-wide vaccination campaign in 1918.

From 2003: 1918 Spanish flu virus being reconstructed by U.S

August 6th, 2009
by The Sunshine Project (2003)
http://www.pandemicfluonline.com/?p=684#more-684

The article below is prophetic. It shows that the U.S. financed the resurrection of the otherwise extinct Spanish flu to justify the development of "new countermeasures" against it. As you read through the articles at PandemicFluOnline, you will note that one name in particular keeps popping up: Dr. Jefferey Taubenberger. A brief bio of Taubenberger appears at the end of this article.

The "Spanish Flu" influenza virus that killed 20-40 million people in 1918 is currently under reconstruction. Several genes of the extraordinarily lethal 1918 flu virus have been isolated and introduced into contemporary flu strains. These proved to be lethal for mice, while virus constructs with genes from current flu virus types had hardly any effect. These experiments may easily be abused for military purposes, but provide little benefit from a medical or public health point of view.

The 1918 Spanish Flu was highly infectious — in comparison to contemporary flu viruses — killing a very high percentage of those infected, including many younger people. The Spanish Flu alone caused the median life expectancy in the U.S. in 1918 to drop by 10 years. Hence, flu viruses are perceived today as a serious biological warfare threat. In Sept., 2003, a $15 million research grant was awarded in the U.S. to develop protective measures against a bioterrorist attack with flu viruses.

Despite the very dangerous nature of the 1918 virus, efforts to reconstruct it started in the mid 1990s when Dr. Jefferey Taubenberger from the U.S. Armed Forces Institute of Pathology in Washington, D.C., succeeded in recovering and sequencing fragments of

the viral RNA from preserved tissues of 1918 victims. In the current issue of the scientific journal Emerging Infectious Diseases, new genetic details of the 1918 flu virus will be published.

But after (partially) unraveling the genetic sequence of the virus, the scientists went a step further and began bringing the Spanish flu back to life. Unnoticed by the public, they succeeded in creating a live virus containing two 1918 genes that proved to be very lethal in animal experiments. This experiment is only one genetic step away from taking the 1918 demon entirely out of the bottle.

A resuscitation of the Spanish flu is neither necessary nor warranted from a public health point of view. Allegedly, the recent experiments sought to test the efficacy of existing antiviral drugs on the 1918 construct. But there is little need for antiviral drugs against the 1918 strain if the 1918 strain had not been recreated in the first place.

“It simply does not make any scientific sense to create a new threat just to develop new countermeasures against it,” said Jan van Aken, biologist with the Sunshine Project. “Genetic characterization of influenza strains has important biomedical applications. But it is not justifiable to recreate this particularly dangerous eradicated strain that could wreak havoc if released, deliberately or accidentally,” he added.

Construction of new maximum security (BSL-4) laboratories for biodefense research has been justified in part by citing the potential of the Spanish Flu as a biological weapon. Influenza usually requires a low level of containment; but when scientists begin recombining virulence-related genes, the danger dramatically increases. The University of Texas Medical Branch’s BSL-4 plans influenza “gene reassortment” experiments in maximum containment. “This kind of research is creating a vicious circle, and could prompt a race by biodefense scientists to genetic engineer unthinkable diseases,” said Edward Hammond of the Sunshine Project. “What disease comes after influenza? Biodefense laboratories must not become self-fulfilling prophesy centers. The world does not need biodefense programs to create a ‘genetically engineered disease gap.’”

From an arms control perspective it appears to be particularly sensitive if a military research institution embarks on a project that aims at constructing more dangerous pathogens. “If Jeffery Taubenberger worked in a Chinese, Russian or Iranian laboratory, his work might well be seen as the ’smoking gun’ of an offensive biowarfare program,” said van Aken.

A Sunshine Project briefing paper on the ‘Reconstruction of the Spanish influenza virus’ provides further details and a comprehensive literature list. The paper can be found at http://www.sunshine-project.org/. The Sunshine Project ceased its operations in 2008, but maintains the website as an archive of its work from 2000-2008.

Jefferey Taubenberger

From Wikipedia:

Jefferey Taubenberger was born in Germany, the third son of an Army officer. When he was nine he moved to a suburb of Washington, D.C. with his parents after his father was posted at the Pentagon. He completed a combined M.D. (1986) and Ph.D. (1987) at the Medical College of Virginia in Richmond in a course designed for students who wanted to follow a career in medical research. For his thesis he studied how stem cells of the bone marrow differentiate into the mature cells of the white blood cell system. In 1988 he began a training to become a pathologist at the National Cancer Institute of the National Institutes of Health. In 1993 he was recruited to start a new lab at the Armed Forces Institute of Pathology (AFIP) in order to apply the then current molecular techniques to the Institute's pathology work. After a year he was promoted to chief of the Division of Molecular Pathology. This included a research lab, where he was free to pursue questions of basic science.

The AFIP forms part of the Walter Reed Army Medical Center in the north-east of Washington. It had originally been established by Abraham Lincoln in 1862 to combat "diseases of the battlefield". Today, the pathology division acts most of its time as a consultant, giving second opinions free of charge to the military and for a fee to civilian physicians. It handles tens of thousands of cases yearly on the understanding that it may keep a representative sample from any case. In this way it has collected tissue samples of some 2,600,000 people from surgical and autopsy material. They mostly take the form of dice-sized pieces of tissue fixed in formalin and embedded in wax blocks of paraffin.

[End wikipedia reference]

A team of "viral pathologists" led by Dr. Jeffrey Taubenberger at Ft. Detrick Maryland began work in 1997 to recreate the 1918 "killer virus," a task that was reportedly accomplished in 2003. In his initial 1997 report, Taubenberger wrote: "The "Spanish" influenza pandemic killed at least 20 million people in 1918-1919, making it the worst infectious pandemic in history. Understanding the origins of the 1918 virus and the basis for its exceptional virulence may aid in the prediction of future influenza pandemics. RNA from a victim of the 1918 pandemic was isolated from a formalin-fixed, paraffin-embedded, lung tissue sample. Nine fragments of viral RNA were sequenced from the coding regions of hemagglutinin, neuraminidase, nucleoprotein, matrix protein 1, and matrix protein 2. The sequences are consistent with a novel H1N1 influenza A virus that incorporate the subgroup of strains that infect humans and swine, as well as the avian subgroup." (Science magazine, March 21, 1997, Dr. Jefferey Taubenberger et. al).

See www.sciencemag.org/cgi/content/abstract/275/5307/179

In other words, Taubenberger and his team resurrected an otherwise extinct “virus” for the purpose of creating a vaccine to counter it.

WHO Is Jane Burgermeister?
From Devvy Kidd
8-2-9

I had Dr. Evangellista on my radio show last Friday night. This is what he sent me about Burgermeister; he has the patents to prove she has the wrong pharma house...

Devvy,

Thought I would share this with you, so you can see some of the evidence for yourself, if interested.

Jane Burgermeister is a fraud, and her WHO/BAXTER lawsuit (no record of a lawsuit) is based on false information. (Simply a publicity stunt, etc)

Furthermore, due to an ongoing investigation into this matter by myself, and several notable doctors and researchers around the country, the pharmaceutical firm responsible for "reverse engineering" the tri-recombinant flu vaccine is NOVARTIS, not Baxter !!!

The major one being, MOTIVE, as to why Burgermeister has indulged in both fraud and in deception. This motive is now becoming more apparent, as, there may be a "possibility" that Novartis has their hand in Burgermeister's activities , either directly, or indirectly.

Please ensure everyone sees this correction, otherwise, people will be looking in the wrong direction when the "bomb" goes off !! Novartis, which had its hand in flu development - "most likely with some folks from Ft. Detrick" - has been working on this for more than 4+ years (FACT).

Subject: Re: Charges filed against Obama, WHO & UN for Bioterrorism

Urgent! Please watch all of the YouTube videos that follow this article, three of which belong to this article.

Charges filed against Obama, WHO & UN for
Bioterrorism and Intent to Commit Mass Murder

Austrian journalist, Jane Burgermeister, recently filed criminal charges with the FBI against the World Health Organization (WHO), the United Nations (UN), and several of the highest ranking government and corporate officials, including Barack Obama & the Rothchilds, concerning bioterrorism and attempts to commit mass murder. She has also prepared an injunction against forced vaccination which is being filed in America. These actions follow her charges filed in April against Baxter AG and Avir Green Hills Biotechnology of Austria for producing contaminated bird flu vaccine, alleging this was a deliberate act to cause and profit from a pandemic.

In her charges, Burgermeister presents evidence of acts of bioterrorism that is in violation of U.S. law by a group operating within the U.S. under the direction of international bankers who control the Federal Reserve, as well as WHO, UN and NATO. This bioterrorism is for the purpose of carrying out a mass genocide against the U.S. population by use of a genetically engineered flu pandemic virus with the intent of causing death. This group has annexed high government offices in the U.S.

Specifically, evidence is presented that the defendants, Barack Obama, President of the U. S, David Nabarro, UN System Coordinator for Influenza, Margaret Chan, Director-General of WHO, Kathleen Sibelius, Secretary of Department of Health and Human Services, Janet

Napolitano, Secretary of Department of Homeland Security, David de Rothschild, banker, David Rockefeller, banker, George Soros, banker, Werner Faymann, Chancellor of Austria, and Alois Stoger, Austrian Health Minister, among others, are part of this international corporate criminal syndicate which has developed, produced, stockpiled and employed biological weapons to eliminate the population of the U.S. and other countries for financial and political gain.

The charges contend that these defendants conspired with each other and others to devise, fund and participate in the final phase of the implementation of a covert international bioweapons program involving the pharmaceutical companies Baxter and Novartis. They did this by bioengineering and then releasing lethal biological agents, specifically the "bird flu" virus and the "swine flu virus" in order to have a pretext to implement a forced mass vaccination program which would be the means of administering a toxic biological agent to cause death and injury to the people of the U.S. This action is in direct violation of the Biological Weapons Anti-terrorism Act.....

AntiSionist - August 5, 2009 06:48 AM (GMT)

Well Devvy Kidd is back after a few days after his post claming Jane was a fraud. Below has a pdf document to put forward. This would seem to counter Ingri's claim that there are no documents from Jane to prove her lawsuit. However in the below article, you will see that they do blame Baxter and not Novartis as Kidd said earlier should have been blamed. Make up your own minds, folks. - AntiSionist

Preliminary Injunction Filed
To Stop Forced Flu Vaccinations
By Devvy
8-5-9

Back in June 2009, the following made headlines all over the Internet:

Charges filed against Obama, WHO & UN for Bioterrorism and Intent to Commit Mass Murder

"Austrian journalist, Jane Burgermeister, recently filed criminal charges with the FBI against the World Health Organization (WHO), the United Nations (UN), and several of the highest ranking government and corporate officials, including Barack Obama & the Rothchilds, concerning bioterrorism and attempts to commit mass murder. She has also prepared an injunction against forced vaccination which is being filed in America. These actions follow her charges filed in April against Baxter AG and Avir Green Hills Biotechnology of Austria for producing contaminated bird flu vaccine, alleging this was a deliberate act to cause and profit from a pandemic."

According to media reports:

Link: http://www.naturalnews.com/026503_pandemic...oterrorism.html

Summary of claims and allegations filed with FBI in Austria on June 10, 2009

"In her charges, Burgermeister presents evidence of acts of bioterrorism that is in violation

of U.S. law by a group operating within the U.S. under the direction of international bankers who control the Federal Reserve, as well as WHO, UN and NATO. This bioterrorism is for the purpose of carrying out a mass genocide against the U.S. population by use of a genetically engineered flu pandemic virus with the intent of causing death. This group has annexed high government offices in the U.S.

"Specifically, evidence is presented that the defendants, Barack Obama, President of the U.S, David Nabarro, UN System Coordinator for Influenza, Margaret Chan, Director-General of WHO, Kathleen Sibelius, Secretary of Department of Health and Human Services, Janet Napolitano, Secretary of Department of Homeland Security, David de Rotschild, banker, David Rockefeller, banker, George Soros, banker, Werner Faymann, Chancellor of Austria, and Alois Stoger, Austrian Health Minister, among others, are part of this international corporate criminal syndicate which has developed, produced, stockpiled and employed biological weapons to eliminate the population of the U.S. and other countries for financial and political gain.

"The charges contend that these defendants conspired with each other and others to devise, fund and participate in the final phase of the implementation of a covert international bioweapons program involving the pharmaceutical companies Baxter and Novartis. They did this by bioengineering and then releasing lethal biological agents, specifically the "bird flu" virus and the "swine flu virus" in order to have a pretext to implement a forced mass vaccination program which would be the means of administering a toxic biological agent to cause death and injury to the people of the U.S. This action is in direct violation of the Biological Weapons Anti-terrorism Act.

"Burgermeister's charges include evidence that Baxter AG, Austrian subsidiary of Baxter International, deliberately sent out 72 kilos of live bird flu virus, supplied by the WHO in the winter of 2009 to 16 laboratories in four counties. She claims this evidence offers clear proof that the pharmaceutical companies and international government agencies themselves are actively engaged in producing, developing, manufacturing and distributing biological agents classified as the most deadly bioweapons on earth in order to trigger a pandemic and cause mass death.

"In her April charges, she noted that Baxter's lab in Austria, one of the supposedly most secure biosecurity labs in the world, did not adhere to the most basic and essential steps to keep 72 kilos of a pathogen classified as a bioweapon secure and separate from all other substances under stringent biosecurity level regulations, but it allowed it to be mixed with the ordinary human flu virus and sent from its facilities in Orth in the Donau."

I have exchanged a number of emails with Ms. Burgermeister the past few days regarding these filings. As she lives in Vienna, their legal process is different than here in the U.S. My first question was about a criminal complaint with the FBI. We the people have the right to make a request with a U.S. Attorney and/or the FBI to open a criminal investigation, but they are under no obligation to undertake one. According to Ms. Burgermeister in an email to me to clarify:

"In Austria, I brought what is called "criminal charges" (Strafanzeige/anzeige). The state prosecutor told the police to investigate as a result of my "criminal charges". I believe this is the same as the FBI. I brought criminal charges/ a criminal complaint. The FBI is obliged to investigate but not to find anyone guilty. That depends on their investigation. Ultimately, the FBI will decide whether to recommend charges to the district attorney."

Ms. Burgermeister has a 105 page template (Complaint) in English which can be viewed here:

http://www.wakenews.net/DOCUMENTS_AGAINST_...CED_VACCINATION__A_H1N1__MEXICAN_FLU__ON__AMERICAN_PEOPLE__AND_TEMPLATE_FOR_FILING_IN_OTHER_COUNTRIES_1_.pdf

My next inquiry was about a lawsuit (injunction) filed here in the U.S. as indicated above in paragraph one. A Preliminary Injunction was filed in United States District Court, District of New Jersey on July 31, 2009, by Tim Vawter, pro se. For those unfamiliar with that term, it simply means that Mr. Vawter was not represented by an attorney at the time he filed. That document can be viewed here:

http://www.wakenews.net/html/us-files.html

While the document doesn't show a case number, one has been assigned: 3:2009cv03803.

This filing is now on the docket; see here:

http://dockets.justia.com/docket/court-njd...case_id-231005/

While I am not an attorney, I do see some potential problems. First, the only defendant listed is Federal Government. I've never seen that before in hundreds of cases I have looked at in the federal courts. Federal Government could potentially mean the million plus federal employees, Congress, cabinets and our military. I believe that defendants must be named by name and the agency they work for as relates to the issue raised in the injunction. The problem Mr. Vawter is going to have is service. Who is he going to serve as defendant Federal Government?

This preliminary injunction is asking the court to stop the federal government from forcing any person to take any influenza (flu) vaccination against a person's will. And, extending the order to include state officials.

To my knowledge as I write this, there is no order by Congress or any of its agencies to force these deadly cocktails on any citizen in this country. The CDC is recommending everyone get shot up, but at this time it is only a recommendation. I think, and I could be wrong, Mr. Vawter will have a problem because there was no forced vaccination order in effect at the time he filed his paperwork.

This case is listed as: Nature of Suit: Civil Rights - Other Civil Rights. The court could very well say that since Mr. Vawter has not been ordered by any agency of the federal government to take an H1N1 flu vaccine, his civil rights have not been violated.

You can track progress of his case at the link above on dockets.justia.

We do know that there are mandatory vaccinations required by certain state agencies and the military is routinely shot up. Below is a link to a paper done by the Congressional Research Service (CRS) back in 2005:

Wolveshater - August 5, 2009 11:43 AM (GMT)

I thought this started sounding like a distraction myself, This SACRAMANIA dude on youtube has been talking forced vaccinations and hyped flu this fall, and roundups for concentration camps for those refusing the vaccine, gun grabbing, and the like.. The cretins don't move that fast..This flu hoax shit is not the way its going down..A blinding flash from a bucket of sun suddenly would swing events in their favor, especially if they use more than one here, thats fear baby, all the sheep will huddle under masters wing then, kiss his ass...I even need to see that scenario to believe it, I think their going to

tighten down the economic screws and starve every one down for a longer time frame... Hungry sheep obey...

View Full Version: SAMBUCUS NIGRA AND OLEA EUROPAEA

Title: SAMBUCUS NIGRA AND OLEA EUROPAEA

craig-oxley - August 2, 2009 11:44 PM (GMT)

http://www.nothinbutherbs.com/product_p/2402.htm

A Flu Virus's Worst Nightmare

SAMBUCUS NIGRA AND OLEA EUROPAEA

SAMBUCUS NIGRA

Folklore tells us that during the Middle Ages, the English believed the Sambucus nigra tree to have mystical abilities and that to have these trees on one's property meant good luck. The medicinal value of the black elderberry goes back to the 5th century BC and is mentioned in the writings of Hippocrates, Dioscurides and Plinius. The juice of the Sambucus nigra has been used for over 2,500 years as a remedy for flu and colds.

Dr. Madeleine Mumcuoglu, PhD, a virologist based in Israel, is credited with discovering how Sambucus nigra thwarts the invasion of the flu virus. In order for a virus to replicate itself, it must first invade existing living cells through tiny "spikes" on the surface of the virus that puncture the walls of the cell. In the lab, Dr. Mumcuoglu discovered that the active constituents of Sambucus nigra "disarm" these "spikes", which prevent the virus from piercing the cell membrane.

In clinical studies conducted in Israel in 1992, half the flue patients participating in the studies were given four tablespoons of syrup containing the active Sambucus nigra ingredients combined with other natural components; the remaining patients were given a placebo. The results showed that within 24 hours, the flu symptoms had significantly improved in twenty percent of the patients taking the Sambucus Nigra syrup. After the second day, another 75% were improved and in three days, a complete cure was achieved in over 90%. Among the control group, only 8% of the patients showed improvements in 24 hours, the remaining 92% improved within 6 days or more.

With these and other results showing Sambucus nigra as a proven antiviral agent, other testing has commenced to understand the extract's potential role in the remedy of other viruses, including HIV, herpes and Epstein-Barr.

The examination of the active phytonutrients in Sambucus Nigra reveals flavonoids, almost exclusively flavonols with rutin as the chief component, as well as isoquercitrin and astrogalin.

OLEA EUROPAEA
Another Flu Fighter

The ancient Egyptians may have been the first to make practical use of the Olea Europaea, using it in the mummification of their kings. In later cultures, Olea europaeas were used as a popular folk remedy to relieve fevers. The first formal medical documentation describing the use of the olea europaea to cure malaria appeared in the 1850's. Other European researchers determined that Olea europaea increases blood flow in the arteries, relieves irregular heartbeats and prevents intestinal spasms. In Hungary, a clinical investigation led by the director of an alternative medicine clinic in Hungary established that Olea europaea is 98% effective in destroying the viruses, bacteria and fungi that causes many of today's most widespread illnesses.

With its antioxidant properties, Olea europaea may play a role in preventing free radical generation and the resulting damage this causes in healthy cells.

In recent times, Olea europaea (oleuropein) has been rediscovered as having multiple health applications. It has been reported to enhance the immune system, have anti-viral, anti-fungal, anti-bacterial and anti-parasite properties, increase energy, have internal cleansing action, lower blood pressure and reduce blood sugar. Olea europaea fights
viruses, such as colds and flu, by interfering with the critical amino acid production essential for virus reproduction.

Active molecules in Olea europaea have the ability to penetrate infected cells and stop viral replication. It can stimulate phagocytosis, an immune system response in which cells ingest and eliminate harmful micro-organisms and foreign matter.

Olea europaea may have powerful antioxidant properties. It has been shown to inhibit oxidation of low-density lipoproteins, the so-called "bad cholesterol" involved in heart arterial disease. With its antioxidant properties, Olea europaea may play a role in preventing free radical generation and the resulting damage this causes in healthy cells.

Researchers have determined that Olea europaea is a true anti viral, in that it selectively blocks the entire spectrum of viral growth and replication in the infected host. No pharmaceutical can accomplish this.

Dr. Tom has formulated for you 100% Sambucus nigra and Olea europaea in combination for maximum viral protection.

Call Nothin' But Herbs today and get started protecting yourself from the multitude of viruses attacking our society.

View Full Version: Scientists Describe How 1918 Influenza Virus

Title: Scientists Describe How 1918 Influenza Virus
Description: *Sample Was Exhumed In Alaska*

craig-oxley - July 31, 2009 12:16 AM (GMT)

Scientists Describe How 1918 Influenza Virus Sample Was Exhumed In Alaska

http://www.sciencedaily.com/releases/2007/...70702145610.htm

ScienceDaily (July 4, 2007) — The effort to find preserved samples of the 1918 influenza virus has been a pursuit of both historical and medical importance. The 1918 influenza pandemic was the most devastating single disease outbreak in modern history, and examining the virus that caused it may help prepare for, and possibly prevent, future pandemics. When the complete sequence of the 1918 virus was published in 2005, it represented a watershed event for influenza researchers worldwide.

In an article in the journal Antiviral Therapy, scientists at the National Institute of Allergy and Infectious Diseases (NIAID), part of the National Institutes of Health, narrate the story of how scientists discovered samples of the 1918 strain in fixed autopsy tissues and in the body of a woman buried in the Alaskan permafrost. The article places this discovery in the context of decades of research into the cause of pandemic influenza, and the authors detail the strange convergence of events that allowed them to recover and sequence the virus in the first place. Its genetic material is so fragile that it should not have survived for days, let alone decades.

In a mass grave in a remote Inuit village near the town of Brevig Mission, a large Inuit woman lay buried under more than six feet of ice and dirt for more than 75 years. The permafrost plus the woman's ample fat stores kept the virus in her lungs so well preserved that when a team of scientists exhumed her body in the late 1990s, they could recover enough viral RNA to sequence the 1918 strain in its entirety. This remarkable good fortune enabled these scientists to open a window onto a past pandemic--and perhaps gain a foothold for preventing a future one.

By Dr. Mercola
http://articles.mercola.com/sites/articles...accination.aspx

In early May, Health and Human Services Secretary Kathleen Sebelius admitted the swine flu virus was not quite the fearsome plague it was widely reported to be in April when the novel influenza A strain (official name H1N1) first emerged in the U.S.

On May 6, Sebelius said:

“We are cautiously optimistic that what we are seeing right now is presenting itself as a much milder virus than the initial cases ... in Mexico.”[1]

Ms. Sebelius’ remark was likely prompted by the fact the swine flu virus is showing itself to have mild symptoms, quick recovery time, and low incidence of death among the vast majority of H1N1 patients throughout the world (with the single exception of Mexico).

A little over a month later, on June 11, the World Health Organization (WHO) raised its swine flu pandemic alert from a 5 to a 6. [2] Phase 6 is the highest level alert, and reflects the speed with which a virus is spreading – not its severity.

WHO actually considers the severity of the H1N1 virus to be moderate, generally defined as an illness requiring neither hospitalization nor even medical care.[3]

From Cautious Optimism to High Risk Pessimism in Under Six Weeks

A few days after the Phase 6 designation, on June 16, Sebelius began urging school superintendents across the nation to prepare for the possibility their schools would be turned into swine flu shot clinics in the fall.

According to Sebelius, “If you think about vaccinating kids, schools are the logical place." She says if the current trend continues, "… the target may be school-age children as a first priority for vaccination.”[4]

And now it is being reported that the United States will spend an additional $1 billion on ingredients for an H1N1 vaccine. Another billion dollars for a virus with mild symptoms?

Why this sudden urgency to mass vaccinate, now that the real risks of the swine flu have been shown to be both mild and infrequent?

Where is the Logic in Mass-Vaccinating Kids?

Never mind the serious health risks of flu vaccines, which I’ll get to shortly. What happened to common sense?

Why are your school-age children being targeted by the Department of Health and Human Services as the “first priority” for novel H1N1 vaccinations that have not undergone adequate safety testing?

Per WHO, most cases of severe and fatal swine flu infections have occurred in people aged 30 to 502. Many of those cases were seen in people who were already ill with disorders like asthma, heart disease, diabetes, autoimmune diseases and obesity.

Additionally, the swine flu virus presents much less threat of death to Americans than all other strains of influenza combined![5]

Why is your healthy youngster, who is highly unlikely to contract a severe case of swine flu, about to go to the front of the line to receive two doses of a rushed-to-market flu vaccine?

Worse yet, if you have a child with an established health condition, do you really want him or her injected with an experimental vaccine?

Children with underlying health problems will likely be the first to receive the vaccine, since they will be considered the most probable group to develop severe cases of the H1N1 virus. Unfortunately, these children are also the ones most vulnerable to serious side effects from the vaccine.

Your Child May Be Pushed to Get FOUR Flu Shots This Fall

On July 15th, Dr. Pascale Wortley, the U.S. CDC's pandemic vaccine coordinator, announced,

"This vaccine campaign will unfold quite differently than seasonal flu. This is a huge endeavor we"re gearing up for."

According to the latest CDC recommendations, school children who have never had a flu shot may need four flu shots this fall. Two doses of the seasonal flu vaccine, and another two against the swine flu. Most everyone else should expect three shots.

Looking on the bright side, there are still two slivers of relief in this madness.
It appears the pandemic flu shots (like the seasonal flu vaccine) are still voluntary, although most evidence strongly suggest that compulsory vaccinations is a HIGH probability.
About 20 percent of the vaccines created will be preservative-free, and made available to children and pregnant women who want them

Adults, however, will receive shots from multi-dose vials that WILL contain thimerosal.

That said, please read on to find out why opting for a preservative-free vaccine is likely not enough if you want to protect the health of your child, and why you and your family may be FAR better off avoiding both the seasonal- and pandemic flu vaccines.

Flu Shots Simply Don't Work

Because addressing the potential side effects of these untested swine flu vaccines is not the only problem here. Numerous studies have shown that flu shots simply do not work. Why would this case be any different?

For example:

According to the 2006 Cochrane Database of Systematic Reviews, 51 separate studies concluded the flu vaccine worked no better than a placebo in 260,000 children ranging in age from six months to 23 months.

A study published in the October 2008 Archives of Pediatric and Adolescent Medicine found flu vaccines in young children have made no difference in the number of flu-related doctor and hospital visits.

As reported in a 2004 publication of the Archives of Disease in Childhood, a study of 800 children with asthma concluded those receiving a flu vaccine had a significantly increased risk of asthma-related doctor and emergency room visits.[6]

A more recent study released at the 2009 American Thoracic Society International Conference showed children with asthma who received FluMist had a 3-fold increased risk for hospitalization.[7]

And not only are vaccines ineffective in preventing flu in your children, they are equally

useless for adults, including the elderly.

According to the 2007 Cochrane Database of Systematic Reviews, studies of over 65,000 healthy adults concluded vaccinations reduced the risk of flu by only six percent, and reduced missed work days by less than a single day. Vaccinations did not reduce the number of people who sought medical help or took time off from work.[8]

The 2006 Cochrane Database also includes a review of 64 vaccination studies of the elderly across nearly 100 flu seasons. The studies showed flu vaccines were ineffective in preventing the flu in either nursing home patients or elderly living in the community.[9]

A study published in the Lancet last year found that influenza vaccination was NOT associated with a reduced risk of pneumonia in older people. This supports a study done five years ago, published in The New England Journal of Medicine.

Research published in the American Journal of Respiratory and Critical Care Medicine also confirms that there has been no decrease in deaths from influenza and pneumonia, despite the fact that vaccination coverage among the elderly has increased from 15 percent in 1980 to 65 percent now.

Last year, researchers with the National Institute of Allergy and Infectious Diseases, and the National Institutes of Health published this conclusion in the Lancet Infectious Diseases:

“We conclude that frailty selection bias and use of non-specific endpoints such as all-cause mortality have led cohort studies to greatly exaggerate vaccine benefits.”

Flu Vaccines Pose Significant Health Risks to Your Children

Most flu vaccines contain dangerous levels of mercury in the form of thimerosal, a deadly preservative that is 50 times more toxic than regular mercury.[10] If taken in high enough doses, it can result in long-term immune, sensory, neurological, motor, and behavioral dysfunctions.

Disorders associated with mercury poisoning include autism, attention deficit disorder, multiple sclerosis, and speech and language deficiencies.

The Institute of Medicine has warned that infants, children, and pregnant women should not be injected with thimerosal, and yet the majority of flu shots contain 25 micrograms of it.

It has been calculated that, by age two, American children have received 237 micrograms of mercury from vaccines alone, which far exceeds the current EPA “safe” level of 0.1 mcg/kg per day.

But that’s not all. Other toxic substances found in various flu vaccines include:
Ethylene glycol (antifreeze)
Neomycin and streptomycin (antibiotics)
Resin and gelatin - known to cause allergic reactions

Formaldehyde – a known cancer causing agent
Aluminum -- a neurotoxin linked to Alzheimer's disease
Polysorbate 80 (Tween80™) – which can cause severe allergic reactions, including anaphylaxis

Phenol (carbolic acid)
Triton X100 (detergent)
Egg proteins (including avian viruses)

What is the Current Status of the H1N1 Flu Vaccine?

In response to WHO's Phase 6 alert level, the CDC declared the H1N1 flu pandemic a public health emergency, which allowed the FDA to authorize drug companies to "fast track" experimental vaccines. Fast tracking means the new vaccines are not tested as thoroughly as vaccines which move through the normal licensing process.

In other words, a fast tracked vaccine will be available for use long before it can be proved safe for use.

In total, five drug manufacturers are now in the process of creating experimental vaccines against the pandemic H1N1 swine flu virus. Between them, it is estimated they will produce between 40 million and 160 million doses of egg-based vaccine, to be available in the U.S. by October.

Pharmaceutical giant Baxter International announced on June 12 it has a patented cell-based technology which reduces the development time to 13 weeks, down from the usual 26, and was scheduled to be completed this month.

Baxter is nothing if not aggressive about getting their influenza vaccines to market. In December, a Baxter facility in Austria sent a human flu vaccine contaminated with deadly H5N1 live avian flu virus to 18 countries, including the Czech Republic. According to a report by The Times of India, the two viruses seem to have been "mixed in error."[11]

The report continues,

"Accidental release of a mixture of live H5N1 and H3N2 viruses could have resulted in dire consequences. While H5N1 doesn''t easily infect people, H3N2 viruses do. If someone exposed to a mixture of the two had been simultaneously infected with both strains, he or she could have served as an incubator for a hybrid virus able to transmit easily to and among people."

Czech newspapers questioned how the potentially deadly contamination was possible. Baxter's position is it was human error. Other sources, however, maintain the cross-contamination was virtually impossible in light of Baxter's adherence to the highest level of laboratory safety, Biosafety Level 3 (BSL3).[12]

The same Czech newspapers, among others, questioned whether Baxter was involved in a deliberate attempt to start a pandemic.

As difficult as it is to contemplate an American pharmaceutical corporation could make such a potentially lethal mistake, or worst yet, intentionally orchestrate a deadly flu pandemic, the fact of the contamination is undisputed.

How comfortable are you with the thought you or your loved ones could be forced to receive injections of a fast tracked swine flu vaccine made by Baxter? An untested vaccine for a flu virus you may not contract, and which will probably only cause moderate discomfort if you do get infected?

Novartis, another Big Pharma player, also announced on June 12 that it, too, has produced a swine flu vaccine using cell-based technology and the adjuvant MF59®.

An adjuvant is an additive designed to generate a stronger immune response to a vaccine. In other words, its purpose is to kick your immune system into overdrive so the size of the dose and number of vaccine doses you receive can be reduced.

The MF59® adjuvant is oil based and contains Tween80, Span85, and squalene. In studies of oil-based adjuvants in rats[13] , the animals were rendered crippled and paralyzed.

Squalene brought on severe arthritis symptoms in rats, and studies in humans given from 10 to 20 ppb (parts per billion) of squalene showed severe immune system impact and development of autoimmune disorders.[14]

I will release a special report on this dangerous adjuvant next week, so stay posted.

Tamiflu Likely Useless Against Swine Flu

And what about the antiviral drug Tamiflu, which has been pushed as a remedy against the swine flu in lieu of a more specific vaccine? As predicted, Tamiflu is likely useless against the novel strain of flu.

According to a recent article in ABC News, public health authorities have reported three cases of the H1N1 influenza in which the virus was resistant to the drug. In one of the cases, the patient had not received the drug, but two others developed the swine flu after receiving Tamiflu as a preventive measure.

Fortunately, all three developed very mild cases of the flu, and have been fully recovered.

Overall, I find it interesting that despite the fact that the virus may be developing resistance to one of the frontline antivirals, it’s mutating into very MILD disease that you’re likely to recover from without much fuss…

That’s even more proof, in my book, that taking Tamiflu is not in your best interest. Because aside from the fact that Tamiflu may soon become completely useless against the swine flu,

there are many other dangers associated with the drug. For a refresher, please review my previous article that covered Tamiflu's hazards in greater detail.

Are Mandatory Swine Flu Vaccinations a Real Possibility?

In my opinion, yes.

There's a great deal of money, political power and momentum behind the swine flu pandemic fear mongering movement, which I first wrote about in my hugely popular swine flu alert in April.

It is clear Big Pharma stands to make many millions through rising stock prices, the sale of dangerous prescription drugs like Tamiflu, and mass swine flu vaccination campaigns.

The progression toward more government control is equally obvious ...

The U.S. Public Health Service was established in 1946. Executive Order 9708 included a list of communicable diseases for which quarantines could be established. In 2005, "influenza caused by novel or re-emergent influenza viruses that are causing, or have the potential to cause, a pandemic,"[15] was added to the list.

Sounds tailor-made for something like the exotic hybrid swine flu we're now faced with, doesn't it?

In the years since 9/11, the U.S. government has made even more moves to clear the way for agencies like the Depts. of Homeland Security and Health and Human Services to interfere in your freedom to choose how to manage your own health, and the health of your family.[16]

For example:

The Project Bioshield Act of 2004 gives NIH the authority to fast track drugs and vaccines deemed "qualified medical countermeasures" against threats to public health.[17]

Executive Order 13375, effective in 2005, amends Executive Order 13295, which gives the Secretary of HHS the power to detain, examine and quarantine indefinitely any individual thought to be infected with a communicable disease.[18]

The 2006 Division E -- Public Readiness and Emergency Preparedness Act gives the Secretary of HHS the power to recommend the development and administration of covered countermeasures, defined as a "pandemic product, vaccine or drug."

Translation: the need for quarantines and mandatory vaccinations for the swine flu pandemic is up to Kathleen Sebelius. The 2006 Act also releases involved parties, including drug manufacturers, from all liability for covered countermeasure drugs, including vaccines.[19]

Based on how the swine flu pandemic has been handled (marketed) to date, it appears drug companies and certain U.S. government agencies hope to scare you into signing up for swine flu vaccinations and prescription flu remedies. Failing that, it is within Ms. Sebelius' discretion to mandate vaccinations.

I agree with Barbara Loe Fisher of the National Vaccination Information Center (NVIC), who says:

"Citizens around the world can be easily manipulated by doctors and politicians engaging in fear mongering in the name of disease controls to forward agendas that have more to do with ideology, power and corporate profits than health."

What You Can Do Right Now

The International Vaccine Conference is held about once every FIVE years. It is without question the single best conference on vaccines in the world. For every speaker that is speaking there are 5-10 others that were not able to speak.

It is the best of the best speakers on this topic and I am VERY excited about attending. Washington DC is absolutely delightful in the fall and all the world class museums there are free.

Please join me at this event. It is only $195 for the weekend and the hotel rooms are only $95 if you make a reservation before July 31. So even I you are only considering going, you should register for the hotel as there is no charge to cancel your reservation.

[dohtml]<object width="425" height="344"><param name="movie" value="http://www.youtube.com/v/1kIZPEYhC84&color1=0xb1b1b1&color2=0xcfcfcf&hl=en&feature=player_embedded&fs=1"></param><param name="allowFullScreen" value="true"></param><param name="allowScriptAccess" value="always"></param><embed src="http://www.youtube.com/v/1kIZPEYhC84&color1=0xb1b1b1&color2=0xcfcfcf&hl=en&feature=player_embedded&fs=1" type="application/x-shockwave-flash" allowfullscreen="true" allowScriptAccess="always" width="425" height="344"></embed></object>[/dohtml]

Visit the National Vaccination Information Center (NVIC) site and join in the fight against mandatory swine flu vaccinations.

Educate yourself about influenza strains, vaccination risks, and the public health laws in your state that may require you or your children to undergo either mandatory vaccination or quarantine.

Take care of your health to reduce or eliminate your risk of contracting the flu. The key is to keep your immune system strong by following these guidelines:

Optimize your vitamin D levels. Vitamin D deficiency is the likely cause of seasonal flu viruses. Getting an optimal level of vitamin D will help you fight infections of all kinds.

Eliminate sugar and processed foods from your diet. Sugar consumption has an immediate, debilitating effect on your immune system.

Get plenty of good quality sleep.

Address the stress effectively. If you feel overwhelmed by stress, your body will not have the reserves it needs to fight infection.

Exercise. Your immune system needs good circulation in order to perform at its best for you.

Take a high quality source of animal-based omega 3 fats like Krill Oil.
Wash your hands. But not with an antibacterial soap. Use a pure, chemical-free soap.

View Full Version: Startling New Evidence That The 'Swine Flu' is

Title: Startling New Evidence That The 'Swine Flu' is
Description: *MAN MADE!*

craig-oxley - July 27, 2009 03:17 PM (GMT)

Startling New Evidence That The 'Swine Flu' Pandemic Is Man-Made

Novartis Patent Detailed And Mass Murder Charged

By A. True Ott, PhD, ND
7-26-9

Murder suspects are either convicted or acquitted at trial based on the prosecution's presentation of EVIDENCE which usually hinges on MOTIVE, OPPORTUNITY, and TIME-LINES combined with physical documents. To gather such hard evidence, detectives and/or federal agents often spend months following leads and interviewing witnesses. In the trial phase, re-creating the sequence of events is essential. I submit this paper will provide more than enough hard evidence to at least result in a series of criminal indictments of charges of MASS MURDER, and CONSPIRACY TO COMMIT WORLD GENOCIDE against Novartis Pharmaceutical principals and agents and others.

PRIMARY MOTIVE

The Primary Motive behind this alleged criminal activity is also the primary cause of most murders in the world today, and that motivation is simply: BIG MONEY. Billions of Dollars of windfall profits from government contracts worldwide, as a matter of fact.

I will provide evidence that will show that Novartis Pharmaceuticals of Basel,

Switzerland has conspired with corrupt "scientists" at the U.S. Army Institute of Pathology Ft. Detrick, Maryland, to create a "novel" strain of weaponized "influenza" virus by means of "reverse engineering" the deadly 1918 killer strain which strain was maliciously and surreptitiously released upon the world in March and April of 2009 for the primary purpose of creating a panic-stricken world-wide demand for Novartis vaccine material.

The evidence will also clearly show that the Novartis vaccine material is in reality designed to facilitate the further mutation of the pandemic into more lethal waves of increasingly virulent and deadly disease, rather than to curtail and limit the existing outbreak. The evidence will show that Novartis is willingly being used, (and extremely well-paid) to facilitate the edicts of the global elite's Club of Rome; which edicts clearly call for a massive and sudden depopulation of certain segments of the earth's human population.

PRIMARY EVIDENCE

To realize such windfall profits on an engineered, global flu pandemic, detailed covert planning must take place of course.
Patents protecting the proprietary flu vaccine must be applied for and secured before the pandemic virus is released in order to minimize the competition and maximize the profit potentials. In a biological attack of this nature, timing is extremely critical. Indeed, the evidence is clear Novartis applied for just such a patent on Nov. 4, 2005, and the U.S. Patent Office accepted this application and granted US 20090047353A1 for a "Split Influenza Vaccine with Adjuvants" on February 19, 2009. (See bottom of page).

With this patent now secured, the conspirators were now free to create the demand for their "novel" split influenza vaccine by releasing a "novel" split-influenza (combining multiple viruses) pandemic virus from a weapons lab test-tube into unsuspecting human hosts. http://www.washingtonpost.com/wp-dyn/conte...9061703271.html

The so-called "Swine Flu" grabbing headlines today is actually a recombinant, or "split-influenza" virus consisting of A-strain Bird-Flu (H5N1), Swine Flu (H1N1) and multiple strains of human flu (H3N2). Likewise, the 1918 Killer Flu that killed untold millions of people was a recombinant or "split-influenza" virus composed of Bird flu, Swine Flu, and multiple strains of human flu.

CRIMINAL TIMELINE

The criminal timeline begins in 1997, when Dr. Jeffrey Taubenberger assembled a team of geneticists and microbiologists to analyze the genome structure, and then to REPRODUCE (i.e. reverse engineer) what is arguably one of the most deadly viral structures the world has ever been cursed with -the 1918 killer flu virus. According to

numerous published stories and reports, Taubenberger and his team utilized super-computers to map the complex RNA and DNA structures of the killer virus, then utilized human plasmids to successfully re-create the 1918 killer. Taubenberger completed his work in early 2005, then immediately left the employ of the U.S. Army at Ft. Detrick to take a much more lucrative position with the National Institutes of Health. His new focus was to create a VACCINE against the very same 1918 killer flu that he and his team had, just months earlier, successfully "reverse engineered" and created.

This researcher is very confident that a focused criminal investigation would likely reveal prima facia evidence that Taubenberger was in reality working for Novartis while employed with the N.I.H. and was quite likely the primary author of Novartis' Nov. 6, 2005 "provisional" patent application. On page 2, paragraph 32 of the patent publication we read, quote: "The influenza virus [that the 'invention vaccine' is designed to protect against] may be a reassortant strain, and may have been obtained by reverse genetics techniques. Reverse genetics techniques allow influenza viruses with desired genome segments to be prepared in vitro using plasmids." The remnant of the paragraph then goes into very specific detail as to the actual mechanics of how the pandemic virus was actually created by Taubenberger's Ft. Detrick team. At the very least, the author of the patent application had to have studied Taubenberger's various published reports on his work at Detrick, for the wording and science is virtually verbatim.

Furthermore, this paragraph is even more damning by the words "may have been obtained". Who "obtained" this virus and for what reason was it "obtained"? Keep in mind the CDC and HHS would have Americans believe that the pandemic viral outbreak is totally a "natural" occurrence if so then how could Novartis have such an incredible advance knowledge to the point of developing a vaccine with such absolutely PERFECT TIMING???

WHO EXACTLY IS "NOVARTIS"??

Novartis International AG is simply the world's largest, multi-national pharmaceutical company with over $53 Billion USD revenue generated in 2008. It's headquarters is located in Basel, Switzerland, home of the vaunted "Swiss Guards" who provide all security measures for the Vatican and the Club of Rome. The company logo symbolizes the "eternal flame" of the Illuminati "enlightened ones". Dig into Novartis International AG's long history, and one finds that it began as a component of the infamous I.G. Farben combine, which in turn was primarily responsible for the rise of Adolph Hitler and the German/Austrian Third Reich.

Dig a bit deeper and you find that Novartis also wholly owns a company called Sandoz which was the inventor of LSD and other strong hallucinogenic "truth" drugs, and was the supplier of LSD to the CIA allowing them to scale new heights with their covert "MK ULTRA" mind control experiments. Documents released to U.S. Congressional investigators in 1977 show that Sandoz Labs had arranged for certain Nazi scientists to

gain new identities in Allen Dulles' CIA at the conclusion of WWII. This was accomplished under a secret extraction program called "Operation Paper Clip".

The address listed on the Novartis Patent applications is a P.O. Box in Emeryville, California. Up until the summer of 2005, this Emeryville California address belonged to Chiron Inc. the world's second-largest INFLUENZA VACCINE MANUFACTURER. Chiron was doing very well, with reported sales of $357 million in fiscal 2002. Chiron's sales nearly doubled, peaking at a whopping $678 million in 2003 and it was mostly due to the marketing and sale of FLU VACCINE CONTRACTS to the federal government. Novartis, which owned much of Chiron's stock, was very pleased, until disaster struck in 2004 --- the entire year's stock of flu vaccine was found to be contaminated and was condemned.

Stock values plummeted on the news. With the stock at a historic low, Novartis quickly purchased the remainder of Chiron's stock and began immediately to work on the massive "novel pandemic flu" vaccine that they somehow knew would soon have worldwide demand especially if they controlled the exclusive patent they could effectively "corner the pandemic flu vaccine market"!!

http://www.sfgate.com/cgi-bin/article.cgi?...L&type=business

OTHER CRIMINAL ACTIVITIES

I would submit that killing tens of thousands of innocent humans via the systemic creation of a "pandemic" in order to make billions of dollars is vile enough, but there is also evidence that there is an even more heinous hidden agenda at work here, and it is spelled GENOCIDE.

It is no mystery that Adolph Hitler advocated the elevation of a Nordic "Master Race" that would rule the world in a "New Order of the Ages" called the "Third Reich". Sadly, not all of the EUGENIC/GENOCIDAL National Socialists were executed at Nuremburg. In reality, the elite financiers that actually dictated the agenda to Hitler, merely went underground, willing to bide their time until their godless agenda to liquidate BILLIONS of people could be successfully implemented.

The evidence that the Novartis-controlled "Pandemic Vaccine" may well be a tool of mass genocide, is actually quite overwhelming.
At this point, some readers may scoff and ask: "Why would any company want to kill off their customers?" The answer is that these "customers" control large blocks of assets and equity. As Kissinger's "NSSM-200" report outlines, the "spoils" of genocide include controlling large tracts of land and mineral assets. This is secondary, of course, to their warped dream of creating a Utopian World Order with only 500 million "worthy" humans allowed to share in it.

WHAT'S THE EVIDENCE?

While George H.W. Bush was busy saving the world from the evil dictator Saddam Hussein in 1991, pursuant to his U.N. speech to create a "new world order" an agenda for an "Initiative for Eco-92 Earth Charter" elitist meeting happened to fall into honest, Christian hands. This agenda basically reiterated the genocide outlined in Henry Kissinger's infamous NSSM-200 report of 1974, and called for "the immediate reduction of world population." The entire report can be downloaded at: http://www.theforbiddenknowledge.com/hardt...cobden_club.htm

My extensive research shows that by 1992, the massive death rate of AIDS had simply not materialized to the Elite's satisfaction, and a more efficient mass killer had to be engineered in order to fulfill the edicts cut into the "Georgia Guidestones".

Evidence shows that like the 2009 "Novel" Flu Virus the HIV virus was also engineered and manufactured in the labs of Ft. Detrick.

In 1969, during a House Appropriations Committee hearing, the Defense Department's Biological Warfare (BW) division at Ft. Detrick requested funds to develop, through complex gene-splicing (i.e. genetic engineering) a "novel" new disease that would both be resistant to, and break down a victim's immune system. The Congressional Record reads:

"Within the next 5 to 10 years it would probably be possible to make a new infective micro-organism which could differ in certain important respects from any known disease-causing organisms. Most important of these is that it might be refractory to the immunological and therapeutic processes upon which we depend to maintain our relative freedom from infectious diseases."

The funds for this "Dr. Strangelove" project were somehow approved. AIDS "magically" appeared within the requested time frame, and of course, just happens to exhibit the exact characteristics specified by the Ft. Detrick scientists.

Three years later, in 1972, the fledgling World Health Organization (WHO) published a very similar proposal to the one submitted to the U.S. House Appropriations Committee in 1969. The WHO proposed that: "An attempt should be made to ascertain whether viruses can in fact exert selective effects on immune function, e.g., by ...affecting T cell function as opposed to B cell function. The possibility should also be looked into that the immune response to the virus itself may be impaired if the infecting virus damages more or less selectively the immune cells responding to the viral antigens." (Bulletin of the W.H.O., vol. 47, p 257- 274.) This is a "textbook" clinical description of the function of the HIV/AIDS virus.

The W.H.O. shortly thereafter begins a massive "smallpox vaccination" program in

Africa in 1975. Within two years, millions of smallpox vaccines are provided by Novartis et. al, under U.N.I.C.E.F. funding. A decade later, it is determined by independent journalists in the U.K. that the incidence of AIDS infections' MAPPED AND GRAPHED EPICENTERS in Africa coincided exactly with the locations of the W.H.O. smallpox vaccination program centers in the mid-1970's (Source, The London Times, May 11, 1987). Some 14,000 Haitians then on UN 'humanitarian missions' to Central Africa were also vaccinated in this campaign, and soon contracted HIV. Personnel actually conducting the vaccinations of the Haitians maintain they had been completely unaware that the vaccine was anything other than a routine shot.

In 1987, Dr. Hilleman, head of all vaccine production of Merck Pharmaceuticals stunned the world with his public admissions that the mass vaccination campaigns of the 1950s and '60s likely caused thousands of cancer deaths each year. This was due to the presence of a cancer-causing virus that contaminated the first polio vaccine, according to Dr. Hilleman. Known as SV40, the virus originated from dead monkeys whose kidney cells were used to culture the first Salk vaccines. Doctors estimate that the virus was injected into tens of millions during the vaccination campaigns, including several million in Canada, before being detected and screened out in 1963. Those born between 1941 and 1961 are thought to be most at risk of having been infected with SV40, and are estimated to have a 300% greater chance of developing cancer. According to Hilleman MERCK KNEW THE VACCINES WERE INFECTED WITH SV40, but distributed them anyway. See http://www.youtube.com/watch?v=edikv0zbAlU

Furthermore, research doctors in New Orleans reported in 1963 that a percentage of the Salk polio vaccines were found to have attenuated, (live) viruses, which actually CAUSED tens of thousands of polio cases during the 1950's.

Following the successful liberation of Kuwait in Operation Desert Storm, hundreds of thousands of victorious American troops are suddenly stricken with a wide variety of auto-immune disorders that doctors named the Gulf War Syndrome, (GWS). After a decade of medical investigation, the culprit is finally determined to be an ingredient in the anthrax vaccinations mandatorily given to the troops. This offending "adjuvant" is a synthetic material known as squalene aka, oil-in-water adjuvant. Writer and Gulf War correspondent Gary Matsumoto documents this entire, tragic saga in his seminal book, "Vaccine-A". See www.vaccine-a.com.

Understanding these historical facts is very important for this reason: Those that ignore history are doomed to repeat it. This is doubly true when it comes to blindly accepting a "novel" mass vaccination for a weaponized, "reverse engineered" virus.

The historical record is very clear attenuated, live viruses in vaccines SPREAD the disease very effectively. When combined with SQUALENE ADJUVANT the virus becomes many times more potent and lethal. When given to CHILDREN IN SCHOOLS, millions of "typhoid Matts and Marys" will be spreading the disease exponentially.

Chillingly, the Novartis patent for the "novel pandemic flu" declares that "African green monkey kidney cells" will be used for the "viral growth substrate" i.e. the carrier medium.
(Page 3, paragraph 0037) We also see that "oil-in-water" squalene-based adjuvants will also be included (page 8 0098) but most incredible of all, because this is a "recombinant" and "novel" split vaccine, it is deemed necessary to include fragments of attenuated viruses (i.e. live pathogens) in the vaccine medium.

On July 13, 2009, the W.H.O. sanctioned this lunacy by declaring: "In view of the anticipated limited vaccine availability at global level and the potential need to protect against "drifted" strains of virus, it is recommended that promoting production and use of vaccines such as those that are formulated with oil-in-water adjuvants and live attenuated influenza vaccines is important."
http://www.who.int/csr/disease/swineflu/no...3/en/index.html

In conclusion and summation, it should be evident that the "2009 Swine Flu" could just as easily be called the "Bird Flu" because it is as much H5N1 (bird flu) as H1N1 (pig flu.) Novartis knew this in 2005 when it received hundreds of millions of dollars from Mike Leavitt's HHS to develop and patent the "bird flu" vaccine. I publicly charge that Novartis had advance knowledge of this "combination" because they had been in consultation with Jeffrey Taubenberger for years.

It is further evident that Novartis' patent provides for "influenza vaccine kits" to be provided to other pharmaceutical manufacturers as well. These "kits" are the basic raw ingredients needed for the other companies to build their own vaccines under their own label.

In 2005, this "jobbing" of separate ingredients by multiple companies would never have been allowed because of the legal liability issues involved. However, in 2009, all liabilities for death and disability from faulty or contaminated vaccines have been stripped away. Any wrongful death or disability lawsuits against Novartis or any other company will today be summarily dismissed.
Novartis today has carte blanche blanket immunity for their actions and any large pharmaceutical company who so desires, can join them at the feeding troughs just by paying millions for their "kits".

If this isn't the pinnacle of criminality, then I don't know what is.

Novartis, if this "novel split vaccine" is so wonderful and safe, why do you require such blanket protection from litigation?

Jeff -

As I have written, the smoking gun is found in the pages of this attached patent below.

Novartis admits that their "invented" vaccine will be effective because of ADVANCED KNOWLEDGE CONCERNING THE ORIGINS OF THE PANDEMIC FLU STRAIN THAT WAS "REVERSED ENGINEERED" WHICH WAS OBTAINED! Clearly the pandemic virus was not an act of nature.

This is prima facia evidence of conspiracy to commit mass murder to get gain, is it not?

WHAT A STORY.

The royal houses and their RH blood should do well then, how wonderful for them and their bio-weapon. -Craig

Copper can boost fight against swine flu

IANS 25 July 2009, 12:31pm ISTPrint Email Discuss Bookmark/
http://timesofindia.indiatimes.com/NEWS/He...how/4819063.cms

LONDON: Copper is quite effective in inhibiting the influenza A H1N1 virus commonly known as Swine flu, according to the latest study.

Copper appears to have a broad spectrum in antiviral activity due to its effectiveness against RNA (Ribonucleic acid)-based influenza and DNA (Deoxyribonucleic acid)-based adenovirus 40/41, which causes gastrointestinal infections.

Bill Keevil, professor at the University of Southampton's School of Biological Sciences, said that he believed copper could be used to reduce the spread of flu in public places.

"With the ongoing threat of contamination by influenza A virus, such as H1N1, there is a real and pressing need to utilise all appropriate and effective measures with proven antimicrobial qualities," said Keevil.

"It is recognised that many infectious diseases are contagious and studies have now shown that the use of copper as a surface material in key public places such as hospitals and food preparation areas offers the potential to substantially restrict and reduce the spread of harmful infections."

The influenza aspect of the study involved a series of experiments testing incubation of influenza A on copper and stainless steel surfaces.

Results showed that after incubation for one hour on copper, 75 percent of the virus was eradicated. Similar inactivation rates have now been observed for adenovirus 40/41.

The study has contributed further to the understanding of copper's antimicrobial qualities, which actively inhibit the growth of bacteria, fungi and viruses, said a University of Southampton release.

These findings were presented at the BIT Life Sciences' Second Annual World Summit on Anti-virals in Beijing this week.

Title: The ten points of the Nuremberg Code

craig-oxley - July 25, 2009 04:37 PM (GMT)

The ten points of the Nuremberg Code

The ten points are, (all from United States National Institutes of Health) [1]

1. The voluntary consent of the human subject is absolutely essential. This means that the person involved should have legal capacity to give consent; should be so situated as to be able to exercise free power of choice, without the intervention of any element of force, fraud, deceit, duress, over-reaching, or other ulterior form of constraint or coercion; and should have sufficient knowledge and comprehension of the elements of the subject matter involved as to enable him to make an understanding and enlightened decision. This latter element requires that before the acceptance of an affirmative decision by the experimental subject there should be made known to him the nature, duration, and purpose of the experiment; the method and means by which it is to be conducted; all inconveniences and hazards reasonable to be expected; and the effects upon his health or person which may possibly come from his participation in the experiment.

The duty and responsibility for ascertaining the quality of the consent rests upon each individual who initiates, directs or engages in the experiment. It is a personal duty and responsibility which may not be delegated to another with impunity.

2. The experiment should be such as to yield fruitful results for the good of society, unprocurable by other methods or means of study, and not random and unnecessary in nature.

3. The experiment should be so designed and based on the results of animal experimentation and a knowledge of the natural history of the disease or other problem under study that the anticipated results will justify the performance of the experiment.

4. The experiment should be so conducted as to avoid all unnecessary physical and mental suffering and injury.

5. No experiment should be conducted where there is a prior reason to believe that death or disabling injury will occur; except, perhaps, in those experiments where the experimental physicians also serve as subjects.

6. The degree of risk to be taken should never exceed that determined by the humanitarian importance of the problem to be solved by the experiment.

7. Proper preparations should be made and adequate facilities provided to protect the experimental subject against even remote possibilities of injury, disability, or death.

8. The experiment should be conducted only by scientifically qualified persons. The highest degree of skill and care should be required through all stages of the experiment of those who conduct or engage in the experiment.

9. During the course of the experiment the human subject should be at liberty to bring the experiment to an end if he has reached the physical or mental state where continuation of the experiment seems to him to be impossible.

10. During the course of the experiment the scientist in charge must be prepared to terminate the experiment at any stage, if he has probable cause to believe, in the exercise of the good faith, superior skill and careful judgment required of him that a continuation of the experiment is likely to result in injury, disability, or death to the experimental subject.

View Full Version: chlorine dioxide gas against influenza A virus

Title: chlorine dioxide gas against influenza A virus
Description: *[MMS TO YOU!]*

craig-oxley - July 18, 2009 03:58 PM (GMT)

Protective effect of low-concentration chlorine dioxide gas against influenza A virus infection

http://blogs.healthfreedomalliance.org/blo...irus-infection/

Norio Ogata and Takashi Shibata
Abstract

Influenza virus infection is one of the major causes of human morbidity and mortality. Between humans, this virus spreads mostly via aerosols excreted from the respiratory system. Current means of prevention of influenza virus infection are not entirely satisfactory because of their limited efficacy. Safe and effective preventive measures against pandemic influenza are greatly needed. We demonstrate that infection of mice induced by aerosols of influenza A virus was prevented by chlorine dioxide (ClO2) gas at an extremely low concentration (below the long-term permissible exposure level to humans, namely 0.1 p.p.m.). Mice in semi-closed cages were exposed to aerosols of influenza A virus (1 LD50) and ClO2 gas (0.03 p.p.m.) simultaneously for 15 min. Three days after exposure, pulmonary virus titre (TCID50) was 102.6±1.5 in five mice treated with ClO2, whilst it was 106.7±0.2 in five mice that had not been treated (P=0.003). Cumulative mortality after 16 days was 0/10 mice treated with ClO2 and 7/10 mice that had not been treated (P=0.002). In in vitro experiments, ClO2 denatured viral envelope proteins (haemagglutinin and neuraminidase) that are indispensable for infectivity of the virus, and abolished infectivity. Taken together, we conclude that ClO2 gas is effective at preventing aerosol-induced influenza virus infection in mice by denaturing viral envelope proteins at a concentration well below the permissible exposure level to humans. ClO2 gas could therefore be useful as a preventive means against influenza in places of human activity without necessitating evacuation.
Introduction

Among the most frequent infections of the upper and lower respiratory tracts in humans are those caused by influenza A virus, an enveloped, negative-sense, single-stranded RNA virus (Skehel & Hay, 1978; Ghendon et al., 1981; McCauley & Mahy, 1983). In a typical year, the virus infects 15–20 % of the population, causing >500 000 deaths worldwide (Thompson et al., 2003; WHO, 2003), but the most frightening effects are seen when new strains of virus emerge, resulting in devastating pandemics(Reid & Taubenberger, 2003). Current reports of avian-to-human transmission of influenza A virus, particularly of the H5N1 subtype, make the prospect of new pandemics particularly alarming (Webby & Webster, 2003; Webster et al., 2007). It cannot be overemphasized that novel strains of influenza virus have the potential to cause devastating pandemics in the near future (Palese, 2004). In the past century, three outbreaks of influenza virus infection have caused significant numbers of human fatalities. Among them, the 1918 strain was particularly notable for its infectivity and the severity of the disease (Kong et al., 2006).

As with many respiratory viruses, influenza virus spreads in the air as aerosols (droplets) expelled from an infected human. It needs to attach to and penetrate target cells to establish infection (Wagner et al., 2002). The principal route of entry of the virus into target cells takes place by binding to a receptor on the surface of a respiratory-tract epithelial cell, with subsequent transfer of viral genetic materials into the infected cell (Wagner et al., 2002). The envelope of the influenza virus carries two major surface glycoproteins, haemagglutinin (HA) and neuraminidase (NA) (EC 3 . 2 . 1 . 18). HA plays a key role in initiating viral infection by binding to sialic acid-containing receptors on host cells and mediates viral entry into cells and fusion with the cellular membrane (Tsuchiyaet al., 2001; Wagner et al., 2002; Bentz & Mittal, 2003). At a later stage of infection, NA also plays a key role by releasing sialic acid residues from the surface of progeny virus particles and from the infected cell, facilitating viral release (Solorzano et al., 2000; Wagner et al., 2002; Gong et al., 2007). When influenza virus is deficient in NA activity, progeny virus particles aggregateat the surface of the infected cell, severely impairing further spread of the virus to other cells. Both HA and NA are indispensable for successful infection and spread of this virus. Several antiviralcompounds, such as zanamivir, oseltamivir and resveratrol, have been developed, but their long-term efficacy is still limited by toxicity and inevitable selection of drug-resistant viral mutants (Nicholson et al., 2003). Vaccination against influenza virus still has limited efficacy, and complete prevention of the disease is not yet possible (Ge et al., 2004).

Chlorine dioxide (ClO_2) is a water-soluble, yellow gas with a characteristic chlorine-like odour and strong oxidizing activity (Moran et al., 1953; Fukayama et al., 1986; Ogata, 2007). It is commonly generated by adding acid to sodium chlorite ($NaClO_2$) solution. ClO_2 is a free radical, owing to one unpaired electron in its molecular orbital (Lynch et al., 1997). Possibly due to its strong oxidizing activity (Moran et al., 1953; Fukayama et al., 1986), when dissolved in water, ClO_2 has potent antimicrobial activity against bacteria, fungi, protozoa and viruses (Taylor & Butler, 1982; Harakeh et al., 1988; Chen

& Vaughn, 1990; Foschino et al., 1998; Eleraky et al., 2002; Schwartz et al., 2003; Sivaganesan et al., 2003; Li et al., 2004; Loret et al., 2005; Sy et al., 2005; Wilson et al., 2005; Okull et al., 2006; Simonet & Gantzer, 2006). However, the antimicrobial activities of gas-phase ClO2 have not been well studied. This is especially true of ClO2 gas at very low concentrations (subtoxic levels) that are sufficiently safe to use in places of human activity without evacuation. According to the US Occupational Safety and Health Administration, the long-term (8 h) permissible exposure level of ClO2 in environmental air in a human workplace is 0.1 p.p.m. (v/v) (US Department of Labor, Occupational Safety and Health Administration, 2006).

If gas-phase ClO2 is shown to have potent antimicrobial activity at a subtoxic level, it would be useful to employ it at such levels to prevent transmission of respiratory infections in public places such as offices, schools, theatres, hospitals and airport buildings without evacuating occupants. The purpose of the present study was to determine whether ClO2 gas at a subtoxic level can protect against influenza A virus infection by using a mouse–influenza model. The mechanism of the effect of ClO2 against this virus was further substantiated by in vitro biochemical experiments.
Methods

Reagents, animals and virus.
Sodium chlorite (NaClO2) was obtained from JT Baker. All other reagents were of reagent grade. CD-1 male mice, 6–8 weeks of age, were purchased from Charles River Laboratories. They were acclimatized in the laboratory for at least 1 week before the experiment. For each set of experiments, groups consisted of 15 mice. Five were sacrificed on day 3 (72 h) after exposure to virus aerosols (see below) for virus titre determination in their lungs and pathological examinations of lung tissue. Ten animals were observed further for mortality until day 21. The animal experiment was approved by Taiko Pharmaceutical Experiment Committee. Influenza virus strain A/PR/8/34 (H1N1) was used for animal experiments, and strain A/New Caledonia/20/99 (H1N1) was used for all in vitro experiments. These viruses were grown and propagated by using Madin–Darby canine kidney (MDCK) cells and Eagle's minimum essential medium (MEM) supplemented with 10 % fetal bovine serum. They were purified by velocity density-gradient centrifugation through a 20–50 % linearsucrose gradient. Virion-containing fractions were collected, titrated and stored at –80 °C until use. Just before use, a vial of virus was thawed quickly and diluted with Dulbecco's PBS to approximately 1 LD50 (one 50 % lethal dose) when delivered as aerosols. Mice were exposed to this preparation for 15 min. The diluted virus suspension was placed in a reservoir of an Aero-Mist nebulizer (CIS-US, Inc.). As a no-virus control, another interchangeable nebulizer holding a reservoir of PBS alone was used in parallel. The virus and no-virus aerosols were changed quickly by a converter . The day of aerosol challenge was termed day 0.

ClO2 generator.
The ClO2 generator was made in our laboratory . ClO2 was generated by mixing 250

mM HCl with 28 mM NaClO2; these solutions were delivered into a reaction vessel by precision liquid pumps A and B. ClO2 was generated according to the reaction 5NaClO2 +4HCl4ClO2+5NaCl+2H2O. ClO2 generated in the reaction vessel was next bubbled with air to expel it as gas. Approximately 50 p.p.m. ClO2 gas came out of the vessel at a flow rate of 0.4 l min–1. The ClO2 gas was next diluted by air using air pumps B and C. Finally, ClO2 gas at approximately 0.8 p.p.m. was delivered from the generator into the mouse cage at a flow rate of about 1.8 l min–1 . Concentration and flow rate of ClO2 gas were adjusted finely by a concentration regulator and a flow-rate regulator, respectively, to meet the gas concentration and flow rate required for the experiment. The ClO2 gas was finally delivered into the mouse cage as shown in Fig. 1(B).

Set-up of the animal experimental system.
For exposure of mice to ClO2 gas and virus aerosols, experiments were done in a class II biosafety cabinet. A semi-closed mouse cage of 26x37x18 cm (inner dimensions) containing 15 mice was placed in the biosafety cabinet . A battery-powered electric fan (2x6x6 cm) to circulate air inside the cage was inserted in the cage with the mice and a battery box. The plexiglass cage was airtight except for the top cover, which was placed loosely on the cage so that air could seep out from the cage to prevent build-up of pressure within the cage. One of two interchangeable nebulizers, containing either PBS alone or virus suspension in PBS, was connected to an air pump . Aerosols made by the nebulizers, either of PBS alone or of virus suspension in PBS, were delivered into the mouse cage. The above-mentioned two kinds of aerosol were interchanged quickly by the converter. ClO2 gas or air (0 p.p.m. ‘gas’ as a control) was delivered into the cage through another hole . A sampling tube of a ClO2 analyser (model 4330-SP; Interscan Corporation) was inserted into the cage through another hole. ClO2 gas concentrations were measured intermittently.

Pathological examination.
Mice were sacrificed by an intramuscular injection of pentobarbital sodium, and their lungs were removed carefully and weighed. A portion of the lung was homogenized with PBS and aliquots were assayed for virus titre by using MDCK cells. The virus titre was expressed as TCID50. Another portion of the lung was fixed in buffered formalin and stained with haematoxylin and eosin for histopathological examinations.

Assay of in vitro infectivity, HA titre and NA activity of virus.
Influenza virus (1 mg protein ml–1) was treated with ClO2 at various concentrations for 2 min at 0 °C in PBS. The reaction was terminated by adding a twofold molar excess of Na2S2O3. The in vitro infectivity of the virus was determined by using MDCK cells as indicator cells. Briefly, 1x106 cells were inoculated in a Petri dish of 6 cm diameter using 10 ml Eagle’s MEM containing 10 % fetal bovine serum. Cells were grown until confluent (about 2 days) and then inoculated with tenfold serial dilutions of virus, treated or not treated with ClO2, suspended in PBS. Cells were next overlaid with freshly prepared medium without serum, but supplemented with 0.9 % agar, 2.5 µg trypsin ml–1, 100 units penicillin G ml–1 and 100 µg streptomycin ml–1. The culture dish was

incubated at 37 °C for 3–4 days in 95 % air/5 % CO_2. The cells were then fixed and stained with crystal violet to count the number of plaques. The concentrations of ClO_2 and/or $Na_2S_2O_3$ used in the above experiment had no effect on the growth of MDCK cells. For the HA titre assay, twofold serial dilutions of treated (0 °C, 2 min, in PBS) virus were prepared in PBS and added to a round-bottomed 96-well microtitre plate (50 µl per well). Chicken red blood cells (2x106 cells in 50 µl) were then added and incubated for 1 h at 4 °C. End-point HA titres were expressed as the reciprocal of the last dilution that showed complete haemagglutination. For the NA assay, virus was diluted to 8 µg protein ml–1, and then 2 mM 2′-(4-methylumbelliferyl)--D-N-acetylneuraminicacid (sodium salt) in calcium-MES buffer [32.5 mM MES buffer (pH 6.5), 4 mM $CaCl_2$] was added to a final concentration of 1 mM. The mixture was incubated for 1 h at 37 °C. The reaction was terminated by adding 800 µl glycine buffer (0.1 M, pH 10.7) containing 25 % ethanol. Fluorescence intensity was measured (ex=365 nm, em=450 nm) by a spectrofluorophotometer (model RF-5300PC; Shimadzu).

Sequencing and mass spectrometry (MS) of peptides.
Synthetic peptides HA1 (NPENGTCYPG) and HA2 (RNLLWLTGKN) correspond to aa 101–110 and 162–171, respectively, of the HA protein. Peptides NA1 (FESVAWSASA) and NA2 (SGYSGSFVQH) correspond to aa 174–183 and 400–409, respectively, of the NA protein. They were obtained from Global Peptide Services. These peptides (2 mM each) were treated with 4 mM ClO_2 at 25 °C for 2 min in PBS in a volume of 500 µl. After the reaction, a twofold molar excess (1.6 µl) of 2.5 M $Na_2S_2O_3$ was added to terminate the reaction. A portion (100 µl) of the reaction mixture was then loaded for high-performance liquid chromatography (HPLC) using a reverse-phase column (Cosmosil 5C18-AR-300, 4.6 mm inner diameter, 250 mm long; Nacalai Tesque). The column was eluted with a solvent of 0.1 % (v/v) trifluoroacetic acid for 6 min and then with a linear gradient of acetonitrile from 10 to 50 % in the above solvent over the next 54 min at a flow rate of 1 ml min–1. Peptides were monitored by absorption at 270 nm. Peak materials (peptides) were collected and lyophilized. The lyophilized peptides were next analysed by Edman degradation using a protein sequencer (Procise; Applied Biosystems) to determine their amino acid sequences. Molecular masses of peptides and amino acid residues were determined by using a mass spectrometer (model Ultraflex; Bruker Daltonik) in matrix-assisted laser desorption/ionization–time of flight (MALDI-TOF) and MALDI-TOF/TOF (tandem MS) modes. -Cyano-4-hydroxycinnamic acid was used as a matrix.

Statistical analysis.
Data were analysed by using Student’s t-test or Fisher’s exact test. P values <0.05 were considered statistically significant.
Results

Simultaneous exposure of mice to virus aerosols and ClO_2 gas

ClO2 gas made by a ClO2 generator was delivered into the mouse cage for 15 min simultaneously with aerosols of PBS alone or of influenza A virus suspended in PBS . The ClO2 gas concentration in the mouse cage of the ClO2-treated group during this period was 0.032±0.026 p.p.m. (time-weighted mean±SD). As a ClO2-untreated control, only air (0 p.p.m. ClO2) and aerosols of influenza virus suspended in PBS were delivered into the mouse cage housing another group of 15 mice. In the ClO2-untreated control group on day 3 (72 h), the pulmonary titre (TCID50) of the virus was 106.7±0.2 (n=5), whereas it was 102.6±1.5 in the ClO2-treated group (P=0.003, Student's t-test) , demonstrating clearly that ClO2 gas was effective in decreasing the number of infectious viruses in mouse lungs (a similar result was obtained in another independent experiment). Cumulative mortality at day 16 was 70 % (7/10) in the ClO2-untreated group and 0 % (0/10) in the ClO2-treated group (P=0.002, Fisher's exact test) . This result indicates that ClO2 gas can prevent mortality of mice challenged with influenza A virus aerosols. We confirmed the reproducibility of the above result in another experiment, in which the mortality was 5/10mice without ClO2 gas, and 0/10 with 0.03 p. p.m. ClO2 gas (P=0.03).

Relative body mass (body mass at day 7 compared with that at day 0) was 1.09±0.08 (n=5) in the ClO2-treated group and 0.91±0.04 (n=5) in the untreated group (P=0.002, Student's t-test) . This result further supports the protection of mice from morbidity caused by influenza A virus. As another control, ClO2 gas (0.03 p.p.m., without virus) and PBS aerosols (without virus) were delivered into a cage housing another group of 15 mice to know whether ClO2 gas at a concentration of 0.03 p.p.m. has any toxic effect on mice. Mice were apparently completely healthy for the 21 days of observation. Microscopic examination of histopathological specimens of lungs from five mice treated with 0.03 p.p.m. ClO2 gas and PBS aerosols showed that their lungs were completely normal (data not shown).

Delayed gas-delivery experiment
Next, we examined the effect of ClO2 gas delivered for 15 min into the mouse cage at various delay times after commencement of the delivery of influenza virus aerosols. The purpose of this experiment was to determine whether ClO2 gas delivered after the virus aerosols would still be able to prevent viral infection. Mortality of mice was 0 % (0/10) when ClO2 was deliveredsimultaneously with the virus aerosols (0 min delay, P=0.022 versus no-ClO2 group) , confirming the result shown in Table 2. When ClO2 gas was delivered 5 min after the delivery of virus aerosols (5 min delay), mortality was 10 % (1/10) (P=0.081 versus no-ClO2 group). The mortality rate was 50 % (5/10) with a 15 min delay, which was the same as in animals that received no ClO2 gas treatment . The result indicates that ClO2 gas was an effective preventative of influenza virus infection when present in the environment simultaneously with the virus aerosols. When delivered after a 5 min delay, it may have been slightly effective (P=0.081), but it was completely ineffective when delivered 15 min after commencement of the delivery of the virus aerosols. Taken together, these results indicate that ClO2 gas inactivated the

virus before it entered the lungs, but that it lacked the ability to inactivate viruses that had already entered the lungs and established infection. In summary, ClO2 gas, at an extremely low concentration (below the long-term permissible exposure level to humans), is effective at preventing infection of mice by influenza A virus without any harmful effects.

Effect of ClO2 on the infectivity of influenza A virus in vitro
Influenza A virus was treated in vitro with ClO2 and its infectivity was assayed by using cultured cells. Infectivity of the virus decreased markedly after treatment with 40–320 µM ClO2, demonstrating that ClO2 indeed inactivates the infectivity of the virus . As the HA and NA proteins on the virus surface (envelope) are indispensable to the infectivity of the virus, we assayed their biological activities. As shown in Table 5, both HA and NA activities decreased markedly after ClO2 treatment in vitro. This result suggests that the reduction in the infectivity of influenza virus is attributable to the decrease of biological activities of the HA and NA proteins on the virus envelope.

Denaturation of HA and NA proteins
We speculated that ClO2 denatured the HA and NA proteins and inactivated their biological activities. To provide support for this hypothesis, we selected two model decapeptides (HA1 and HA2) from HA and two (NA1 and NA2) from NA (for sequences, see Methods). After treatment of these peptides with ClO2, they were analysed by reverse-phase HPLC. When these four peptideswere treated individually with ClO2, there were several novel peptide peaks on the chromatograms that differed completely from the original peptide peaks (data not shown). This indicates that the original peptides were modified covalently by reaction with ClO2. This hypothesis was supported further by the fact that, upon sequencing (by Edman degradation) of the peptide peaks recovered from HPLC, some amino acid residues in the peptides were not identified . For example, regarding the peptide HA2 (RNLLWLTGKN, aa 162–171) treated with ClO2, the sequence of the peptide peak recovered from HPLC was RNLLXLTGKN; the fifth amino acid residue (Trp166 in the original protein) could not be identified by the conventional protein-sequencing method. This indicates strongly that this residue (tryptophan) was modified covalently by ClO2. Likewise, other peptides were also found to be modified at tryptophan and tyrosine residues . It is unclear whether the cysteine residue of HA1 was modified by ClO2, because cysteine residues are not positively identifiable by this conventional sequencing method.

Covalent modification of tryptophan and tyrosine residues by ClO2 was confirmed by MS. As shown in Table 7, in the modified HA2 and NA1 peptides, there was an increase of about 32 or 48atomic mass units in the tryptophan residues, indicating that two or three atoms of oxygen were incorporated covalently into tryptophan residues. Likewise, there was an increase of about 32 or 48 atomic mass units in the tyrosine residues in the modified HA1 and NA2 peptides , indicating the covalent incorporation of two or three atoms of oxygen into tyrosine residues. Taken together, we conclude that amino acid residues in the HA and NA proteins, primarily tryptophan and tyrosine

residues, are modified covalently by ClO2. Such modifications of amino acid residues appear to denature the HA and NA proteins of influenza A virus, which are indispensable for its infectivity, and consequently abolish infectivity of the virus.
Discussion

We have demonstrated that ClO2 gas at an extremely low concentration can prevent influenza A virus infection of mice caused by aerosols. According to the US Occupational Safety and Health Administration, the 8 h permissible exposure level of ClO2 in human workplaces is 0.1 p.p.m. The level of ClO2 gas (0.03 p.p.m.) used in this study is well below this level, and our results indicate that ClO2 at this level could be used in the presence of humans to prevent their infection by influenza A virus and possibly other related virus infections of the respiratory tract. Specifically, ClO2 gas could be used in places such as offices, theatres, hotels, schools and airport buildings without evacuating people, thus not interrupting their normal activities.Current growing concerns about the threat posed by highly pathogenic H5N1 avian influenza virus have prompted interest in evaluating measures against this virus. ClO2 and chlorine have long beenused as disinfectants of public water supplies. Thus far, chlorine treatment (chlorination) represents the most common form of disinfection used in water treatment. Rice et al. (2007) reportedrecently that the H5N1 strain of influenza A virus was inactivated by chlorine in an in vitro experiment. In their experiment, the free chlorine concentration typically used in drinking-water treatment was sufficient to inactive the virus by more than three orders of magnitude. Although the strain of influenza virus used in our present experiment (H1N1) differs from that of Rice et al. (2007), it is suggested that our present method, namely treatment of influenza virus by ClO2, provides another effective manoeuvre for the treatment of public water supplies contaminated by the virus, and it paves a new way for prevention of pandemic influenza.

ClO2 gas is very soluble in water, and is in equilibrium between the gas and water phases. In our preliminary experiment, ClO2 reached equilibrium between the gas and water phases within 30 s (half-maximal in 20 s) (N. Ogata, unpublished data). Generally speaking, a water-soluble gaseous substance reaches equilibrium between the gas and water phases according to Henry’s law, C=kP, where C is the concentration of a substance in the water phase, P is partial pressure of the substance in the gas phase and k is an equilibrium constant. When the diameter of the aerosol is in the range 1–10 µm, as in the present experiment, equilibrium is reached within 1 min. We also found that Henry’s equilibrium gas constant k regarding the ClO2–water equilibrium, namely k in the above equation, was 3.9x10–5 mol l–1 Pa–1 (N. Ogata, unpublished data). Therefore, the ClO2 concentration in the virus aerosols is theoretically 0.12 µM when the aerosols are in equilibrium with 0.03 p.p.m. ClO2 gas. This suggests further that the influenza A virus is inactivated at 0.12 µM ClO2 in water (PBS in our present experiment).

We have shown that ClO2 denatures (abolishes the functions of) the HA and NA proteins on the envelope of the influenza virus . As these proteins are indispensable for

the infectivity of this virus, the fact that they were denatured by ClO2 could explain why infectivity of the virus decreased after treatment with ClO2. However, it is noteworthy that the reduction in infectivity, as demonstrated by plaque assay, did not necessarily parallel the reductions in HA and NA activities . One possibility is the presence of other protein(s) in the virus that is/are critical and indispensable for its infectivity and is/are denatured by ClO2. For example, the M2 protein, a proton channel in the virus envelope, could be a target of ClO2. This protein is indispensable for the virusto establish infection (Tang et al., 2002). A tryptophan residue (Trp41) of this protein protrudes into the proton channel and works as a 'gate' for a proton that enters and passes through the channel (Tang et al., 2002). As tryptophan residues were modified by ClO2 in this study (Tables 6 and 7), it is likely that ClO2 could also modify the tryptophan residue (Trp41) in this protein and abolish its function.

Tyrosine (Tyr108) and tryptophan (Trp166) residues in HA are conserved among many strains of influenza virus and constitute the binding site of the protein for the receptor (sialic acid) [Tyr98 and Trp153, respectively, in Stevens et al. (2006)]. Therefore, covalent modification of these amino acid residues (Tables 5–7) explains the reduction in HA activity caused by ClO2 treatment. Likewise, tyrosine (Tyr402) and tryptophan (Trp179) residues are conserved in NA. They constitute an active-site pocket of the protein and are necessary for its catalytic activity [Tyr406 and Trp178, respectively, in Lentz et al. (1987)]; this view is supported by the fact that complete loss of its enzymic activity occurs by their substitution with other amino acids (Lentz et al., 1987). Therefore, covalent modification of these amino acid residues in NA by ClO2 would explain its inactivation by ClO2.

Herbal Medicine for ‘flu (influenza). Swine Fever: prophylactic use of Echinacea in H1N1 (bird and pig ‘flu) pandemic control
April 30th, 2009

ADEQUATE STOCKS OF ANTI-VIRAL (ANTI-INFLUENZA) HERBAL MEDICINE HELD
(Please add your comments below)

The World Health Organisation (Geneva, 29th May 09) has called for drug companies to make available increased stocks of anti-virals, at a cost that can be afforded by the world’s populations.

Although we are not one of those drug companies, Rutland Biodynamics has been receiving calls from concerned practitioners about the sustainability of the supplies of our fresh Echinacea purpurea tincture, fluid extracts and of other Echinacea species.

This is because Echinacea species has been widely held for many years to be the main anti-viral and anti-influenza herbal medicine available in Europe. In addition, Echinacea is believed to be an immuno-stimulant in humans and has well demonstrated anti-bacterial properties that are effective in the control of the symptoms of the common cold.

We are pleased to re-assure all parties that we are able to supply in the region of up to 2,000 litres of various Echinacea tincture and fluid extract forms immediately (enough for 400,000 single doses of 5ml) and that we have further (currently unestimated) stocks currently in the field, that are due to be harvested this year.

Please enquire for bulk prices.

Corinne Montenon wrote to us to say (and I have put it up here for readers):

There is a widespread consensus amongst herbalists that immunostimulants are not ideal for a virus such as H1N1 as it relies on the virulence of a healthy immune system to spread.
As a herbalist, I am not advocating the use of immunostimulants, but of antivirals such as Scutellaria lateriflora, Curcuma longa and Thuja occidentalis. I think you will find this opinion to be quite widespread.
Best wishes,
Corinne

David Hammond wrote to us saying (and we hve put it up here for readers to see) :

Some of the early information on swine flu (and, of course, it is very early information, and may not be true) indicates that it kills by producing a ‘cytokine storm’, much in the manner that bird flu does. If this is true, then is it wise to stimulate the immune system? A better approach might be to take Curcuma, as Turmeric is a great anti-inflammatory, and would reduce the production of inflammatory cytokines, especially TNFa. Any comments? Regards Dave
herbalist says:
May 1, 2009 at 10:32 am

We are of course aware of the ideas you have described.

I do slightly take issue with the idea that there is widespread consensus about this, because our company always sees a big uptake of Echinacea when this virus threatens, and by very experienced professional practitioners. I do entirely agree that the ‘cytokine storm’ idea is widely touted every year that there is an outbreak of the H1N1 variety but that is not the same as consensus.
I should also say that I am one herbalist who does not accept the idea for a number of reasons. One is that it could barely be called it a hypothesis, and I am not aware of any way in which it can be tested. I do of course realise that the idea has been promoted by one very highly respected herbalist in the first place.
There seems to be confusion between using Echinacea for prophylaxis and using it later on during some high fever state. Terms such as ‘cytokine storm’ are emotive and appealing but frankly ill-defined. Not mentioning the self-stabilising aspects of the pycho-neuro-endocrino- immune system, the “immune system” is spoken of very much as if it is understood in a rather one-dimensional way, when we know that the inter-relationships between the plant and human world is a vast rich tapestry operating at a every level of life, feeding back at the molecular level. People are not all the same as each other; might populations develop different susceptibilities over centuries? We do not even know whether and if so, how genetic susceptibility might affect any such hypothetical cytokine storm.
As far as I can gather, the concept itself is derived from some blue-sky thinking about the descriptions of the great ‘flu outbreak after WWI. I do not know of any direct evidence, although I would be interested to hear of any. I could go on but what I am saying is that, although you may be correct, there is very little justification for the idea yet.

Reducing inflammation is a method of last resort when the inflammation threatens the further health of the patient and at other times, I think it’s a somewhat allopathic response. In the meantime, inflammation is Nature’s method – traditionally herbalists give diaphoretics to raise the temperature in the case of colds ! As herbalists, we are unlikely (hopefully) to see life-threatening cases.

Therefore, on the balance of probability, I do what most herbalists do. I supply Echinacea (liberally) first and foremost to my loved ones, whenever ‘flu threatens and we have have really quite elderly relations who claim not to have had a cold for years and years since being ‘on the Echinacea’. That and the world uptake in Echinacea at this time is the empirical evidence, admittedly circumstantial, that I offer.

Kind regards to all,
Paul Chenery MNIMH

Dear Corinne

After a quick search on google i’ve found some research supporting possible antiviral properties of Scutellaria Baicalensis however i’ve been unable to find any supporting research for Scutellaria Laterifolia.
Do you have any information about Scut Laterifolia as an antiviral.
Many thanks
licia
Cristina Cromer says:
May 3, 2009 at 1:34 pm

I am always reluctant to treat the immune system unless it specifically needs it.

There is plenty of good evidence that elderberries (Sambucus nigra fructus) are active against cold and flu viruses, both as prophylactic and as treatment. I shall certainly be ordering extra for my practice. I shall also make sure my patients know how to recognise and harvest this splendid herb for themselves.

Cristina Cromer MNIMH
Corinne says:
May 3, 2009 at 10:33 pm

Dear Licia,

Most of the research on anti-viral effects seems to be on Scutellaria Baicalensis indeed, but both species contain baicalin and its aglycone baicalein, known anti-virals (just Google Baicalin and anti-viral and research will come up like: http://www.ionchannels.org/showabstract.php?pmid=14692724).

Therefore, I assume that although Scut Lat is more known for its effect on the nervous system, it probably also has an anti-viral effect, since it contains anti-viral compounds. But I’m not a chemist…

Our dear friend, Christopher Hedley, was here last week and told us that it was said that Eupatorium perfoliatum was used with apparent great effect in the great ‘flu epidemic of a century ago, although the evidence was of course somewhat anecdotal. Apparently, one herbalist who was commissioned by an industrialist to treat a whole mid-west town used Feverwort (also known as Thoroughwort and Boneset) and reported that not one case of ‘flu struck in the town, at all.
Professional care is advised in the use of Eupatoria species, which should only be taken under the supervision of a qualified medical herbalist.
Rutland Biodynamics is shortly harvesting fresh biodynamic organic Eupatorium perfoliatum and there should be good stocks available by the autumn. We are making a

new product – a 1:1 fresh 25%!
There are some interesting links at http://en.wikipedia.org/wiki/Eupatorium_perfoliatum
Christopher Hedley says:
June 27, 2009 at 5:56 pm

Cytokine storms are a normal occurrence in influenza and not necessarily the cause of death. Provisional indications for this strain of ‘flu point to the same underlying causes of death as in any strain – that is elderly, weakened and immune compromised people are those at most risk.

Of course Echinacea might not be all that useful in treating pneumonia of any kind but it is useful when infections reach the blood level and viranaemia is a feature of the current pandemic strains.

The idea that Echinacea is a simple immune system stimulant is just plain wrong. Research points to its role in balancing and reinforcing immunity.

The clearest analysis of the subject I have seen is by the American herbalist Paul Bergner writing in his news letter, ‘Medical Herbalism’ and available on his web site – links below.

Incidentally, he also gives a useful analysis of the pros and cons of using Echinacea in auto-immune disease in Medical Herbalism volume 15, number 3, Winter 2007. I heartily recommend both issues to all interested readers.

PS. the accurate version of the Boneset and 1918 ‘flu is also in Medical Herbalism. My version was a little inflated but it was a nice day and I was in an expansive mood.

First of all I would like to point out that I’m not a qualified herbalist on paper but I’ve

studied the works of some of the greatest true Vitalist suppressed healers around. In order to treat any real Pandemic the first thing you need is Boneset (Eupatorium perfoliatum). This alters the immune system to reduce cytokine storm whilst still doing the typical job we would take it for normal flus. The next would be the herb Boldo which also reduces cytokine storm. Of course we’d use lower levels of Boldo and back the rest up with Boneset. The use of the King of Herbs, Garlic is a must. This must be raw Garlic cloves, a preventative measure would be 2-3 cloves daily. During a Pandemic then this would increase to 14 cloves per day. One lady took 47 cloves daily for three days running making 141 cloves no problem. Theres arguments against the Cold Sheet Treatment during Pandemic but the big promoters of the CST will tell you its perfectly fine and will heal but make sure the Garlic is within the protocol.

The ideal way to treat Pandemic Flu is to simply make sure you balance the immune stimulating herbs/foods with the herbs/flus which do not rely on immune stimulation to kill such as Garlic. So we’d use Garlic, Colloidal Silver, Citricidal & Ozone whilst used Boneset, Echinacea and so forth. As always its about balance.

I can’t stress enough the use of Ozonated Water for fighting and especially very quick recovery rates from illness. I’ve used Ozone for almost 8 years with great results. I’ve seen people recover in a couple of days to say four days, whilst other people are taking 3 or more weeks. This is most definately down to the Ozone.

Lets not forget the Tumeric and Cayenne Pepper of course. Also the most basic formula of Cayenne, Horseradish, Ginger, Garlic & onion in Apple Cyder Vinegar. A must is also the Mucusless Diet in order to cleanse the body of the feeding ground of the invaders. The more excess mucus in the lung the more trouble your going to be in.

Finally I suggest everyone studies up on Urine Therapy and some of its properties like Urea for fighting Pandemic. You might be pleasantly surprised. Hope this has been of some use to you all and God be with you if this does being a true Pandemic and not just something to cover up the Economic Collapse due between August and October.

Title: Homeless people die after bird flu vaccine trial
Description: *in Poland*

craig-oxley - July 7, 2009 04:57 PM (GMT)

Homeless people die after bird flu vaccine trial in Poland

Three Polish doctors and six nurses are facing criminal prosecution after a number of homeless people died following medical trials for a vaccine to the H5N1 bird-flu virus.

By Matthew Day in Warsaw
Published: 4:37PM BST 02 Jul 2008
http://www.telegraph.co.uk/news/worldnews/...-in-Poland.html

The medical staff, from the northern town of Grudziadz, are being investigated over medical trials on as many as 350 homeless and poor people last year, which prosecutors say involved an untried vaccine to the highly-contagious virus.

Authorities claim that the alleged victims received £1-2 to be tested with what they thought was a conventional flu vaccine but, according to investigators, was actually an anti bird-flu drug.

The director of a Grudziadz homeless centre, Mieczyslaw Waclawski, told a Polish newspaper that last year, 21 people from his centre died, a figure well above the average of about eight.

Although authorities have yet to prove a direct link between the deaths and the activities of the medical staff, Poland's health minister, Ewa Kopacz, has said that the doctors and nurses involved should not return to their profession.

"It is in the interests of all doctors that those who are responsible for this are punished," the minister added.

Investigators are also probing the possibility that the medical staff may have also have deceived the pharmaceutical companies that commissioned the trials.

The suspects said that the all those involved knew that the trial involved an anti-H5N1 drug and willingly participated.

The news of the investigation will come as another blow to the reputation of Poland's beleaguered and poverty-stricken national health service. In 2002, a number of ambulance medics were found guilty of killing their patients for commissions from funeral companies.

Summons

Dear Madam/Sir,

We are required to deal with the following matter in which you are concerned:

International SCHOOL Incidents

X Please report in person *) to our office or telephone me for a convenient appointment time.

Please report in person *) to our office or delegate in your stead an authorised proxy. You can also report to us with your proxy.

A proxy can be a natural person in their own right, a member of the legal profession. a representative of commercial law or a registered trading company. Persons who unauthorised engage in a proxy for another person for business profit purposes are not permitted to be authorised as a proxy. The proxy (authorised representative) must be fully conversant with the facts and be able to prove this by a written authorisation. The proxy has to read aloud in his or the company's name. (?)

A written proxy is not required

- if you are represented by an authorised professional person of a group e.g. a solicitor, notary public or economic trustee.

- if you are represented by family members, namely household members, employees, officials of organisations who are known to us and no doubt exists about their authority to act as proxy.

- if you come to us together with your authorised proxy.

Date: Time:

Place (Floor/Room Nr.)

Please bring with you when you attend this Summons, an official photograph identity card and the following documents:

Evidenceof income and financial circumstances (e.g. salary verification, income tax information)

If you are unable to comply with this Summons for valid reasons (e.g. illness, disability, urgent occupation-related obstacles, holiday travel which cannot be postponed)

please inform us immediately so that we can postpone the quoted date if need be.

Yours sincerely,

*)You are at liberty to bring along a legal adviser of your choice.

View Full Version: Charges filed against WHO and UN for Bioterrorism

Title: Charges filed against WHO and UN for Bioterrorism
Description: *and Intent to Commit Mass Murder*

craig-oxley - June 26, 2009 01:40 PM (GMT)

Charges filed against WHO and UN for Bioterrorism and Intent to Commit Mass Murder

Barbara Minto – Natural News June 25, 2009
http://naturalnews.com/z026503_pandemic_sw...oterrorism.html

As the anticipated July release date for Baxter's A/H1N1 flu pandemic vaccine approaches, an Austrian investigative journalist is warning the world that the greatest crime in the history of humanity is underway. Jane Burgermeister has recently filed criminal charges with the FBI against the World Health Organization (WHO), the United Nations (UN), and several of the highest ranking government and corporate officials concerning bioterrorism and attempts to commit mass murder. She has also prepared an injunction against forced vaccination which is being filed in America. These actions follow her charges filed in April against Baxter AG and Avir Green Hills Biotechnology of Austria for producing contaminated bird flu vaccine, alleging this was a deliberate act to cause and profit from a pandemic.

Summary of claims and allegations filed with FBI in Austria on June 10, 2009

In her charges, Burgermeister presents evidence of acts of bioterrorism that is in violation of U.S. law by a group operating within the U.S. under the direction of international bankers who control the Federal Reserve, as well as WHO, UN and NATO. This bioterrorism is for the purpose of carrying out a mass genocide against the U.S. population by use of a genetically engineered flu pandemic virus with the intent of causing death. This group has annexed high government offices in the U.S.

Specifically, evidence is presented that the defendants, Barack Obama, President of the U.S, David Nabarro, UN System Coordinator for Influenza, Margaret Chan, Director-General of WHO, Kathleen Sibelius, Secretary of Department of Health and Human Services, Janet Napolitano, Secretary of Department of Homeland Security, David de

Rotschild, banker, David Rockefeller, banker, George Soros, banker, Werner Faymann, Chancellor of Austria, and Alois Stoger, Austrian Health Minister, among others, are part of this international corporate criminal syndicate which has developed, produced, stockpiled and employed biological weapons to eliminate the population of the U.S. and other countries for financial and political gain.

The charges contend that these defendants conspired with each other and others to devise, fund and participate in the final phase of the implementation of a covert international bioweapons program involving the pharmaceutical companies Baxter and Novartis. They did this by bioengineering and then releasing lethal biological agents, specifically the "bird flu" virus and the "swine flu virus" in order to have a pretext to implement a forced mass vaccination program which would be the means of administering a toxic biological agent to cause death and injury to the people of the U.S. This action is in direct violation of the Biological Weapons Anti-terrorism Act.

Burgermeister's charges include evidence that Baxter AG, Austrian subsidiary of Baxter International, deliberately sent out 72 kilos of live bird flu virus, supplied by the WHO in the winter of 2009 to 16 laboratories in four counties. She claims this evidence offers clear proof that the pharmaceutical companies and international government agencies themselves are actively engaged in producing, developing, manufacturing and distributing biological agents classified as the most deadly bioweapons on earth in order to trigger a pandemic and cause mass death.

In her April charges, she noted that Baxter's lab in Austria, one of the supposedly most secure biosecurity labs in the world, did not adhere to the most basic and essential steps to keep 72 kilos of a pathogen classified as a bioweapon secure and separate from all other substances under stringent biosecurity level regulations, but it allowed it to be mixed with the ordinary human flu virus and sent from its facilities in Orth in the Donau.

In February, when a staff member at BioTest in the Czech Republic tested the material meant for candidate vaccines on ferrets, the ferrets died. This incident was not followed up by any investigation from the WHO, EU, or Austrian health authorities. There was no investigation of the content of the virus material, and there is no data on the genetic sequence of the virus released.

In answer to parliamentary questions on May 20th, the Austrian Health Minister, Alois Stoger, revealed that the incident had been handled not as a biosecurity lapse, as it should have been, but as an offence against the veterinary code. A veterinary doctor was sent to the lab for a brief inspection.

Burgermeister's dossier reveals that the release of the virus was to be an essential step for triggering a pandemic that would allow the WHO to declare a Level 6 Pandemic. She lists the laws and decrees that would allow the UN and WHO to take over the

United States in the event of pandemic. In addition, legislation requiring compliance with mandatory vaccinations would be put into force in the U.S. under conditions of pandemic declaration.

She charges that the entire "swine flu" pandemic business is premised on a massive lie that there is no natural virus out there that poses a threat to the population. She presents evidence leading to the belief that the bird flu and swine flu viruses have, in fact, been bioengineered in laboratories using funding supplied by the WHO and other government agencies, among others. This "swine flu" is a hybrid of part swine flu, part human flu and part bird flu, something that can only come from laboratories according to many experts.

WHO's claim that this "swine flu" is spreading and a pandemic must be declared ignores the fundamental causes. The viruses that were released were created and released with the help of WHO, and WHO is overwhelmingly responsible for the pandemic in the first place. In addition, the symptoms of the supposed "swine flu" are indistinguishable from regular flu or from the common cold. The "swine flu" does not cause death anymore often than the regular flu causes death.

Burgermeister notes that the figures for deaths reported for the "swine flu" are inconsistent and there is no clarity as to how the number of "deaths" has been documented.

There is no pandemic potential unless mass vaccinations are carried out to weaponize the flu under the guise of protecting the population. There are reasonable grounds for believing that the mandatory vaccines will be purposely contaminated with diseases that are specifically designed to cause death.

Reference is made to a licensed Novartis bird flu vaccine that killed 21 homeless people in Poland in the summer of 2008 and had as its "primary outcome measure" an "adverse events rate", thereby meeting the U.S. government's own definition of a bioweapon (a biological agent designed to cause an adverse events rate, i.e death or injury) with a delivery system (injection).

She alleges that the same complex of international pharmaceutical companies and international government agencies that have developed and released pandemic material have positioned themselves to profit from triggering the pandemic with contracts to supply vaccines. Media controlled by the group that is engineering the "swine flu" agenda is spreading misinformation to lull the people of the U.S. into taking the dangerous vaccine.

The people of the U.S. will suffer substantial and irreparable harm and injury if they are forced to take this unproven vaccine without their consent in accordance with the Model State Emergency Health Powers Act, National Emergency Act, National Security

Presidential Directive/NSPD 51, Homeland Security Presidential Directive/HSPD-20, and the International Partnership on Avian and Pandemic Influenza.

In the U.S. since 2008, Burgermeister charges that those named in her allegations have implemented new and/or accelerated the implementation of laws and regulations designed to strip the citizens of the U.S. of their lawful constitutional rights to refuse an injection. These people have created or allowed provisions to remain in place that make it a criminal act to refuse to take an injection against pandemic viruses. They have imposed other excessive and cruel penalties such as imprisonment and/or quarantine in FEMA camps while barring the citizens of the U.S. from claiming compensation from injury or death from the forced injections. This is in violation of the laws governing federal corruption and the abuse of office as well as of the Constitution and Bill of Rights. Through these actions, the named defendants have laid the groundwork for mass genocide.

Using the "swine flu" as a pretext, the defendants have preplanned the mass murder of the U.S. population by means of forced vaccination. They have installed an extensive network of FEMA concentration camps and identified mass grave sites, and they have been involved in devising and implementing a scheme to hand power over the U.S. to an international crime syndicate that uses the UN and WHO as a front for illegal racketeering influenced organized crime activities, in violation of the laws that govern treason.

She further charges that the complex of pharmaceutical companies consisting of Baxter, Novartis and Sanofi Aventis are part of a foreign-based dual purpose bioweapons program, financed by this international criminal syndicate and designed to implement mass murder to reduce the world's population by more than 5 billion people in the next ten years. Their plan is to spread terror to justify forcing people to give up their rights, and to force mass quarantine in FEMA camps. The houses, companies and farms and lands of those who are killed will be up for grabs by this syndicate.

By eliminating the population of North America, the international elite gain access to the region's natural resources such as water and undeveloped oil lands. And by eliminating the U.S. and its democratic constitution by subsuming it under a North American Union, the international crime group will have total control over North America.

Highlights from the complete dossier

The complete dossier of the June 10th action is a 69 page document presenting evidence to substantiate all charges. This includes:

Factual background that delineates time lines and facts that establish probable cause, UN and WHO definitions and roles, and history and incidents from the April, 2009 "swine flu" outbreak.

Evidence the "swine flu" vaccines are defined as bioweapons as delineates in government agencies and regulations classifying and restricting vaccines, and the fear of foreign countries that "swine flu" vaccines will be used for biological warfare.

Scientific evidence the "swine flu" virus is an artificial (genetic) virus.

Scientific evidence the "swine flu" was bioengineered to resemble the Spanish flu virus of 1918 including quotes from Swine Flu 2009 is Weaponized 1918 Spanish Flu by A. True Ott, Ph.D., N.D., and a Science Magazine report from Dr. Jeffrey Taubenberger et. al.

The genome sequence of the "swine flu"

Evidence of the deliberate release of the "swine flu" in Mexico

Evidence as to the involvement of President Obama that delineates his trip to Mexico which coincided with the recent "swine flu" outbreak and the death of several officials involved in his trip. Contention is made that the President was never tested for "swine flu" because he had been previously vaccinated.

Evidence as to the role of Baxter and WHO in producing and releasing pandemic virus material in Austria includes a statement from a Baxter official stating the accidentally distributed H5N1 in the Czech Republic was received from a WHO reference center. This includes delineation of evidence and allegations from Burgermeister's charges filed in April in Austria that are currently under investigation.

Evidence Baxter is an element in a covert bioweapons network

Evidence Baxter has deliberately contaminated vaccine material.

Evidence Novartis is using vaccines as bioweapons

Evidence as to WHO's role in the bioweapons program

Evidence as to WHO's manipulation of disease data in order to justify declaring a Pandemic Level 6 in order to seize control of the USA.

Evidence as to the FDA's role in covering up the bioweapons program

Evidence as to Canada's National Microbiology Lab's role in the bioweapons program.

Evidence of the involvement of scientists working for the UK's NIBSC, and the CDC in engineering the "swine flu".

Evidence vaccinations caused the Spanish killer flu of 1918 including belief of Dr. Jerry

Tennant that the widespread use of aspirin during the winter that followed the end of World War I could have been a key factor contributing to the earlier pandemic by suppressing the immune system and lowering body temperatures, allowing the flu virus to multiply. Tamiflu and Relenza also lower body temperatures, and therefore can also be expected to contribute to the spread of a pandemic.

Evidence as to manipulation of the legal framework to allow mass murder with impunity.

Constitutional issues: the legality vs. illegality of jeopardizing the life, health and public good by mass vaccinations.

The issue of immunity and compensation as evidence of intent to commit a crime.

Evidence as to the existence of an international corporate crime syndicate.

Evidence of the existence of the "Illuminati".

Evidence as to the depopulation agenda of the Illuminati/Bilderbergs and their involvement in the engineering and release of the artificial "swine flu" virus.

Evidence that weaponized flu was discussed at the annual Bilderberg meeting in Athens from May 14-17, 2009, as part of their agenda of genocide, including a list of attendees who, according to a statement once made by Pierre Trudeau, view themselves as genetically superior to the rest of humanity.

Media is keeping Americans clueless about the threat they are under

Jane Burgermeister is a dual Irish/Austrian who has written for Nature, the British Medical Journal, and American Prospect. She is the European Correspondent of the Renewable Energy World website. She has written extensively about climate change, biotechnology, and the ecology.

In addition to the charges currently under investigation that she filed against Baxter AG and Avir Green Hills Biotechnology in April, she has filed charges against WHO and Baxter among others concerning a case of exploding "swine flu" vials meant for a research lab on a busy IC train in Switzerland.

In her view, control of the media by the ruling elite has allowed the world crime syndicate to further its agenda unabated while the rest of the people remain in the dark about what is really going on. Her charges are an attempt to get around this media control and bring the truth to light.

Her greatest concern is that "in spite of the fact Baxter has been caught red handed nearly triggering pandemic, they are also moving ahead, together with allied pharma companies, with supplying the vaccine for pandemics." Baxter is hurrying to get this

vaccine to market some time in July.

About forced vaccination in Sweden

July 6, 2009 by birdflu666
http://birdflu666.wordpress.com/

Annika in Sweden has emailed saying Sweden has ordered 18 million vaccines, that is two doses per person. The Swedish authority that deals with disease control says on their website that in case of a pandemic there will be “cooperation” with the EU and WHO. Sweden’s pandemic plan, available on the link below, indicates special pandemic “crisis management committees” will be given significant emergency powers in the event of a pandemic and be able to usurp the authority of other branches of local and national government, and will apparently also be ultimately taking their orders from WHO and the EU. http://209.85.129.132/search?q=cache:CoPQV...1&hl=en&ct=clnk
Annika says there are rumours the internet could be closed down and suggests making telephone lists to stay in touch my text messages etc.

craig-oxley - July 6, 2009 11:42 PM (GMT)

About my 2-hour interview with the Austrian anti terrorism unit and the criminal charges filed in Florida

July 5, 2009 by birdflu666
http://birdflu666.wordpress.com/

In the meantime, I've been for an interview at the

The Security Directorate Vienna
For the Protection of the Constitution
and For Fighting Terrorism

following an invitation, which can be seen at this link.

http://wakenews.net/Austrian_Anti_Terroris..._Invitation.JPG

I presented more evidence, arguments and facts concerning Baxter and the 72 kilos of live bird flu material, which was sent out to 16 laboratories from its facilities in Austria in February – material which was destined for vaccines in four countries: Slovenia, Czech Republic, Germany and Austria.

The original live bird flu virus came from WHO.

The Austrian Health Minister Alois Stöger confirmed that Baxter sent out 72 kilos in Parliamentary Answers dated May 20th, 2009.

He also revealed he had undertaken no steps to conduct a full in investigation into Baxter's breach of biosafety level 3 regulations.

http://wakenews.net/Austrian_Parliamentary...s_re_Baxter.pdf

He claimed the 72 kilos of live bird flu material had been destroyed, but gave no details of that process; the suspicion has been raised the 72 kilos is still in circulation.

The original parliamentary questions tabled on March 20th (also in German), — which the Health Minister was obliged by law to answer within 8 weeks –, can also be seen on the download-site for all documents on a secure website in Switzerland:

http://wakenews.net/html/jane_burgermeister.html

Under Austria's Influenza Pandemic Plan of 2005, WHO and the EU are set to take charge of Austria via a special crisis management team (SKKM) to be set up in the Federal Ministery of Interior in the event of a "pandemic" emergency.

Innoculating the entire Austrian population with (Baxter) shots is a declared objective of the SKKM. The injections will contain a mix of “whole virus”, mercury and adjuvants – and so be very toxic.

http://www.bmg.gv.at/cms/site/attachments/...rsion12_061.pdf

http://www.bmg.gv.at/cms/site/attachments/...pp_englisch.pdf

Similar pandemic plans exist in countries all over Europe.

In some countries, such as France, the injections could be mandatory.

This week I will file a new set of criminal charges against the Health Minister, Alois Stöger, the Chancellor Werner Faymann, Dr Dagmar Belakowitsch-Jenewein and others for their role in the cover up of Baxter’s crime here in Austria.

Interestingly, Faymann was at the Bilderberg meeting in Athens this May. A member of Austrian Parliament tabled questions on 17th May concerning Faymann’s visit to the Bilderbergs, which the CEO of the vaccine company Novartis also attended.

http://www.bzoe-klub.at/Pressedienste/Mai_...009_Strutz.html

Novartis seems to have been involved in the bird flu vaccine trials in Poland that killed at least 21 people in summer 2008.

There is also evidence that depopulation was discussed at the Bilderberg meeting in Athens. Furthermore, a Swedish politician is reported to have floated the idea that WHO should be transformed into a global health department.

Onto another subject, my special thanks to Drew Malone who has also offered to put up all the relevant legal documents on his secure site, and to file the criminal charges in his local district court.

Many corrupted and old copies are circulating, some of these apparently from Dr Bill Deagle, so please make sure to get your copy from one of the secure sites.

I am a graduate of Edinburgh University, a journalist who has written for Nature, the British Medical Journal, The Scientist, Reuters Health, the Guardian and the Observer as well as for Renewable Energy World, (where I was European Correspondent until being fired this week) and adhere to professional journalism standards at all times, though the sheer speed at which some od the documents had to be produced may have resulted in some minor typos etc.

Finally, Elizabeth Book from Ormond Beach Florida emailed to say she has presented the criminal charges to the Daytona Beach Police Department after thoroughly reading

them, and talks about her experience.

“When I handed them the papers [the police officers at the window] both started smirking and laughing. The young male officer said, “Mam, I think that you have to file these charges in Federal Court.” I replied, “Yes, I probably do. But my interest is in protecting Volusia County right now. So I will file them here.”

An older officer who had been listening in stepped up and took what I had to say quite seriously. He told me that I should hear a reply from them within five days. I looked the young smirking officer in the face and said to him, “Laugh now, if you will, young man.”

“Will you be reading the charges?”, I asked him. When he told me that he would be reading them, I told him to write down some of the websites mentioned in the evidence and to go see for himself what is actually going on. He said that he would.”

Elizabeth also writes:

“I have heard that F.E.M.A. is planning nationwide terrorism drills in the United States. They are set to begin on July 27th. I can only pray that I might make it in time to offset this tyranny over my nation. I am well aware that the U.N. has almost total autonomic authority here, now, with the level 6 Pandemic Alert being called . We have more than one million foreign troops here ready to react upon their orders. How could the F.B.I. even overcome that?”

In the event of a pandemic, WHO will coordinate the activities of Homeland Security and FEMA from a special pandemic control room linked to supercomputers of the UN security forces.

This control room appears set to be the the nerve center for any operation to transport large numbers of Americans by rail or road to the FEMA camps or from special quarantine centers set up at 19 airports.

Any systematic and sustained disruption to the operation of the WHO pandemic control room, of Homeland Security and FEMA headquarters or of the logistics of its units, of railways or other transport infrastructure leading to FEMA camps would be a severe blow to any covert mission to mass murder Americans and leave the country to be occupied by foreign troops under the direction of WHO and the UN.

craig-oxley - July 6, 2009 11:43 PM (GMT)

German news site reports on Swiss bioterrorism incident

July 3, 2009 by birdflu666
http://birdflu666.wordpress.com/

The German news site MM News today reported on charges I filed concerning a bioterrorism incident in Switzerland in April when a “faultily” packed container with vials of “swine flu”, allegedly direct from Mexico City, and a WHO-affiliated laboratory, exploded on a packed Inter City train close to Lausanne, spraying the passengers with the biological agent as the container was transported right across Switzerland to Geneva’s national influenza lab.

http://www.mmnews.de/index.php/20090703321...uf-Schweiz.html

I alleged the hermetically sealed container with faulity packed dry ice was actually a “ruck sack” cabon bomb designed to evade electronic detectors in Zurich Airport and Zurich Station, and to explode at a specific time in the acclimatised train compartment: a relatively enclosed space with constant temperature etc an ideal environment to spread an agent aerolised by the force of the explosion.

Also, the vials of pandemic flu should never have been transported on a passenger train in the first place, a clear violation of the law. The passengers were allowed to go home without any medical checks on the intervention of an official from the national lab.

At the time of the explosion, there was not a single case of “swine” flu in Switzerland. In the meantime, the flu is slowly but surely spreading, thereby helping WHO justify its pandemic level 6 declaration.

Reports on Flutrackers show that the highest incidence of “swine” flu in Switzerland is in the canton Vaud, Lausanne, the location of the “swine flu” train incident. One person has been infected inside of Switzerland – it is unclear just how that could have happened. Might that person have been a passenger on that train?

Thanks to Michael Mross for taking up the story, hopefully sparking a much needed discussion about these kinds of “incidents”.

Thanks, too, to Luc for donating some Swiss francs to the cause of legal action to help his fellow human beings.

New Zealand Minister of Health investigates concerns about Baxter

July 2, 2009 by birdflu666
http://birdflu666.wordpress.com/

The New Zealand Minister of Health, Tony Ryall, has asked officials at the New

Zealand Ministry of Health to urgently advise him on concerns raised about a swine flu vaccine produced by Baxter International Inc, says Penny Bright, Media Spokesperson Water Pressure Group Judicially recognised 'Public Watchdog' on Metrowater, water and Auckland regional governance matters.

———- Forwarded message ———-
From: Peter Maciver (MIN)
Date: Wed, Jul 1, 2009 at 5:57 PM
Subject: Your correspondence to Hon Tony Ryall
To: "waterpressure@gmail.com"

Dear Ms Bright

On behalf of Hon Tony Ryall, Minister of Health, thank you for your correspondence of 30 June 2009 outlining your concerns on a swine flu vaccine produced by Baxter International Inc.

The Minister has read your email and has asked Ministry of Health officials to urgently advise him on the matters you have raised. You will receive a personal reply as soon as possible.

Yours sincerely

Peter Maciver | Office of Hon Tony Ryall

Private Secretary – Health

——
Penny Bright has sent these links concerning New Zealand's pandemic legislation.

About my being fired yesterday

July 1, 2009 by birdflu666
http://birdflu666.wordpress.com/

On Monday, I was unexpectedly fired from my job as European Correspondent of the Renewable Energy World website.

Because there is reason to believe this decision was related to my filing charges alleging bioterrorism against the people of the USA and the rest of the world, and because I am entitled as a citizen to report a crime if there is credible evidence, I intend to file a lawsuit against Pennwell, a magazine company that covers the oil and defense industries and which took over REW in 2007 after I began working there, for unfair dismissal.

I have heard of other journalists fired or harrassed for covering this subject.

Help strike a blow for freedom of the press and for legal action to stop this kind of pressure being applied to journalists, and donate to:

Title: Understanding the H3N8 canine flu

craig-oxley - July 2, 2009 02:45 PM (GMT)

We heard the other week the cretins were going to release a dog pandemic via vaccination programs. Now talk of H3N8 again so it looks likely. You see dog is mans best friend. If dogs go dead with flu then this would scare a human family far more than a cat death. This will help enforce the fearmongering of the human flu they push. Its all conditioning. They can even give the dogs real deadly flu but just lie about a human flu and the effect will work just the same! -Craig

Understanding the H3N8 canine flu

By: Deidre Wengen
http://www.phillyburbs.com/information/gui...canine-flu.html

With the outbreak of Swine Flu, many people began to tune in to the spread of the contagious disease and it became a major talking point in the media and social circles.

But there is also a virus that's been spreading among dogs and it's wise for pet owners to educate themselves about the disease and the dangers of it.

The H3N8 canine flu jumped from horses to dogs at least five years ago and scientists and researchers feared that it would spread quickly and cause a large number of deaths in the dog population. Areas of the country including Florida, Philadelphia and Denver were hit hard. However, the virus is now thought to be less dangerous and only kills about 5% of dogs that it infects. The breeds more susceptible to attracting the virus are those with pushed-in noses-- think Pugs, Pekingese and Shi-Tzu. The virus can spread just by dogs touching noses or drinking out the the same water. It seems that it is more common in communal dog places such as schools and breeding grounds.

According to this article from the New York Times, Dr. Edward J. Dubovi of the veterinary school at Cornell University said that if the virus mutates a couple more times, it has the potential to be a very serious problem.

Thankfully the the United States Department of Agriculture announced last week that it had approved the first vaccine for the H3N8 virus.

To learn more about the virus, you can read up on key facts by clicking here.

kalongi - July 2, 2009 04:38 PM (GMT)

Yes, i had to take my dog to the vet yesterday and the woman was talking about this new virus in town that was affecting the canine populace, called, "Leishmaniasis".

It was the first time i heard of such thing and now i see this post about the H3N8 canine flu, hmm.

New York City swine flu case tally could be as high as 500,000, CDC says

BY John Lauinger
DAILY NEWS STAFF WRITER
Saturday, June 27th 2009, 12:28 PM
http://www.nydailynews.com/ny_local/2009/0...0_cdc_says.html

New research estimates that half a million New Yorkers have been infected by swine flu - casting doubts on the city's claim that transmission of the H1N1 virus has declined.

The alarming data was released Friday by the Centers for Disease Control and Prevention, which estimated there have been 50 times more cases nationwide than have been reported to health authorities.

"We're saying that there have been at least a million cases of the new H1N1 virus so far this year in the United States," said Anne Schuchat, director of the CDC's National Center for Immunization and Respiratory Diseases.

"Reported cases are really just the tip of the iceberg."

"City health officials were not immediately available for comment Saturday. Schuchat added that the number of infected Americans may actually be higher than 1 million.

The CDC study was not based on laboratory evidence.

Instead, researchers relied on mathematical modelling of surveys conducted in areas, like New York City, that have had high levels of H1N1 infections.

There have been about 28,000 confirmed cases of the A(H1N1) strain nationwide. Roughly 3,000 people have been hospitalized due to the strain, with 127 reported deaths.

In New York City, there were 804 recorded hospitalizations and 32 deaths attributed to swine flu as of June 23, the most recent date for which data was available on the city Health Department's Web site.

On June 12, the city Health Department issued a statement that said H1N1 transmission appeared to be on the decline, since lower numbers of people were showing up at hospital emergency rooms with flu-like illness.

The new CDC study suggests that swine flu infections are far higher than reported cases.

The CDC study found that 6.9% of city residents had flu-like illness during a three-week period in May.

Based on virologic testing, the researchers "knew that most of that influenza-like illness was based on this new H1N1 strain," Schuchat said.

"And from that," Schuchat continued, "they estimated that around half a million New York City residents may have been infected with this new virus and had flu-like illness without necessarily seeking care."

Schuchat echoed a previous warning that the new swine flu bug could come back in a more severe form during the fall flu season.

Swine flu kills Brampton girl, 6, in 24 hrs

Jun 23, 2009 04:30 AM
Theresa Boyle
HEALTH REPORTER
http://www.thestar.com/article/655062

A 6-year-old Brampton girl with swine flu died only a day after she began showing flu-like symptoms.

The child, who attended Roberta Bondar Public School, passed away a week ago and it was only discovered after she died that she had the H1N1 influenza virus.

The exact cause of death has not yet been determined, but the virus is known to have been a contributing factor, Dr. Arlene King, Ontario's chief medical officer of health, told a news conference yesterday.

The child got a fever and began vomiting on Sunday, June 14, and died the following day. An autopsy was performed and lab results revealed last Friday she did indeed have the virus. She is the fourth Ontarian with the virus to die.

Quebec health officials released a statement late yesterday afternoon to announce two new deaths in the province. They gave no details and did not return calls.

The deaths of the two Quebecers and the Brampton girl bring to 16 the number of Canadians to die after contracting swine flu.

Though the child, whose identity has not been made public, did not have any apparent pre-existing medical problems, the coroner's office is now trying to determine whether she had an undiagnosed condition. It's not known how the girl contracted the virus, but two members of her extended family had mild cases.

Officials are providing few details about the girl's death, including where she died. All King would say was that she did not die in hospital or at home.

Yesterday, Dr. David Mowat, medical officer of health for Peel, sent a letter to students, parents and staff at the elementary school, advising them that the girl was not symptomatic when she was in class.

"As such, the risk of transmission of H1N1 flu virus from this student to others in the school is very low," he wrote.

King said children at the school should continue attending class unless they feel ill. "At this time, we do not recommend that any schools be closed if there is a suspect or confirmed case," she said.

There have been more than 2,650 confirmed cases of swine flu in Ontario – and more than 5,700 across Canada – but most are considered mild with symptoms very similar to an annual seasonal flu.

Meantime, an international conference on disaster management being held in Toronto heard that private businesses are purchasing their own supplies of antiviral medications to prevent employees from being infected.

Amin Mawani, a professor with the Schulich School of Business at York University, said it's advisable for companies to take such measures to curb employee absenteeism and protect profits in the event that a second, more severe wave of the virus strikes in the

fall.

"Pandemic planning can be viewed as insurance," he said.

But Alison Stuart, assistant deputy minister of public health, said the province is not advocating that such measures be taken.

"We have not recommended to either the health sector or more broadly to other sectors in Ontario that they stockpile antivirals as (preventative measures)."

Aspartame / NutraSweet Toxicity Reaction Samples

Aspartame / NutraSweet / Equal / Neotame

^Poisoning^, ^Toxicity Reactions^, ^Health Damage^ brought to you by

Monsanto / NutraSweet / Kelco / Benevia
^^^^^ ^^^^^^^ ^^^^ ^^^^^

IMPORTANT NOTE: Please print out this list and read *ALL* of the way through it over time. I know it's long, but it can help you recognize the various cases of aspartame toxicity and *help others*. Then copy and share this and other documents from the Aspartame Toxicity Information Center web page with as many others as possible.

The names have been removed to protect confidentiality, but many of these posts can be found in various archives and WWW search engines. Please note that this document is only a tiny percentage of adverse reactions to aspartame that have been posted to the Internet over the last few years. The toxicity reactions posted to the Internet are only a very small percentage of the total toxicity reactions reported to various groups. Two independent organizations track aspartame-caused health problems: 1) the Aspartame Consumer Safety Network (ACSN), P.O. Box 780634, Dallas, Texas, 214-352-4268,

marystod@airmail.net, and 2) Mission Possible International,
9270 River Club Parkway, Duluth, Georgia 30155,
770-242-2599, bettym19@mindspring.com Please contact these
organizations for more information.

If you have experienced health damage from aspartame and your health
improved after removing it from your diet, please forward your
aspartame toxicity reaction to:

Mark Gold
Aspartame Toxicity Information Center
12 East Side Dr., Suite 2-18
Concord, NH 03301
mgold@holisticmed.com

Extensive resources for nutrition, general wellness and healing can
be found on the main web page:

http://www.holisticmed.com/

News organizations looking for information and contacts (local
case histories, physicians, scientists, etc.) should email
mgold@holisticmed.com and I will put you in touch with the
appropriate organizations.

HOW TO USE THIS LIST

The list is now in *reverse* chronological order such that the newest
aspartame toxicity reaction is at the top.

If you are reading the list for the first time, please print out the
whole list and ***read from the bottom up.*** Then SHARE the
printout and other documents on this web page with others.

For updates, *read from the top down* until you reach an adverse
reaction that you have read before. I have stopped updating this
list temporarily because it was getting too long for most people
to download.

Subject: Affected by Equal

I have had many of the same symptoms as listed in the other letters including headaches, muscle weakness, short term memory loss, depression. But what really gave me a wake up call was the Bells Palsy. Bells Palsy is the unexplained paralysis of one side of the face. I started using Equal when it first started getting popular.
I started with the headaches, then the short term memory loss and depression but not wanting to link it to Equal. Then the muscle weakness started with tingling in the back of my head and I started thinking it may be linked to the use of the equal but still continued to use it. Then (about 5 years ago) I woke up one morning with no control of the left side of my face. The Doctors diagnosis was Bell Palsy. They said they don't know what causes it. Since then I stop using Equal and the headaches stop, my short term
memory has improved, the depression has stopped, the muscle weakness has stopped, the
tingling is gone and the facial paralysis is 95% recovered. Unfortunately the facial paralysis will not 100% recover. After some time had passed since I had stopped using Equal I was curious if it really had something to do with the things I was experiencing so I started using it to see if it was all in me head. Within a few days I started having the headaches and tingling in the back of my head again. I know it's not in my head now it
definitely is the Equal.

Case from United Kingdom newspaper

Eve walks again after diet change

A Shropshire woman who spent a year without the use of her legs has said she can now walk again after cutting the artificial sweetener aspartame from her diet.

Eve Terry, 24, of Main Road, Pontesbury, is convinced that avoiding certain food and drink that contain the ingredient — such as low calorie yoghurts and soft drinks — has led directly to her remarkable recovery.

In April 2004, Mrs Terry's face swelled up and drooped and she often felt tired, but doctors were at a loss to tell her what was wrong.

"I looked like I had had a stroke and people kept coming up to me to ask me if I had," she said. "Then about three months later I woke up one morning and my legs just felt as if they wouldn’t hold me up."

But in April of this year, Mrs Terry was referred to Dr Sarah Myhill, a GP based in Knighton, Powys, who immediately told her to cut aspartame out of her diet. Within six weeks, she had regained the use of her legs and her face was almost back to normal.

Dr Myhill diagnosed Mrs Terry as having Bell's Palsy, which is a disorder of the facial nerves. She was also found to have Gillian Barre Syndrome, which causes nervous system problems.

Subject: Thank GOD, I am alive!

Dear Mr. Jacobson,

IF I live till March 7th 2006 I will be 71 years old! I will
not attempt to hold you for too long, but PLEASE listen to my TRUE
story. ASPARTAME, EQUAL, and NUTRASWEET is not safe for human consumption!
I started to use EQUAL in early 1990's. 6 months into using
Equal as a sugar substitute, I started to have seizures, somtimes
twice a day. I went to 3 different doctors and had all kinds of
tests run. All the tests came back that I was in good shape! I
asked the last doctor, Dr. Xxxxxxxxx at the xxxxxxxx xxxxxxx Clinic,
If I was in such a good shape, why was I having seizures, my hair
falling out, my eyesight gone bad, and to make matters worse, I was
losing my memory! I did not drive my car for over a year...for two
reasons, I was afraid of having a seizure and hurting myself or
someone else or killing one or the other, and because my memory was
so bad I was afraid of leaving my home and not knowing where to
return to my home! After three different doctors told me "I was in
fine shape".
I am a saved by the GRACE of GOD person and I began to pray to
the LORD to help me solve this problem. My idea came from GOD by
installing in what little brain I had left from using Equal, to
start eliminating my foods one by one to see IF I could tell what
was wrong! I told my hubby I was taking something into my system
that was not agreeing with me....or I had cancer and not one test
was finding it! So, the elimination started.
I kept having the seizures, and etc.. I had been using Equal
for 4 years by this time. In the process of elimination I only had
one other to eliminate and that was Equal. I did not believe the

FDA would approve something like that so destructive to mankind untill I quit using EQUAL and I quit having seizures! Never had another seizure....my hair quit falling out...my eyesight returned, and THANK GOD my memory returned. I called the consumer 800 number on the back of the Equal box and told the lady what I had lived through! She said " well you can't prove that because it (Equal) don't show up in the blood work". Well...I knew then that tests had been made to see if all the chemicals that makes up Equal would show up! Monsanto Chemical Company made sure when they put that chemical out to the public as a sugar that they would be protected! I know that when I quit using that "horror" called sugar substitute I got well again!!! You, the FDA and all that is involved will answer to The GOD of heaven one day and give an account for all the people that has suffered and died from the lies that you tell. Do you know what would be nice....IF YOU could help take it off the market!! Start telling the truth...what would you give in exchange for your SOUL???? There are 3 things MONEY can't buy HEALTH, HAPPINESS, and HEAVEN. My health has returned to me and I am not on any type of medication.

THANK GOD, I am alive today to tell you my story. Won't you please help others?

Sierra Sun
Readers write: aspartame
http://www.sierrasun.com/article/20060223/...0006/-1/OPINION
Beware of aspartame

February 23, 2006

I just read Henry Kliebenstein's article ("Steer clear of those artificial sweeteners" Sierra Sun page B2 Feb. 17) on artificial sweeteners and thank you for getting the word out.

Just Google aspartame and poison and you will have a lot to write about. A year ago I thought I was going to die. I put everything in my wife's name and I had been feeling sick for a few years. I was getting allergies I never had before and highly sensitive to formaldehyde, which is in plywood and I work around. I could smell it across the street and had to stay away from it or have allergy symptoms.

Last November I was starting to have debilitating pains in my hands.

I thought I would have to stop working all together. I had poisoning symptoms so I Googled formaldehyde to see how bad it was in the products I work around and aspartame came up. I had been using aspartame in my coffee and everything you would put sugar on for four years and I was floored to find out it metabolizes into formaldehyde.
I also saw stories that paralleled mine. I stopped taking this drug (aspartame) and all the symptoms went away - thank goodness.

But I still couldn't get away from it. I was chewing gum with it and I found out we were giving chewable vitamins to our child that also contained the poison. Do you know there are about 500 products that have this in them?

So do some reading online and get the word out please.

Subject: Fwd: Are you going lite? 92 symptoms on aspartame!

I wanted to let you know that I was totally addicted to the "blue stuff." this year! It felt like my
head was going to just EXPLODE! I have been on the stuff, for 10 years I realized. I went
COLD TURKEY, and got to exerance withdrawls.

I know I should not drink coffee, but I still do. I don't smoke, drink or other silly things. I also consider
myself not to be to extreme "HEALTH NUT," because I try to make it all work together, my herbs
and my modern times life style. I was raised on a farm, and could not get to the store. So we did
everything we could on the farm and went to the store when we could. We lived a healthy life except when
we got to buy stuff from the store which was a treat! Junk food to me is still a treat!

I know a lot about herbs, such as STEVIA, and Pau d'Arco and Uva Ursi. Those are my three favorite herbs!
I have since switched to Stevia.
(http://www.owlsnestplantation.com/stevia_herb_stevia_powder_stevioside_bulk_stevia.asp)
(I bought a pound, which is really lasting me!)

I was in MAJOR PAIN, just shoot me kinda pain! Why do I blame the "blue stuff" because I took the blue stuff
right in the middle of the worse of the withdrawls to see if that was "really it," IT WAS! I felt better!

I won't touch that stuff anymore!

I think took me nearly 3 weeks to really get over it! Maybe because I did see if it was the "blue stuff."

Subject: Please Help Ban Aspartame from New Mexico's Foods
To: xxxxxxxxx@state.nm.us
January 23, 2006

Dear Respected Person,

I am a xx year old Middle School Counselor that works with youth ages 11-14 here in xxxxxxxx, New Mexico.

I see an average of 30 students a week in individual counseling sessions dealing with issues ranging from peer conflict, effects of family's drug use (methamphetamines in particular), all the way to suicidal ideation and clinical depression.

The last two issues are the ones I would like to emphasize in this letter, as they deal directly with the effects of aspartame ingestion.

Aspartame Suppresses the Levels of Serotonin in the Brain

Serotonin is a naturally produced brain chemical that is necessary for healthy functioning and emotional well-being. We know that low levels of seratonin correlate with depression. When interviewing students on the circumstances surrounding their depressive symptons, I inquire about the ingestion of sugar-free gum and diet sodas, both of which contain aspartame.

9 times out of 10 the students indicate regular aspartame ingestion... I inform them on the effects of aspartame ingestion, and ask for them to discontinue use of products containing aspartame. During follow-up, all complying students report a significant reduction in depressive symptoms.

According to one recent report,

5 suicides have been linked to aspartame ingestion.

Please do all you can to pave the path to ban aspartame
from our food, drinks, candy, and gum. We must look out for the well-being of our unsuspecting youth (as well as others). It is our moral, ethical and legal obligation to do so. As a person of power within our govenmental structure of our great state, please do your part to protect our citizens.

Subject: Atypical Facial Pain

Hi Everyone,

My name is xxxxx. New member. I've been consuming NutraSweet for 2 1/2 years and suffer from Atypical Facial Pain (one of the 92 side effects of Aspartame. After reading an article online about Aspartame and my condition I stopped drinking diet pop 3 weeks ago. The pain is decreasing. I take 1/2 of the medication that I was for pain. I haven't been able to locate any information on how long it takes to recover from the side effects of Aspartame or if the condition I have will be permanent. Has anyone in the group recovered from their side effects? Any information would be very helpful to me. Thank you.

Subject: Aspartame Testimonial From Los Angeles, CA

In 1985, I was a sophomore at the University of California, San Diego. That's when I began
drinking diet coke regularly. I didn't drink coffee. By the spring of 1986, I was starting to notice that my health and mental abilities were deteriorating. My illness escalated rapidly one evening when I was struck with a strange high fever, unlike anything I had experienced previously. My neck was swollen out to my jaw line, and I was shaking all night. In the morning, I went to the student health center. The nurse who
saw me said, "It looks like you have a healthy case of mono." However, the mono test came back negative. Next, they tested for strep, and that was negative, too. On a

third visit, they sent me away with a diagnosis of tonsillitis. I knew it wasn't tonsillitis, but I did not seek further treatment at that time.

I never really got better. Over the next several months, I continued to grow increasingly ill in some alarming ways. What I noticed first was that I had a constant sore throat. I also had chronic severe headaches and low-grade fevers. I was profoundly tired all of the time. One morning, I woke up with a stabbing pain in my eye. It was bright red. Again, I sought treatment at the student health center. They gave me drops for conjunctivitis, despite my insistence that this was not pink eye. A few days later, the pain was unbearable, and they referred me to a specialist who diagnosed iritis, a condition in which the body's immune system attacks the iris. Untreated, it can lead to blindness. My eye responded to treatment, but I began having unusual eye infections and irritations fairly regularly after that. In the fall, I had a painful outbreak of shingles at the base of my spine. It felt as if my body were falling apart. I slept much more than my friends, but I rarely felt rested.

I started having one strange complaint after another. My hair would come out and my toenails would fall off. I was sensitive to bright light. I developed mild mitral valve prolapse (a type of heart murmur). I had one vaginal infection after another for no apparent reason, and my urethra was frequently irritated. My bowel movements were never "normal." I either had diarrhea or constipation or strange ribbon-like stools.

By early 1987, I was starting to experience severe depression and memory problems. I had always been a top student, with strong verbal skills. I was a literature major, and I knew something was going horribly wrong when I began having difficulty retrieving words. Thinking I might have pms for the lack of any other plausible explanation, I went back to the health center. They referred me to the on-campus psychological counseling office, where I was diagnosed with depression. I had sensations that my body was not quite solid, as if I were dissolving. However, I knew that was I was experiencing was not primarily a mental health problem. It's as if I had suddenly gone from being a 20-year-old active co-ed to getting stuck in a 90-year-old's failing body.

I was an athlete in highschool and had always been quite physically active. I had been an

honor student since junior highschool, and was always involved in lots of extracurricular activities. However, as my physical deterioration continued, even light exertion could cause me to drop to the floor from dizziness and exhaustion. As things progressed, I developed fibromyalgia. I remember telling my mother, "I feel so tired that my bones ache." I had recurring laryngitis, conjunctivitis, yeast infections, bladder infections, and fairly severe irritable bowel syndrome (IBS). My throat was nearly always painfully raw. I started having outbreaks of eczema and strange rashes that no one I consulted could diagnose.

I continued drinking diet coke and chewing gum with aspartame throughout college, but I never suspected a connection with my illness.

In graduate school, I would attend classes in the evenings, but I had no energy for anything other than struggling to keep my grades up despite the "brain fog" that was almost always present. I was a member of Mensa, and had always been a top student. However, by this point, it was a real struggle for me to string two thoughts together. Under stress, I'd stammer and struggle to say what I was thinking, which was a dramatic change from how I'd been previously. My roommate attended class, held a part-time job, and had an active social life. Whereas, I'd sleep in 14-hour stretches and wake with barely enough energy or focus to complete my studies. Writing was excruciating because I so uncomfortable, tired, and mentally slowed. My frequent visits to the on-campus health services continued for persistent infections, inflammations, and other mysterious complaints.

I graduated in 1990, and started my career. When I saw the first reports on television about Gulf War Syndrome, I told my mom, "I know this sounds crazy, but I have what those guys have." Their testimonials matched what I was experiencing so closely. I felt strongly at the time that there must be a connection. A couple of years later, as my aspartame consumption was tapering off, I had a bout of episcleritis. It's similar to iritis but less serious. The ophthalmologist took a health history and recommended strongly that I consult a rheumatologist.

After an extensive round of tests, she diagnosed me with CFIDS and fibromyalgia. The only lab
results that came back abnormal on a regular basis were my sed rate tests. She assured me that
my symptoms were not "all in my head." Upon receiving the IBS diagnosis from a gastroenterologist, I stopped drinking sodas. From that point on, my health started to improve.

For years, I wondered what had made me so sick for most of my twenties. I thought I might
have been accidentally exposed to an experimental pathogen or toxic weapon because that sort
of research was conducted in the area where my college campus is. I even had a titer drawn for
brucellosis because they manufactured a weaponized version of it near where I lived. (They
sold some of it to Sadam Hussein, so I took this possibility seriously.) However, my test came back negative.

I turned 40 this year and now enjoy excellent health. I feel ten times younger than when I
was in my twenties. I attribute this improvement to cutting out aspartame entirely when I started working with a naturopathic physician three years ago. I sleep, exercise, socialize,
work, think, and feel like a "normal" person again. I feel as if about 95% of my mental capacity is restored.

NOTE: I think it's interesting that La Jolla, the location of my college campus was when my
illness started, has been identified as a "hot spot" for the CFIDS epidemic. We would get
our diet coke in cases from the Price Club (before it became a Costco). Is it possible that
diet coke sold in the area sat in some hot warehouse to a point where the beverages became toxic?

I'll be glad to answer any questions or provide more information in support of raising public
awareness of the severe threat aspartame poses to those of us who have adverse reactions to it.

Can Diet Soda and Sugarless Gum Cause Cancer?
http://www.progressiveu.org/150845-can-die...um-cause-cancer

I've been avoiding aspartame ever since I figured out that it was giving me migraine headaches. I had heard that there were thousands of complaints of adverse effects almost a decade ago. My daughter developed a blister under her tongue after chewing sugarless gum.

Thank God this gentleman in Italy researched the use of aspartame more thoroughly. He very well may be saving thousands from suffering and death.

Aspartame is made from toxins. Avoid it like the plague.

Read it here for yourself and you decide.

Subject: nutra sweet poisening

Dear Mark, i found the site on the internet and just need to share my story. About 6 weeks ago, my boyfriend came home from the grocery with a box of 100 packets of Nutra sweet for our coffee. Usually I use Splenda and have had no adverse reaction to it. Closing in on Thanksgiving, i noticed i was developing lower back pain, joint hip pain and an overall sense of not being able to get out of bed in the morning. I related it to shoveling snow...maybe i strained muscles...but

it continued and began to scare me. Was i sick? Right before Christmas day it occurred to me it was getting worse...deep, arthritic pain (i'm 46) and although i do have some degenerative arthritis...the onset was so sudden and strong....i knew it had to be something else. It came to me just after Christmas day....the nutra sweet. I immediately stopped drinking it in my coffee and with in TWO DAYS the pain was completely GONE....i
am convinced it was the nutra sweet poisening me....just wanted to share this with someone who is aware of it's dangers. thank you,

Subject: Tumor, memory and vision problems
Date: 10/15/2005 12:10 PM

I'm new to the group and still trying to learn how to communicate with other members. Please forgive me if I am posting this to the wrong address or in the wrong place. (My email is xxxxxxxxxxxxxxxxx) I recently reported my memory loss and vision problems caused by asprtame to the FDA Medwatch. I wanted to thank you for all of the good work you've done to educate the public about aspartame. I'm still learning how to comm I've consumed high levels of aspartame for years became I believed it wouldn't have gotten FDA approval if it wasn't safe.

About a year ago I started to notice that I was having word finding difficulty and frequent lapses in short term memory. As this became progressively worse I became worried about my ability to remain gainfully employed. While researching memory problems I found various articles written by you and others about the dangers of aspartame usage.

As an experiment I stopped using aspartame for 2 months. Within the first 2 weeks my carbohydrates and sweet cravings started to diminish. But the biggest surprise was the drastic improvement I've seen in my short-term memory and visual acuity.

I've had various health problems since I started ingesting aspartame. I developed a non-malignant cranial nerve brain tumor in 1990. It was growing inside the cranium at the root of the 7th cranial nerve. The excision caused the left side of my face to be permanently paralyzed. My question is...Is there a connection between heavy aspartame use and non malignant neurolimas, neuromas or crainal nerve tumors?

Thank you for all the work you've done to spread the word about this

poison. You've greatly improved the quality of my daily life!

Subject: Aspartame Use

I was a person that used aspartame regularly in everything as a sugar substitute. Coffee, soda, cakes, pies,
even gum. Over time I became very very ill. I didn't know what was wrong with me , doctors didn't know
what was wrong with me. I was slowly increasingly getting sicker. I had extreme joint pain I could barely walk
from the parking lot at work to my desk. I'd have to leave 30 minutes earlier than usual just to allow the time to
walk in. Elderly people at the stores would pass me.

I was slowly deteriorating. Some doctors thought it was fibromalagia in which there is no cure. I had no energy, I was
always feeling nausea I am only 37 years old and I knew there was something wrong but I didn't know what. I began
feeling very sick instantly after drinking or eating aspartame. I decide to stop using aspartame because that was the
only change that I had made previous the onset of my condition. I began to drink detox tea and went back to using sugar.
I immediately felt better and as time passed the joint pain has stopped. Still to this day if

I accidental consume an
aspartame product I feel the effects immediately after ingesting the substance, so quick that I don't even have time to
finish the product before I discard it because of feeling ill.

I was feeding these products to my at the time small children and I'm so devastated to know that I may have hurt them.
I thought that I was doing something healthy for them. I didn't know that this substance was unsafe. I believed that if it
was being used in a product that it was tested and approved to be safe. Our lives were definitely touched by aspartame
and it will effect our household always in the way we eat, drink and buy products. We will always use sugar from now on.
I hope that my feedback is not overlooked and that action would be taken to remove aspartame from the market. I may
have very well continiued wih the consumption of this product without second guessing my diet decisions.

Subject: Toasted my brain on aspartame

Hello, I'm a former National Merit Scholar and University Student. I
say "former" because aspartame has utterly butchered my brain.
That's right. I was a 21 year old with a bright future and an even
brighter mind. Traditionally, I've scored anywhere between 130-150 on IQ tests with ease. On a recent exam, I nailed just 98 -- with difficulty. My

mental capacity has been severely, dramatically, and -- perhaps -- permanently altered due to excess consumption of this chemical disaster.

In the midst of a severe depression, I swilled the stuff in ridiculously extreme amounts. Three 44oz drinks a day were not uncommon. Looking back, it's easy to conjecture that Diet Coke actually instigated and aggravated my psychological problems. As a statistic of one, I offer the following observations about my experiences, written as honestly as I can muster.

In the beginning, I was an extraordinary skeptic. Diet Coke was my favorite drink, and I trusted the industry funded studies above all alarmist "nonsense". People I knew warned me about how my habits could affect me, especially given my talents, but I shrugged them off. "MIT dosed people with 14,000 grams of the stuff," I'd say, "it's safer than water!"

How wrong I was.

I thought my addiction was merely caffeine, but caffeine never satiated me. I always craved the sweet fizzy brew; a chemical junky, always on the hunt for my next brain fix. Over the months, as my appetite and consumption of aspartame increased to absurdist levels, I noticed the following:

1. It caused me to stop thinking. I recall having an exceptionally clear mind -- sharp, precise, and swift. After drinking aspartame, I noticed a very clear annihilation of my memory. I could not broach topics or relate ideas. People would ask questions like "What was your favorite movie with actor X?" I simply could not link those words to a face or picture in my mind. It's as if someone were speaking Spanish. You do not know how disconcerting this is until it occurs.

2. It gave me neurological and heart disorders. At the height of my consumption, the ring and pinky fingers of my left hand went COMPLETELY NUMB FOR TWO WEEKS STRAIGHT. Simultaneously, I experienced a discomfort and thudding sensation in my chest, as though my heart were overworked and on the verge of failure. As is usual with these circumstances, physicians could find "nothing wrong with me". I've NEVER had conditions like these in the entirety of my life, and WHAM.

3. I became profoundly forgetful and dissociated, as though I were walking through a dream or under heavy medication. Daily events and

situations ceased to have any personal meaning to me. It's as though I'd taken a novocain shot to the cranium.

4. I sunk into the darkest depression I've ever known. My emotions were so out of control I'd get dry heaves, have suicidal ideation, sit motionless for hours, lock the door and stay in bed, etc. etc. Had this happened before? Did I have a history of mental illness? No.

All of this and I hadn't even hit the ADI!

My doc says many of my cognitive difficulties were probably due to the huge amounts of caffeine I was consuming. Bullshit.

Ladies and Gentlemen, I've imbibed every caffeinated concoction on the planet in copious quantity: coffee, tea, regular cola, cappucino, hot chocolate, whatever, and NONE of them have given me symptoms like this. On the contrary, they usually offer a temporary nootropic affect, giving me better focus.

If you're considering drinking the stuff, consider this: if any ONE of the three deadly toxins in this hell-molecule lives up to its potential, you're causing slow, irreparable damage to yourself. Not just your body but to YOU, your mind. Aspartame wears things away, erodes them at a level you can't perceive. One day, you could conceivably wake up and feel 75%. Or 60%. Or 20%.

After four months without, I still feel as though I'm recovering from a traumatic head injury. My physical symptoms are long gone, as is my depression. My slowness of thought and memory have markedly improved. Overall, I can only pray that my mind will completely recover with time... if not, I'm purely thankful to have abstained when I did. I very much appreciate life now.

There's a humble old adage that applies very, very well here:
"Where there's smoke, there's fire."

And there's a good damn deal of smoke around.

BURN MONSANTO!

Subject: Aspartame symtoms

Hello.
Great Website! People need to be made aware of the dangers of aspartame.
I am 25 years old and reside in England.

I used to drink bottles and bottles of aspartame sweetened cooldrink, eat aspartame sweetened yoghurt ect.
Ha, ha, I thought I was helping myself lose weight.

The worse of my problems was symptoms of diabetes. I was certain that I had diabetes and had myself tested.
According to my first test results I was diabetic, then I learned about the dangers of aspartame,
cut it out of my diet and everything returned to normal.

The symptoms I had was:

* Excessive depression
* Extreme hunger (resulting in a 12 kilogram weight gain)
* Symptoms of diabetes (drastic drop in bloodsugar levels making me shaky untill I eat something sweet)
* Extreme, unexplained, tiredness (I used to get up at 6 am, I worked part time untill 13h00, then came home,
had lunch and go to sleep untill 17h00, had dinner and went to bed around 20h00, many times even earlier)
* Uncontrolled Uretera infections
* Drastic drop in body temperature, making me shake with shivers in the afternoons even though the heating in the house was running.

At 24 I thought that my life was basicly over, because I had no normal life anymore.

Untill I learned about
aspartame. Now that I have cut it out of my diet all these symptoms have disappeared. I am living a normal life now,
keeping up with a full time job and other activities. I am not controlled by hunger anymore, have lost all the
weight I gained and I don't feel depressed anymore. No more shakes and shivers! What a difference it made!

Subject: My experience

Recently my sister forwarded to me an email about the dangers of using artificial sweeteners. I wanted to
share with you my recent experience. I have been using artificial sweeteners for many, many years...but
in moderation. Recently however I starting drinking 4-6 glasses of Crystal Light, plus drinking diet pop in
the evening. I was attempting to lose weight. However I started to experience severe vertigo, stomach aches
and some other symptoms. Vertigo runs in my family so I didn't think too much about it except that it
seemed different from other times. THEN, I read the article that had been sitting in my in basket. I was
so surprised about the dangers of aspartame and what I was doing to my body. Coincidently I also had
run out of my Crystal Light so I went back to drinking bottled water. All of my symptoms, the vertigo,
stomach aches and asthma went away. I will now try to completely eliminate this poison from my diet.
I am now spreading the word to my co-workers and friends.

Thanks

I didn't read the email but.....

Subject: Email To all xxxxxxxx residents
Date: 12:54 AM 8/4/2005

Please find below a copy of the email I sent to a very wide xxxxxxxxxx
based audience earlier this evening . The response in the last
hour has been incredible. I hope many will take the opportunity to
research for themselves further the issues on aspartame.
--
....
Just four days ago I received an article in an email from a close friend.
The wife of a former Army Air Core Helicopter Pilot who served during the
1982 conflict.

The report was about the use of sweeteners that is found in many food and
drink products. Because of my ongoing search for answers as to why my wife
Mandy developed a life threatening brain tumour which required urgent
surgery to remove and why our daughter Rachel has suffered from epilepsy
since she was just 3 days old, I decided to check out the information
given to me.

I was horrified at what I discovered.

I have since become a member of "Mission Possible International" and will
begin to inform my fellow country people of the serious potential risks
associated with Aspartame.

Now I do not wish to bore you all with personal grievances, but the
following might surprise you.
Since we learned about aspartame and its deadly toxins, we did a search of
items in our home and was amazed at just how many products contained

aspartame. We decided to stop using any products immediately, that was four days ago and the results have been quite striking.

Rachel as mentioned has regular night time seizures and until four days ago I personally do not remember a single night in the past 18 years that I have not had to attend her, usually several times in a single night. Well since we removed the aspartame products, especially the instant chocolate and diet mineral water. Rachel has not had a single attack in four consecutive nights. This is short of a miracle.

I learned that aspartame can seriously affect the ability of regular prescribed drugs and it is highly probable that Rachel's medication was being affected. It also makes me wonder if Mandy's tumour was in fact directly linked to aspartame, it is certainly something we have to consider.

Subject: My niece went into respitory arrest

Dear Sir,
I have never liked nutrisweet but now none of my family uses it. My niece was only two years old when she started having seizures. They took her to the xxxxxxxxxxx clinic and determined that it was not epilepsy. At one point she went into respitory arrest and almost died if she hadn't been in the hospital at the time I believe she would have. They put her on dilantin which made her a zombie and she still had seizures. One day when she had another seizure my brother called me asking me what he could do (she had passed out again). Out of the blue I remembered that when nutrisweet first came out that seizures in epileptics and young children was a possible side effect. I asked him if she had been having any. They had been giving her nurtisweet popsicles because they were concerned with how many she was eating (more than 4 a day). I told him what I remembered and they took her off the dilantin and nutrisweet. She only had one more siezure (we think she got some sugar free jello at a picnic). She went from having seizures that could not be controlled to no medication at all in a matter of weeks. The doctors did not want her taken off the meds. They would not listen to my brother about the nutrisweet connection. Now she is a fine and healthy second grader.
I know of many diabetics drinking diet sodas. This is a known hazzard and has been from the start.
When will our medical community start to listen? How many children are having

seizures now due to nutrisweet?
And it seems that every eplileptic I know is using nutrisweet because their doctor says it is Okay to have it!!!
(at least 4 people)

Thankyou for being out there to inform people. I just wish more people would listen.

Hi Betty - How are you? Hope everything is well - its been awhile since we've talked. I just wanted to let you know, I'm doing so much better since we last talked. I was in desperate need of help - I'm sure you can imagine since I called you numerous times for support. For some people, just getting off aspartame is enough to recover from problems they may be suffering but in my case, it took a lot more. My first "episode" was a lot easier to handle - I just stopped using the sweetener and within a couple of weeks, I was a new person. At the time, I wasn't aware how harmful aspartame was - I just knew I was sick and assumed it was something I was doing. . . and I was right.
I was I would have followed my guts.

A few months after that, I went to the doctor for a physical and mentioned my experience w/aspartame - I thought she would be happy to hear I figured out the problem since no one could seem to figure out what was wrong with me. Instead, she laughed it off and said it was impossible. The doctors thought I was a hypochondriac and actually diagnosed me with a mental problem. They prescribed me all kinds of mental drugs but luckily I didn't take any of it. Taking her word, I started drinking my diet sodas again and within several months, my symptoms came back and this time it was severe. I had all the tests you can name, they couldn't find anything wrong with me except for what I was telling them. They finally diagnosed me with depression! I have lost all my faith in doctors. I thought I was going to go crazy - none of them would listen. That's when I found all the info on aspartame and talked you. It was a rough time - I visited Dr. Harding (she a blessing) and she worked miracles for me - god bless her! ....

Subject: Victim of Aspartame Poisoning - Cerebral Aneurysm, Seizure

In my mid thirties, I begain drinking diet sodas to lose weight. After 2 years of initial use, I began having headaches and dizziness on a daily basis. Over-the-counter medications did not improve my symptoms. Then I began experiencing chronic fatigue, extreme weakness, body pain (flu like), \'head in a fog\' thinking, back pain, irregular, painful and debilitating menstrual cycles. I also experienced hypoglycemia symptoms, bloating, breathing difficulties, heart palpitations, excessive thirst and hunger, severe itching, nausea, numbness and tingling of extremities, night sweats, tremors and blurred vision. At times I actually felt as if I were being poisoned. On Sept 22, 2004, I had a seizure. After all the doctor visits and medical tests, it was determined that I was very healthy, with the exception of an incidental finding, cerebral aneurysm. My PCP prescribed Zoloft for panic attacks, which did help to relieve my symptoms temporarily. I continued to struggle through each day. I knew I was dying, and was ready to go because I was so miserable. Several weeks ago, I learned that 2 of my neighbors, both female, have been sick with the same symptoms. We had our well water tested, heavy metal screening, looked into the possibility of toxic mold in the homes, until I discovered the toxic effects of Aspartame poisoning. I confirmed with my neighbors and they in fact consumed large amounts of diet soda (Nutrasweet) as well. I am now 2 weeks without Aspartame in my diet...and I am beginning to feel much improvement in my health. Most of my symptoms have improved tremendously, or disappeared. Even those around me have noticed a difference in my behavior, focus, and particularly my energy level. I am convinced that I am a victim of Aspartame poisoning.

Thank you for taking my story.

Subject: re: aspartame

I am someone who has a story about aspartame. I think I went to the Dr. about 5 yrs ago
because I had a numbness and tingling in my face which I thought could be the start of a

tooth nerve dying. Ex-ray said no. I think that was probably the first experience I had w/ numbness
and tingling which progressed to a full body flush and tingling which happened about 20 - 30 times a day.
It seemed to occur in parts of my body where I had an injury of some sort - a broken bone in my foot etc.
These symptoms lasted for about 30-60 sec. and did not knock me off my feet but sometimes, if it
included a vision problem in my left eye, I had to consciously make and effort to stay in control of my
body. In the fall of 2003 I went to my family Dr. who sent me to the neurologist. Of course they looked
for things like stroke, MS, epilepsy etc. I had an MRI of my head, a carotid artery test, ex-rays, saw the
opthomologist, orthopedic surgeon and the neurologist 3 times. He could't find anything - I think he thought
I was making this up. All he said was if it was still happening in 30 days I should come back. Well, I was
seeing ads for food which said "no apartame" and I began to wonder. I drank diet ice tea and used other
food products since they came on the market. I consumed a large jar of diet iced tea every 2 wks in addition
to diet soda etc. I decided to eliminate aspartame from my diet and after about 2 wks the numb/flushes started
to subside. It took almost 6 mo. before they were gone entirely. It hasn't happened for 6 -7 mo. I received your
e/mail address from my daughter who is a professor in the science dept. at xxxxxxxxxxx State because I have been
wanting to tell this story to someone because I felt it had some significance for others who have undiagnosed
neurological problems.

Subject: Aspartame poisoning

Since I can remeber I have always drunk diet drinks had sugar free sweets and
other food products. About 6 years ago I experienced severe fatigue, loss of feeling
and tingling in my fingers and down one side of my body. I even experienced paralysis
in my legs. I was sent to see a neurologist and he put me through lots of tests suspecting

that I had MS. All tests came back negative. My Mum then met a lady who had MS and told her about aspartame. I then cut it out of my diet completely and my symptoms disappeared.
I have been fine since.

Subject: Aspartame

Dear Sir,

I only have a few moments to write you a quick note. But I first and foremost would like to thank you for all the information I have obtained through your website about the toxicity of aspartame.

I have been experiencing strange symptoms pertaining to my health for quite awhile, that
I couldn't put my finger on. I will go into details at a later time, but last week it all came to a head with one piece of sugarless gum. I have been drinking a diet iced-tea with aspartame
for quite some time, and never put two and two together until this past week with an awful reaction to one piece of gum. The day prior to this last episode, I had a slight feeling in
my throat as if I had suddenly got an awful sore throat, which went away, and that night I drank
some iced tea. The next day, the only thing I put in my mouth when this reaction was set off was
a piece of this sugarless gum, and I felt the most awful pain like a firecracker went off in my mouth,
and I believe my throat was closing up, my throat hurt incredibly. Dr. said it sounded like and
allergic reaction, and I took benadryl which really didn't help completely, but the symptoms subsided.
Since that day, last Tuesday, I have had no aspartame at all, and I can't begin to tell you how
much better I feel. I have people telling me it's to soon to tell if that was really the problem,
but as it stands right now, I truly believe I have been a victim of this monster called asartame.
If possible could you let me know if you think that small amount of time could make such a

marked improvement in my overall health. I feel 25 again, not 65, and I am 42. I can't thank you enough..

I wish more people would look to additives as a source of problems, I know I will be spreading
the word. My vision is improved, my eyes don't hurt, I slept better than I have in months. Thank you , Thank you!

A little OT, but NutraSweet has been implicated in a lot of adverse reactions.
My wife's reaction was so severe that the doc's thought she had multiple sclerosis
for a while. Then she gave up gum with NutraSweet (Aspartame) and voila!
no more symptoms! There's been not a little bit of coverup for this chemical.

Subject: aspartame reactions

Hello mgold,

I grew up drinking Diet Dr. Pepper in the 80's (I think when it was
still saccharin). In the mid nineties I was a college student. I
started having memory problems. I've always had wonderful short-term
memory and did some of my best studying right before a test. But
suddenly I was forgetting everything I had just studied. I was
actually in danger of flunking a difficult class. I was also getting
very bad headaches. A friend of my parents told us about an actress
he knew who stopped drinking diet sodas a month or two before her
play would start. It was late in the semester but I stopped drinking
Diet Dr. Pepper and stopped eating diet popsicles. The headaches
went away. My memory improved a lot and I managed to make a high
enough grade on the final exam to get a C in the class.

I tried to stop drinking Diet Dr. Peppers completely, but I seemed
to be addicted. It wasn't until after I was married that I kicked
that habit. And my husband could always tell if I drank a Diet Dr.

Pepper - he said I started noticeably forgetting things.

During my days of Nutrasweet, I gained weight, got headaches, developed eye migraines, developed hypoglycemia and had memory problems. My memory has never recovered 100%. At this point, I am completely off of all artificial sweeteners. I tried Splenda when it came out, but I seemed to develop an addiction to that as well.
....

Subject: Our experience with poison #%%% I mean aspartame!

About 15 years ago I worked in a warehouse that was not air conditioned and I was drinking sodas all day long. Needless to say I started to gain weight, so I made some sugarfree Kool-aid to take to work. Well I got a headache that felt like the top of my skull was being crushed in all the way around the top. The next day more kool-aid and the very same headache. So I have never used anything with aspartame in it since. Guess what I have never had such a monster headache like that again.

But my real story is this, my mother was using nutra-sweet in coffee and tea and drank diet coke. In March of 2000 she was having a dry cough so I had taken her to the hospital doctors office and while she was there she had congestive heart failure. It was caused by a buildup of fluids around her heart. So this ment her kidneys had gone bad. Then she had to go on dialysis 3 times a week. One morning about 2 years ago she was so sick, I took her to the emergency room and they ran all kinds of tests on her, Xrays, blood work, EEG, EKG and found nothing. 2 days later the same exact thing again emergency room and all the tests again. The doctors found nothing.

Then I remembered my own experience with aspartame and did a web search and found your site. I couldn't believe the number of people having such a wide range of problems after taking something with aspartame in it. Well I threw eveything with aspartame in it away and got her to understand she could never have diet coke again. It took about 3 to 4 months before her problems went away. She has not had anything with aspartame in it and guess what she has not had those same problems since. There is no way for me to prove it, but I believe it was the aspartame that destroyed her kidneys and caused the need for dialysis. This is a woman that did not drink or smoke or use anything to excess, so why would her kidneys fail? There are lots of other people that are her age and do

not require dialysis. It doesn't take a PHd or a rocket scientist to see a connection here. So my advice to everyone if you have just half a brain you won't use any kind of artifical sweetner esp. aspartame.

To: aspartame@holisticmed.com
Subject: Here is my story:

Here is my story:

I recently moved to a new apartment, and before my kitchen was functional (a period of 6 weeks) I was eating out. Breakfast and lunch each day was purchased at a local petrol station food store, and included iced teas, cool drinks and similar. At that time I was not aware that Aspartame was contained in these drinks. There may have been other poisons in the "freshly made" plastic packed sandwiches which I am still not aware of. However, I now know that there were artificial sweeteners (not otherwise specified) in some of the drinks I was purchasing.

My symptoms included dull feeling in the head, growing confusion, dizziness, numbness in my fingers and toes and clumsy behavior (all of which I recognized as neurological symptoms). I started dropping things, banging myself and injuring myself while working on the new apartment. This was dangerous since I was using power tools, and at times was working at height. I was so disoriented and unaware of my surroundings at one time that I drove into a post and smashed the front end of my automobile. My fingers became so insensitive that I started having trouble typing (I am normally a very fast touch typist) and considerable trouble playing the piano (including pieces I know well and generally have no trouble with).

I was puzzled to find that I was having trouble with relatively simple mathematics; I am a product designer and must often use applied mathematics consisting of simple differential equations and routine techniques for analyzing material strengths and so on, and also relatively straightforward hypothesis testing statistics. Why, I asked myself, were these things becoming so difficult?

Reading became difficult. It was partly a cognitive problem, so that when I could see the words I found difficulty understanding what was written. More and more I was re-reading sentences to catch the meaning. I was also having visual problems, and had my eyes tested for new reading glasses - which it turned out were not needed.

I then blamed the Chinese restaurant for putting too much MSG in my food; without a kitchen at home I was going there three or four times a week. The owner responded to my complaints by reducing MSG in general and serving me with MSG free meals. The
symptoms did not improve.

I then supposed that my problems may be related to a blood condition, and had extensive tests done, including tests for rare conditions such as G6PD activity deficiency, and cytochrome P450 enzyme activities. (Was I a so called "poor metabolizer"?) These tests all proved to be normal.

Finally I realized that the drinks may be poisoning me. I investigated further and discovered that some of them probably contained Aspartame. Of course, I immediately stopped consuming these drinks. My kitchen is now operational and I cook my own food from fresh vegetables and organically grown produce were possible.

In the several weeks following cessation of purchasing drinks from the station, my symptoms largely cleared up. However, not everything is back to normal and it is clear that I have been neurologically damaged. I have recurrent tinnitus, in the form of a constant hissing sound in the background - at times a whistling sound. This was present before moving house, but is now significantly worse. It spoils my music listening pleasure, and sometimes keeps me awake at night.

I also have damaged sight. I printed out an Amsler grid and tested myself. I could see some slightly wavy lines and other patches which were blank (not black, simply empty where the lines should have been visible). These are diagnostic for macular degeneration. My reading is still somewhat hindered by patch vision in the foveal centre. I shall now start on a course of AREDS supplements to slow down the visual loss; presumably once macular degeneration has started is continues into age related macular degeneration (AMD).

I conclude that the Aspartame in the drinks is responsible for the episodes and for the neurological, auditory and visual damage I now suffer. My life has been irrecoverably reduced because of this misadventure.

Alas, nothing shall be done to redress this situation as long as Bush remains in the Whitehouse. And (many Americans do not realize how forcefully their domestic affairs impact other peoples; I am Dutch) nothing shall be done in this country until the US had legislated Aspartame out of legal use.

Subject: aspartame

I had always practiced a healthy lifestyle so when aspartame came out I wouldn't have anything to do with it. Then due to a health problem I suddenly gained quite a bit of weight. I went to a Dr. who put me on a diet that include several sugar-free foods & drinks. Reluctantly but to help lose the weight I consumed them. 2 weeks later I was overcome by dizziness, and felt like my head and ears were going to explode, it was debilitating. I went to vertigo specialist at a top medical facility and they couldn't find any explanation for my vertigo. I was placed on many medications with no relief.

My mother found on the net that aspartame caused vertigo. I stopped using it right then and within a few days the dizziness stopped but will come back with a vengeance if I even accidentally get a stick of gum with aspartame, I get so dizzy it is like I am drunk.

I feel my equilibrium is permanently damaged because of it. Before I could watch TV and enjoy a movie. Now, I can't because the movements make me motion sick. My whole family has had reactions to this poison aspartame. My Father loses his memory, My sister get hives on her tongue, My aunt went deaf until she stopped drinking diet coke, and my mother has memory loss & hives from it. I tell everyone that it is a toxin and to please not drink it, but sadly most don't listen.

Subject: TOXIC DRUG - ASPARTAME

Aspartame's deadly effects are most certainly true. I am living proof, that if I had not heard about Aspartame 8 years ago and discontinued its use, I would have been dead by now. I used to drink diet soda's about 4-6 cans a day, and used all diet products because at 120 lbs. I thought I was fat. (soda, gum, jello, pudding, hot chocolate, Crystal Light, kool-aid, etc.) All diet products used aspartame for a sweetener. Even though I was using all these "diet" products, I kept gaining weight.

I thank God daily that 8 years ago my son brought home an article sent by his science teacher about the effects of nutra-sweet. At that time, I was experiencing many of

the symptoms described in the article, heart palpitations, dizziness, brain fog, memory loss, extreme fatigue, depression, blurred vision, muscle soreness, and worst of all, I had a large mass in one of my breasts (my breast had become very deformed, sore and so much larger than the other that I couldn't even find a bra to fit).
I had a biopsy done and it was not cancerous, so I was supposed to go back for a re-check in 6 mo. (I did not go back in till 18 mo. because of fear). During that time, I got rid of everything that contained Nutra-Sweet, started drinking mostly purified water and some coffee or tea). I worked at drinking a lot of water daily to try to flush my system out. What I had done in those 18 months seemed to work because when I had the re-check done, the mass was gone! The heart palpitations were gone too. The doctor and radiologist said whatever I was doing, to keep it up. They were amazed that a mass that size could go away on its own.

Today I am 47 years old and I believe that I still suffer from depression, fibromyalgia and I have recently been diagnosed with thyroiditis, because of my diet soda intake and other diet product usage from years earlier. But, I know that Doctors will never admit my problems are caused from aspartame poisoning. Not when Monsanto keeps
donating huge sums of money to the American Medical Association. The doctors will keep
their mouths shut, at the expense of us! They're some doctors that are speaking out against aspartame, but they are few. I am one of an ever-growing number who have educated themselves on diet and nutrition because I choose to live! I will not sacrifice my health or life for a Diet Pepsi!

I would like to see this TOXIC DRUG removed from the human food chain. And if possible, I would like to be a part of the law-suit against Monsanto.

Subject: My Experience with Aspartame

During the past few years I became somewhat "addicted" to Breath-Saver mints. I typically
ate 4 or 5 a day, and bought big packages of them at Costco. I also drank four or five diet pepsis a week.
Symptoms came on gradually, and I never made the connection to Aspartame. They included attacks
of gastritis, extremely painful episodes that woke me up at night. Doctor prescribed Prevacid which
helped, but I had never before had such painful stomach troubles. I am 53 years old.

I also seemed to suffer more from headaches, depression, and fatigue.

About a year ago I began having severe joint and tendon pain in my shoulder. Popping and grating
sensation whenever I moved my arm in certain ways. Went to physical therapy, didn't help.
Had MRI which showed tendonitis but no joint deterioration. I became unable to sleep on my
right side. Chiropractor could not help. Cortisone shots did not help. I work at a desk, and some
days were so bad I could hardly function. Took lots of Advil. Certain activities such as bicycle
riding and running aggravated the pain and I had to stop doing them.

A couple months ago I somehow began to wonder about aspartame and researched it on the
internet, and quickly found your informative website. After reading many of the articles you
have posted, as well as other people's experiences, I decided to completely stop my aspartame
consumption. It has had amazing results after fairly short time.

My shoulder pain is 90% abated, hardly noticeable now. I stopped having gastritis attacks.
Other symptoms have improved.

I am convinced I was being poisoned by aspartame. I do not pretend to understand the
physiology of how it was affecting my shoulder, but if aspartame did not cause the condition,
it apparently made it much worse.

My chiropractor was very interested in my experience, and is mentioning it to many of his
other patients. He finds my recovery fairly remarkable.

Thank you for your good work in informing the public about this harmful product.

Subject: Aspartame

Last year, I had been drinking Diet Coke constantly in a new job that I started last May, ...breakfast,
mid-day, evening...probably 4-6 cans a day. Then I decided I liked coffee and started drinking coffee with
Equal (aspartame) in it. Sometime in September I began being very dizzy when I woke up in the morning.
A few weeks later, it progressed to the point that I was dizzy most of every day and it became severe
whenever I would lie down. I went to see an Ear Nose & Throat doctor and went through many tests. Nothing
could be found to cause the dizziness. He prescribed valium and a fluid reduction pill. I never took the Valium...
dizziness continued...rolling over in the bed caused violent dizziness...and resultant nausea. Shortly after the
doctor's visit, I had a friend tell me to just try cutting out all aspartame for a while. I had my last Diet Coke/coffee
with Equal on a Wednesday...it took until Sunday before it was out of my system, but on Sunday I woke up and
was not dizzy at all and have not been dizzy since. I think that the HOT coffee broke down the aspartame into
methanol and was the final toxic blow. No artificial %$#% is going into my system any more (as much as I can help it).

Subject: Aspartame caused problems

I am glad that I found this site and have been reading through most of the case histories.
Artificial sweetener have caused so many problems for me I don't even know where to begin.
I started out by using Aspartame in my coffee. I used to drink 5-6 cups of coffee and drank
3 tablets in each cup. I kicked my coffee habit later on but started drinking artificialy sweetened
carbonated drinks. Approximately 6 - 8 cups a day. I also ate yoghurt with aspartame in and
other products like sugar free chewing gum. I suffered from imbalance in my hormones which
could not be explained. I just later on accepted that it will never change. I started having

frequent
infections which could not be cured by antibiotics. I suffered from very bad depression. I also gained
a lot of weight which I just could not get rid of and I suffered from all kinds of cravings, specially
sweet cravings. I used to crave sweets so much that I felt like I was going insane untill I ate 2 - 3 bars
of chocolate or Ice cream. I was tired all the time and had frequent mood swings. I also got blurred
speech at times and was unable to concentrate.

My husband told me that my weight problem was caused by the artificial sweetener and I did not want to
believe him. Finally I decided just to prove a point that he is wrong I will stop using artificial sweetener.
My whole life changed after that. I have lost 4 kilograms in the past two months. I have completely
stopped having cravings. My hormones are balanced and I'm having my preriod regularly and on time.
I have no more infections. My mental health have improved so much that I feel like a completely
different person. I will never used artificial sweetener again.

i didn't know why i was getting headaches until i started digging around.

Aspartame causes "brain lesions". I stopped eating/drinking nutrasweeted/aspartamed products and
my spontaneous headaches stopped. Don't imbibe it. If you don't notice a headache, its probably too late....

Subject: aspartame poisoning

In 1998 I switched to diet coke because I am overweight. Also in 1998 I started having bouts of Vertigo. The very first one was not severe, but lasted about a month. After the first one, I would have bouts that were so severe I could not get out of bed. If I did, I would
throw up from the motion sickness. Last year it was so bad that I was constantly "dizzy". If I looked up, turned my head, laid on my left side, etc. I went to a neurologist and while she was taking my history she asked me how much caffeine I consumed. I told her that I drink probably a 12 pack of diet coke a day, not to mention the ones I drive through McDonalds and get. She told me to immediately quit drinking diet coke because of the nutrasweet and to switch to regular to ween off it completely. She was concerned about caffeine withdrawal so she wanted me to drink regular coke so not to have the withdrawal
headache. I quit drinking the diet coke in May of 2003. From June, 2003 til now I have not
had one episode of vertigo. Today I am having a bout with it and have determined it to be
because I have been chewing alot of sugarless gum. I will now throw it all in the trash.

Subject: Artifical Sweeteners

Hello! We were e-mailed some information about aspartame
this evening, and the other "artifical" sweeteners by my husbands

uncle, so we went on-line to investigate the rest of the answers
that we had questions for, needless to say, what we've found, is
quite hair raising , and made me so mad, I could spit rocks. When
someone is told by our tv ads,or a personal friend, that there is
one sweetener that is better then the other one, you start using it,
because you really want to believe it, main reason is that there isn't
a PH.D around that would tell you anything different, just that my
blood sugar is high, my ears ring, my joints ache, I get dizzy quite
often, I have mood swings, I get heart palpitations that just almost
take my breath away, & that I retain water, but the Dr. says I'm "normal???"
& I am given no other answer, except if they think that a pill can fix it,
they are right there to give you a prescription for it, they smile, and get rich!!

As of tonight, we went through our cupboards, and pantry, and poured
out all of our "diet drinks", and everything in the frig. that had any type of
artifical sweetener in it, and we were really shocked to find out how much
junk stuff, that even is in yogurt, not all of the yogurt, just some of it,that
we had to throw out. I will let you know how long it takes for me to feel like
I'm back to normal, or just about, because I used to have a lot more energy,
I didn't have blurred vision before, & I just had my eyes check not too long ago.
We thank you for your fantastic articals, and all of the other information we
found, and have learned a lot from them. If it isn't organic,or when we read
the ingred.label & it has an artifical food color, or sweetener in it, we will
not buy it. We don't get addicted to a soft drink; we just will make sure it
won't kill us, or make us feel like we are almost dead. We have a family
member that is dieing from brain cancer, and I don't know if it was the
diet drinks or not, but we aren't taking any chances, we like life, we've
been educated real fast, and will always remember. Thank You

[Below is a response after 2 weeks of aspartame detox.]

Subject: Appalled that so many are still suffering because of this poison!

Dear Mark,

My list of health problems grew longer and longer over the course of drinking diet sodas for 15 years.
Never did I imagine it was all related to the diet sodas. I have been very angry since this discovery, as
I still have severe memory loss - at times struggling for words just to finish a sentence. I had severe
insomnia for years. I experienced the spots, floaters and chronic fatique, tingling in my hands,
eating binges, and headaches with blind attacks. Toward the end I was having severe muscle spasms/contractions
in my legs constantly - I thought I was going to reach the point of not being able to walk at all. Fortunately,
my mother had received an email with a list of the negative reactions caused by the consumption of
aspartame/sucrolose. I immediately stopped all use of any fake sugars. All of the symptoms I have listed
above eventually went away, with the exception of, as I stated earlier the memory loss. It is very embarrasing
and I work hard at hiding this problem from my friends, family and colleagues - I know there are times my
husband genuinely worries and is perplexed by the memory loss. He, as well as many others think I am crazy
when I tell them the cause. I discovered this 6 years ago and am appalled that so many others are still suffering
because of this poison. I want to thank you for your efforts in educating the public - you are doing a great service!

I WOULD LIKE TO LET YOU KNOW THAT 3 1/2 WEEKS AGO , I QUIT ALL ASPARTAME AND

ANYTHING DIET. 24 YEARS AGO WHEN I WAS PREGNANT WITH MY SECOND CHILD MY DR.
TOLD ME TO GO ON A DIET BECAUSE I GAINED 13 POUNDS IN ONE MONTH. I SWITCHED TO
DIET SODAS AND ANYTHING THAT WAS "DIET". IN THE PAST 6 MONTHS I WAS DIAGNOSED
HYPOGLYCEMIC AND ALSO WITH HYPERTENSION. I AM 45 YEARS OLD AND WAS ALWAYS
HEALTHY. 6 MONTHS AGO I KEPT GETTING LIGHT-HEADED AND FEELING LIKE I WAS GOING DOWN.
SINCE I AM A SERVER IN A RESTAURANT POURING COFFEE 8 HOURS A DAY, THIS IS NOT A
GOOD THING. I HAVE A MIDDLE EAR PROBLEM SO FIGURED THAT IS WHAT IT WAS FROM. THEN
THEY TOLD ME AFTER TESTS THAT MY BLOOD SUGAR WAS 53. THEN I WAS DIAGNOSED WITH
HIGH BLOOD PRESSURE.TO MAKE A LONG STORY SHORT NO DIET ANYTHING FOR 3 WEEKS
AND I AM BACK TO 90%.

Subject: my Nutrasweet story

About 5yrs ago, I was buying Nutrasweet at Costco in the box of 500s and using it like crazy in coffee and iced tea. I also drank alot of diet pepsi. I started to have memory problems and work and my boss threatened to fire me for being too slow. I would get lost driving in my own city doing errands. I forgot to pay the mortgage twice and left a gas stove going all day.

I saw my doctor and he sent me for a CT brain scan and they found nothing wrong. Soon after the test I read in Prevention magazine that Nutrasweet can cause short term memory loss.

That next morning I used no Nutrasweet in my coffee and noticed a huge difference! I wasnt foggy headed and could think so much clearer! So now I use Stevia in my coffee... xxxxx

Subject: Aspartame

Hi;
Several months ago I started a diet, it was wonderful and I lost 25 lb. The book that help me with this diet told me not to drink any soft drink with Aspartame, but since I needed something sweet, I figured out that it was OK. After 3 months of dinking soft drinks with Aspartame I started to feel very tired, my muscles hurt a lot and I was very stressed. The funny thing was that I was very tired during the summer, and, since I am a teacher, I do not work in the summer. Why was I tired and stress out? Why was my neck very tense and my legs hurt?

I got an email from my brother in Mexico about Aspartame, I read all the symptoms that Aspartame cause according with this letter and I realized that I was suffering from intoxication caused by Aspartame. I decided not to take Aspartame anymore. Now I am feeling a lot better. I believe Aspartame was intoxicating me.

Subject:

I was reading your toxicity reports on Aspartame and was grateful someone out there is informing
the public about this harmful chemical. As a child I had many side effects associated to this chemical.
Headaches, Dizziness, Fatigue. I was taught never to eat it no matter what the circumstances. I have
found many new chemical names on “Sugar-Free” products over the years and try to avoid “Sugar-Free”
anything due to my reactions and knowledge of chemicals including Saccrin and Aspartame (NutraSweet).
I am curious if you have noticed Phenylalanine which from my research is just another name for aspartame
that has been used in “Sugar-Free” candies, gums, and even Fitness Supplements.
Check out this link
http://www.sweetpoison.com/phenylalanine.html

Thought you should probably add that to your list since they are one and the same and this stuff is nasty.
Brain Damage is not something we need our country to have a high dose of.

I want to thank you again for keeping this info on the Web

Subject: Aspartame Poisoning

This letter is in response to your requests for information regarding my symptoms to what I believe is Aspartame poisoning. My symptoms first began in early 2003. In late 2002, I began to gain weight. My diet included approximately 8 liters of Pepsi per week. As part of a strategy to combat this weight gain, I switched from regular Pepsi to Diet Pepsi around the end of 2002. Soon after, I began to notice my feet felt unusually cold at night.

This progressed until I was soon too uncomfortable to sleep at night without wearing socks. By late February 2004, a second symptom arose. At this time, I began to notice that my left eye would become numb and unresponsive whenever I would relax or prepare to go to sleep. This partial paralysis was upsetting to me, and I soon began to consult eye doctors. Several months and three eye doctors later, I was referred to a general MD. This MD's office diagnosed me as most likely having MS. This precipitated a number of expensive tests for MS at a local hospital. These tested included a CAT scan, an MRI, and various blood work. All came back as negative for MS.

At this point I was frustrated with paying for expensive tests and consulting lots of doctors who seemed to have no idea what was wrong with me. I stopped seeing any doctor at all. My symptoms slowly, but undramaticaly, progressed. By early Summer of 2004, however, a new symptom arose. At this time, I began experiencing tremors. At first I simply had strange feelings at time. Soon, however, I noticed visible shaking. This occurred mainly when I was relaxed or waking up in the morning. This shaking quickly progressed over the span of 2 or 3 weeks to the point that considerable shaking and even facial spasms were waking me up in the morning.

I told a friend about my situation and how I didn't have the time and money to be wasting on doctors who couldn't tell what was wrong with me. I was scarred however, and announced my intention to start seeing more medical professionals. My friend commented that I might be a victim of Aspartame poisoning, and that I should stop drinking Diet Pepsi. I took his advice. Within a few days, my symptoms of a year and a half were noticeably better. Within a month, all of my symptoms were gone. Following this, I unknowingly began using some other products containing Aspartame. My symptoms began to return. After realizing that

Aspartame has many names, I ridded myself of these products as well. My symptoms once again subsided. All of this has left no doubt in my mind that I have been a victim of Aspartame poisoning.

I am looking to stop Aspartame use nationally and to recover my considerable expenses,
both emotionally and financially, in having to go through all of this. Please keep me up to date on any pending class-action lawsuits.

As with many of you, I am a skeptic. It is difficult to make me believe something like this. But...I will speak from my own experience. Not the tale told by a friend of a friend, but me personally.

Up until 2 days ago I've been drinking Diet Coke and Diet Dr. Pepper. Probably 3 or more cans a day.
Progressively, i've felt worse and worse over the past several months. I also started drinking more and more diet drinks.

My niece warned me about Aspartame. I didn't listen and kept on drinking the Diet sodas.
My symptoms included declining eyesight, fatigue, headaches, dizziness, aches in my neck,
overpowering stress and a feeling of desparation. I did not want to get out of bed in the morning, I could have slept all day.

Two days ago I stopped drinking the sodas. It is the first time in over a year and a half that i've gone this long without a diet soda. The day after I stopped, I woke up feeling better. This morning, it is twofold. I feel better than I have in months.
I've got a great energy level. I can breathe better, see more clearly, think clearly and I hopped out of bed.

I ask myself...is this merely coincidence? There is nothing else i've changed in my diet or routine. If I was hearing this from a friend then I may doubt some but this happened to me...just this week.

The energy I feel is natural, not that of any stimulant. My attitude is that I could conquer the world and I have my confidence back.

This experience is enough to make me never consume Aspartame again. When I see a diet coke, it looks like a skull and crossbones to me...and I don't miss it at all.

...just my own story...

Funny how the sites that claim aspartame is harmless somewhow have more credence than
the ones that come out against it. I'll go with my personal experience. I had
about 10 symptoms, stopped using NutraSweet, and voila! Doing much better.

Subject: Aspartame reaction

Hi,
I just found this website and thought I would send you my story.
I grew up in the home of my granfather who was a diabetic. As a result to only sodas in our home were diet and
as this was back in the 70's and early to mid 80's they were sweetended with saccharine. I used to drink to least one to
two 12 oz. cans of diet 7-UP a day and I couldn't stand the overly sweet taste of regular soda.

In approximately 1985 or 1986 (I believe the same year 7-UP switched to aspartame) I started experieincing debilatating
migraine headaches. These migraines would begin with me seeing little flashes of light (I believe it is called and aura) and
then such extreme pain that I could not work or even move. At the time I had also started taking oral contraceptives and my
gynecologist thought that was the problem. I promptly quit taking the contraceptves and the migraines continued daily,
usually lasting for several hours each day.

Becasue the ceasation of the contraceptives had no effect on the migraines, my gynecologist thought maybe I had a vascular
problem (his code name for an anyuersim) or a tumor. He decided it would be best that I go to a nuerologist for further testing.
Fortunalty my insurance provider required a return trip to my family doctor before going to yet another specialist and my
family doctor was a very practical man who understood that many migraines are actually reactions to food.

For the next month I was placed on an allergy diet. Basically I was allowed to eat nothing except boiled potaots or plain rice.
I was allowed no coffee, tea, wine, chocolate, cheese, and absolutatly NO SODA, diet or otherwise.

Within 4 days the migrianes stopped and I was told to add one food at a time to my diet and see what happened.
Lo and behold the only thing that triggered my migrianes was the diet 7-UP. At first it made no sense, because I had
been drinking diet 7-UP for years, and then I discovered that they had replaced the saccharine with this new so called
wonder sweetener Nutra-Sweet. I then conducted one personal experiment with Nutrasweet and that was to eat a
breathmint sweetened with it. At the time I had been given a wonderful drug called Ergostat that would stop the migraine
if taken when I had an aura. So I ate the breath mint and within 5 minutes I had an aura, took my medication and
blocked the migraine.

I have never purposefully eaten anything with Nutrasweet in it since and the only migraines I have had in the past 20+ have
occurred when I have accidentally consumed NutraSweet. I feel lucky that my family doctor had the good sense to suggest
I had an allergy or food reaction and not just ordered a battery of tests that would have found nothing. Becasue of this
I did not continue using the poison and I have sounded off to anyone who would listen about what a vile horrible product it is.

Subject: Aspartame Toxicity Information

My mother and I always drank diet everything, so when aspartame took over, we had no choice. Two years later, my mom began having grand mal seizures (and I developed migraines). They did all the tests, and found nothing wrong. We had heard about a connection between aspartame and seizures, so we stopped using aspartame. After a year of being seizure free, a friend gave my mom diet soda in a glass. That night she had another seizure. That was it. Aspartame was banned in my house.

Fast forward to two years ago. My husband, myself, and my two sons were on our way to my sister's house for Christmas. Half way there, my 9 year old starts seizing. A grand mal. Take him to the hospital, they find nothing wrong. I found out the day before, he had consumed 10 diet sodas at his friend's house. It scared everyone so bad that now they listen to me when I tell them not to use aspartame.

Subject: Migraines and Dizziness
Date: 07:36 PM 8/2/2005,

Hello, as one of the new members Betty is refering to, i thought I would introduce myself. I'm Jennifer. I began suffering from dizzy spells in elementary school. Doctors did test after test to no avail. At 12, I began to suffer from crippling migraines as well. I totally cut aspartame out of my diet at 16. You should understand that prior to this, the only aspartame I had may have been a piece of sugar free candy or gum. I had only consumed one diet beverage outside of possibly a sip of someone elses. I bring this up to point out that a toxicity level for is ridiculous. Any level is too much. I am 26 now. I still suffer from migraines, but the frequency and intensity has decreased dramatically. I haven't had a bad one in more than a month. At sixteen, I got them at least once a week and they were bad enough that I would black out. I've been trying to convince everyone I care about for years that the stuff is dangerous. There are campaigns everywhere telling us how horrible tobacco is and yet it looks like some kind of vitamin supplement when compared with aspartame. More people need to know.

Hello My name is Cindy
I am from the UK. I have a 13 year old daughter, who is diabetic so drinks lots of sugar [free] drinks. This year she has been ill and i was told she has chronic fatigue syndrome. But i have been hearing some bad things about Aspartame and wondering if it could be linked to my daughters illness. At the moment i have stopped giving anything with Aspartame in. but i am having lots of trouble finding sugar free drinks without it so she is now only drinking water and not happy. if you have any information on this i would be very grateful to hear from you. I would love to see Aspartame banned in the uk.

Dear Mark

Thank you for you email.

My daughter Amber is already feeling much better. She has more energy and

is a lot happier. The change in her has been wonder.

I cant believe something this damaging is still allowed to be used. When
we found out Amber was diabetic we thought sugarfree was wonderful. How wrong i was.

Subject: Aspartame reaction.

Some years ago I discovered that I have a highly toxic reaction to Aspartame.
I would often get headaches and dizziness after drinking a diet soda, and realized the connection. Not considering this, I tried a liquid diet drink to help me lose weight. The reaction was almost immediate. My breathing became labored and the dizziness was overwhelming. I don't remember anything after that except waking up on my kitchen floor with my 18 month old having been left on his own for the two hours
I was unconscious. I was told that it was anaphylactic shock caused by the aspartame, and for the remainder of my life I must carry an Epi-Pen at all times as a life saving measure.
Just recently my niece made me a cup of tea the pack of Equal she was using passed over my cup. I woke up at three in the morning barely able to breathe.

The sensitivity to aspartame is terrifying, as it is found in so many foods as a flavor enhancer.
Now I read ALL of the ingredients, even if the list begins with "sugar."

Dumais Brothers Take Act to Athens
Texas' Tandem, Justin and Troy, take their talents to the men's synchronized springboard final
Aug. 13, 2004
By Stephanie Berlin Daily Texan

AUSTIN, Texas (U-WIRE) - Two years ago at the NCAA Championships in Georgia, the entire University of Texas men's
swimming and diving team stood on the first-place podium. Among them were Justin and Troy Dumais, two brothers
whose spectacular dives helped Texas win its ninth national title.

The two stood with their team on the podium, horns held proudly in the air.

"They were enjoying that moment as a team," Texas men's and women's diving coach Matt Scoggin recalled.
"Not as brothers or individuals, but as a team. That was a great day."

On Aug. 16, the Dumais brothers will try and reach the top podium once again, this time in Athens and, this time
around, as their own two-man team. Justin and Troy are taking their talents to the 2004 Olympics together
in the men's synchronized springboard final.
....
But the rise to the top hasn't always been easy. Justin, who had been ill since early November,
just recently became healthy enough to train for the Olympics.

"He lost his energy," Kathy said. "Blood tests showed his thyroid was a little high, and they started treating that.
It turned out he was poisoning himself with aspartame."

Aspartame, which can be found in everything from diet drinks to protein shakes, is a popular artificial sweetener.
Doctors found that Justin was very sensitive to the sweetener, and once he stopped using it, his health vastly improved.

_____
Aspartame Consumer Safety Network Questionnaire

Name__xxxxxxxxxxxxxxx_____ Age_36_ Sex: M___F X
Address_xxxxxxxxxxxxxxxxx _____
City__xxxxxxxx_____State_xx_____
___ Zip_xxxxxx_____ Tele xxxxxxxxxxxxx

Medical problems that you believe are caused from using aspartame:

Severe hair loss, unable to concentrate, I attend management meetings weekly (I am an Operations Officer at a bank), I am unable to find the proper words, have a dyslexic mouth (words actually come out backwards), slurring of speech, feeling lethargic, in a fog, dazed, severe short-term memory loss (must write everything down), migraines, fatigue, seeing bright flashes of light, ringing of ears, and my average weight has always been around 130lbs., I eat healthy, stay away from sugar and fat, work out frequently, and for the last three years I mysteriously gained 30lbs now weighing 150lbs. So, I'd add weight gain to the list. Numbness of hands and feet, severe muscle cramps in feet and legs, heart palpitations, irregular heart beats, insomnia, panic attacks, severe menstrual cramps, excessive thirst, bloating,

Why do you believe aspartame caused these problems?

I've been to the doctor in the past for the heart palpitations, and stressed feeling and they couldn't find anything physically wrong with me. I've been several times for the menstral problems and they just prescribe medications to make it easier. I've had a couple of phyiscals over the last few years and with two different doctors and they both find no indication of my feeling so bad and anxious. After reading the side effects on your website, that was my answer to several years worth of struggling with the fact I may have to face the fact I may be mentally unstable.

Did the symptoms go away when you stopped using the products?

It has been three weeks now since I've had Diet Pepsi and I can say that my period was almost painless this month, my short term memory is coming back. I'm not as fatigued as I was, I don't feel as though I'm walking in a fog as much, it

is subsiding slowly, but, my hair is still falling out (this scares me).

Did you see a Doctor about symptoms?

Yes. she said the medical community did not see asparatame as a risk. That we should check for hormone levels. Did Doctor think it related to aspartame?
She said the medical community did not see asparatame as a risk. That we should check for hormone levels. I asked her about the formaldehyde levels and she said that our bodies metabolize it. She's one of them.....

Did you report your symptoms to the FDA (Food & Drug Admin.) or any other group?

No

What specific products(s) containing aspartame were you consuming when you experienced these symptoms?

Diet Pepsi

On the average, what quantity were you consuming (how often, how much each time, etc.):

I would consume 3-6 cans per day. On the weekends, I could go through a whole two liter
in one day without any problem. I was craving that stuff. How long had you been consuming these products before you experienced the symptoms? I started consuming Diet Pepsi when I was about 19 or 20. The symptoms didn't start until I was about 24 or 25. That I could tell. They came on so slowly until they all came to a head all at once just recently and now I'm 36.

FOR THOSE CONCERNED ABOUT WEIGHT: Did you begin using products with aspartame
when you began a restricted calorie diet?

I always used lite pancake syrup. Aunt Jemima light or Hungry Jack Light. Besides chewing gum...Extra.

Did you use aspartame products only for some of your meals to save calories?

Yes

Did aspartame seem to help you lose weight at first?

I've never been overweight. I've always been healthy with a good BMI.

What were the long term weight loss effects of using aspartame.

It seems that over the past 3 years I've gained 20 pounds slowly and it's stabled at 150. I couldn't seem to lose it. We'll see what happens now that I'm off Diet Pepsi for good.

Subject: RE: aspartame

Mark,

Thank you for your e-mail. I just want you to know I feel like a different person now. I have detoxed my system with vitamins and French green clay (I read Dr. Janet Starr-Hull's Detox book). I have found that I am a morning person. It's unbelievable. No more fog, no more depression or anxiety. I get out of bed feeling good in the morning, not like I have a hangover and sluggish.

Out of all the symptoms I listed below, the only ones remaining are: My hair is still thinning, but not as bad. It is improving with the vitamins. I was depleted in selenium. I've lost 10 pounds, I think a lot of it was bloat. My shoes are all too big for my feet and I can actually see my ankles for the first time in years. I feel great.

I had Jell-O at a reception not too long ago and later that day I had heart palpitations, my feet were cramping, and I felt awful all night. I found the Jell-O was sugar free. I avoid the stuff like the plague and I have to ground my 15 yr old son for chewing juicy fruit! Not smoking or doing drugs or anything bad like that, but for chewing gum that is not sugar free but contains aspartame. Too sad!

Short term memory has dramatically improved. I am getting better at finding words, but would like to see more improvement in that area. I'm sure with time and continued supplements I will improve.

Post subject: CAUTION TO ALL DIET SODA DRINKERS

LISTEN YA'LL.

Over the past week, I have been detoxing from serious toxic posining from the Aspatame
in Diet Soda. I was drinking Caffeine Free Diet Pepsi 2-3 times a day for 3 weeks and I had the following symptoms:

Blurry vision, left side of face hurting, burning traveling mass moving from left side of upper back to left brest and chest area, pinching and feeling like something is crawling under the skin in my legs, ankles, feet and the back of my arms, increased cellulite on thighs, weight gain, lower back pain and spinal acheyness.
All of these symptoms happend to me over a 3 week period and I think I had an extreme reaction because I never drunk diet soda before in my life. The scariest thing was when I felt something moving up my spinal cord and then blow up and burst like a bubble in the back of my neck then all I felt was heat traveling to the bottom of my BRAIN.

I went to the dentist, OB/GYN and the my PCP and they all found nothing! My PCP tried to tell me that it was "all in my head" so I took my life into my own hands and thought about everything I had eaten in the past few weeks. The only thing new and different was those damn Diet Pepsi's. So I went on-line and began to do research on the dangers of Diet Soda.

Basically I found out that when the Aspatame (artificial sweetner) hits your body and the temparature is greater then 86.7 degrees, it changes its composition to FORMIC ACID.
Formic Acid is what FIRE ANT'S VENOM is. It further breaks it down into Fermeldahyde.
Isn't that a chemical they use in removing paint or preserving dead bodies at funerals? I can't remember? But this is crazy. And all of this effects the nervous system in a toxic way, which is why I was feeling the pinches and burning etc. There are dozens of

websites that give you the symptoms of Aspatame poisining and the ones I described above are just a few. Some people have reported tumors in the neck, breast, and BRAIN.

I went to have a colonic on Monday and as I laid on the table on my back, there was so much acid raising to my throat that there was a smokey fog coming out of my mouth. I was forced to lay on my side and cough it out. Fortunately, I am into a lot of herbal things and I now a Medicine man in harlem from Ghana. I went to see him on Wedensday evening and began doing what he told me and talking the things he recommended.

I want everybody to know, especially women because we get brain washed by commercials
and what other women do to loose weight. Diet Sodas make you fatter and crave more carbohydrates. I know I felt something going on with my ovary, so if you are a women, and having issues with fertility, mensturation etc, look at your diet and see if it is due to some product you are consuming that contains this deadly poison.

I still feel little pulses going on, but I feel much better then I did last week
My medicine man friend saved my life again. The first time was when I caught Malaria when I came from Africa in 1999. (And you know, there is no cure for Malaria). So, love yourself and tell everyone to stop drinking poison diet soda!!!!!!!!!!!

Oh and this is what he told me to do:

Eat:
cucumbers/yellow and green squash
raw spinich

Mineral:
You have to see him for the liquid minerals.
1 cup of 2 bottles every morning.
1 teapoon of choraphyll 3x's a day.
1 teaspoon of apple cycle vinger 2x's a day.
1 cup of Daily Detox Tea (apple/Cinnamon) 2x's a day
Put ground Flax Seeds in everything I eat.
And drink 2 gallons of distilled water a day.

Juice:
1 green/yellow apple
1 stalk of celery
1 beet root
1 bunch of parsley
(alternate) ginger/garlic 1 3 inch slice

Maybe this is why everyone is getting cancer. My father has Prostate and Colon Cancer and he was a Equal addict forever!!!! My mother died 5 years ago of Cardiac issues and she was addicted to Sugar-Free Jello (which has artifical sweetner in it) before she passed, one day, she just stopped walking. That's what it was. It all makes scense now.

TAKE CARE OF YOURSELF AND DON'T FEED YOUR KIDS THESE SWEETNERS EITHER BECAUSE IT MAY
BE WHATS CAUSING ATTENTION DEFECIT DISORDER, ETC.

As other people post, I will post the URL's so you can go to the websites for more detailed information if you still don't believe that this stuff is poison.

PEACE

ASPARTAME = poison. Worried about the amount of sugar I was consuming I switched to Lite/Max sugar free type colas. Within an hour of drinking a can of Pepsi Max I would get a headache, took me a while to work out what was causing them. Blaming VDU screen, to much weed the night b4, etc. Feel so much better for ditching anything with aspartame in. Water is the way forward . . .

Subject: Aspartame

It is amazing how many of the symptoms mentioned on your website I can relate to, memory loss, floaters, chronic fatigue, dizziness, numbness, depression. Up until July 2004, I had been consuming Aspartame products for 20 years (I'm 36 now), pop, yogurt, gum, you name it. It was only when I started waking up at night with my legs and arms numb feeling completely paralysis, did I realize something needed to be done. I had been to the Dr.s complaining about some gradual numbness in my limbs,

she ran a gamut of tests with no visible results, but prescribed me a arthritis type medication for relief anyways. Only when the medication provided no relief and the Dr. had ran out of test, I turned to the web and started doing my own research and was astonished at the amount people complaining about similar symptoms and relating them all to Aspartame poisoning.

Within a few weeks of totally eliminating Aspartame from my diet the numbness in my limbs went away, but I still have frequent severe headaches, memory loss and occasional dizziness.

Why is it Dr.'s don't ask or mention the possibility of Aspartame consumption? And with all of this compounding information related to Aspartame poisoning, how can this product
still be on the market?
....

Subject: Breastfeeding

Dear Mark,

I may have missed it, but I have not seen anything on the web so far about NutraSweet inhibiting breastmilk production. Only my sister and I have noticed that drinking diet drinks while breastfeeding decreases milk supply, almost immediately. Within the same day
of drinking more than one diet drink, our milk supply will go down. If you know of sources
on the web that talk about this and if you have time, please e-mail the link to me.
If not, please get something going. I am passionate about breastfeeding and I meet mother
after mother who "didn't make enough milk" despite having done the usual things to increase
milk production. I myself had problems once I started drinking diet drinks, but found that the elimination of NutraSweet or other artificial sweeteners almost immediately brought milk production back up to what it was before.

Subject: Personal Aspartame Story - Seizures
Date: 12:31 PM 8/30/2004

Betty,

I've sent this in before but I'm not sure that I sent it to this site or to you. My daughter, Xxxxxxxx, had Petit Mal or absence seizure from the time she was about 3. Another child born to her aunt had seizure from birth. Xxxxxxxx's seizures, and her cousin's seizures, were controlled with medication until Xxxxxxxx was about 12 or 13. By that time she had begun to have a Grand Mal seizure per month in conjuction with her menstrual cycle.

Gradually she started having more and more Grand Mal seizures, Petit Mal seizure, complex partial seizures, seizures of every kind. This was just about the time products with Nutrasweet were released into the market. Being a teen-aged girl, naturally she watched her weight, as did I, and we both drank only diet soft-drinks. By the time Xxxxxxxx was 17, she was having between 150 and 200 seizures in a 24-hour day. She had a partial right-frontal lobotomy at xxxxxxxxxxxxxxxxxxx hospital to remove the focal point of the seizures and, hopefully, control them. Her doctor, Dr. Michael S., said the portion of her brain that they removed didn't even have obvious grooves any longer due to the number and strength of the seizure she'd been having for so long.

To our dismay, the surgery did not stop the seizures. It did slow them down initially. Then we watched as they began to escalate again. During all this time, she continued to use products with Nutrasweet. We had no idea of any connection. Finally, when she was about 20, she entered the drug trials for Lamictal. For the first time, she was taking a drug that offered some seizure control without sedating her. (She'd been taking 185 mg of phenobarbitol per day WITH 700 mg of dilantin.) When I asked her doctor how this medication was different than the rest in it's mechanism, he just told me I wouldn't understand. By this time the internet was now generally available, so I looked the drug up there. I found that among other things the drug prevented the uptake of ASPARTATE, which is the metabolized form of aspartic acid. I called Dr. Smith to ask him in what way aspartate was related to Aspatame. Again he dismissed by saying that just because the words were alike, didn't mean the drugs were. Well, I'm a mechanical engineer and had 4 years of Latin language. I knew that if the names were similar there was a reason. So I continued to research and began coming up with all of these horrible stories. Worse yet, I found that the executives at

Searle, and subsequently at Monsanto, knew about the potential dangers, especially to those who already had epilepsy or a genetic inclination to it. They'll have to stand before God one day and answer for this evil they perpetrated, for money, against their fellow human beings.

I immediately took all products that might possibly contain Nutrasweet away from Xxxxxxxx. Her seizures stopped that week. She remained on Lamictal, but she was able to get off Dilantin and Phenobarb. We did have to add Topamax to the Lamictal but she's living a much better life than previously.

The surgery affected her short term memory, her cognitive ability, and her developmental functioning. She's now 30 and she's living in a residential facility about 90 miles west of Chicago. It took me a long time to let her go but she's much happier there, more independent and living her own life. However...before her seizures began to escalate so drastically, she was a year ahead of her age-peers in math and reading. She was an exceptionally bright and talented child, attending a special school for children gifted in the arts. Now her IQ is 74 and functionally she's reached an age-level of about 17. We don't know how much farther she will progress. And it's a huge credit to her courage, strength of character, and personal determination that's she's come this far.

I won't say that Nutrasweet, Searle, and Monsanto ruined her life because she's made her life over with purpose and grace and courage. I just can't help but wonder what her life would have been like if she'd never tasted the stuff. She'd have epilepsy, yes, but we would have been able to control the seizures right from the beginning. She'd have been able to finish high school, gone on to college, have a career, a marriage, children, drive a car. None of this will ever be now. I'm grateful to God that she's accomplished what she has. I work hard not to dwell too much on what might have been. Ultimately, we're all in the hands of God and I have to believe there's a reason for what happened to her.

Her doctor has subsequently become a believer and now tells all his patients not to touch Nutrasweet. None of us ever should. It's poison for everyone. I hope you nail not just the companies, but the executives as well. They bear a personal responsibility for their decisions and it's time they were made to accept that responsibility. Based on the people who've died and been crippled for life, they're guilty of manslaughter at the least.

Subject: apartame

My experience with aspartame started about 3 years ago. As a cyclist and avid athlete I was
looking for a way to keep my weight down during the winter months when I was not riding. I started
drinking Diet Dr. Pepper because I saw it as a way to eliminate a lot of calories from my diet, as I liked
to drink pop all day. That is when I started to feel exausted all the time. At the end of the work day
I would go home and fall asleep immediately after I got home. I would sleep about 3 hours, wake up
and eat then go to bed. The next day I would wake up feeling absoulutely exausted. Like I hadn't slept at all.
The whole school year went by and I was in a daze. I felt like a zombie and the whole day felt almost like
an out of body experience. My training that summer was aweful. My performance was poor, I had terrible
problems with body aches on my bike, and I continued to be tired all the time. After a year and a half of
living like this I read an article about some reported side effects of aspartame. I quit drinking diet pop and
within a week I was feeling a tremendous difference in the way I felt. I have no longer had any problems
with fatigue and I happy to say my bike riding is coming back into top form.

A giant thanks for saving my life

03-22-2004, 09:40 PM

hoosierwife

because I was SERIOUSLY ill and doctors didn't have a clue. They
knew it seemed a lot like lupus, MS, fibromyalgia,
or a degenerative disease, accompanied by extreme fatigue,

memory loss, brain fog, and depression. I am not a person
who was ever depressed! Farm woman, for heaven's sakes, too
busy to be depressed, but gradually got really, really bad.
Felt toxic, poisoned, hands tingled and went numb, could not
climb up or down stairs except at a pace rivaling my
103 year old grandma (she probably could have beat me on a flat
stretch). So after no idea from various docs, I remembered
a post a couple of years ago about the dangers of diet soda. I
was a diet Pepsi-aholic!!!!! Would have 4 to 6 of them a day!
And gaining weight with it, too. Anyway, after searching the net
for articles about diet pop, found I might have just as well gone
over to the funeral home and asked them to pour me a big glass of
formaldehyde, and then throw in some wood alcohol, and
then drank that!!!! (also NutraSweet, another name for aspartame)

Within a week of quitting completely, I was much better, and now it's
a month later and life is so much better. I didn't realize how
sick I was until I quit, just knew I felt totally awful and couldn't
even remember what it ever felt like to be energetic or healthy.
For a visual methphor, those of you who know what a tractor pull is
like? I was like the tractor when they've piled another ton of
concrete blocks onto the sledge - slower, slower, stopped. I now tell
everyone I know to run far away from it - it'll kill you.
And to those who think they can't give it up, like I did (I lived for
the stuff, it got me going in the morning, perked up my day, etc.)
it is not hard at all once you realize what it has done to you.
Especially dangerous for diabetics. Go to these websites for info:
http://www.321recipes.com/aspartame.html or
http://www.anxietypanic.com/aspartame.html or
http://www.sweetpoison.com/aspartame-side-effects.html

So THANK YOU to whoever posted about this, you are a life-saver!!!!!

Health History.
No major illnesses or need for medical treatment in the first 26 years of my
life (except for usual childhood illnesses, such as chicken-pox).

I was a regular consumer of diet-sodas, such as Diet Coke, for about 15 years, averaging around 2 litres/day during this period. On some days this might easily have been 3-4 litres.

Health problems began in Sept 2002, with occasional symptoms at first, but had become more chronic and debilitating by Xmas of that year. Early symptoms included persistant vague lightheadedness/dizziness, which sometimes feels like motion sickness (I had suffered a brief episode of this back in 1999, but it resolved itself within a few days), and also some night-time heart palpitations (hence why I've been stuck on cardiology's patient list ever since!). Further additional symptoms have been tachycardia, excessive fatigue, occasional hot flashes and night-sweats, intermittant "mental fog" and loss of cognitive abilities, classic migraines and also strange visual disturbances. These disturbances include weird "after-images" of everything I see, the shimmering of lined patterns and also the small dark spots and bright flashes reported by others. I also appear to have far more eye-floaters than usual and my eyes themselves often look tired and swollen. There have been periods during the last 18 months when I have felt bad and periods when I have felt very bad! My recent abstention (2+1/2 weeks now) from aspartame has brought the only signs of remission during this whole time. The tired eyes, fatigue and mental fog have particularly improved, as have the dizziness and visual effects to some extent.

Subject: gum headache

I read recently in a Yoga Journal that migraine sufferers should not have aspartame, that it could be a migraine trigger. I knew the stuff was bad for you, but never thought a piece of gum now and again could hurt me. And I never linked any of my migraines to asparatame until the very next day, when I had a piece of sugarless gum and within hours had a huge migraine.

I'll never touch it again. And the very fact that it is legal, well that just floors me.

Subject: Aspartame in chewable vitamins

I am finding that the knowledge out there that aspartame is in chewable vitamins and children's vitamins is rare. Although I did not know that it was actually poison, I was made aware of Aspartame health hazards back in 1991 or 1992 after I had been consuming Nutrasweet on a regular basis, and was having increasing excruciating monthly periods. They escalated, and finally I was finding myself bedridden 3 days at a time at least once a month. I took myself off Nutrasweet, and slowly but surely, my monthly periods got much better, and I was feeling better overall. I avoided the stuff like it was poison, as I have since found that it actually is. Years later in 2001, I became pregnant with my second child and began bingeing on chewable vitamin C because of the health benefits I was aware of as I was preparing to have a scheduled C-Section delivery. 3 months after delivery, I began experiencing very similar symptoms like that of the ones I had had years ago with my period, and during my ovulations. Passing time one day in the kitchen, I for no reason happened to glance through the ingredients to my chewable vitamin C. You can imagine my anger when I saw the word ASPARTAME in my VITAMINS! I began to scour the ingredients to ALL vitamins! I was absolutely infuriated to find that nearly ALL childrens vitamins found in supermarkets, and grocery stores have ASPARTAME in them! Namely ALL varieties of the FLINSTONE's chewables ALL contain ASPARTAME! As I have explored information on ASPARTAME, I have not yet come across info discussing the fact that this is an ingredient widely used in chewable vitamins! Please get the word out!

Subject: Re: aspartame makes me sick

Hi Mark,
Thanks for all the info, that will keep me busy reading for a while.
Here's my story
I quit using Aspartame & all other fake sweeteners in '97 when I learned from a wise lady at a
health food store how horrible it is. Sometimes I get lazy about reading labels and accidently ingest
some and immediately get reactions .... extremely blurred & squiggley vision, headache that lasts
2-3 days, irritability.

I went to the dentist last week and got the aspartame headache, blurry vision, etc. I asked to read
the label on the flavored topical they use for pre-numbing before they inject novocaine, and
SURE ENOUGH it had aspartame in it. They only put a tiny bit in my mouth, but it caused this

reaction. Now I am wondering if the sweeteners they use in toothpaste, even though it isn't ingested,
could cause an effect from being absorbed through the tissues. The tiniest bit seems to affect me.
I don't use mouthwash, but it is in that too, which again could be absorbed through the tissues.
I wonder what else it is in that I don't know about?

I keep trying to tell my friends and family not to use these chemicals. Now I have an arsenol of material
to show them. Thank you

Subject: Re: Aspartame

Hi Mark,

I have been through menopause for about 5 years and am now 60
years old. In 2002 I started bleeding and bled for months. This
was diagnosed as polyps in the uterus. I had an operation to remove
a large and smaller polyp. Within 6 months the same thing happened
again but the bleeding was heavier. I had asked the doctor what caused
them and she didn't know.

After the last operation she suggested that should I get the bleeding
back we should seriously consider removing the uterus.

This January 2004, I started heavy bleeding and after bleeding almost
every day for 4 weeks I was very disgusted and scared. In early February,
I went on-line to see what could be causing the bleeding. Within 3 minutes
I found the website about Aspartame. Aspartame caused multiple polyps in
lab animals. That day I stopped drinking diet tonic and threw out everything
in my kitchen that contained Aspartame. The next day the bleeding stopped
and hasn't returned. It is now February 26th and no bleeding. I also had
tingling in my fingertips and that seems to have gone away also.

Subject: Save Yourself

I am a forty one year old male. I am a police officer and an avid runner. I was addicted to a very popular and well known diet soft drink which during my last year of usage included a twist of lemon. I consumed three to four 20 oz bottles of this a day. I began having head pains on the left side of my skull. I could actually place my finger on the area of pain, right above my left ear. I also began having blurred vision, a loss for words and at times the feeling that I was about to pass out. And tingling in my hands and sometimes feet. I was very worried, and believed that I had developed a brain tumor. I underwent an MRI (Brain Scan) and blood testing. All came back with negative results. I stopped drinking diet drinks and anything containing the "A" word i.e. sugarless gum. It is now three month later and all of my symptoms have vanished. I am a believer and I feel GREAT!

To: aspartame@holisticmed.com
Subject: Personal Experience

I think you are doing a wonderful service to the public, with your information - Ten years ago, I was suffering from such horrible pain, my whole body was in pain, and I would tremble, and couldn't sleep, would cry in my sleep, and I frightened the living hell out of my husband - I used to consume about a 2-litre bottle of Diet Coke per day - and day and night, I progessively was in such pain, and then I heard about Aspartame, by accident, finding a site, and read things by Betty Martini - I even emailed her, we wrote some back and forth - I printed every page of info I could find - stopped drinking diet coke, and in a while, the pain stopped, and I got better, my color came back, I'm healthier, and I know now, that I was suffering from Aspartame poisoning - I was too afraid to go to the Doctor - and I was to weak to drive there if I'd wanted to -

I went into Depression, and got so angry at everything, I was miserable, and messed up a lot of friendships, but got some back, made a lot of people upset at me - I was so miserable - it took longer to get out of that depression and anger, than it did to get over the pain - it took me 10 years - I can't believe the FDA would approve us drinking poison - they just don't damn care - as long as they make money -

I'd rather sit and drink a warm beer than any soda products of any kind - at least there is barley in beer!!! But I mostly drink Green tea with Ginseng and Honey - I had a health check up a couple years ago, and at 55, all

vitals
are normal, I am healthy - and I no longer have pain like I had then - it was pure hell - and more people need to see this information - don't give up on getting it out there - go to the Media if you have to - I think if I'd kept on drinking that vile poison, I would have died -

I have been sending your site to many of my friends and family, and others I love - I don't
want them to keep drinking that junk, and get sick, or worse - I was in real bad shape 10 years ago, and I was hooked on that stuff - it's an addiction, and it should be banned as a drug - like any other drug -

Carry on, and get the word out - I still read labels - and I find
that if 'man made it, then it's not fit for human consumption' - We can't trust the FDA - we
have to trust ourselves -

Thank you for your very informative site - I've been sending to anyone I care about - I have a
3-ring binder, full of information on aspartame, and I've shared it with so many people - keep
up that good fight - I am glad there are people like you out there, that CARE - God Bless All of You!!

Last July I started having problems standing up and lying down to bed, because of vertigo problems. I actually started missing work due to these problems. After going to my doctor and ENT they diagnosed the problem as vertigo and decided that it could have developed due to some polyps in my nasal passages and deviated septum. I had the surgery and missed even more work and spent thousands of dollars to have this done. After 3 months my situation never got better.

One day at the health food store I work at,this customer was complaining of the same problems I had. He had mentioned he had aspartame poisoning. That night I came home and found your website and decided I was going to cut out all Aspartame products and just see what happened. It has been 2 months since I have had a Diet drink or a problem with my vertigo. I can't thank you enough for all of your information you have given me. Thanks, Matt

Subject: ASPARTAME NIGHTMARE & MORE
To: mgold@holisticmed.com

About 8 years ago my husband and I started the Atkins diet. We started drinking diet sodas, specifically diet Pepsi. We stopped the dieting but continued with the Diet sodas. About 5 years ago my husband started having really bad winters; his body ached, he felt like he had the flu most of the winter; and about 2 years ago it all became unbearable for him, the fatigue was debilitating and the pain in his legs was unbelievable, not to mention a whole new set of symptoms. He could hardly get out of bed, and going to work used all his energy (when he could work. Last year he became disable temporarily. The doctors could not find anything physical wrong with him. He was tested for MS, Mercury Poisoning and all the neurological diseases they could think of. He seemed to be 100 yrs old and aging even more faster.

A co-worker forwarded an email about aspartame, we immediately stopped all comsumption and now 3 months later he is ready to back to work. Although, he still has some left over symptoms, he is 80% better and we think the aspartame must have done some damage to his body.

Thank you infinitely for circulating this information, without it I don't think my husband would have lasted much longer.
GOD BLESS YOU for all your work regarding this POISON!!

Subject: Aspartame Poisoning
I posted this on the Aspartame Support Group on Yahoo. I didn't know if you kept up with it or not.
I am a 40 year old woman with 3 children ages 17, 4 1/2 and 2 1/2. Here is my story.

I have been a heavy diet soda drinker ever since it came out on the market. I was drinking 6-8 cans a day not including stops here and there for a super-sized diet drink at the local fast food restaurant when I was out and about. I also have been consuming foods containing aspartame to try and lose weight forever. About 2 years ago after the birth of my 3rd child I began having heart palpitations, dizziness, chest pains and numbness and tingling going down the left side of my body. I have been to the ER multiple times, I have had EKGs, heart stress tests, MRIs, CTs, ultrasounds, blood tests, etc.. I have seen a Neurologist, ENT, Gastrol (spelling?) doctor, Chiropractor, Physical Therapists, Massage Therapists, dentist. No one could every find anything wrong with me.

Oh, wait I did find out I have Reflux, Anxiety Attacks (ya, over worrying about what is wrong with me!) and I am overweight!!! A month ago I decided to start over with a new Family Practice doctor, he told me that I had already been through the "million dollar work up" and that I should feel good to know that there was nothing seriously wrong with me. He said I was having Anxiety Attacks and prescribed Zoloft. I was elated! I finally could blame my symptoms on something! I was willing to accept that this was my problem, because my mother had suffered from depression and anxiety her entire life and it is hereditary. After time, I began to deal with daily life much better, however the tingling and numbness continued in fact it started to get worse, I still would get dizzy out of no where. I would get this pins and needle tingling that started at the top of my head and would cover my entire face and down both sides of my body all the way to my feet. I had been told by friends that it sounded like I had MS. I looked up MS symptoms on the internet and was convinced that I had it. I called my doctor and told him that I wasn't convinced that Anxiety was my problem, he told me to give it time. That same day I went back on the internet and searched for Anxiety Attacks to see if anyone else diagnosed with Anxiety Attacks experienced the same symptoms as I had. I came across the Aspartame articles and read down the 92 symptoms and could not believe how many of them I had and then I found that Aspartame Poisoning mimics many diseases including MS!!!!! I was appalled as I read on and the word "self-emballing" was used.

I immediately stopped all asparatame products. It has been almost 3 weeks and my symptoms have not completely gone away, however they are less severe. I am also now finding out that the pains in my neck

and shoulder have started to be almost nonexistent...I always thought I was getting arthritis. I have been taking minerals and antioxidants to help my body rid of this awful poison I have been shoving down my throat for more years than I care to say. I am also horrified to find out that I have been doing the same thing to my children. Antiobiotics, Tylenol, Benedryl, Vitamins.... they all contain aspartame!! What are we suppose to give our children!!!!

My teenage son has always chewed gum, ate mints, etc... Now I think about everytime he complained about stomach aches and headaches and I would just tell him to "wear a hat", "get more sleep", "eat better". He was probably suffering from the same thing!! I drank tons of caffiene free diet soda while I was pregnant with my last 2 children, they were both born severely anemic and the doctors could not come up with an answer why.... I wonder if it was the aspartame?????

I am angry that I have spent all this time worrying and not being the best mom and wife because I have had such terrible mood swings, I've been so tired that it was hard for me to get up and play, I was yelling all of the time and frustrated with life in general when there was no reason to be frustrated. I am most angry about all the money I have spent on doctors trying to find out what was wrong with me.

I will tell the world how awful this poison is!!!

How can they keep this on the market? I don't understand why it continues when it is obvious so many people are having these symptoms!!!

Subject: Fw: Aspartame Poisoning

Thank you for the information, it is greatly appreciated. I have been aspartame free for almost
6 weeks and my symptoms have subsided greatly. I do have some bad days still. I am on day
2 of being off of Zoloft and am finding that my symptoms are subsiding even more. I was told by

someone from the Support Group that methylcellulose is in Zoloft. I don't know what that is,
but it maybe why since I am not taking it anymore I am feeling even better! Do you have any
information on methylcellulose??

Subject: aspartame experience

I am a healthy 35 year old, healthy, fit, male. I was on the adkins,
low carb, low sugar diet for a couple months where I drank 4-5 diet
pops, ate numerous sugar-free (aspartame laced) foods and chewed sugar
free gum constantly. I started noticing a brain fog where I actually
thought I was experiencing the first signs of alzheimer's. I'm in sales
where I need to be at the top of my mental game all day long and I was
finding myself losing my train of thought, stuttering and sometimes
slurring my words. Then one day, I was sitting down watching TV drinking
diet pop and eating low carb french toast with sugar free syrup, I noticed
the tips of my fingers starting to go numb with a headache that I could
put my finger on. A few minutes later, I jumped out of my seat and started
running for my life. I felt out of my body with a huge fear of dying.
I ran around my house 5 times in my shorts, in 32 degree weather, until
I felt this fear subside. I felt this surreal and scary fear a couple
times over the next hour when I decided to play it safe and go to the
emergency room. By the way, I am not the kind of person to cry wolf to
get attention and to me, I never would have gone if I thought for one
second this was no big deal. Anyway, I was driving to the hospital
(15 minutes away) when IT hit me. I thought I was dying in the car.
My legs and arms went completely numb, my heart felt like it was
fluttering out of control. I was starting to lose consciousness or
dying, one of the two. I called 911 in my car, saying in hysterical,
unintelligible speech that I was having a heart attack or a stroke.
They told me to pull over to wait for help, but I said I was too scared
too wait. I drove 120 miles an hour to get to the hospital. I got there
and to make a long story short, my heart rate was at 130 and I had trouble
remembering my birth date. They didnt find anything wrong and said I
probably had a panic attack. I had never had one before and wasnt really
stressed or depressed about anything. I knew there was more to it. I
researched panic attacks and found the aspartame link which made perfect
sense, especially after reading other people's similar situations. I can

attest that you dont get better overnight from stopping aspartame. I hear it can take 60-90 days to get it out of your system. It has been a slow progression to wellness. It's been almost two months since this episode and the last time I've touched aspartame and even though alot of the symptoms have subsided, I still get numbness in my hands and feet on occassion(including right now) with an occassional heart palpitation. The memory loss and the fog, however, has been lifted. I am confident in the next month or so, I will be symptom and aspartame free.

What's amazing is if you go on the aspartame website, they talk about all the great benefits of their product. They say it was approved to be safe and not to believe all the internet myths saying that people are having bad reactions to it. Well, I was a skeptic too, until it happened to me and now I tell everyone I know that the victims are "the truth" and them saying it's safe is "the myth".

Subject: heavy aspartame symptoms here - how can I help?

I get these symptoms off an on and recently noted it's when I've been consuming aspartame. I avoid it but get the symtoms again and find I've been consuming it without my knowledge. It use to be on the label but now I have to check the ingredients and learn the various names for it. This killer is destroying my life. My symptoms are:

a very specific migraine I recognize as 'the aspartame migraine'. depression, nervousness, blurry vision, weakness in my legs and arms, lots of stupid mistakes and bad short term memory. I'm usually very with it and my IQ was 140 last checked. It feels like it would be 80 if I took a test now. I can't think. I've read up on the political beneficiaries of this additive and I'm fed up with the special interests plopping their wallet padded asses into the official seats that were put in place to protect us.

Is there a class action suit I can join?

Subject: Re: Multiple Sclerosis or Aspartame Disease

Just an update from an e-mail we exchanged in February and also to MS Focus. I had been diagnosed as pre-MS by my doctor. That day I went off my diet pepsi habit of 5-8 cans a day.

It is now April 19th and I am symptom free. Also my migraine headaches are gone. The only one I had since that day was the day after I went off - boy was I sick from caffeine withdrawal! But since that day I've progressively gotten better. I read to give it 60 days - by mid-March my numbness and tingling were gone, my shooting "electricity" sensations in my legs were gone, my tiredness and achiness in my legs was gone, my hearing (plugged ear) was gone, and I quit dropping things as I had begun to experience. I've replace diet pepsi with water.

Regardless of what anyone says about the evidence of aspartame poisoning,
I believe you. I've done my best to try to get other people to quit having it also, but I guess they have to go through it like I did to really realize what it does to you. I'm praying my symptoms don't come back, and I don't think they will. Only time will tell.

HEllo I just read your webpage and I thought I was the only person with the allergy to this NASTY stuff..Cause everytime people hear about my allergy they are soo shocked and amazed ..I'm now 23 years old but when I was 10 and living with my mom she would use everything sugar free and I was at teh dr. office 2-3 per week because I was alwasy sick my face was always broken out in nasty blister looking things that would breakopen and would last 3-4 weeks if not longer..My mom thought I was always faking sick but when I moved in with my dad and step mom They NEVER used stuff sugar free.. and I never was sick with them so the Dr. told me to eat the BRAT (bread rice applesauce and toast) and start introducing back foods and when I start getting sick note what the new food or drink I had consumed I was fine with everything
until I ate a desert my mom made wiht equal and I got soo sick! My dad was diganosed with
diabetis in 1999 and he is also allergic to aspartame. We found a product that he can consume

but I still Can not have it...SPLENDA sucralose my dad has no problem with it but I still get
sick and break out...I can have NOTHING with ANY sweetners other than SUGAR in it!
thought I would leave my input TY!

I had been drinking diet sprite for years and years with no
real problem other then panic attacks that I thought were from
a neurological standpoint but then this past May 2003 I started
getting a burning rash around my eyes, it would always be there
for 5 or 6 months I always had it in one spot or another flaring
up around my eye lids or under my eyes, that delicate area, ooh
the shower everyday was a nightmare with the moist heat on it, anyway I
have never had any skin problems in my life, thought it was a
new allergy, since Georgia is allergy central, I thought I was
developing weird sensitivities since moving here,

well I switched moisturizers, base makeups, eyeshadow, eye makeup
remover, mascara, all of it and nothing changed, still burning rash,
dermititis, I was very concerned. The doctor had given me ellidel
for it but it only somewhat eased the burning but it never went away.

Recently (3 months ago) in my cosmotology class we had a massage
speaker one night and we talked about everything, she really
an "of the earth" seeming woman and she mentioned how poisonous
aspartame is to the body blah blah, I didn't think anything of it at
first, thought she was just hippie type organic food eater, so I went
home looked it up on the internet and I was tremendously appalled that
this, if this was true, how come it was not common knowledge.

Well, I was researching what products had aspartame in it and found that
gum did, which is odd becuase I think it was about late spring early
summer when I found that pop out card gum, eclipse or trident stuff,
It was so easy to pop a piece out about 10 times a day, I was going
through it like crazy, so I decided to do a trial run of no aspartame
in my diet, thinking that maybe the gum pushed over my limit of aspartame
intake- well I am happy to announce that 2 months after stopping
ingestion of aspartame I no longer have the dermatitis around my eyes,

it has been a month since no symptoms and there are still no signs of it, which is amazing to me, it was definately the reason for my ailment, there is no doubt in my mind whatsoever, I am a believer, I am so happy I tell people I know not to use aspartame, stop drinknig diet coke blah blah, I realize you have to be very careful when mentioning this to friends etc, you come off seeming preachy and they automatically stop listening. I have to figure out a way to get it across to them whith out seeming like a fruitcake. They almost don't want to believe it, which I understand, it's in everything that especiallly a woman would consume, diet stuff, gum, diet drinks, they figure if they don't acknowledge it they won't have to stop. It's hard to find alternatives, really hard.

Well there is my story- it wasn't as serious as a mimiced nervous system disorder or anything major, just an annoying eye rash but I had to live with it everyday and because I have educated myself on aspartame I feel like I am one up one the rest of the world and I am only better because of it ! Thank you for your time.

Subject: Life - Aspartame and Vision
Date: 01:42 AM 6/28/2004

I also thank the Lord for the existence of that generous man, Dave Rietz, with Dorway. He helped give me information that would not have reached me in time to save my vision, if it hadn´t been for him and two other friends.

I live in Mexico. I had been a daily user of Diet-Coke and Canderel for about five-six years, when one January, 2000, a friend from a big Medical Center in Mexico City called me and said, "Katina, stop drinking Diet-Coke. It´s poison." A fellow worker of hers also called me about the same time.

On February 14, 2000, I got on internet and started navegating. I couldn´t find anything wrong with Aspartame, until I started looking for "Fenilalanina" (the name taken directly off the last Diet-Coke container in the house). It was like opening a Pandora´s Box of worms.

The Lord has been generous to me by leading me to various changes in my life so that my health continues to improve. My list of ailments due to Aspartame could fill a book. I am lucky to be alive, sighted and with

much to live for.

....

I should mention that, since Valentine´s Day, 2000 [February 2000], I have not taken any aspartame. I had been going to a General Hospital here to be checked out for different situations of health that I couldn´t put my finger on why I was feeling soooooooooooooooo bad.

Among the Doctors, I dealt with a marvelous Ophthalmologist, with 40 years of clinical experience, who checked me out thoroughly. He sent me to Tests of Visual Fields many different times. Each time he checked me out on his apparatus to see inside my eyes. Each time he would shake his head and send me off to another test.

This went on from August, 1999, to November, 1999. In November, my friend, the Hospital Social Worker and I cornered Dr. Durán to ask him what was up. His answer was interesting.

He said, "I simply don´t understand. With 40 years of experience I´ve never seen anything like this. Her (mentioning a part of the optic nerve) is so deteriorated that she shouldn´t be able to see, but the Vision Fields Test says she sees. I don´t understand. She should be blind."

In April, 2000, I went back to get a prescription for new glasses. He checked me again. I asked him how my eyes were. He said, "You don´t have anything wrong. You´re O.K."

That is one of my adventures with this junk.

Please send me a copy of Dr. Blaylock´s article so that I can continue to improve. I have a lot of work I want to get done and definitely want to be completely well to do it.

I´m soooooooooooo excited about the suits in California. I pray for all the people involved every day so that the TRUTH will out.

God bless you,

Hi, My name is xxxxxxxxxx I'm a 28 year old mom of four children suffering from the aspartame. About one and half years ago I woke up with tingling in my feet within a week it was up both my legs and I could not feel my private areas. I had problems walking I couldn't drive and didn't know when I had to go to the bathroom. The doctors did lots of tests but had no answers then they said that I could possibly have M.S. But they weren't sure. After at least six MRI's and another one this April 1 still no answer. But I have finally figured it out on my own. Aspartame was my problem, I'm a diabetic who has been drinking diet soda for eleven years.
....
It's been about two weeks and I feel alittle tired
but my skin is brighter and I'm not always thirsty any more. I just want to thank everyone for getting this information out and !

Hello to xxxxxx and everyone. I wish I could say I am glad to be a member of this list but who can be glad about having their life ruined by deliberate cruelty in the name of the Almighty Dollar. But I am tremendously thankful that you all are here and that this list is here and that there is an army of faithful people devoting so much of themselves to helping others and attempting to stop this madness. I simply feel that I have to have someplace to unload something of what I feel and connect to people who understand. My history is long and complex but I will not dwell on it suffice to say that I grew up in a very violent home with two severly disturbed alcoholic parents. From that I have received the diagnosis of chronic post traumatic stress disorder...ahh how the aspartame helped me with my depression. How it took me lower and lower into the depths of a mindless black fog. And then while doing my stint in college back in the early '70's I was exposed to a massive dose of chlordane in the house where I was living. After that my health has been weird. I wasn't the only person living there that experienced lasting effects. One person developed a brain tumor. The rest of us lucky ones just got chronic fatigue and chemical senstivities. Then I was gassed with 2-4D, you know, Agent Orange, while living in newly wedded bliss at an apartment complex. Finally life in the big city was so intolerable for me, even with herbs and vitamins and organic foods, that we

moved to the country. But that meant giving up a lot. Organinc foods are hard to come by and finances are diifficult at best. As we grew to mid-life and watched my husband's sisters and brothers become diabetic we switched to using Nutra-Sweet and other various forms of aspartame. This was about 1 to 1and 1/2 years ago. I started using the stuff for various reasons, not good ones to be sure and viola...memory loss-oh I can remember the horrors of childhood vividly but I can't seem to figure out which key is for the car or the house. Severe muscle and joint pain till I could barely walk. Burning pains, ringing ears to the point of hardly being able to hear, then the weird pounding noises and burning skin and then at the last migraines- this from a person who ordinarily had maybe 2 headaches a year. Also I was having some sort of siezure activity. I didn't know what it was till I described it to my husband and he as a lifelong epileptic recognized it at once. Miraculously I stumbled across the dorway website and my life has changed for the better. I am now, as far as I know, aspartame free for one month. I can walk without pain and am no longer hopelessly depressed, my old coping skills I learned through years of therapy are working again. No headaches at all unless I get in contact with outgassing such as at Wal-Mart. But I still don't feel consistently well. Today was a bad day. I have had a HORRIBLE painful rash for about a week. It is improving with creams and B vitamins. I should be feeling better. I checked your archives and found the post about aspartame being hidden in yogurt and
started shaking and almost crying I was so upset. I just started using Dannon's "All Natural" plain yogurt. I was careful to read the label. Supposedly, there is nothing in it but milk, and of course bovine growth hormone, but it is the best I could find. What upset me the most is that I gave some to my beloved dogs. I want to stay on this list to keep abreast of what I can do for my family, my pets, my friends and neighbors. I have been telling everyone I know about the dangers in aspartame. Most of the time I get this blank look and then the subject is changed. Well, at least I told them. Thank you all for indulging me in this long outpouring. I pray night and day that this horrible thing that has been perpetrated on the world by Monsanto and the FDA will come to an end. M.B. in Ohio

Very poor comprehension, forgetfulness, dizziness, joint and muscle pain, headaches, fatigue, and numbness in my fingers were symptoms I experienced while consuming aspartame. For at least seven years, I tried to avoid sugar whenever I could, buying products using aspartame instead...gum, ice cream, sweet thing II, and diet coke/pepsi.

While I had many headaches, the joint and muscle pain was much worse. I could hardly get out of the bed in the morning, having to slowly roll out and walk slowly. I felt old enough to retire.

Trying to learn a new job was unusually challenging. My reading comprehension was severely impaired in a job where that was critical. I had trouble concentrating and was very forgetful.

Reluctantly, I came to suspect aspartame. Beginning January 2003, I eliminated aspartame from my diet. Within a week, my muscle pains were easing. Nearing four months later, I wake without pain. My ability to comprehend and remember what I read has returned.

I hate having to give up my diet drinks, but I feel like I've risen from the dead. I wouldn't have believed it if I hadn't experienced it myself.

Diane D.

I happened upon your site looking for safety info on sucralose. Approximately 3 years ago while trying to cut back on sugar I began drinking a lot of Crystal Light Lemonade. At the time I was an RN on a cardiovascular unit. I have had very rare occassional PVC's throughout the years, but after approx 3 weeks of drinking the lemonade I began having runs of bigeminy and trigeminy (pvc's every 2nd or 3rd heartbeat). This left me exhausted and short of breath. I placed myself on a cardiac monitor at work to print out tracings of what was happening and made an appointment with my doctor who immediately sent me to a cardiologist. While awaiting my cardiologist tests results back I noticed one night that after I put a piece of sugar-free gum (with aspartame) in my mouth, the runs began. I cut out the aspartame, but it took several weeks for the toxicity level to decrease and my heart rythm to return to almost normal (I still tend to throw pvc's more frequently than before, but no! runs). M came back normal. I mentioned the aspartame to the MD and he had no idea if this might be the cause. By the way, I had given up all caffeine 3 years before and had an otherwise very healthy lifestyle. I am very

careful to avoid all aspartame and research any new sweetners that arise.

I was very pleased to find that your site had information about sucralose, as I have been wary of trying any sugar free products after my experience with aspartame.

Last summer, I was trying to lose weight, and consumed a lot of "diet" products, including soda, yogurt, and various desserts in addition to other low-fat products. Several weeks later, I started to pass out every so often during the day, and I had an almost constant migraine headache. I eliminated aspartame from my regimen and within a couple of days, my headaches became less severe. When I consulted my nutritionist, she told me that I should avoid aspartame in the future because I was probably allergic to it. I have since avoided it like the plague.

Thank you for your valuable information, and I hope my experience can help others.

Subject: Aspartame & Co

Dear Mark Gold,

I have been off aspartame now since 21st February 2003, being close to 5 months now. I think I'm coming back to the normal world which has been the worst nightmare for the past 8 - 9 years at least.

You wanted information on developments - well - I think I tell you my complete story, as now I realise so many things that have been going on and I couldn't connect. I hope this information can also help others to get back to a normal functioning brain and life.

The symptoms that have for sure weakened and almost disappeared are

- heavy confusion
- memory loss and disorder
- chronic fatigue syndrome
- bloated stomach
- diarrhoea with cramps in intestines
- strong feelings of panic and fear
- temporary insomnia
- depression
- hip and joint pain
- hair loss

(and all this just by taking 4-8 pieces of chewy V6 a day) - no coke light, no other diet products, nothing alike)

It took though over 3 months before I noticed the real change in my head, not being so heavy anymore and being able to think again and also remember things. I was so far gone that I sometimes could not remember my own address and phone number.

I don't think it is necessary that I express what I feel towards Monsanto & Co. and all people involved in this, as many others have said it on your website quite clearly.

I am very grateful for having found all information on your site and once again to say - You saved my life and that of many of us. Thank you so much.

My life changed when I was diagnosed for hyper-prolactinemia in early 80ties and as this whole area was quite unexplored (and I had no medical knowledge as to how the human brain functions with its pituitary gland and hypothalamus), I was put on PRAVIDEL (Bromocryptine) and the dose was increased up to 10mg per day. This stuff put me so much off reality - I was just happy to survive a normal working day, and needed 9-10 hours sleep to be able to survive at all.

The doctors never found a reason for this hyperprolactinemia and they could also not explain why, despite high medication intake, the PRL levels would not stay low.

Thinking back now, at that time already I used "aspartame" chewing gum, maybe not so much - and I did for a period of time use artificial sweetener in my coffee (for maybe 1 year) which could well have been the cause for this disturbance in hormones.

But during the treatment with Bromocryptine, I could not distinguish between the symptoms of the medication and the ones from aspartame. I was not aware of

anything around me.

When I was completely desperate with this medication - and the doctors said I had to take it to the end of my life - there was no alternative (I refused removal of an at the time 6-7 mm large micro adenoma), I decided in 1998 to stop all medication from one day to another, without consulting any med. advice. I could not life any longer with this strong stuff (also used for Parkinson's disease) being always dizzy and tired, etc. etc.

After over 6 months of heavy withdrawal symptoms you can possible think of, and when that was over, I still remained with a very dizzy head, headaches, bloated stomach, heavy confusion, memory loss, panic attacks, etc, etc, etc. - which I thought would disappear now. The only problem that added to it - I was not drugged up anymore and calmed down. So all these symptoms were extremely strong and I could hardy bear it.

After 1 year, the mico-adenoma had reduced to 1-2 mm (which it still is) but blood tests still indicated high PRL levels messing up of course the oestrogen production and all related to it.

And up to Feb this year, I have been working my way through this nightmare with all above problems.

The past 2 months have for me been the best ones during the last 10 years minimum. I still have high PRL, but hope that maybe the body can partly recover during the next months - I do not know to what extent the damage is irreversible - headaches GONE, the pain I had since over 10-13 years in my hip is GONE, pain in the points of the fingers GONE, pain in my neck GONE and physical body pain when waking up in the night - ALL GONE.

My eyebrows have not been growing anymore for the past 15 years, and - since 3 months, they start growing back - it is simply amazing. So does my hair - I don't loose so much anymore, and lots of it grows again

I feel energy coming back. And that is great.

During the entire period of PRL problems, I read so many medical books on the functioning of the brain and have acquired quite a knowledge on that.

But I had no reason to mistrust our food industry and all my research in finding out why the hypothalamus is completely in disorder failed due to that. It could have saved me so many years of nightmare.

I have also since Feb this year read the "Exitotoxins - the taste that kills" and others on the subject and have also abandoned any sort of MSG from my food

consumption which I find does me a lot of good. I noticed that when having any kind of MSG in the food, I feel very bad for the next few days, very dizzy and tired (not as bad as with aspartame through)

In order to stay healthy, I have never ever smoked one single cigarette nor drunk one glass of alcohol - and then this discovery. It takes some time to deal with the fact that I poisoned my body over all these years.

I will keep you informed on developments also on the prolactine levels as I know many people (not only women) have this problem - and I get the very frightening feeling that this is also partly done because of the aspartame. But I can neither prove nor completely judge it right now.
I know only that I have never been so stressed that this could have caused it.

Another victim was my sister - dealing with diarrhoea and arthritis in her eyes, causing serious infections that can lead up to blindness and we were so strongly trying to find out what causes it. Same for joint pains and bloated stomach.

Since she stopped her 1 glass of sugar free lemonade in March this year, her intestines are back to normal and the eye infection has not reappeared so far.

It is more than admirable what you do for all of us - and there will be many more that will need this info.

Subject: ASPARTAME
Date: Wed, 23 Apr 2003 15:55:28 -0600

I was drinking the flavored water from Sams not knowing about the problems with aspartame. I started having severe dizzy spells to the point it would affect one side of my body. It was like I did not have control of my leg movement. Any movement of my head I would experience dizziness. My head felt foggy. I went to the doctor 5 times in about two months trying to figure out what was wrong. He thought it was fluid built up around my middle ear and put me on water pills for about two months. This did not help. When I would get the dizzy spells which where numerous times during the day it would drain all my strength. I lost most of my summer not feeling good. I had notice every time I would drink the flavored water I would instantly get a weird feeling in my head. I was telling someone about it and they told me that aspartame was not good. So I quit drinking it and

all my systems have disappeared. I will never use this stuff again. I really believe it should be banned. My sister had been also drinking propel water and has been having problems. They are leaning towards MS. I believe the aspartame may be some of her problems also.

I heard somewhere that South African adds aspertame to sugar. If that is true it is very difficult to avoid it. I am an aspertame poisioning sufferer and my headaches are on the right-rear part of my brain. Feels like swelling in my brain. I also have vision problems. The problem is that aspertame can now be put into anything without putting it on the label.

Living With Anxiety and Depression LWAAD MSN.Com Discussion Group
Subject: General: Don't Drink the Diet Coke

Stacy (Feb 6, 2003): I know, for a fact that diet drinks and any thing else, almost all chewing gum and candy (even the sugary kind, you have to read the labels) that contains aspartame is so, so bad for you. I have been suffering from severe panic and anxiety, dizziness all from aspartame. I recently began having severe night time panic attacks and traced them to a pack of sugarless chewing gum that I was chewing daily. I traced the diet drinks to my anxiety earlier in 2002, but didn't even consider all the other products. It's been a week since I've chewed the gum and a rash that I've had for three months has cleared up and my anxiety is steadily improving. Also watch out for MSG. I get almost the exact same symptoms. If you think about it, it's also a free form amino acid. Just thought this info might help some one. Also, if you're taking any meds for your symptoms and they are not getting any better, suspect an allergy to one of the many toxic subs out there. I figured this out when my xanax didn't help my panic attacks at all. Thanks!

I get a highly uncomfortable dysphoria from consuming about half a soda drink with aspartame. It feels about ten times worse than having consumed way too much caffeine. I also get stomach pain. I avoid it like poison; to my body it is poison. Did you know psychiatric facilities do not serve it to their patients?

Well Tank this is what I have found on Stevia. It is SUPER SWEET stuff. One puff of dust from the box when squeezed can be tasted across the room within minutes.

http://www.stevia.net/

As for Aspartame, I was damn near non ambulatory with a diagnosis of beginning stage Multiple Sclerosis last year. Needing leg braces to do what little walking I could do. At the advice of a collegue I stopped ALL intake (and that isn't easy cause it's in almost everything non-caloric) of Aspartame (phenylalanine) and now, 4 months later I am 100% ambulatory without assistive devices and bulking muscle like crazy.

I don't mean to knock the product but for some people with unknown PKU sensativity (ME) it can be a long term death sentence onsetting MS. I wrote a thread on this and also have some pics up of my progress if you do a search of my name.

Lt. Wombat

I was in the same boat, and I'm a physician for crik's sake.

I was diagnosed with MS after no one else could explain why I had visible holes in the myelin
sheath of my spinal nerves. It debilitated me from a novice weight lifter to a shaking weakling,
I even had my medical license limited to observation only, no direct patient invasive procedures allowed.

I quit diet anything and today (1 year later almost to the day) I am 100% back to normal and lifting heavy again.

My colleagues still poo poo away any thoughts that I had aspartame poisoning. In fact anyone during
medical training who mentioned the words was labeled a “conspiracy weird’o) by the faculty and shunned.

While my practice is orthopedics, if I were to encounter anyone with my symptoms I would have to
think really long and hard if I were going to “officially” diagnose them with aspartame poisoning; but
I have “unofficially mentioned” it to some people through this past year.

[Note: Due to numerous requests, we began updating this file/sampling of
aspartame poisoning case histories on April 24, 2003 after a long break.
See below for several years of additional aspartame poisoning cases.]

Subject: Re: Diet POP dizzy spell
From: xxx < xxxxxxxxxxxx@yahoo.com >
Date: 19:49 Sep 20 2002 (19:49 Sep 20)

I was having dizzy spells, where I felt as though I had lost my sense of equalibrium. One was so bad I had to leave work that day (I am a school bus driver). It felt as though my brain stem had seperated from my spinal cord, or a least that is the only way I can think to describe it, everything went sideways for a second, then I felt as though I couldn't regain my balance.

I have a friend who has MS, she told me she had had the same sort of dizzy spells before she was diagnosed.

After a while I realized that everytime I drank diet soda especially large quantities ie. fast food serving, I would get dizzy.

Now I try to avoid it but it's everywhere. It does not have to say "sugar free" it may just say "light" or "no cal" so read the ingredients on everything!

I also have a friend who drank crystal light instead of water when she was pregnant. now her little girl has seizures but the doctors cant find a cause.

Since the day I found out what aspartame is, I have tried as hard as possible to cut it out of my diet, but in this day in age it is sooo difficult, they put aspartame in anything with sweetners, in that way coke would be better than diet, but please, don't go back to drinking the diet coke. When I cut it out, it was horrible, but within a week I was fine, I hardly ever drink coke at all now, but PLEASE DON'T go to the diet coke, rainbow is right, the aspartame is in no way good for u

aspartame is the devil. i used to have temporary fuzzy blindness spells. turns out i chewed too much winterfresh gum. stopped chewing it and never had those spells again. well, until last week, that is. i bought a back of spearmint gum and chewed half the pack in like three days. what happens? temporary fuzzy blindness spell. no shit. thanks for posting those links. more people need to know about this stuff. it's agonizing to me to know how so many people could improve their lives by just being conscious of what they ingest daily. so many ignorant people refuse to admit a link between what they eat and how they feel. i mean, that's just stupid to say there is no correlation but i know many many people who do just that.

Well I have migraines something horrible and for a long time I knew all my triggers and I'd stay away from them..... so for months I have been having them again..... I just started using this shit about 2 years ago again..... and for that entire time I have been trying to find the one trigger that was causing the flare ups again. I stopped eating half the shit I was eating..... you name it, I went thru it. Little did I know that it was THIS shit and I have not had a headache in the week that I have been off of it.

I have been having raging migraines again and they seemed to get worse all the time. Who would ave thought the shit in my damn VITAMINS was messing with me.

My husband worked in the nutrasweet plant for almost a year. He always came home covered in it. He said the same plant also makes anti freeze or something like that with it. He also said every person that works in the plant are way overweight, because they eat so much of it a day while working there. And it actually causes you to gain weight because your system slows down so much from it. And he also said the company that makes it knows that. So much for diet doing anything for you.

Poor memory? It could be aspartame!
http://www.homesteadingtoday.com/viewtopic.php?t=15990

neopossum
Location: North Georgia
Posted: Fri Feb 07, 2003 11:24 pm Post subject: Poor memory? It could be aspartame!

Have you noticed your memory getting a little fuzzy lately? Can't remember names? Forgetting what you're supposed to be doing? Losing your car?

I posted most of the following under the "Alzheimer's" caption a few days ago, but very few people have looked at that subject since. This information is important to anybody who wants to live cheaply because aspartame toxicity manifests itself in many forms, and some people spend tens of thousands of dollars on medical bills trying to figure out what's wrong with them when all they need to do is start reading labels and avoid aspartame.

Many cases diagnosed as "Alzheimer's" have been cured when the diet was cleared of all sources of aspartame (NutraSweet). This is a severe neurotoxin that exacerbates any neurological dysfunction. Many patients who have been diagnosed to have multiple sclerosis have "miraculously" recovered within a few weeks after they removed all aspartame from their diet. I learned the hard way about the dangers of this so-called "food additive" that the FDA was bribed to approve. Drinking just two Diet Cokes per day, I reached a point where I could not even remember my address to tell a friend over the phone. I lost a career position because I could not remember the names of my board members. This went on for about eight years. When I finally decided to see if "those nuts" who said it might be aspartame were right, within three days after getting all NutraSweet out of my diet, the fog began to clear. Within about three months, my brain

was working fine. After about a year, it seemed that my memory was better than before the bout with aspartame. I have since taught memory courses. I also taught Human Development to 7th quarter chiropractic students and gave them extra credit for knowing about the dangers of aspartame. Many of the graduating doctors later told me how much that knowledge helped them in their practice to aid their patients in clearing up a huge list of mysterious complaints. With what I know now, I would rather drink antifreeze than drink a Diet Coke. The stuff is in everything, even non-dietetic chewing gum, especially Wrigley's. For more information, go to dorway.com. Once you get past the bells and whistles, you can find some good, solid evidence to back up what I'm saying. One day, the lawsuits against NutraSweet, Monsanto, and the various major pushers of this poison, such as Coca-Cola, Pepsi, etc., will make the tobacco settlement look like petty cash. The stuff not only wrecks your memory, but also causes cancer, panic attacks, etc., and very subtly eats away at your ability to make rational, logical decisions. Thus you have what I call "the Susan Smitt syndrome." It also causes you to gain weight by increasing your appetite for sweets. And it doesn't even taste good!

If you want to live economically and a full, healthy lifespan you need to read labels with a magnifying glass and avoid anything containing aspartame, neotame, NutraSweet, or anything else that looks suspicious. It's in Equal, but it is not in Sweet'n'Low, which is saccharin and a little sugar. Even that's not good for you, but at least it won't kill you.

I also had a terrible problem with aspartame. I used the stuff for many years and all during that time I suffered from terrible depression. Everyday I would at some point have an awful sinking feeling, I can't even describe how bad it really was.I don't believe in getting pills from a doctor so I just lived with it.To make a long story short I discovered quite by accident it was the nutrasweet I used daily in tea and the couple of diet pops a week I would get.Since I quit using it I have seen many times when I would buy a diet drink at a gas station the next day that

horrible feeling would return. PLease people if you know anyone who is depressed ask them if they use this product there's got to be alot of others out there.

Another place to watch for this is in flavored water.

Ditto on all the aspartame ragging! I used to drink the stuff because I could not handle sugar, until I started getting absolutely horrible headaches. Finally made the connection one day and stopped the diet pop - and improved tremendously. At one point I started drinking the diet soda again - and the headaches returned. So I know it was the aspartame. If I feel the need for soda, sparkling water with fruit juice really hits the spot.

Caution on Splenda: yes, I know it's toted as the next non-calorie, okay to consume sweetener. But it is a byproduct of chlorine, and the long term effects have never been studied, either in humans, or in laboratory animals. Short term it has been linked to cancer, neuro problems - basically your typical carcophony of artificial sweetener linked health problems.

Sorry to throw cold water - I thought Splenda would be the answer for me too - until I started reading about it. Guess I will have to make do with more natural things - fruit juices, and an occasional shot of sugar when the need arises!

Aspartame IS bad news, as little as a quarter cup of any diet drink gives me the raging migraine headaches. So I have to read all food and drink labels very carefully.

I worked for an internist for over 15 years, he was always wondering what was causing the sudden increase in cases of brain cancer (brain cancer used to be extremely rare) over the past 10 years or so, I kept telling him it was the aspartame, I think he and the medical community are starting to listen!

Saturday August 31, 2002 2:05 AM

Great in put. I didn't realize Amy, probably showing my stupidity here, that vinegar like beer is ferminted. Huh? Wowzah - that can kill me with sz's and a headache but oddly it does occur reliably with a da or two wait.

I can not get into my stpid diary becaue I am on stupid Dilantini and I have stupidly forgotten my stupid password but....

I forgot these:

MSG - immediate drops and other sz types but what gets me is - it sends me into lilke a spiral.I don' t just seize for awhile. Get rid of it in my system. I get set up in a spiral.

Aspartane - it' s bad for me. Sssets off absences, jerks and simpes and complex partials. Like clock work. But I do oh so grave a diet coke. Twice I've chated. Twice I've suffered.

One of the changes I made was to no longer consume artificial sweeteners (aspartame, saccharin, etc). I had read an article a while back regarding joint pain and aspartame, but it took me a while to decide to give it up. I began using stevia (only a couple of days to adjust to the different taste - KAL brand is the very best!), but within a week the aches and pains in my back and joints had virtually disappeared. I now use only stevia for sweetening and cooking. Hope this helps someone.

xxxxx,

It may be the spraying, but then again, many of the symptoms you report are also common among people with aspartame poisoning. (aspartame is in Nutrasweet, diet drinks of all kinds, sugar-free gum and mints, Equal, flavored liquid Coffeemate, in Pedialyte and Augmentin, Children's Tylenol and Kids Centrum Vitamins, Metamucil ... the list goes on and on.

There thousands of products that now contain aspartame.

92 symptoms (including yours - dizziness, fatigue, bloating, headaches) have been reported to the FDA by suffering consumers. Don't expect them to ban it, though.

More info: http://www.dorway.com/badnews.html

Many people don't think they're eating/drinking aspartame but it's in so many products if you don't read the fine print on the labels you may not know.

--- Fiver, an aspartame "survivor" - finally free of it after 18 years of hell (fatigue, dermatitis, depression, anxiety, joint pain, mood swings, "brain fog", backaches, irritability, PMS, memory impairment and more ... ALL STOPPED WHEN I STOPPED USING ASPARTAME.)

Hi Folks,

This may be a bit controversial, but the use of aspartame, also known as Equal, has caused me incalculable harm. I have joint pain that has caused me to becom e legally disabled. This is not only from my diabetic neurological problems, but also from drinking diet soda and using Equal to sweeten things. Dr Aspler, I know that you are a medical doctor so I am including some info for you and the rest of Orchid to check out. I have been aspartame free for over 2 years and the change is remarkable not only to the mitigation of the joint pain, but also to many other symptoms. I would be happy to discuss this problem off list with any one. ....

Hi Skip, I drank diet soda when that aspartame first came out. I would go on my daily bicycle ride which was a 13 mile trip around the Ocean Drive to my house. I would take a rest and drink one soda. This caused me to get very dizzy and lightheaded and I could not figure out the cause. Then I read that the aspartame changes to formaldehyde in your system if you drink it when you are working out and overheated. And we all know what formaldehyde is used for (frogs in jars and Angel Dust). As soon as I eliminated the aspartame the dizzy spells disappeared. Haven't touched the stuff since the first year they brought it out.

I was sick for a very long time. I was experiencing daily headaches, extreme fatigue, and depression. Doctor's couldn't find the cause of my symptoms. I finally ended up visiting a nutritionist. She determined that all my problems related to use of aspartame. About two weeks after I eliminated aspartame from my diet, symptoms went away. At first, I was really skeptical that aspartame was the problem but when the symptoms disappeared, I became a believer. Some time later, I read a book concerning the dangers of aspartame and it is very scary. I truly believe that aspartame is dangerous. I will NEVER use it again. I suggest you stay away from it too.

I have also had a very bad experience with aspartame. I was running to the

doctor regularly for several years and had all kinds of tests done. They thought I was a hypochondriac and ended up giving me prozac for depression. That only magnified the problem because my system then had to eliminate two drugs instead of only one. After hearing that aspartame caused brain tumors, I stopped drinking diet sodas and my symptoms gradually disappeared. I truly believe that aspartame is very bad for people.

Subject: Aspartame!

Dear Mark,

I just stumbled across holistic.com's website and got very excited! I'm trying to figure out what to write about in my technical writing class, and I think Aspartame and MS-like symptoms would be perfect for me. I have another story to add to this website, but first I would like to ask you for recomendations for other websites, any scientific evidence supporting this, doctors that support this theory, etc. I think it would be great to write a technical report to the FDA or other authorities on this subject.

Here's my story:

I'm a 28 year-old male and about a year ago I started having MS-like

symptoms. It started with a numbing sensation in my lips that moved to my tongue, nose, and the point between my eyebrows. A couple days later this sensation showed up on my finger tips. I started having vertigo and I was feeling more emotional than usual. A couple times I lost my balance and fell over which was very unusual. I didn't have any pain though.

The first place I went for help was a chiropractor because I thought it was possibly caused by a pinched nerve. After I realized this wasn't working I tried acupuncture and chinese medicine. Finally, I went to my doctor only to find out these were MS-like symptoms. He was pretty sure I had MS, but to prove it he ordered a MRI. The neurologist I was seeing refered me to a neurosurgion and this scared me quite a bit. It turned out that I had a lesion in the tectal region of my brain. SCARY! He called it a tectal glioma and said it was a very rare brain tumor. He then ordered another MRI for three months later to check it's status. Fortunately the lesion was gone which proves I didn't have a tumor. He refered me back to the neurologist who took my films to a neurologist convention to see what they thought. It turns out they thought it was definitely MS.

Shortly after all this, I received an e-mail that described how aspartame may be linked to MS-like symptoms. I used to chew lots of trident gum before I received the e-mail, and after I stopped using aspartame, my symptoms went away and have been gone ever since. I have no idea if it was the aspartame or if I really do have MS, but there does seem to be a correlation, and I haven't had any symptoms since I quit using aspartame.

I must mention that one of my co-workers is going through the same thing I went through, and she drinks lots of diet pepsi. In fact, she's going to have a very painful nerve conduction test because nothing else has proven MS.

Update:
I'm now 2½ weeks aspartame free.. I also cut out MSG (which, might I add,

was a lot more difficult considering all of the products out there with MSG in them - no more Doritos or Stove Top Stuffing or Hidden Valley Ranch dressing or Campbell's Tomato Soup for me).. Considering how small the sacrifice was, I'm feeling remarkably better.. I have more energy than I've had in ages, the fibrofog is starting to lift and I haven't been as dizzy or lightheaded (which are all major improvements in my book)..

It amazes me that something as seemingly inconsequential as drinking diet soda and consuming products laden with MSG might be responsible for the degree of my illness.. Why don't more rheumatologists suggest that their patients with FMS cut out these obviously wicked substances? It would've saved me a lot of trouble and years of feeling subhuman if I hadn't had to do all the research myself.. ....

Aspertame Cause??

Margo4337
posted 07-02-2002 11:57 AM

My sister and I were talking a couple of weeks ago and she told me that she had stopped taking Aspertame in any food or drink because of all of the warnings and info from web sites she has read about. She encouraged me to go to any search engine and type in Aspertame and start reading. After I did, I decided on my own to stop drinking diet pop, etc. Within two days, my night time foot pain, pins and needles etc., had decreased DRAMATICALLY!! It is week 2 and still hardly any night time pain and the day time numbness seems to be slightly better. Just curious if anyone has ever related these two and wanted to spread the word in case it helps others from this horrible night time problem. Let me know! Margo

I have irritable bowel syndrome. I do not drink any diet drinks of any kind. I do not use equal, sweet n low, or anyother substitute. If I do, I will bloat and cramp really bad for the next couple of days. I drink coffee every morning with sugar. I use to drink diet dew every day, coffee with sugar sub. every am. I quit those products over 2 years ago, and I have alot less problems with my IBS.

Diabetes
Aspartame danger

Paula Webster
posted 12-30-2002 01:12 AM

I wanted to warn my fellow diabetics about aspartame (NutraSweet, equal, spoonfull, etc) I loved pop and I drank almost a 12 pack a day. I became so ill while drinking diet drinks, but I didn't have any idea what was causing my problems. I could no longer walk very far. When I walked to my car in the drive way I would have to stop a rest 2 to 3 times to make it. I had extreme fatigue, extreme memory loss (I would forget easy words for things like "shirt"), I would suddenly lose my balance and stagger for no reason, I had blinding migrain headaches, and worst of all I had finally developed horrible pain in my body even my face. It was like having your hand in a vise and someone just continued to clamp down tighter. I had reached the place where I just moaned in constant pain. I never dreamed I would ever had my normal life back again. A friend sent me a article about aspartame and it's toxic effects. I stopped all forms of diet pop, food, whatever. After a few weeks, I thought I was getting better, but I was afraid it was wishful thinking. Five months later, I was walking Walmarts shopping again, I remember most words now although sometimes I have to think a few minutes first. After years of constant headaches, I rarely ever have any these days. But, best of all, the pain is gone!! I am about 98%pain free. All I changed in the 5 months was I didn't touch a drop of anything with aspartame in it. It goes under a lot of different brand names. Also, Monosodiumglutmate (MSG) is a nurotoxin that works just like aspartame in destroying nerve endings. So read your ingredients carfully.

Aspartame can be listed as, "high frutose syrup" "certain numbers" "artifical flavoring" etc. Ever notice the number of electric carts that have popped up in stores for shoppers. Aspartame mimics MS, triggers diabeties, and so much more. There is no where near enough space here. Your quality of life may depend on your knowledge about aspartame.

I believe that nutrasweet is dangerous to anyone not just diabetics. I used to get tingling in my hands and feel like I was on drugs when I was consuming diet soda and snacks. It was like moving in slow motion sometimes as I would move my arms. I don't take any medications so that explaination is out. It took about a week or two to get out of my system when I stopped using it cause that's when my symptoms went away. I then went to a couple of websites about it and it explained that it does have a culmulative affect and does cause such problems. One was discribed as feeling unreal. Natural furtose is safer. Even Slenda.

Hello,
I can share a personal story with everyone about my experience with aspartame.

It was about 10 years ago. I was a diet coke addict. I drank about 2 liters a day. Oh, I loved the taste so much and began noticing that I seemed more and more thirsty when I wasn't drinking my diet cokes. I'd estimate I drank this amount for about one year. Then one day I decided I was going to quit drinking diet coke. Mainly because I had read a article about aspartame tocicity. It was in a newsletter I received in the mail

from Dr. Julian Whitaker.
So I quit cold turkey. Within 24 hours my body began to detox. I had a headache so severe I thought my head was going to explode. I was thinking this was probably from the caffeine. Then the detox really hit me. I spent days in the bathroom with liquid green stuff coming out of my bowels. I developed a high fever of 105 degrees. The perspiration coming out of my body smelled just like turpintine. It was horrible. I saw spider's on the ceiling and wall. I went to my doctor and he said I had the stomach flu. Folks I'm here to tell you it was not the stomach flu. I was going through a very strong and horrible detox as the aspartame was coming out of my body. Pure chemical smells from the bowels to the perspiration to my breath. This put me in bed for 5 weeks. There is no doubt in my mind it was aspartame poisoning/detox. To this day if I accidently get even a super small dose of Nutri-sweet, my eyes begin to swell shut along with my throat. As far as I'm concerned it is deadly stuff. The things we read on the net are true.

People call me radical as well. I'm really very conservative. If you'll do your own research with this wonderful tool we call the Internet you will learn about things like, "Monsanto (the maker's of aspartame) pay the FDA huge amounts of money to say their product is "safe." Ultimately it comes down to the fact that each individual must make their own choice whether to consume this product or not. I choose NOT! And I can't honestly say I feel the FDA has the best interest about my health in mind.

Splenda may not be for everyone. I have had IB problems in the past, so that may explain my reaction. I ate one "candy" bar made with Splenda and was in the bathroom the rest of the night with severe stomach and intestinal cramps. Also, my daughter who doesn't have IB problems, had one fruit flavored drink made with Splenda and had the bathroom problem too.
I also stay away from aspartame. I tend to be sensitive to non-natural

substances. I can tell when I have accidentally sipped the wrong soda because my tongue and lips will immediatly go numb. Kind of like medicine head and later I will become an air-head (can't concentrate). It definitely had a bad effect on my brain so I stay far, far away.

From 1990-2003 I drank Diet Coke. From 1990-2003 I gained 50 pounds. I stand 5'7 with a small frame and was beside myself with frustration from weight gain. I did Weight Watchers, Nutri-System, Atkins, Jenny Craig, Phen Fen, Atkins again....with no results. Many people over the years have told me that Aspartame i.e. Nutra Sweet causes obesity. Of course that makes no sense at all, right? Well, long story short. I started seeing a neuro-muscular massage therapist in October of 2002 for constant muscle pain and numbness. I am a professional drummer and have been doing it for years, so I assumed that it was overuse of my muscles that was causing me so much pain. Anyway, my therapist told me that my muscles were completely saturated in acid and that most of them weren't even working. She then asked me if I consumed cokes and things like that. I answered yes and she said that as long as I'm drinking them, my muscles will continue to ache and not work. So, for that reason alone, I had my last Diet Coke on New Year's Day, 2003. Determined to keep the muscles pain from coming back, I

stuck to it. In order to get my caffeine, I drink black coffee with NO sweetener of any kind, and unsweetened iced tea with lemon. Here is the catch....With no dietary changes other than quitting Diet Coke, January 1st, 2003 I weighed in at 149 pounds, and convinced that I would never be slim again. Today, April 18th, 2003, I weigh 120 pounds. No exercise, no dieting...NO DIET COKE. Please e-mail me if you have any questions at xxxxxxxxxxxxxxxxxx. I am now a size 6, down from a 10 and I have no muscle pain anymore.

Aspartame gives me migraines. You can do it w/o sugar substitues (m)

I am not willing to try the other subsitutes because I don't want to risk a migraine. You don't have to rely on altered products to do the program and be successful! Some of your foods will have higher points values, but that beats hives, doesn't it? Some of the WW foods have aspartame, so you have to be careful what you buy.
If you want to try some of the other substites, go ahead. But I am here to say, you don't need to use sugar subsitutes to do the program and be successful.

I do not advocate consuming anything with aspartame in it. A year ago I gave up diet drinks at the advice of a well-educated cousin, who warned about the harmful effects of aspartame. I was having horrible abdominal pain and had multitudes of tests run to determine the cause (I'm sure it was gallbladder related, but that could never be proven.) When I followed her advice and got rid of every single product I ingested with aspartame in it, my abdominal pain magically went away (although it took a few weeks.)
I also learned from her that as aspartame is digested it turns into formaldehyde and other harmful chemicals. Since I don't need preserving just yet, I stay away from the stuff.

Anything with aspartane is a HUGE trigger for me. I have stayed completely clear of artificial sweetners for years. I recently discovered a natural sweetner that is considered "diet". It is called Stevia. It does not trigger migraines for me. Let me know if anyone else has used this and how this works for them.

To: xxxxx@xxxxxxx.xxx
Subject: Nutrasweet

Last night, I decided to do some browsing on the Internet
concerning Nutrasweet. I have had severe problems in the
past for many years with this stuff, but finally tested myself
by leaving it alone for 3 wks. and found after just 2 wks. that
I definitely could see a change in how I felt .
My mother is experiencing health problems and my sister ,
who has also found that she can't tolerate it, and I started
to do some research last night to find out why she is
having this particular problem .
....
Haven't been able to convince her of this yet. I asked
her the last time I visited with her , to leave it off
for 3 solid wks. and see if she noticed a change.
She's reluctant to do it. I can understand it. It took
a friend from October to August , three yrs. ago, to
convince me to try leaving it off for 3 wks. . I'm so
glad that I did. I had thought that I was dying. I could
hardly function.
For over 10 yrs. , I experienced chronic diarrhea , severe
stomach cramping, isolation because of the diarrhea,
dizziness, depression, low energy.
I even had one doctor to diagnose me with Chronic Fatigue
Syndrome.
I was experiencing weakness all over, especially my
legs. I've had two MRI's since 1988 , thinking that I might
be developing MS, also.
I couldn't eat out without coming straight home.
If my daughters wanted to shop , I could only go to
one store, and then, come home.
If we went shopping and they wanted to eat out, we shopped
at one store and then ate, and then came straight home.
At home, when I cooked a meal, I didn't have the energy
to wash the dishes until the next morning.
Since going completely off that stuff, I have slowly
regained my ability to walk the length of the mall,
can stay away from the house for longer periods of time.
I don't have to hold on to shopping carts to maintain
my balance. I still have some cramping and diarrhea,
but it isn't nearly as bad as it used to be. I don't break
out in cold sweats anymore or feel faint , worrying if I'll

make it to the restroom.
Please forgive me for being so personal in this letter.
No one knows how I've suffered due to this. If my
letter helps one person to leave Nutrasweet alone , or
help change Diet Coke , or get it off the market, it's well
worth my time to write this.

I used to drink a diet soda with lunch. Then I switched to decaf diet
soda for lunch to eliminate the caffeine. Did this for a few months and
slept better at night. Then I switched from decaf diet soda to sparkling
mineral water to eliminate the aspartame and I noticed how much better I
functioned in the afternoon. It was amazing how foggy-headed the aspartame
was making me. Sometimes I would give in a have a diet soda but only if I
knew I didn't have any tasks to do that were mentally strenuous, because I
was more focused and could think more quickly when I avoided aspartame.
Now I try to avoid aspartame in everything. It is even in yogurt! ....

Aha! Another convert back to sugar? I actually used to think the people
who warned about aspertame were neurotic and the type who were afraid of
'anything new'. I loved diet soda, using the stuff on my cereal, on fruit,
etc. Well, it took a couple of years, but I noticed I was having daily
headaches. I cold turkied (is that a verb :-) ?) it and the headaches
stopped immediately. Can only imagine what it was doing to my internal
organs (the major rant of my acupuncturist).

Date: Sat, 31 Jan 1998 16:48:49 -0600
To: xxxxx@xxxxxxx.xxx
Subject: My aspartame story.

I would like to register a complaint about Nutrasweet. I have experienced headaches, short term memory loss, dizzyness, and seizure-like symptoms while consuming this product.

Because of the above symptoms, I spent several years seeing neurologists who ran a litany of tests. Amazingly, all tests showed absolutely no abnormailities. According to the doctors they could not identify any reason for the seizures or other symptoms. Nevertheless, I should take the seizure medicines tegretol and neurontin.

All along, I new there was a cause for the symptoms even if the neurologists couldn't find it. I am not one to give up without an answer. ...and I knew the seizure symptoms did not appear out of the blue.
....
However, I remembered during a 3 month trip to Malaysia, during which I had no access to Nutrasweet, that I had no seizures, no headaches, no memory loss. Just a coincidence, absolutely not.

Therefore, I decided to try a little experiment. That experiment was to end the consumption of all aspartame, and of my seizure medicine. That day was December 27, 1997, my birthday. Since this day, I have not had any seizures, any headaches, my memory has returned, and I feel 100 times better. Coincidence, not at all.

I had been having headaches daily. I had been having constant memory problems which threatened the completion of my MBA. I had been having seizures regularly even while on neurontin and tegretol. Coincidence, that all the symptoms ended when I removed aspartame from my life. Absolutely, positively not.

Seems to me that I may well be able to prove a causal relationship between the my consumption of Nutrasweet and my health problems. Therefore, I am in the process of searching for an attorney.

For now, I realize that this is just anecdotal evidence, and that Monsanto doesn't give a damn about my health. Though in an very minute way they care about me because I will never consume that which is poison to me...Nutrasweet.

To: xxxxx@xxxxxxx.xxx
Subject: Re: Aspartame Victim

I would like to tell you about my personal experiences with aspartame and what I feel that it has done to me.....

In the last two years I have become a *heavy* Diet Pepsi drinker (approximately 2 two liters a day, plus NutraSweet in my coffe, and many so called "diet" products once my weight gain began.... and I the more NutraSweet I consumed the more weight I put on....) hearing things about how NutraSweet was bad for you, but never really knowing the facts. I don't know exactly how long after starting to drink that much of the soda my symptoms started to appear, but I would say that it was about six to eight months. For a little over a year now I have had to deal with *tremendous* weight gain. I always had a little bit of extra meat on my body, but I was always active enough to keep it level. I never changed weight much, but in the last year I have put on approximately 70 pounds, all in my thighs and hips. (This may or may not be all from aspartame, obviously, but I don't know....)

In addition to the weight gain, I have had AWFUL mood problems. I have been diagnosed as manic depressive, and have started to have anxiety attacks. I don't know how much of my other physical ailments were caused by aspartame, but before I list them let me say that previous to my drinking the soda all the time, I didn't have any of the symptoms. I was an average, mostly healthy 19 year old girl. I have always had very very minor arthritis (since I was a child) and very light athsma (never "attacks", but it made normal colds worse)..... the rest of these things, I never had ever had wrong with me until I started drinking the soda all the time.

anxiety attacks/panic attacks
bloating
breathing difficulties/chronic cough
burning urination
VERY CHRONIC FATIGUE
depression (Very Badly)
EXTREMELY EXCESIVE THIRST AND HUNGER

face flushing
thinning/losing hair
extreme loss of sexual feelings (has caused huge problems with my fiancee and I)
inability to concentrate
insomnia (Severe)
irratibility
itching
joint pains
VERY marked personality changes
memory loss/poor memory/not as good as it used to be
EXTREMELY MESSED UP menstrual cycles
numbless/tingling of extremities
EXTREME WEIGHT GAIN

I am now 21 years old, and I honestly feel like I'm an 85 year old. (No offense to anyone older, but I think you get what I mean...) I just don't feel young and full of life the way I used to. I thought these things were all wrong with me because of my "manic depression" that the doctor said I had. I thought that all of it was in my head.... I have spent time actively thinking that I am an awful human being, fat and lazy and worthless. Tracing these emotions backwards, I realize that they all started after my HEAVY consumption of Diet Pepsi started. I used to be vibrant, full of confidence and able to spend a day being physically active with the best of them.

Now I can't do any of those things.

Subject: Re: My 60 days is over!!

I am just writing to update my personal aspartame story. ;) Sometime a little over 60 days ago I wrote to you with my horror story about aspartame. I am the 21 year old who felt as though I were 95. I had a list of symptoms as long as my arm, and was convinced that my entire life was on a downward spiral into destruction.

But now!!

60 days later and I swear to God I feel like a new person. My personality has just changed so much!! I feel like I did years ago, before I started putting that poison into my body. The panic/anxiety and depression and nastiness has just faded away. My sleeping patterns have returned to normal. I eat and drink like a normal person now, without the excessive consumption. I can move like I used to, without the pains and aches.... Just so many things about me have returned to how they should be. I'm 21 again and just so happy I could scream!!

I just wanted to write to you and thank you for all the information you have out there about aspartame. I have told friends and family, I have taken the flyer to the supermarkets and other local places and I think that people who I have talked to about it have started to listen! It's wonderful.

I am a tribute to the values of keeping that junk out of your body. It's an awful good thing my boyfriend loved me enough to stay with me through all the horrible mood swings and things I put him through.... He's getting quite the benifits also, from the me he used to know before I started to become a bitter old person.

Thank you xxxxxx, for spreading the word about this. I appreciate it more than I can say.

Subject: Thank you
Date: Sun, 14 Jun 1998 19:32:03 PDT

I began to have head tremors about a year or so ago, and they were getting worse. Whenever I was tired or sitting still watching TV or (very embarrassing) in the middle of a meeting, my head would shake. To the degree that caused me great concern. I went to the doctors but all test including an MRI told me nothing was wrong. I knew better. So I got on the internet and put in "head tremors" that's when I found the aspertame reaction page. You have no idea what it was like to "Possibly" know what was wrong. After 2 months of giving up aspertame, my head still shook and I was about to give up, thinking I must be wrong, but into the third month of not drinking my usual 3 diet cokes a day, not only have the tremors let up, I can actual think much, much clearer and don't forget what I'm saying in the middle of a sentence. I feel like the "fog" I have been in has lifted. But that's only the beginning.
Ten years ago I almost died... are you ready for this from seizures that had no cause, no cure. Back then I drank diet soda constantly also and gave it up during one of my "hospital" stays. They never did find out what was wrong with me. I was on medication like you would not believe when I was sent to a doctor at Yale School of Medicine in New Haven, CT who decided to remove me from the unbelievable amounts of medications the previous doctors had me on to start from scratch. I was even scheduled to have surgery to have a part of my brain removed to stopped the seizures. But as she began to lessen my medication, I was able to stand up and walk across the room without having a seizure, I was able to remember who had just visited me, I could go on, but you get the picture. The final diagnoses because there was no other answer was and I quote "convulsive syncope brought on by non-epileptic medicines". I went from an invalid who could not move to an unbelievably busy person.
When the tremors started, so did the fear. I will never know if it was the aspertame that almost killed me, all signs point to that fact, but I do know for a fact, that the aspertame caused my tremors and brain fog.
Thank you for spreading the word, I look forward to feeling better and better every day. And please encourage people to not give up, the poison takes time to get out of your system.

Subject: Aspartame Illness Diagnosed.....

I am a type II diabetic and had been taking Nutrasweet for years. I had noticed that stress and anxiety in my body, specially in the morning on waking up and stretchy legs at night. I felt uncomfortable with this unexplained stress but the doctors could not identify it. I had also noticed over the last several years difficulty in memory and attributed it to old age. I am 48 and thought that this is what starts happening when you get old. Oh yes, I had also noticed severe joint pain specially in shoulder, hips, and knees. I recently had some intense periodontal work done and was put on tetracycline medication for infection. Within one week I had an acute vertigo attack. I thought I was having a stroke and was whisked to the ER at the hospital. I was told by doctors that there was no explanation for this and given medication. The vertigo subsided as I told the doctors of my now morning stress and anxiety, and that my body was telling me something. About a week later the morning anxiety got so bad that I had to go to the ER again and beg for help. A triage nurse talked to be and both her and the doctor tried to convince me that since I was recently looking for a new job, the anxiety was in my head. They put me on Buspar. I kept on saying something is not right and even though the Buspar took the edges off the anxiety or panic attacks I felt like life was soon coming to an end. Very scary and depressing.

Searching the net with my symptoms I started to see a pattern and then one morning last weekend a got a severe anxiety surge just after I had eaten some cereal with Nutrasweet spinkled on it. Could it be that I am allergic to Aspertene? I stopped using it and within several days felt like a new person. I can sleep at night and life is looking great.

I thought I would pass this on to you. You can repost it or use this information at you see fit. Please in return let me know of possible organizations or others, specially diabetics that I can pass this on too. I wish I had known sooner, since I would imagine that serious damage has been done to my body and I am sure overall affected my life span. I am angry at how such a damaging product is still being used.

Subject: So much improvement off aspartame.

Just thought I would give you an update. I don't know if this is important in your records but I thought I would pass it on. When I had my acute vertigo attack and thought I was having a heart

attack, I noticed a slurring or drooping of one side of my mouth, I think it was the left, but not sure. I told the doctors that I had this sensation and the looked puzzled since it is not common with a vertigo attack. It was temporary just during the initial attack. I have never had, and hope I never again, another vertigo attack so I really cannot compare the severity of my attack with anything else. It seemed to me that I was having a heart attack. Also, the vertigo attack and anxiety attacks were worst in the morning when just getting up. Just thought I would pass this on since you seem to be the center of data collection.

Right now I feel great. My energy level has skyrocketed and my daughter who is 21 complains when she visits now because we are always walking or going somewhere. She used to like coming over to visit because we would just sit and veg. Have already lost 15 lbs in the last couple of weeks. It will be time for some new clothes pretty soon. This reversal in my body in no way can be a coincidence. Enjoy your list messages.

Subject: Aspartame reaction

I found your site just in time and it has stopped me cold. I no longer use anything with Aspartame. In 1992, I was diaganosed with Severe Hypoglycemia. I was told to not ingest any sugar whatsoever, and I was put on a strict diabetic exchange diet. Months went by and in october I began finding a bunch of sugar free alternatives to those things I loved so much - ice cream, candy, hot cocoa etc. Well, after several months I began to develop acne. Keep in mind that I had never had a pimple in my life and I was 22 at the time. Well, I tried ewverything - accutance, retin a, euryderm etc. - It helped a little. Then in 1995, I began ingested a lot more nutrasweet - on my cereal, in my tea, several diet cokes a day. Well, I began to develop anxiety and sleep disorders - I did not sleep for a week. I became obsessive and plagued with worry. I thought it was caffiene - si I stopped it. It became a little better. Well, I still had pimples and in 1996 I got cystic acne and was still wired. After going from doctor to doctor and having my hormone levels checked and told that there was nothing wrong - I became frustrated. My face looked like hell - swollen and oily and it hurt - my self esteem was in the crapper. I needed to do something - so, I thought about the time when this started coming around. I traced it back to when I was diagnosed with hypoglycemia. That

is when I started with nutrasweet - so in december I stopped. WOW, My face cleared up in about a month - totally. I have slept through the night for the last two months - no anxiety - nothing. I am happy to say that after having quit music from "performance anxiety" that I am able to do that again. Another thing I noticed was I no longer have back aches and my PMS is not as bad. Pretty amazing huh? And they say this stuff isn't bad for you. Well, I am living proof, as are all of the other people on here, that it is bad - VERY BAD - even life threatening. Thank you

Subject: Final submission - Symptoms complete

This is a very accurate account of my life on aspartame. Seems to me that anyone who is using aspartame and having problems could find correlations with their symptoms as I did with mine. I connected dates with employment and events that I was certain of dates and that is how I have develped this list of symptoms.

Symptoms of Aspartame Poisoning
Actual Case History

Seizures and Convulsions - First grand mal nocturnal seizure was 01/96, then: 03/25/97, 03/29/97, 04/29/95, 10/25/9 (two during the night), 01/05/98.

Dizziness & Tremors - Severe dizziness and unbalance at my mother and father's 40th Aedding Anniversay mass--brother caught me from falling (that was 1990). Intermittent unbalance and dizziness from 1993 to 1997. The symptoms disappeard afer April 1997 after completley quitting the ingestion of Nutra Sweet.

Severe Headaches - Yes - For 15 years I thought I had sinus headaches. Generalized in the post-surgical area on the left side of my head. Occasionally, the headaches would involve either my whole head, my frontal region or just the left side. Headaches severity subsided after April 1997. Became intense after that, but completely went away after January 25, 1998 to the present.

Memory Loss - Yes - very noticable in 1994-1997, especially when I worked for an attorney's office Disappeared after April 1997.

Slurred speech - Yes - very noticable in 1994 - 1997, especially when

I worked for an attorney's office. Disappeard after April 1997.

Confusion - Yes-occasonally since 1993 -- totally disappeard after April 1997

Numbness or Tingling of Extremities - Yes--occasional - totally disappeared after January 25, 1998.

Chronic Fatigue - Yes--very noticeable from 1993 to 1997. Still lingered after that but not as severe. Most severe when working in the Attorney's office. Subsided after April 1997, but totally disappeared after January 1998.

Depression - Occasionally down, but not extreme--seems to be gone also since January 25, 1998

Insomnia - Severe since 1993. Severe up until January 1998. Very infrequent now.

Irritability - Yes--I blamed it on the career change from 1993. But I still was irritable doing what I loved doing for a living--being an artist. I didn't understand. Some still lingers, but a noticeable positive change since January 25, 1998 after quitting the creamer.

Panic Attacks - Yes - severe at night upon awakening and right before I would have a grand mal seizure. It was so much improved since April 1997, but still present until January 25, 1998--once I quit the creamer, this symptom has occured one time without the threat of a seizure.

Marked Personality Changes - Yes--most noticebly withdrawn (so one family member noticed) and didn't feel like I fit in since 1993 - the career change into being a full-time artist in 1997 helped improved that, but I still knew something wasn't completely right. My shyness was to a greater degree. I feel like I am the person I once was before 1993, but I am still very shy and intimidated at times, but all of that seems to be better since January 25, 1998.

Phobias - YES--extreme---afraid of going to sleep because I thought I would die during a seizure. After January 25, 1998, that symptom completely disappeared.

Rapid Heart Beat & Tachycardia - YES--very extreme at different times since 1993. This symptom didn't disappear after April 1997. It got so severe at times, I was over 120 BPM, and my blood pressure was

very high. This symptom completely disappeared after January 25, 1998.

Asthmatic Reactions - Yes--in the form of sneezing and apparent sinus congestion. Would wake up sneezing, and discolored drainage from my nose was present most of the day. Sneezing very infrequent since January 25, 1998. No change in this symptom after April 1997. Still severe up until January 25, 1998. Now moderate drainage remains.

Chest Pains - yes-- off and on since 1993 - Completely disappeared after January 25, 1998.

Hypertension High - First noticed March 1997 - 144/96. Only one time was it critically high, and that was in October 1997 - 168/102. It has been low since January 25, 1998 - 120/84.

Nausea or Vomiting - Yes-only nausea - Usually accompanied the low blood sugar reactions I seemed to have during different time throughout the year of 1997. My first clue should have been years ago when I tried Diet Pepsi--I got nauseated right away and didn't know why. Diet Pepsi is the only product that gave me immediate nausea.

Diarrhea - Yes--very noticable after a meal, but not frequent. First noticed in early 1997.
....
Blood Sugar Control Problems - Yes--severe, even though I am not a diabetic. Approx. 4 times during 1997, I had severe low blood sugar reactions where I would start shaking and have to stop and get some sugar in me.

Craving for Food - Yes--always wanted something, but never knew what I craved. Mostly since 1993. Since January 25, 1998, I have not had cravings. Now changing over non-processed foods.

Weight Gain - Yes - 30lbs in the last 3 years. I never ate that much and rarely snack, but my body just gained the weight which was and still is impossible to lose until I detox my body from the formaldahyde I feel.

Hair Loss (Baldness) or Thinning of Hair - Thinning of my hair has been very noticeable since 1995.

[snip lots of symptoms: severe infections, itching, burning

urination, excessive thirst, etc.]

Joint Pains - Yes---As far back as 1993, I remember having joint pain every day and feeling like I was "old" at the age of 42. Since January 25, 1998, that all disappeared unless I eat something that contains MSG or hidden NutraSweet. My immediate reaction to those things is first sneezing, not feeling well and joint pain the next day.

April 1997 was a significant time for me, because after 3 grand mal nocturnal seizures in less than 45 days, I completely quit ingesting nutra sweet in all foods and beverage. Throughout 1997 and as late as January 5, 1998, I had nocturnal grand mal seizures after not ingesting nutra sweet for all those months. That led me to believe that there was a real physical problem present OR it led me to believe that I was still ingesting nutra sweet unknowingly. The only thing I was still ingesting that DID NOT state anywhere on the container was the Nestle's French Vanilla Creamer. Afer completely quitting that on January 25, 1998 (I had enjoyed it since 1993), most all of my symptoms immediately disappeared and I have not been having any seizure activity. Though it is too early to tell, I have a hunch that the creamer does have nutra sweet in it, even though the company denies that it does.

Subject: Re: ASPARTAME -- PROOFS OF HARM

Unfortunately, my own husband, Ken, was one of them. Late last summer he was having a bad headache located mostly on one side of his head. He went into the Univ. of Utah Medical Center for an MRI. They discovered a mass, more like a brain lesion. The Dr., who first examined him up in Payson (a town located between us here in Price, and closer to Provo) is a specialist in those sorts of problems, and recommended the MRI.
....
Anyway, Ken cut out drinking the diet Coke, or anything at all which contained Aspartame or other artificial sweeteners. His headaches soon stopped, and when he went back for another MRI in early Feb. everything was clear,--no more brain lesion, or beginning of a tumor or whatever it was. When I contacted the Dr. again by E-mail about a month ago, he said that several of his other patients, who had also

stopped drinking any diet sodas, had all of their similar problems cleared up, too.

There are several other articles which I posted last fall, perhaps when you were away from the List. Among them was one describing how Japan had banned all Aspartame for the last 10 years or longer. STEVIA is being used instead, and Japan is now cultivating the sweet-leaved bushes there.

Had to send in my personal experience before stumbling off to bed....
I did have neurological symptoms that I feel were the result of consuming sugarfree desserts and drinks sweetened with aspartame.
I had muscle tremors that made it feel like we were having an earthquake when I was trying to go to sleep at night. Since I completely stopped consuming any of these products the last 5 years I have had no shaking sensations...
My son gets zero of these products. I noticed that when I ate desserts sweetened with aspartame the tremors returned. I think the stuff is VERY questionable.

Subject: Aspertame Adverse Reaction

I would like to add my own story to that of the growing list of people who have suffered adverse reactions to aspertame. My story is actually an old one. Back when the cola companies first started putting nutrasweet in their drinks I decided that it was a good time to begin the use of artificial sweetners. Up until then I had avoided diet sodas because I didn't like the taste of sacharin.

Well, I came home with my first can of diet Coke. I drank it with dinner - around 7 p.m. At around 10 p.m. as I lay down beside my husband to go to sleep I bagan to feel strange. It felt as if electricity was building up in my limbs and the next thing we

knew I was having seisures in both arms and both legs. My limbs jerked around uncontrollably. My head swung from left to right as I lay on the bed. My husband was very upset; so was I. The seisures continued intermitantly for two hours, lessening with intensity as the time went by.

I told my husband that I thought it had to be the soda doing it to me because I'd never had any kind of seizure in my life. Needless to say I did not have any more of the Diet Coke. I allowed a month to pass. During that time my husband waited to see if the seizures would reoccur. They did not. I, was convinced that it was the aspertame; he was not convinced. As an experiment, after one month had passed, I purchased a diet-Pepsi. I drank it in the presence of my husband one Saturday afternoon. The adverse reaction proceeded just as it had the month prior with the diet-Coke.

After wating a few months I tried diet 7-UP. I really did want to lose weight without giving up sodas. Again, the same reaction as the first two instances.

>NO!!! I sure don't! I did when it first came out(I was in about 10th
>grade),and it made me very sick. I was using it in everything-"Diet
>coke" "Extra" gum "Equal",etc..... Finally my doctor figured out that
>I was most definitely allergic to it. It gave me intense
>headaches,blurred vision,balance problems(which was very embarrassing as
>a member of a dance company!) and many other problems which I can't
>remember now due to the "fog" in my head! Anyway, I abruptly stopped
>using it and felt much better immediately. I avoid it now for those
>reasons, but I don't entirly trust it as "safe" either. That's my
>personal opinion. I'm not a person that trusts chemicals much,drugs, or
>altered food. So that's my 2cents!

I don't use anything with Nutrasweet either - soon after it came out, I tried it and twice got quite sick from it. Once waas a headache, body aches and the other time, it made me throw up! So I think I'm allergic to it. We just don't *know* longterm what the affects of that are. I discourage my hubby/kids from having lots of the stuff too. Real sugar has been around a long time, so we

know more about that!

I really don't like soda/pop at all - don't like the bubbles. I'm still on my apple cider trend adn thinking that the FMS might be causing that. As long as the store keeps carrying it - every half gallon I wonder if that'll be the last, but they still have it, so I'm thankful for that!!

Medical problems that you believe are caused from using aspartame:

I have experienced severe abdominal pain, bloating, feeling of being tremendously full all of the time even though I would hardly eat. Pain to the point of not being able to bend over. Regurgitation of food. I would become tremendously gassy.

Why do you feel aspartame caused these problems?

Because this went on for over one year. I thought I had a food allergy. I slowly began to eliminate foods that I felt could be causing it. I eventually had eliminated almost everything. It was by accident that I did not consume any asparatame one weekend, and felt better than I had in over a year. I thought it could be it, and completely stopped consuming it. I have not had one symptom since.

Did the symptoms go away when you stopped using hte products?

Yes, 100%.

Did you see a doctor about symptoms?

Yes, they ran numerous tests. Sent me to a digestive healthcare clinic. Put me on medications that required me to take up to 12 pills a day. I am not one to take medication, so I continued to attempt to figure it out on my own.

Did Doctor think it was related to aspartame?

No, I did mention it one time, but he did not feel that was it.

Did you report your symptoms to the FDA or any other group?

No, I have read a lot about affects of aspartame since I was so sick, but did not know where to report to.

Specific products I was consuming:

Crystal Light approx. a pitcher a day
NutraSweet in every cup of coffee I would drink (2-Cups/Day)
Trident (I would chew a lot of gum) (1/2 pack/Day)
Equal - on my cereal in the morning (1-Bowl / day)
Sugar-Free Jolly Ranchers
Sugar-Free Frozen Yogurt (1-Cup per day)

I have since found other products (ie. gum) that is not sugar-free but contains asparatame yet. I look at every label now.

I probably started experiencing these symptoms soon after using the products. I am very health conscious, so I began adding more to my diet over time. The symptoms definitely got worse overtime. I have consumed on occasion without my knowledge, small amounts since I have given it up. I can tell immediately, that my body cannot tolerate it.

I am so against the use of it since I became knowledgeable of it making me so miserable for so long. I would just cry because I was so uncomfortable at times. It began to interfere in things I would do, I wouldn't go places.

I truly believe that this product should not be on the market. I would be interested in any information related to my experience that you might have.

I don't know about Nutrasweet being bad for every one, but I know that it makes me deathly ill. Headaches, sick to my stomach, really raunchy taste. But I am one of those that just can't stomach it. My mom has been using saccharine and aspartame for years and she is just fine.
...
When I was 16 my step mom told me that I had to drink it, and told me it was a matter of taste and sat me down and made me drink a 6 pack of diet Pepsi...I ended up in the hospital with gastric distress, that was the last time I willingly drank it. One sip and I am wanting to heave.

To: xxxxx@xxxxxxx.xxx
Subject: aspartame problems
Date: Fri, 13 Feb 1998 18:46:06 -0600

I am a 37-year-old teacher, who has always been in good health.
....
I eat healthy foods, but I have one bad habit. I began drinking Dt. Coke three years ago, and I am up to two 20 oz. Diet Cokes per day. I don't drink coffee or tea, so my Dt. Coke habit began as a want for caffeine. I switched to caffeine-free Dt. Coke after one year of the regular diet kind. Unfortunately, about six months ago, I began having terrible headaches. I would go to sleep with one, and wake up with one. I didn't seem to have any organic reason why I was having them. Everyone seemed to think they were stress related, BUT I really felt happy - my career and colleagues are great, my husband and kids are fantastic, our money situation is better than ever -- why would I be stressed? On a hunch, I gave up pop. Within 10 days, my headaches went away. After being headache-free for a few weeks, and I guess, finding it hard to believe that pop could cause problems, I went back to drinking caffeine-free Diet Coke.

Then three weeks ago, I began to have light flashes occur in my eyes. I thought it was our fluorescent lights we have in our classroom, which seem to shine brighter on dark, dreary days, and the reflection off of the dozens of mostly white papers I grade on a daily basis. My eyes need a rest, I thought. Then it happened two more times, once when I was at home. When the flashes occur, I can't see in the center of my eyes, only around the edges, and the flashes are as bright as photographic bulbs. I have a check-up next month, so I thought I'd bring it up then, since otherwise I was O.K. It was strange, too, and I didn't want anyone to think I was hallucinating, etc., etc.

This week, I have had constant heart palpitations. These frighten me, enough that I mentioned it to family members and even a colleague of mine. I have no pain -- just frequent heart "fluttering." I have read enough to know these symptoms are related to certain health problems (and my brother is a doctor, which helps!) I have no thyroid problems and my blood sugar level is fine. I have a doctor's appointment in a few days, but, being a teacher, I'm naturally curious. So I thought about my lifestyle (I don't smoke, drink, or do drugs), my eating habits, etc., and looked for excesses. Dt. Coke, of course! I followed a hunch and did a search on "aspartame." I'm going cold turkey on the Dt. Coke. I'll let you know when or if the palpitations stop, or if another cause is found. I would have never thought that diet soda could be toxic. I guess I'll find out first hand if my fears are correct. Why hasn't this been brought out before? I'm beginning to feel like a victim.

[update]

To: xxxxx@xxxxxxx.xxx
Subject: Aspartame
Date: Tue, 17 Mar 1998 20:19:27 -0600

I stopped using all products containing aspartame on February 11, 1998, after suspecting caffeine-free Dt. Coke was making me sick. I drank some as a "test" on Friday, February 20, and got really sick. I also tried tea (not herbal) on Feb. 25 to see if it triggered anything. It didn't affect me. Still thinking it a coincidence, I tried caffeine-free Dt. Coke again on March 9th, but only four sips. Yikes! Was that a bad decision! I'm just glad I have strong willpower, because I feel now that I was addicted to Dt. Coke. This and the fact that it has made me so sick, has frightened me enough to give it up for good, plus other aspartame-containing products. I've never drank alcohol or tried any addicting drugs, but I feel that Dt. Coke is as addictive and dangerous. I'm telling everyone I know to be careful of what they eat and drink. My colleagues cannot believe this has

happened to active me. I still have some heart palpitations now which occur randomly (not specifically after exercise or eating, they just occur in an irregular pattern) even though I am now on 200 mg. Lopressor per day. My memory is improving slightly, although I think I may be compensating for my problem somewhat (more lists, sticky notes to myself, etc.). The sensitivity to light, and light flashes have stopped so far. My doctors want to do another thyroid scan next week. I'll update you. Thanks for the information! I'm glad there are people out there who care!

> or aspartame.

Last year, I developed Bells Palsy (I did recover) and then I got Shingles. both of these have to do with nerves and run along the path of nerves. You only get shingles when extremely run down such as the elderly or cancer patients. I was 36 years old. this scared the s?&* out of me. I started doing some research and discovered all the "BAD" things nutrasweet can do. It can mimic MS which both Bells and shingles are symptoms of. I did have an MRI which ruled MS out. I stopped it cold turkey.
....
I was drinking gallons of diet iced tea a week. enough. Never again! I also felt like a cloud had been lifted off of my brain within a few days of stopping it.

Subject: You're a victim of mass poisoning

I am SO angry.... I and my 10 year old son have been off of this since August and almost all my symptoms are gone! He no longer has asthma and now no longer needs to wear glasses!!!!

I don't have to wear glasses either!!!! But those are minor. I have been using Nutra Sweet for at least 7 or 8 years!!! I had gained weight! I now only weigh 118-120 (I am 5ft 2in), I have been up to around 200 lbs, and using this to LOSE!!!! I had Endometreosis and Menstrual problems...Had a Hysterectomy at 24, developed Hyperglycemia and so increased the Aspartame intake. Soon after I started having bladder and bowel problems. Had a colonoscopy...to examine my insides and bladder surgery to diagnose. I was told to have Chronic Spastic Colon Problems, and that I no longer had a bladder lining...a condition called Interstistial Cystitis. The symptoms are blood in the urine...pain...and no infection. I have been treated for all of the above for 7 years. They only worsened. Then about 4 years ago I started have major muscle problems. I was constantly in a fog, and falling down and running into things. My legs would give out while I was walking. My knees could not hold me up. At this time I only weighed about 145 lbs. Finally, I was pre- diagnosed with MS. I was sent to a Nuerologist for extensive tests. Including a spinal tap and MRI and Brain electrode testing. MS was not the problem. My muscle Spasms in my back got so bad that I was bed ridden and having to be carried to the bathroom. The pain was almost unbearable. I was then diagnosed with Fibromyalgia by 3 separate Drs. My memory loss became a joke to the whole family. And I use to sit down and feel like I was in a well looking out into the world...a sort of sur-real feeling. I was lossing hair, and having allergy problems, and constantly in pain in my abdomin and back. I finally decided to get healthy and started "working out". I ended up in the hospital for heart palpatations and chest pain. I would have tremors that no one could control. I was told they were panic attacks, but over what, I would ask? I would be asleep and wake up in tremors! Someone mentioned this info to me, and so I cut down on the aspartame, just because I was willing to try anything. I joined a weight loss class called weigh down. She said that your body basically metabolizes everything natural and to just try to eat "Real" food and not the diet foods with artifical fat and sweetners. This would allow your body to work natuarally. I started this in June. I finally quite all nutrasweet in August. By December I am almost totally well. I am no longer in pain and not in need of ANY medication except for hormones for the hysterectomy. I am 32 now. This has made me so angry! I am warning everyone, and intend to contact my insurance company....since they have helped me foot the bills. No one can however give me back the quality of life I lost during the last few years. Nor can they make up for all the pain and the tests I had to endure. I feel betrayed, and yet I am so glad that there is information out now before it is too late. I am thankful my son is off of this stuff, and I pray he will be ok in the future.
Thank you for all you are doing. Let me know what I can do to help.

Re: Aspartame: Nutrapoison?
Mon, Dec 15, 1997, 8:20 PM
Message # 274332

I was intrigued by the posting for the conference Aspartame:Nutrapoison??, unfortunatly I was unable to make it. However, I have had personal experiences with aspartame that I would like to share. About 10 years ago my grandmother became ill and the illness progressed until it became so violent that it forced her to the emergency room. It began with flu like symptoms and progressed to the point of effecting her vital signs with boughts of extreme stomach illness. At the time of her hospitalization they were unaware of the cause of her illness because the symptoms disappeared shortly after her hospitalization. The correlation was drawn to aspartame when family members brought in "diet Ginger Ale" and the illness returned. At this time they determined that she was "allergic" to it. I had assumed at this point that it was not harmful to everybody, just her because of some rejection by her body.

I myself was unaware of its negative side affects until recently when I had to seek several forms of treatment for debilitating migraines. It wasn't until a mere coincidence that my eye doctor warned me that the cause may be aspartame. I immediately stopped consuming diet soda and have been migraine- free for 8 months!! I have grave concerns however, because I have seen several primary care doctors and not one of them warned me of the possible aspartame/migraine correlation. Is there anyway that this information can be educated to the public, especially the physicians?

Subject: Re: Aspartame + Epileptic Seizures

My little girl was seven when she started to experience problems. She is a tubbly little thing - it runs in our family and always has. When I was expecting her I stuck to low call drinks and food. As she grew so did her wieght and one day I had a call from the school nurse about it. She referred us to a hospital dietician and the diet sheet told us to switch to low call drinks and low call foods.

I followed all of this with gusto and got some artifiical sweetner as well. Within a short space of time she started to be not so well. Somethimes she was not with it and sometimes she would look real bad. She started to have funny turns and would lose the muscle power to one side of her face and loose her speech. Eventually she had a full blown fit that was very bad indeed.

When all your information arrived it prompted much discussion. My eldest child told me that my daughter loved the artificial sweetner and if may back was turned she would help herself to a couple of spoonfuls at breakfast time. She always had her fits in the late morning! EEG's and Brain Scans produced no sign of any problems but she was and still is diagnosed as Epileptic.

They gave her medication but it did not seem to have much effect. My daughter was pale with dark circles under her eyes and a blue tinge to her lips. She did not seem to be with it and she became breathless very easily yet they could not find anything wrong!!

Life was awful but then xxxxx xxxxx Asked a question on the Net about this subject and you replied. When I read all the information you sent I was horrified. I threw out any and everything that had Aspartame in it.

Three weeks late I was looking at a healthy alert child with vivacious bright eyes, rosy cheeks and red lips. She has never had a fit since and needless to say she now avoids anything with Aspartame in it. My daughter felt the improvement so much that she is convinced that this awful substance caused her problems.

She has only ever been on a low dose of seizure controlling drug and we are finding it very hard to get the medical authorities to recognise that there is a realy high probability that this was the cause. Our family are convinced of it because we saw no improvement for some time after she started on medication but a wonderful improvement when we started the no Aspartame regime.

Im sorry to have taken so long to let you know the outcome of your efforts. I have just gone on the net and the first thing I did was look you up. I just wanted to let you know that you have restored peace of mind for my daughter and myself and that I support your campaign to the full. Once again thank you so very much.

Subject: Re: Aspartame + Epileptic Seizures

Thanks for your note and all of the information - You will never understand just how grateful I am for the trouble you took on that one night to send that information. I suffered post traumatic stress syndrome for two years after my daughter had her first fit and I am so convinced that we have the cause that I can now sleep at night. My eldest child has just had an eeg and guess what? it is showing irregularities - I feel so guilty because I used to drink this stuff when I was pregnant because I was always being nagged about my weight.

I refuse to buy anything with it in and I now write letters of complaint to all those manufacturers who insist on putting this rubbish into non low cal products ie. normal orjage drinks etc. We only have mineral water and fruit juice in our house and I take every opportunity I can to recount our story to whoever will listen. As a result our local schools no longer give the children anything with Aspartame. So many people on this Island now are aware of the dangers of this substance.

I will keep fighting the good fight and will continue to do battle with our local hospital - can you believe it? THEY ACTUALLY GAVE ME A DIET SHEET FOR MY DAUGHTER WHICH STATED THAT I SHOULD GIVE HER LOW CAL PRJODUCTS!!

Subject: Re: I took the test! Aspartame

On Jan 1, 1998, I quit eating anything that had Aspartame in it. It used to be an important part of my diet since I have always been horizontally gifted. My first recollection of Aspartame was when Tab was removed from the market and replaced it with Diet Coke. (Who even remembers how long ago that was?) Since I have quit Aspartame I have

noticed that my headaches have gone, my memory has improved
and I think my current food management plan is successful
because aspartame is no longer part of my diet.

Mailing List: EARTHSAVE@maelstrom.stjohns.edu

I don't know whether Aspartame weight gain was psychological or
actual. I do know that I developed increasing headaches and vision
problems due to Aspartame which I stopped consuming over a year ago.

In its place, I simply changed my diet. That change did not mean
drinking sugared Pepsi instead of Diet Pepsi. It meant changing from
junk food diet drinks to a more natural diet without any added
sweetener. I stopped consuming soft drinks, tea or cofee, and drank
herbal teas that did not need sweetener, Mountain Valley Water (which I
use for all cooking and beverages, even for my pets) . I've returned to
eating fresh fruits and fresh fruit juices or shakes and avoiding
anything with sugar or artificial sweeteners.

Since I've stopped using Nutraseet, my vision is becoming better and
the headaches have seized. In fact, I can now see with eye glasses
that I used 6 years ago. Whereas, when I used Equal, I was contantly
getting new prescriptions.

Since I rarely buy food at the grocery store, the food I am able to buy is not yet contaminated with artifical ingredients. And, although I've had a weight problem for years, it is not due to buying natural food, but rather what I had eaten while also consuming Equal.

I'm losing weight now. In the last two weeks, I've lost about 8 pounds.

To: xxxxx@xxxxxxx.xxx
Subject: Nutrasweet
Date: Tue, 31 Mar 1998 15:37:16 EST

I just read your long article on Nutrasweet. I have Chronic Fatigue Syndrome which I attribute to chemical/pestacide poisoning which altered my immune system so that I was susceptable to the yet to be discovered virus that causes CFS. That's my educated guess after over a year of "internet study and research".

Nevertheless I do have a Nutrasweet story. When Nutrasweet first came on the market in the '80s, I was drinking Diet Pepsi with nutrasweet and noticed migraine headaches were increasing in frequency and severity. On mother's day 1987 I had such a severe migraine that I thought it was a stroke. I was in my 30's so you can imagine how worried I was. I had a CT scan at the Wellington Regional Medical Center in West Palm Beach, and it was negative for a stroke, so they gave me some pain medication and sent me home. I have never had nutrasweet since then, and have been a fanatic about keeping my young children off of it. As the years have gone by, whenever I read something negative about nutrasweet, I am not surprised. It is sickening that most children's medicine has nutrasweet in it.

It is a crying shame that you and others have been/are going through such hell, and ill health. All because of corporate greed on the part of Searle.

Subject: Re[2]: sendme: brain-cancer

Yes, I got the information I wanted. Yes, I am a victim and I have

known that for over 10 years now. However, I was unaware of the awareness groups as well as the other major side effects. As a child, I was misdiagnosed with hypoglycemia due to vertigo I experienced due to aspartame in diet soda. I was only 11 and they put me on a low sugar diet, meaning I actually consumed more NutraSweet and the dizziness continued. I finally lied to the Dr. because I was sick of appointments and being treated like a freak. I said they had stopped and went back to eating normal. After I stopped consuming NutraSweet, the dizziness stopped.

Subject: Re: Nasty lil toxin
Date: 1998/03/16
Newsgroups: soc.singles.moderated

Yup. Both with having side-effects and with digging through long list of ingredients to make sure that something I'm going to eat doesn't have aspertame in it. (A good indicator is if it warns phenylketinurics (sp) not to eat this.)

My side effects varied. From food and sodas, I get nasty, nasty headaches. I really think it's had a negative effect on my memory, too. For awhile I tried to do the SlimFast thing, and the powdered mix gave me the most bizzare sensations--like I was kinda drunk but with a serious caffeine buzz. My insides just quaked and I could feel my blood rushing through my veins with each pump of my heart. After the second "meal", I stopped. (Note, though, that the pre-mixed, canned stuff doesn't have aspertame, just the powdered mix.)

I even get headaches now from breathmints or chewing gum that has aspertame in it.

My suggestion for you (if you have to beware the stuff) is to avoid anything that has the word "lite" in it. Nine times out of ten, it'll have nutrasweet in it. You'll have to learn how to diet without using those products. (Which sucks rocks if you want my opinion, but, what else can you do??)

Subject: Re: please help

I suffered for about a year with what my doctor thought was some kind of "chronic mono" or "chronic fatigue symdrom." In addition to fatigue, I had extreme difficulty concentrating, and felt like I never came completely awake all day. It turned out that my symptoms were caused by aspartame when I switched to diet soda, and went away within 48 hours of ceasing to drink it. The suggestion that it might be the diet soda came from a coworker, and I never expected it to turn out to actually be the cause.

xxxxxxx, You may be skeptical of the research and comments made on that particular web site - and sometimes I am also skeptical of everyone who always seems to want to be suspicious of EVERYTHING - BUT - I truly believe that aspartame is a bad thing for me.- and I no longer use it in any way, shape or form, nor do I allow anyone in my family to use it! I began drinking diet coke about 2 years ago - because i wanted to save some calories - even tho it tasted awful - i got used to it and really enjoyed it - then about 1 year ago i began having horrible headaches, foggy thinking even optical migraines (lost my vision for short periods of time) I never, never had a migraine or foggy thinking before - anyhow, did a lot of reading up on aspartame - and decided to give up my diet coke - this wasnt easy - i craved it - 3 different occassions i have tried some diet coke and all three times within an hour or so i developed a sever migraine and/or the foggy brain thing! that's all the research i need to know i will stay away from it forever!! sorry so long - but thought you might be interested in hearing from an "average woman" not a crazed person out to find bad in everything Praise the Lord for the wonderful things He has done in my life through WDW!! Thats a great idea, xxxxxx. I for one can vouch that aspartame played a major part in some of my health problems. I was a heavy user in that I

don't really like hot drinks and I lived on Diet Cola. I actually felt it took a few months to wean myself off it. I missed it a lot. And an extra point, some chewing gum and sweets contain aspartame as well. I found mints that I never knew were sugar free and they had aspartame. So check the labels on stuff as well.

Subject: Re: IC

We have known, for years, that nutrasweet is a significant bladder irritant for Interstitial Cystitis patients. With the small open wounds in the bladder membrane that most IC patients have, nutrasweet is one of those compounds that appears to easily penetrate and further inflame those tissues. IT is one our top ten list of forbidden fruits.. and, between you and me, I think that those people who have lived on diet sodas for years and then developed the incurable IC can blame nutrasweet as the trigger for their particular condition.

Dear Dr. Friedman:

My beloved wife Kelli died last month. She was 37 years old. She
left behind an 8 year old daughter.

Kelli died of a brain tumor. She was a heavy user of Aspartame. On a
typical day, she would consume between 6 - 12 cans of diet cola. I used to
joke to her that she drank so much diet Pepsi, that she should cut out the
middleman and have them deliver the stuff right to our house. Her use of
Aspartame did not end with diet cola. She consumed it in many products every
day. Like most women, she was obsessed with watching her weight.

I have heard representatives from Monsanto claim that the product is the most widely tested and safest product on the market. It's not a coincidence that the studies they quote to support their claim were funded by Monsanto.

There are so many doctors and scientists who are questioning the safety of Aspartame, that it is time the FDA took action. I'm not a scientist, and don't claim to understand all of the studies. However, it seems to me that when you can find a direct correlation between the introduction of Aspartame into the market and a sharp rise in the number of brain tumors, it's more than a coincidence. It needs to be investigated.

Lives are at stake here! I do realize that it's too late to bring Kelli back. I can't tell you the hell we went through for the past three and a half years. Her illness took a toll on our entire family. We will suffer from her loss for the rest of our lives.

Dr. Friedman, please have the courage to stand up against Monsanto and the other big business interests trying to hide the facts. Get Aspartame off the market!

>it is extremely uncomfortable and makes me feel like I have to hold my eyes in
>w/ my hands! I toss and turn and can't go to sleep when this occurs. Very
>strange!

I had the same problem. At one point I was consuming either two glass or diet soda or copious amounts of powered drink formulas, all laced with aspartame.

The headaches got so bad that it took two aspirins, twice during different time of the night, just to get a decent night's sleep!

Finally, I researched the matter on the Net and found PLENTY of reports about the same thing. I immediately quit ANY drink, mixture, or envelope containing Aspartame or Nutra-Sweet. The headaches stopped and haven't returned. That's all the proof I need!

As for Stevia, don't give up! Go to Web and look of "Paul on Sweetners" at http://www.split.com/fat/sweet.htm.

I am wondering how Cindy's cat scan turned out. I know she didn't mention anything about Nutra Sweet, but for those who did, I also have had an experience with it and it was most unpleasant. It was about 8-10 years ago. I had been drinking diet soda for a good while when I

started having these spells. The closest thing I can think that they would be like is a stroke. I would start to get a headache, then become dizzy or light headed and pretty quickly too. Then my speech wouldn't cooperate with me. I could think of someone's name and see their face, but not say their name and I felt slurry too. I also would have pain in my left arm. I know this sounds crazy, but I experienced it. I stopped drinking diet things and it stopped. I don't have that happen anymore. I have to give God the credit for me being able to find out what it was. It had to be His hand and I sure do thank Him for it!!
When I read these other posts about the Nutra Sweet, I thought I would share. Hope it is of some help to someone

Newsgroups: alt.med.cfs
Subject: Re: MED: other: chat Aspartame

Unfortunately - tis the truth.

I have a HUGE file on this stuff - BAD NewS! Avoid it like a STD!

I fouled up back in the hot summer of 92, and was consuming a 24 pack of diet pop a week - tried to give up coffee - what a dope!

After about 6 weeks of the diet pop - I found myself going down hill and it was only the beginig of July - This was NOT supposed to happen to PWC's at that time of the year.... the downward spiral is due here mid

November - not mid July.

I quit the diet pop, and within a couple of weeks was BACK to the level of activity I was accustomed to that April, May and early June.

It you want a copy of the aspartame file let me know back channel - but I warn you - it is HUGE, VERY HUGE, HUMONGOUES even - really - it is one big blighter!

Best wishes for an improvement once you quit poisoning yourself with EQUAL, (AKA - Aspartame)!!!

Subject: Aspartame... the BAD news!
To: xxxxx@xxxxxxx.xxx

I'm 42, male, in reasonable general health (if slightly over weight) and run a small computer company near Oxford, U.K.

I switched to Aspartame-based sweeteners in tea and coffee several years ago. Over the past 9 months I've been suffering from bouts of diarrhoea on an approximately twice-weekly basis usually without any apparent cause. Over the past two months these had been getting more severe with bouts lasting several days. Unpleasant and uncomfortable but not accompanied by vomiting or feeling really lousy as one might normally expect from food poisoning or a stomach bug.

I tried various modification of diet (already having excluded almost all

prepared foods in favour of a low-fat diet of fresh fruit, vegetables, chicken and fish) and exercise which made little difference

Three weeks ago I read 'Aspartame... the BAD news!' and decided to stop using artificial sweeteners or products containing them. Here in the UK this was a pelleted and Granular sweetener marketed as 'Canderel' plus the occasional diet Pepsi or diet Lilt. I did this just as an experiment (I'm a bit of a cynic about 'Internet Scares' I'm afraid!).

The diarrhoea stopped within a day and hasn't (fingers crossed!) returned. Bowel motions are now more normal than they have been for many months. I still have some digestive problems; I hope these will improve as the effects of Aspartame on my system dissipate and that there is little or no permanent damage.

I cut that garbage out of my diet in December. I found the dizzy spells I was getting have almost disapeared! I never heard of swelling as a side effect of apspartame, but I wouldn't doubt it! Dizzy spells, headaches, stomach problems. . .and now edema. That stuff is poison.

Subject: Re: ASPARTAME?
Date: 09 May 1998 13:55:16 GMT
Newsgroups: alt.med.fibromyalgia

My own experience with aspartame (Nutrasweet) is that is gives me screaming headaches. Several years ago when I was dieting and constantly complaining of headaches, my neighbor (a nurse with an epileptic son who was also affected by aspartame) suggested that I eliminate the diet pop I was drinking . Lo and behold, that particular type of headache disappeared.

Subject: Re: Anybody take this?
Date: 16 May 1998 07:24:43 GMT
Newsgroups: alt.support.mult-sclerosis

I found this spring that my feet were swelling for the first time in my life. My internist suggested I walk more (this during the rainy spring we are having in NYC--rain makes my legs feel like each one is encased in a 75-pound concrete block). I followed his advice, but the swelling persisted. Then I found the cause: diet colas with Nutrasweet, which I had just begun to drink. As soon as eliminated them, the edema (swelling) disappeared. I later read that aspartame (Nutrasweet and Equal) causes foot edema in some people.

Ok, now to aspertame. While surfing the net about MSG, I ran across a site about aspertame and it's affects. Yeah, I've read that there are lots of controversy over this product, and I don't want to start anything with anyone about it, but I'm just going to state what this product does to ME and how it affects my life. In addition to all those nasty side effects *dizziness, brain fog, blacking out,* (I have experienced these effects personally) I have also found that the maltodextrin used as the filler for aspertame converts to MSG when ingested. SOOO, with that in mind, it is very frustring to also find that Sugar Twin (and the guy from the Stevia page has told me that the free sample that he is sending me) has that as it's first ingredient also.

Subject: RE: Headaches and aspartame

Thanks for your email. I have been meaning to write to you. My wife has been off aspartame for approximately two months and has noticed a significant reduction in her headaches. The few that she still gets are much less severe. There was a definite change immediately after she stopped using the aspartame. The list of alternate sweeteners was also very helpful. It will take a while before all of the aspartame is out of her system. I am sure she will continue to improve. We'll keep in touch.

Subject: re:aspartame

I just received your story and was amazed. My husband drinks at least a 6-pack of diet pepsi a day and has no effects. However, since I quit nursing our son I felt free to again drink caffeine and started to drink diet pepsi. I didn't drink it every day and also drank regular pepsi. After a few weeks I noticed I started to get headaches, had trouble focusing my eyes and was getting dizzy. I at first thought that it was from the caffeine since I hadn't had much for a couple of years. I then noticed I only got symptoms after drinking diet pepsi. I wondered why but didn't think much of it, I just quit drinking it. Now I know why and it scares me because my husband and I have both allowed our 2 year old son drink small amounts of diet pepsi. Not to mention other drinks and foods containing aspartame.

Subject: Re: Aspartame Poisoning

Nutrasweet has Aspartame in it, and Aspartame< thins out the lining in the blood vessels. For those who suffer from frequent headaches or from migraine headaches, this can become a serious problem, as the thinning of the blood vessel lining will produce higher levels of pressure in the blood vessels - especially those in the brain. I suffer from Migraines, and I'm Hypoglycemic. It took a couple of years to figure out why I was getting headaches after meals, et al. Fortunately, I did the research and consulted my doctor before I ended up blowing a blood vessel.

Re: Aspartame test
Date: Tue, Dec 16, 1997, 3:11 PM
Message # 274430

About 10 years ago I participated in a double blind study of the effects of Aspartame at Duke University. I was asked to be included because I had complained to the FDA and some medical doctors interested in the substance's side effects.

At the time I was previously very healthy, and I was consuming 10-20 ounces of Diet Coke daily. I started having migrane headaches (I didn't know they were migranes until my doctor diagnosed, I had never had them before), confusion, dizziness, memory loss, and I just felt very "old". I was only 25 yrs old at the time.

I read an article about the "possible" side effects of aspartame, and it sounded just like me so I wrote to the doctor who wrote the article, explaining my experience. It was several months later that I went to Duke for the study. I was very concerned about the effects of Aspartame and wanted to contribute what I could to the cause, in this case I contributed my body! They checked me out head to toe, inside and out first, then gave me capsules to take each day. Some with Aspartame, some without. Then each day they ran many tests on me again. The results showed that I have an allergy to some chemical in it. I guess it is a common allergy, many people have it, therefore many people can have side effects to Aspartame.

I believe this is only one problem with Aspartame, it is very much a poison to our systems, and should be avoided at all costs. Every person who knew me at the time I had the symtoms now avoids Aspartame, they saw what it does to a healthy person.

Subject: Re: ASPERTAME/NUTRASWEET STUDY

We tried the NO ASPARTAME TEST! Here are two results:

A. My brother is a company president, used to drink 4 to 6 cans per day at work, of diet soda.

After I forwarded him your info, he quit.

Then he thanked me, saying, I used to get KILLER headaches every day, now they are completely gone.

B. I myself used to drink 3 to 4 cans per day, thinking it would help me lose weight.

I quit and guess what, I LOST WEIGHT. What happened was, my stomach was no longer irritated by aspartame. When I drank diet coke, I would get a caffeine high and also a stomachache. To soothe my stomach, I would eat. Guess what, I have lost about 15 pounds without trying, because my stomach does not ache any more from the aspartame!

Hello xxxxx. This is xxxx from xxxxx. I wanted to share a personal experienre concerning aspartame. A couple of weeks ago I bought this rasberry juice concentrate. A week later I started to feel weird. I was tired out of my mind. I had problems with my longvision (it took time to focus my eyes on the object that I was looking at). I thought I was getting something. Then when I reread the label of the concentrate to my astonishment I noticed that it had sugar but it also had aspartame. I poured it down the sink and in a few days time the symptoms disappeared. I failed three of my exams besause of this. I was sitting in the examroom looking at my exampapers. I knew I could do them but somehow I couldn't get my thoughts organized. I think this was due to aspartame I was prepared for the exams so it wasn't because I hadn't read enough. I've known the negative effect of aspartame for a long time but this kind of personal experience is frightening and it motivates me to try more here in xxxxxx.

I have been off diet sodas, diet anything with aspartame, for three months now and I can really tell an improvement in how I feel. I have now convinced my great aunt, daughter and several of my daughter's friends to get off the stuff and I no longer have it in my home. My aunt was having the classic symptoms you described and since she has been off it, she has not had a single headache. My daughter was a little reluctant, but being 23 has to be difficult, I think I can remember that far back. The one thing my daughter noticed immediately was the loss of water retention. Her face has now broken out, but mine did too. I told her that I thought it was the toxins coming out because after around 10 days, my face cleared up.

I want to thank you from the bottom of my heart for informing me and others of what this horrible chemical was doing to our bodies. I salute your work and may God's blessings be upon you.

I must beg to differ with you. There is something terribly wrong with NutraSweet. I drank lots of Diet Sodas for a long time, and always had terrible migraine headaches. I couldn't figure out what the problem was. I went to drs. and then to a Special Chiropractor to fix me up. Nothing worked. Drugs just took the edge off. To no avail.

Then one day my very concerned husband said stop drinking diet soda for a while. Guess what. My headaches went away. They have gone completely. When I try to drink something like Crystal Lite, the next day the headache is back with a vengance.

Appreciate your commitment to aspartame and its inherent problems.
I worked for Coca-Cola for 25 years and understand what is happening. With a young family, soft drinks in the house was not a luxury but a necessity. We drank Coke and subsequently Diet Coke as a matte of fact. Sure I was aware of caffeine but as a devoted coffee drinker I certainly had no problems with the caffeine that was part of any Cola drink.

I became addicted not only to Coca-Cola but most important Diet Coke. Inherent problems were written off as old age. I did not realize until I started reading articles on aspartame that there could be a problem. I quite drinking Diet Coke and my life changed.

Thursday June 11, @08:53
... it's sugar free. And aspartime gives me a headache (as well as a bad aftertaste). If it were available w/sugar, I'd definitely buy some.

Thursday June 11, @09:08

Finally, I don't have to worry about getting confused while popping Altoids and Vivarin and chewing the Vivarin...believe me, it's not an experience you want...I'd order a case if they came with sugar...Aspartame makes me nauseous...

Thursday June 11, @09:56
These mints look promising but for two things. A) They're sugar-free. Aspartame is legalized poison. B) They couldnt possibly be as strong as Altoids.

Thursday June 11, @11:44
Aspartame gives me severe migranes (about the only way I ever experience them!). Damn shame about these neato mints- I guess I won't be buying them any time soon.
....
It's this witches' brew of poisons that actually tastes "sweet", not Aspartame itself. It's amazing what the FDA will approve for public consumption, isn't it?

Thursday June 11, @12:07
I too suffer 12 hour migraine headaches after drinking a single diet soda.

The first time it happed was after staying up all night playing "Empire" on the VAX-750 at Interactiv Graphic Systems back in 1984. When the sun came up, I got up from the ADM-3 terminal and raided the fridge for something to drink. The only choice was "Diet Dr. Pepper." I guzzled the 12 ounce can and started to drive home from Woodland Hills, California to Northridge, California. About five miles down the road I started to experience the worst headache of my life. I thought that I was going to die. But I made it home alive.

I simply cannot believe that Aspartame is legal!
Yet it is.

Thursday June 11, @12:33
The engineering students at the university I

atteneded would never drink the stuff. They called it
"NutriStupid", because they could tell the effect
that it had on their mental performance.

I never touch it either, and you'll never catch me
eating olestra, either. "Anal leakage" just doesn't
sound like a pleasant side-effect.

Thursday June 11, @02:26
Where can I find more information about aspartame and
its nasty effects?

I've stopped drinking Diet Coke (used to down at
least 6 a day) and I feel much better for it, but I'd
like a little more information to help my friends
quit their "Diet Coke habit".

Subject: Aspartame

I wrote you in August. I got off of aspartame on August 22nd. It just sent FDA a message, I hope it got to the right place. I couldn't find what I wanted. It had a comment page that I sent but I think it was for comments for Internet page.

Here is what I sent to them:

I am sending you notification that I think that aspartame is a very dangerous substance. It is what caused me to have slurred speech, lost most of my reflexes, dizziness, hives, balance and coordination, my heart would pound hard when I would be sitting, I had trouble sleeping, nightmares, I had to have help tying my shoes. I was having a terrible time concentrating. I had to have my daughter do my bills at work. I was tested for all kinds of things. I was checked for stroke, heart trouble, Lupis, Multiple Sclerosis. I had a Cat Scan, and a MRI. I had about $5000 dollars worth of tests, and the Doctors couldn't figure out what was the cause. I have fibromyalgia, and aspartame made it much worse. I have been in terrible pain for years. It took me about 70 days to get aspartame out of my system and now I am in less pain than I have been in for years. All of my symptoms left except one, I am still having difficulty concentrating. Please consider taking this hazard off the market. Since I have been free of aspartame, my husband and many other people have noticed that I am able to do many things that I haven't been able to do in YEARS! I had drank aspartame in diet drinks evetry since it came out. I had no idea that aspartame was what was

causing most of my problems until I started doing research on what could cause slurred speech. I don't want anyone to go through what I have been through. I thank God that I found out before it was TOO LATE!

Subject: nutrasweet/hypoglycemia/seizures

I am 26 years old and I have never had a serious medical condition in my life. Recently, I began having blackouts, feeling rather run down, and I was having frequent mood swings. I consider myself to be in excellent physical condition and watch my diet religiously.
Not very long ago, I was taken to the hospital while having one of my supposed seizures, or blackouts. I tend to stray away from "seizure" because as soon as the word is brought up you are labeled epileptic. While at the hospital, I was put through all of the usual tests when someone is said to have had a seizure. The tests, C-T scan, MRI, and ECG, did not reveal any obvious problems. So, for lack of anything better, my brilliant(Hahh!!) neurologist diagnosed me with epilepsy. At the same time I was also having problems with my blood sugar being too low. He didn't even try to link either of my two problems together into a feasible diagnosis. You can understand that I was feeling angry, depressed, and thoroughly confused.
It wasn't a week after I had been released from the hospital and I had another "seizure". My girlfriend and I thought back through the events of the prior days and nothing seemed irregular. While in the hospital my physician placed me on Dilantin, an anti-convulsive medication, and it was supposed to alleviate my problem. Obviously it wasn't working. My girlfriend and I then began thinking of anything that we had changed in our lifestyles in the last six months since these problems occurred.
We found an article on the adverse effects of nutrasweet and became very curious. Then we discovered it. With our efforts of keeping a strict diet I began consuming large amounts of Crystal Light. I liked the powdered drink mix because by the package I just assumed it was flavored water. I never drank any diet sodas so I really never encountered Nutrasweet to a very high degree. Soon I was consuming 6-10 gallons a week along with my normal water intake. I did not experience any immediate problems, at least we don't think so. Then came the problems that I have discussed. Since then I have found a doctor that believes in my reaction to Aspartame, and has discontinued my medication. I am now trying to restore my life to the way it was before my Nutrasweet problem. Due to my seizures, my driver's license has been suspended for six months.

Subject: Aspartame
To: xxxxxx@xxxxx.xxx

Let me first commend you and your "partners in crime" for the work that you do in reference to aspartame and it's ill effects on the human body. As a sufferer of aspartame poisoning, I feel quite strongly that you and your people may have gone as far as saving my life. At the least, you people are responsible for improving my quality of life by an exponential amount.
I was diagnosed with type II diabetes a little over 3 years ago. Like a scared little diabetic, I was concerned for my health enough to make several changes in my lifestyle, to improve my overall health and to try to keep my diabetes under control.
I began using Equal in my coffee,(4 cups/day) and I began drinking diet Pepsi, about 4 per day. I tried to use as many products with aspartame as possible. During the next 2 years, I lost 55 lbs, much to the delight of myself, my family, and my doctor. But during these 2 years, my health began to suffer, and I started experiencing many problems that no one, including my doctor, associated with aspartame useage. As a matter of fact, everyone, including myself, thought that most of my

problems were my "advancing age" (46 now). The problems I had were as follows; indigestion (used Rolaids like candy), headaches, almost every morning,(used Advil almost everyday). severe mood swings, memory loss (mostly short term), my vision deteriorated, insomnia, and finally vertigo. When I began the dizziness associated with vertigo, I again went to the doctor thinking maybe I had a clogged artery to my brain. My doctor could find absolutely nothing wrong with me. He scheduled me for a "fasting" blood test the next morning. The next morning I took a thermos of coffee sweetened with aspartame in the truck, to drink on the way to work after the blood test. That morning, I felt great...no dizziness and no indigestion. When I got to work, bam...I had a dizzy spell. I thought for a minute as to "what did I do from the time I left the lab, until now?"....it hit me like a ton of bricks....an almost forgotten memory of the controversy over the approval of aspartame. I searched the Web and ended up at your sight. The rest is sort of history. I stopped using aspartame products, and all the symptoms went away, almost immediately, except...I fear my eyes are permanently damaged, and my short term memory has improved, but is a long ways from what a man my age should be experiencing. I am now on a "one man" crusade in work, to educate my fellow workers and friends to the dangers of aspartame. I have been successful with 4 individuals, who are now on the mend, and who also NEVER associated their medical problems with their use of aspartame.

To: MSLIST-L@techunix.technion.ac.il
Subject: Re: Effects of alcohol? Now also Diet Coke

I have had more than 1 doctor warn me about nutrasweet. Funny, I don't use it anyway... because my first time ingesting it resulted in hallucinations and the most incredible anxiety I have ever experienced. I ran into my mother's bedroom crying and insisting that my room was haunted. I told her that things were flying around and my digital display on my clock had changed from green to blood red and was dripping.

Thing was.... I didn't even know I had had nutrasweet. A friend of mine had made kool-aid with it, and we had gone for a picnic at a fishing peer. I asked her if she had put "anything special" in the kool-aid and she said.... just "equal." I put it in the back of my mind, until one day (about a week later), I hear on the radio that there were people having bad reactions to nutrasweet, including

hallucenations. I called the FDA that afternoon. They sent someone over to interview me, and gave me Searle's address (the manufacturer). I sent for more information and FDA reports and such. This was before the internet and before they began putting it into every diet food on the market.

What I read about aspartame (nutrasweet) astounded me, and I never touched the stuff again. I got very habitual about reading labels and asking people if what they had given me had aspartame in it. I also made a point of educating people about it, as much as I could.

My sister has had a seizure disorder since she was a child. The constantly told her it wasn't epilepsy. Oddly enough, her new neurologist and a second opinion just confirmed that it IS epilepsy. ROTFL (as if we didn't know). Anyway, she had been on her usual "epilepsy" meds for her seizure disorder (that still cracks me up) since she was in 3rd grade. Only one grand mal seizure when she was about 13. We felt that had to do with her getting her period the first time and the hormonal changes affecting her brain. From the time she was 32 or so, she started to have petit mal seizures again. No one could figure out why. Then, one day, about 2 years ago, she revealed to me that it was very common for her to drink 3-5 diet cokes a day. I was so upset. Here she was... just the person who shouldn't be drinking that poison!!!! and now she is having small seizures again? I asked her to promise me that she would quit the diet cokes and drink regular ones for 2 weeks.... just as an experiment. She hasn't touched one since, or had any seizures at all.
....

Yes I am off of Aspartame completely!! Have been feeling good. Haven't had any seizures and have been able to cut back on my Dilantin. I am also cutting out caffeine now. Of course my neurologist won't admit that Aspartame has anything to do with seizures, he just laughs when asked that question. But I do know that I didn't have seizures until I was 19 years old, (after I started drinking diet soda) and am not having them now (off of diet sodas and all other Nutrasweet). My CT scan and MRI were both normal and doctors can't explain why I had seizures. EEG did show seizure activity, so I know I was not just crazy. I would be curious to see if my

EEG is now improved. But that costs a lot of money, so I guess I'll just enjoy my new and improved lifestyle and keep my fingers crossed. Cutting back on the Dilantin has also given me more energy!

I have been plagued with unknown health problems for 3 years. Been to several doctors, had all kinds of tests run, and after the tests confirmed I had nothing wrong, and I was still having seizures, I begin to eliminate foods from my diet, I still had all kinds of problems, such as fatigue, heart palpitations, hypertension, abdominal pain, hair loss, memory loss, vision loss, to name a few, but the seizures were the worst. When I eliminated Equal from my diet 6 weeks ago, I have not had another seizure, and all other ailments except the irregular heart beats have improved. I wish I knew the long range damage of Equal to my body, and I might have a better outlook on life. Do you know a lawyer working on this for the people with damage to their health from Nutrasweet, and where can I contact them.

Subject: Re: Detox update - good news!

I just wanted to let you know how I'm feeling after two weeks away from Nutrasweet. You may remember I had spoken to xxxxx xxxxxxx about a non-pharmaceutical for my excruciating insomnia - well, I no longer need one, as I sleep through the night now. The only lifestyle/dietary change I've made is the elimination of aspartame (Diet Pepsi, more specifically). I still consume caffeine every day.

I was very concerned about gaining weight, because of my history of eating disorders, but so far, so good. I think I'm eating more, but haven't gained an ounce.

The flashing lights in my eyes have settled down, and I can't wait until my retinal specialist examines me Monday - he's skeptical about the aspartame link, but when he sees my improvement, perhaps he'll be more convinced.

My kids have noticed changes in my demeanor - I meet them outside when they

get off the school bus, rather than them finding me exhaused in bed at 3 p.m. I'm also much clearer in the morning, and not prone to agitation.

I'll keep you apprised of my progress along the way, and thank you so much for all the valuable information to which you have directed me.

Subject: Re: Aspartame

December 25 marked the last day of my 60-day withdrawal from aspartame, and I just wanted you to hear how things are going. I'm still having an awful lot of vision problems - legally blind. What is now apparent is that this particular part of my affliction my be life-long, because of damage to the optic nerve and retina that is irreparable. My eyesight "waxes and wanes", and the flashing lights sometimes make me feel like going insane!

However, on a more positive note, I am sleeping so much better, and I do not feel the rage and ensuing depression I felt when I was using aspartame on a daily basis. My heart has stopped fluttering, my mouth doesn't burn any more, and I feel a little more "there" I have not experienced any more grand mal seizures, either (you may recall I had four in the period between 1994-1997 with no history of epilepsy, tumors or massive head injuries)

Monsanto has used the general population as guinea pigs, as far as I'm concerned. And in light of Fen-phen, Rezulin, and other drugs approved, then abandoned by the FDA, I am a firm believer that the FDA is not qualified to be a regulatory body when it it comes to the public well-being. To me, FDA approval is meaningless - as they say, you can put syrup on it, but that don't make it pancakes!

Subject: Aspartame and choking

I try not to eat anything, chew gum, or drink anything that contains NutraSweet. A few years ago I realized that sometimes when I chewed gum, I would choke and lose my breath for several seconds, which is VERY scary. It then became apparant that it only happened when chewing gum with NutraSweet in it. I know only one other person that this happens to--we call that kind of gum "choker gum". Do you know why it affects some people that way? I read what you had to say about phenylalanine on the internet. Why isn't it banned?! It's disgusting!

Subject: Re: Aspartame Poisoning?

I have spent much of this afternoon reviewing, with interest, the material on your web site, along with that on the xxxxx web site and that of xxxxx, as well as the xxxxxx Web Site.

This was prompted by a several weeks of ongoing severe headaches and throat irritation that had gone unexplained. I had come to the conclusion that perhaps allergies were at play, and started to watch for what brought on the symptoms. The last two evenings, symptoms were brought on severly by the same apparent cause: extra large, fast food Diet Cokes!

Over the past 3-4 months, I moved from my prior job to create a startup business. I am a software designer and developer and have spent a great deal of time at home creating a new software program. As a result, my intake of Diet Coke has increased dramitically. However, I did not begin to expect this was a problem until the past two evenings.

I have cut out these drinks as of today, and will monitor whether this causes the symtoms to subside. If you would like, I will report back to you after a period of time.

Thanks you for your efforts to make this informaiton available. The first site I found was the xxxxx site. I was quite discouraged as I though I had identified the problem. Only when I followed my other search links did I realize the whole truth might not be there.

Subject: NutraSweet victim

some very disturbing information on Nutrasweet on the WEB a few months back. After reading the information I stopped drinking Diet Coke and diet sodas immediately. I had been drinking Diet Coke for about four years or so, pretty much on a daily basis (Meaning one or two a day). For about the last two years I had some increasing pain on the inside bone of both elbows. I thought it may have been an old hockey injury. I started to get very concerned when the pain was persistant and seem to be getting worse to the point of having great pain when lifting not so heavy objects. I remembered when I had started drinking diet sodas. That was the only constant variable in my diet in the past years. The pain got to the point of being too severe to ignore. I happened to look up on Nutrasweet on the WEB and found an abundance of negative information. One particular report mentioned that sore joints was one of the symptoms. I have not injested diet

sodas since then and am happy to say the pain is 90 % gone. Coincident? Maybe.....I don't think so. I hope that I haven't done anything too irreversable at this time. I did coincidently drink a couple of quarts of freshed squeezed vegetable juice each week during those years. A friend of mine owned a juice store at the time and (like a bar) I would stop in a couple of nights a week for a :drink". During that time (approx. 5 years) I only had the flue once. (note: I am not a health or excersise fanatic) I am sorry about the long winded note, but I thought you might like to hear my story.

AOL/Allergies, Immune Disorders/Food Allergies
Subject: Re: "Diet" Drinks
Date: Tue, Dec 23, 1997 9:40 AM

However, I have had a different encounter with Nutrasweet and all aspartame-based products. This summer I was diagnosed as not only having asthma/allergies (already knew that) but also chemical sensitivities to phenol & formalin (formaldehyde precursor). In my reading, I found an explanation for the aspartame reaction I had. Once ingested, there is apparently a reaction with aspartame in the intestines which produces formaldehyde.

Even a small breath mint with Nutrasweet can make my bronchii inflame to the point where I can't even get enough air to speak. My face turns grey-blue, I get agitated (I usually stay calm during an asthma attack), and I'm exhausted for several days. Once I cut out all Nutrasweet, it stopped. Although you have not run into this extreme, you may want to look into chemical sensitivities. It's possible that you have run into a chemical sensitivity rather than a straight allergic reaction.

Subject: Re: Looking for brain tumor information

Since that day that you wrote me I stopped completely the use of neutrasweet. My intake per day of this molecule was huge. Now, the dizziness is gone I hope that it did not kill too many neuron cells or created any genetic damage. What is very interesting is the participation of Dr. R. Wurtman in this issue. As long as it was politically convenient for him he helped the struggle against the FDA. When he needed approval from them for Redox (another medical disaster), Neutrasweet became O.K. It makes me very angree when he appeared on the CNN after 24 patients already were diagnozed with valve damage and stated that Redox is the safest drug on the market for this purpose. At the same time the damage to the neurns was showed in tissue culture.
I am a scientist myself and I know how political and monetary advantages can change their scientific opinion and kill many people.

Subject: aspartame

Thank you very much for your time and devotion to this cause. In the first week of August, I was searching for a cause for my mom's neuropathy and abdominal pain. Thanks to your website I have an answer.

I can't convince mom's doctors that this is the cause. Most doctors seem to be brain dead. They just think it is normal in diabetics to develop severe abdominal pain.

Since I am convinced, I am going full swing into educating the public. I am going to hand out flyers entitled DIET COKE ALMOST KILLED MY MOTHER at the store where mom bought her poison as well as picket the FDA. My parents live about 5 miles from the FDA.

I don't want to step on anyones toes. Let me know if you would like to in anyway coordinate my efforts so that I don't go off half-cocked so to speak and do no good!

Mom has passed the 60 day mark with little improvement except her arthritic pain is gone and her B/G level is much more stable. She still has severe

abdominal pains which is treated by percocet and weak legs. She is using about 1/4 as much insulin. She is confined to a nursing home because it became impossible for my 76 year old father to care for her.

I have talked to so many people who are affected by this poison. I rarely consumed it but couldn't understand about 8 months ago feeling very strange every time I ate dinner at my folks. At one time I had to stop my car on the way home because of a rapid heartbeat. Thought I was having a heart attack. While writing this letter, I went outside to talk to a friend, a junk dealer named "Popeye". He told me about getting tunnel vision and convulsions after consuming crystal light at his brother-in-laws house.

Subject: Aspartame keeps diabetes out of control

This is not very scientific but I wanted to write to you about my mom's experience with aspartame. She takes medication to control her sugar and never is able to get it under control. She also drank lots of diet soda and ate things with nutrasweet, jello, pudding, cookies, etc. The doctor told her to give it up and start taking shots. She decided to find a new doctor. About this same time. (Last April, I think) I got your articles via e-mail after reading about you and immediately called my mom. My dad answered and I told him about it. From that moment on no diet soda etc. And immediately her sugar count began going down and came under control. About 2 months ago she drank Crystal Light for 3 days. Because she had it around for my nephew and she thought what the heck. Well her sugar went sky high, so she stopped. Two weeks ago she had 3 diet root beers in one evening. The next morning, it was sky high again. I think she is now convinced. I wish we could convince my sister to stop (weight problem) and not allow my 3 yr old nephew to drink it. But she said she is cutting down. I did share the recent article with her about it affecting conception, as she is trying to get pregnant again. At least she didn't drink it while pregnant. Thanks for all your information and I hope this helps prove even more what you say. My boyfriend is a pilot and he has quit drinking any diet soda. He never ate foods with it, and he is sharing

that info with other pilots. Keep up the good work and have a wonderful Thanksgiving and a Blessed Holiday Season. I hope my story makes sense. I am not a great writer.

Subject: Re: Caffeine, aspartame and sugar.

Thumper I get a horrible headache and diarrhea from nutrasweet. It took me a long time to trace it back to diet pepsi. I read an article a few years ago that suggested nutrasweet had been linked in some way to some type of neuro problems. I don't remeber if it was brain tumors or strokes. Headaches were a symptom though. It seems to me that saccharin causes bladder cancer in rats. But like you said, the human equivalent was an outrageous amount. I don't recall the human equivalent in the nutrsweet tests. It is probably the same way.

Funny you should mention them going away. It seemed to me at the time, that they [the PVCs] occurred sporatically throughout the year. I went through the Holter monitor test and the doctor pretty much said that I didn't have anything to worry about. Since then, I started surfing the web and various other journals in the library. I have all but eliminated the following two chemicals from my diet; phosphoric acid (found in cokes, diet cokes and pretty much any caramel colored soda pop) and nutrasweet (equal, etc). The PVCs rarely occur these days (that was a year and a half ago). I still consume caffeine (2-3 cups per morning) and I exercise moderately 2 to 3 times per week. I am 34 years old and have a history of heart trouble (I was born with a hole in my heart - the hole was repaired but a severe murmur remains to this day).

I had a very bad experience with Nutrasweet--it caused severe headaches,
visual disturbances, hemispheric numbness and parasthesias in my face and
head (one side only). It took me quite a while (and a complete neurologic
work-up) to figure out for sure if it was the aspartame--but when I figured
it out and tried Nutrasweet by itself I knew for sure. I felt really terrible
while using it. I think it is a dangerous chemical--and have since
read that there have been convulsions and deaths from using it. I won't
touch it ever again--nor do I want my children, or grandchildren consuming
it.

[Followup]

AOL/General Health Discussions/NutraSweet
Subject: I have Mastocytosis and Nutrasweet is poison

Date: 23 Jul 1997 01:53:17 EDT

I have mastocytosis, mast cell disorder--due to to the degranulation of mast cells in my blood and in various organs, I have weakness, parasthesias, fatigue, pain, facial swelling, respiratory problems, hypersensitivities (looks like severe allergy) to food additives--and NUTRASWEET IS the VERY WORST, followed closely by sensitivity to MSG. Both these chemicals trigger mast cell degranulation for me, which if severe enough, leads to anaphylactic shock. If I do not treat the shock symptoms immediately I could die rather quickly. I also have had severe neurologic problems from these chemicals which mimic stroke. I hate Nutrasweet and the companies which are putting it into the food chain. We are going to have millions of people so ill they will have to live in nursing homes before they are old--if we do not get the POISONS out of our food chain, starting with aspartame, and monosodium glutamate.

I think the people who have immediate reactions are indeed "lucky". I had a friend who drank several NutraPoison sodas every day. She developed severe, debilitating headaches but never made the connection to the NutraPoison. Over the course of a year she spent thousands of dollars on specialists and tests (she even had a brain scan). Spent hundreds of dollars on different kinds of drugs to alleviate the headaches, all to no avail. Someone mentioned to her that NutraPoison has been known to cause headaches, so she decided to stop ingesting it. Her headaches stopped 2 days later. A couple weeks later she tried drinking one soda and got a horrible headache. She then became an anti-NutraPoison activist, trying to warn others. Too bad I didn't listen. She told me she started doing research on how dangerous it was and practically begged me to get off it, but I just didn't want to listen. I kept saying that it was only bad for certain people, but I "obviously" didn't have any problems with it, so I kept on drinking it. I wish I had had a severe reaction so I would have realized how damaging it is. I kept drinking it for years, thinking all along that I just wasn't "allergic" to it. My family and friends were all worried about my NutraPoison intake, but I kept telling them it was certainly safer than sugar. Finally I decided to try to stop drinking it for awhile to see if there was anything in what people were telling me. After being free of NutraPoison for 2 weeks I noticed that I wasn't tired in the morning anymore (didn't need

caffeine to wake me up), I stopped craving sweets, I lost weight, and
I felt better. A few weeks later I decided to try it again. I had
muscle aches, joint pain, and I almost threw up. It tasted like poison.
I used to actually crave the taste, but now it just tastes like the
poison that it is.

> It converts to
> formaldehyde even in the retina of the eye and has caused enough blindness
> that in l986 the FDA was petitioned to ban aspartame for this reason.
> It ravages every organ in the body.

I just found out (at only 43) that I have glaucoma, even though I don't
have any risk factors. Perhaps its from my years of drinking NutraPoison?

> Also, the wood alcohol in aspartame literally destroys the immune system.
> Would you get up each morning and take a little pill that you knew little
> by little would breakdown your immune system?

I also got MCS, FM and CFS while drinking NutraPoison. My liver simply
doesn't do phase II detox anymore. Maybe NutraPoison didn't directly
cause these illnesses, but I do know that it added to my total toxic load.

> I can think of no redeeming value for NutraSweet except a good rat poison.

I think I remember reading somewhere that given a choice, rats won't eat
NutraSweet (or maybe it was cockroaches?) so it may not even make
a good rat poison.

> No redeeming value does NutraSweet have. It is addicting and it makes
> billions for Monsanto.

I'm sorry to say that for years I helped support Monsanto with my
NutraPoison habit. I cringe at the thought today. I can't believe
I wouldn't listen to all those who were trying to help me.

Subject: re: toxic reaction to aspertame

The following is my brief account of recent experiences of a toxic
reaction to aspertame and/or acesulfame k.

I had never heard of aspartame (or acesulfame k) and recently suffered my

first ever panic attack. More than anything else I could not understand why or how this could possibly happen to me since I am very fit and a reasonably calm person who performs well under stress. Then, thanks to reading an account on the internet, mentioning aspartame, I did an analysis of recent changes in my diet.

To my surprise and horror I discovered that I had been taking some chewable vitamin C tablets (purchased at Boots the Chemist here in the U.K.) which contained both aspartame and acesulfame k. I had consumed 35 tablets at the rate of one a day. I was immediately convinced that this was the source of the problem since my usual diet never includes anything containing artificial sweeteners or other artificial substances and I have always kept a close watch on my diet. Of course, I stopped taking these tablets and within days my symptoms changed dramatically. I had suffered palpitations and tightness across my chest and the bridge of my nose, and my anxiety level was extreme. After stopping the tablets the palpitations came less often and were less profound and my anxiety dropped considerably. As the days have gone by I have felt continually better.

I cannot believe that this wretched substance is out there in so many products just waiting for the next unsuspecting victim. It really is time for the big food giants to admit that aspartame, acesulfame k and products like them, are not fit for human consumption. If aspartame can do this to me (and it really was one of the most harrowing and nightmarish periods of my life) then what is it doing to our children. Here in the UK more and more children are suffering from chronic fatigue syndrome... How do the scientists know that this is not a side effect of the consumption of aspartame in diet coke and other products?

Clearly, there is more to aspartame and acesulfame k than we are being allowed to know. Many people's experiences are more tragic than mine and if it were not for the access to information via the internet I may never have known what the source of my problem was.

Subject: Thank you so much!

After reading your web page, I have finally figured out why I have been feeling so weird. Mood swings, panic attacks, heart palpitations, chest pains, and since I have cut out aspartme and any other artificial sweetners, I feel like a new person. You never hear anything about this in the media,

and the only reason I figured it out is because I am a vegetarian, excercise like a banchee, drink tons of water, take vitamins, am 5'6 and weigh 112 pounds, and Diet Drinks were my only vice. I feel like a totally new person after cutting them out of my diet. Thanks for you information!

Subject: Aspartame

I found your name & address on Internet today. I wanted to share my experience.

Several years ago I started drinking a lot of Diet Coke. Gradually I began to feel tired all the time. I am a librarian and by noon every day all I wanted to do was sit at my desk and close my eyes or stare into space. Not only was I tired, my back hurt all the time. And it was like my brain was in a fog. I was in my early 40's at that time and had decided I would never be able to learn much of anything new. Then one day I was reading magazine at my desk because I was to tired to work. I don't remember what magazine - only that is was a woman's magazine. There was an article about nutrasweet possibly causing loss of brain power. (That might not have been exactly how it was worded) I decided right then to quit drinking diet Coke and see what would happen.

It only took about a week and it was like the fog lifted from my brain. And gradually my energy came back. And my back quit hurting all the time. Now I can work all day with out excessive fatigue. And I have learned how to use a computer - something I might not have wanted to try a few years ago.

I did not realize I had Aspertame Disease. I did not even know there was such a thing until my mother taped a radio program about it. I recognized my systems from among the many! I have not drank diet drinks in over years five years.

I plan to tell others about the danger of aspartame.

I feel I must repond here. i have been having problems craving diet foods like diet pop and iced tea that contained nutra sweet. However, at the time I did not realize it, was sick, and the doctor brought it to my attention! I quit consuming it just to see if it made a difference and it did! I have a problem with the seratonin and dopamine neurotransmitters. Noone will ever convince me otherwise. My family saw the change in me and they even voluntarily cut it out of their diet!

Nutrasweet! Bah, I hate to even see the word. It made my life so miserable for 10 years. I thought when it came out it was the best thing that ever happened. I could drink all the pop I wanted with nutrasweet. I got daily migraines. Had every kind of medical test to try and figure out what was causing the migraines. Finally when the headaches were coming 4 times a day and I was banging my head against the wall because I was so frustrated, I started taking a look at what I was eating. The first thing I stopped was pop, mainly because there wasn't any, and noticed that I DIDN'T GET A DAILY HEADACHE!! I hadn't had a migraine in a very long time, UNTIL today. So the only thing I had eaten was a container of yogurt and sure enough, there was nutrasweet in it. I haven't allowed nutrasweet in the house in 2 years and here I'm the one that brought it in with the yogurt. Have to pay more attention to labels!!

Age_29_ Sex: M
City_____Edmonton_____State__Alberta_____

Medical problems that you believe are caused from using aspartame:

Headaches, fatigue, memory loss, weight fluctuations

Why do you believe aspartame caused these problems?

I had several instances that I stopped using aspartame for a 1 or few weeks. I notice that the symptoms went away after I stopped. My short term memory improved, the headaches went away, I was no longer fatigued and my weight stopped fluctuating. Although the headaches and fatigue may have been caused by the caffiene in the beverages.

Did the symptoms go away when you stopped using the products?
Yes

Did you see a Doctor about symptoms?
No

Did Doctor think it related to aspartame?

Did you report your symptoms to the FDA (Food & Drug Admin.) or any other group?
No

What specific products(s) containing aspartame were you consuming when you experienced these symptoms?
Diet Coke

On the average, what quantity were you consuming (how often, how much each time, etc.)
2 litres of Diet Coke each day

How long had you been consuming these products before you experienced the symptoms?
unknown

FOR THOSE CONCERNED ABOUT WEIGHT:
Did you begin using products with aspartame when you began a restricted calorie diet?
yes

Did you use aspartame products only for some of your meals to save

calories?
no

Did aspartame seem to help you lose weight at first?
no

What were the long term weight loss effects of using aspartame.

No effect. The calories saved by drinking aspartame were made
up by eating too much of other things.

Subject: Re: little history

I started taking the contraceptive pill when I was 17/18. Took
Ovranette, a combined estrogen/progestogen on and off until
I was 30. I smoke, so when I hit 30 I tried a progestogen only
pill. It made me bleed continously, so I stopped taking it. Started
taking Mercilon in 1991. I had always had heavy, painful periods,
bad cramps in my lower back and down the fronts of my thighs,
as well as bad depression for 2 weeks out of every 4. Being on
the pill relieved these symptoms.

After about two years on Mercilon, I started getting cramps again
with the monthly bleed, this didn't bother me too much. The actual
bleeding was really reduced, only a really tiny amount.

Two years ago, in July '95, I was on the week off, and was due
a bleed. I started to feel quite ill, no fever, just queasy and tired,
then I got bad back cramps for 5 days, then a very small bleed
just one showing of blood, and then the cramps turned into a
really bad pain on the left hand side of my back, just above my

hip. It wasn't movement related, I felt like I had the 'flu, and after a few days went to the doctor. I don't and didn't have good doctor, just one I went to for the pill prescription. She gave me some anti inflammatories and sent me home to bed. The pain didn't go away, so I went back to her. She sent me for a back XRay.

That night, I had really severe diarreah and cramps in my stomach every 20 minutes, with blood in the diarreah. I called the doctor at 8.00 am, and my husband went and picked up some lomitol (anti-spasmodic). That stopped the cramps and diarreah. I went for the XRay, no problem with my back. She took a urine sample and a stool sample. She sent me to a physiotherapist. The physio said it wasn't muscular or skeletal. She suggested some kind of pelvic inflammatory problem. The doctor found blood in the urine, sent me for an ultrasound. No problem. Sent me for an IVP - she insisted that it must be my kidneys - no problem with IVP, noted some small areas of opacity on my pelvis (rear), kidneys just fine. The doctor was really horrible, so I decided not to see her again. She wouldn't believe me when I said it was gynae. She refused to send me to a gynaecologist. Went to another doctor who agreed I should see a gynaecologist. Saw the gynaecologist who said there was nothing wrong with me, and it must be my kidneys. Doctor sent me to a urologist. Urologist was the only doctor I met during this entire business who listened to what I said. As he asked me questions, I heard his questions and my own answers - by this time I had been sick, with constant diarroreah and pain for nearly 3 months. I was also severely run down. As we talked I realised there was something I could do to help a bit, which was to start taking a multi vitamin! He said that he didn't think it was urological, but he'd do a cystoscapy just in case. Did it, no problems. Sent me for a CAT scan, because he suspected something ovarian. No result, other than a retroverted uterus.

I got the really bad, flu like sickness and back pain a second time after a bleed, couldn't get out of bed. I stopped taking the pill. The sickness passed after about 10 days, and I got a bit better. Diarreah didn't stop. Went to another gynaecologist who did a laparoscopy. Had suspected possible endometriosis. None found. Only result of note, the retroverted uterus.

I started going to the physio for pelvic strengthening excercises, the bad pain came back with the next period. Went to the gynaecologist again, with letter from the physio, he put me onto depo-provera to stop the cycles.

In between all this, there would be days when suddenly, my back would be okay. I also saw another 3 back specialists, who insisted that my back was fine, and that where the pain was was not back pain. Anyway, went on the provera in Dec 95. OK for about 2 weeks, then back came the pain - lower back, particularly left side, above hip. Pain not worse with movement or position. No actual position helped to alleviate it. In late January I started a bleed, with cramping and back pain - this went on for 2 and half weeks. The gynaecologist was away and his replacement was the first gynae I'd been to see, and I never wanted to set eyes on her again!! So when he came back, decided I would be better on 8 week shots rather than 12 week shots. In addition to the back pain, I now had one in my groin, like elastic being pulled from the front. Diarreah had begun to settle down, and I didn't have the sickness any more.

I stayed on the provera until Dec 96. No improvement with the pain, still having 6 weekly bleeds, and bad cramps continually. Back cramps, like when menstruating.

The last bleed I had was in the middle of Nov. 96. Between the middle of Nov. and two weeks ago, I had no bleeding, but frequent back cramps and pain.

In Mid February and again in Mid June, I had terrible PMS. Sore breasts, which I never used to get, weepy, cramping, back pain. I started on the Atkins diet six weeks ago. Two weeks into the plan, and just after the induction phase, I had some chinese food. I got back cramps. I realised I hadn't had them for two weeks, thought about it and realised that a lot of the time when I had cramps it was after having chinese food. MSG!!

The following week I felt a stirring in my uterus as the pain moved from the lower to the middle back - sort of a rising upwards - got the usual menstrual constipation, followed by some bleeding, for 6 days! not terribly heavy, but real bleeding. No cramps. Some back pain, but not too bad, and no sickness afterwards.
Whilst I was researching low carbohydrate stuff on the net, some of the articles mentioned Aspartame. I used to drink gallons of the stuff. Three days before the period started, I stopped taking any at all. I don't know if that's long enough to make a difference. My back is quite good now, I'm getting some disk pain - like when I walk the sciatic nerve is getting upset, so it feels like my back is trying to put itself back to normal. I have some pain still

in my groin, but it's discomfort rather than pain.

I think I have mixture of several different allergies. I've been lactose intolerant for years, and totally allergic to full fat milk since I was 3 or 4 years old. Right now, I think I have to let my body clear out all the stuff that was poison to me, like gluten, and get my hormones into some sort of balance as well. I think it will be a while, but I feel well, and can cope with the pain a lot better, particularly when it feels like "good" pain, repairing rather than damaging -

Subject: Re: Nutrasweet
Date: 08 Jul 1997 11:13:36 EDT

I would get sleepy after drinking a Slice when Nutrasweet first came out. I just wanted to close my eyes and put my head down on my desk. I was getting plenty of sleep and couldn't ask for a more interesting job but I attributed it to fatigue because Nutrasweet was touted as having no side effects. The last straw came when I drank a diet Coke on an empty stomach and later that day (but after I had dinner), I experienced a strobe effect as though my brain were clicking on and off. It was very frightening and I quit Nutrasweet cold turkey. I didn't experience any more sleepiness at work until I was in my ninth month of pregnancy. I really like pop so I sip it in a juice glass if I've had my limit for the day.

Re: Diet Coke proving!!
Mon, 7 Jul 1997 17:42:41 +0000

I can vouch for those symptoms!! I tried to drink diet coke for about a month and had much the same results (along with blinding headaches) - and can vouch for the mental state it would put you in.

To say the least not only do I stay away from any nutrasweet product - but keep it from my children as well. Sugar may not be the best - but it is definatly better than the effects of diet products.

Subject: Help at last... please read
Date: 1997/09/13
Newsgroups: alt.support.tinnitus

On 07-11-97 I received information on the fact that aspartame(Nutrasweet/Equal) could cause tinnitus by destroying the central nervous system. I had been a large user of diet sodas which contain aspartame.I figured I had nothing to lose by switching to plain water. The results were not immediate but took approx. 2 months. I can now honestly say that my tinnitus has been greatly reduced and completely gone much of the time.

Subj: Re: Recall of aspertame !!!
Date: 97-10-03 01:44:19 EDT
To: mfriedman@oc.fda.gov (head of the fda)

It is an emergency that you find the strength as a man to recall such a deadly substance as aspertame..
I always thought that I would first get my message through to FDA to remove sodium benzoate from food and drugs..WE BLEED SEVERELY WITH THIS PRESERVATIVE...NOT TO MENTION THE HEADACHES THAT MY SON ALWAYS HAD PRIOR TO A
BAD HEMORRHAGE...
However; the fact that I haven't had success in being heard for sodium benzoate, perhaps you will consider the severe reactions we have had to Nutrasweet...headaches, blurred vision, dull ache in head days following

severe headache and poor focus with eyesight during the days following...nausea, etc.
The MOST IMPORTANT THING I WANT YOU TO KNOW IS THE TERRIBLE THINGS MY BROTHER
HAS BEEN THROUGH SINCE THE 80'S WITH A DIET COKE ADDICTION...I FIRST COMPLAINED TO FDA IN '85 AND '86, only to be told there was only information about short-term memory loss related to aspertame...nothing about addiction, depression..vision problems..personality changes..or anything else...I was told that FDA would need at least 10 years to study the effects of aspartame.... Following the refusal of FDA to listen to my complaints for both my brother and my family...I knew I had to get someone to listen to me since my brother displayed such Diet Coke addiction that I feared for his life...I found a name back then...Dr. Louis Elsas, Prof of Pediatrics at Emory University...I communicated with him by telephone...he wrote to me...and I felt better once I had found someone who believed me...I knew he was the doctor so talked about at that time in the 80's as the one who was warning pregnant women to avoid aspartame to protect their babies brains and to keep it from babies after birth at least until the babies were 6 months old...he had seen brain damage from the substance in babies in these age groups...he told me that at that time (late 80's) someone in Washington was tracking Nutrasweet Victims....It was a little encouraging to find someone who didn't think I was crazy to believe in a Diet Coke addiction...
It would be too lengthy to try to explain all that aspartame DID TO MY BROTHER...but I feel better knowing how hard I worked to convince my family and his doctor of his addiction to aspartame...I feel even better now that he is off Nutrasweet products... especially happy that his psychiatrist is weening him off all the big time medications he was on for symptoms that had gotten so out of had with increased use of aspartame...TO WATCH SUCH AN INTELLIGENT COLLEGE GRADUATE GO DOWN THE TUBES AND LOSE MORE THAN A DECADE OF
HIS LIFE IS PAINFUL...BUT THANK GOD HE IS ONE OF THE FORTUNATE ONES WHO STILL
HAS A LIFE !!! WE FEEL IT WILL TAKE SOMEONE WITH A REAL CONSCIENCE, NOT A
NEED FOR GREED OR PRESTIGE WITH ASPERTAME MAKERS, TO STEP UP TO THE MIKE AND
ANNOUNCE THE RECALL OF THIS DEADLY NEUROTOXIN...If anyone backing Nutrasweet
thinks the whole public can be changed into believing that aspartame is safe...let me share with you the answer I got from an ATTORNEY concerning aspertame safety....We were at a wedding 2 weeks ago...I speak with him often since we were on a cancer board together years ago...I know of his love for flying, so I asked him about his knowledge concerning the aspertame

"unsafety" at high elevations...His answer was that Nutrasweet is no longer allowed in his home...he said once he determined that Nutrasweet made him depressed and made his wife's moods bad, he banned it from his house quite some time back....Now maybe you can see that many people are intelligent enough to make healthy decisions for themselves...BUT WHAT ABOUT OUR KIDS AND
OUR GRANDKIDS... WASHINGTON NEEDS TO WAKE UP AND FEED OUR KIDS BETTER FOODS
(LESS NUGGETS, HOT DOGS, JELLO, CHOC MILK, INSTANT POTATOES, ETC).. THEY NEED
SOME REAL HOMECOOKED AND FRESH FOODS, FREE OF UNNECESSARY ADDITIVES, AND
CERTAINLY ASPERTAME SHOULD BE BANNED FROM ALL FOODS AND DRUGS, FIRST AND
FOREMOST THOSE WE PUT IN FRONT OF OUR KIDS...LET'S GIVE THEIR BRAINS A
CHANCE...
PLEASE STAND WITH THE PEOPLE WHO CRY OUT FOR YOUR HELP IN GETTING THIS DEADLY
NEUROTOXIN OFF THE MARKET...RECALL IT PLEASE.

Just to add one more adverse reaction to your file;
I don't touch nutrasweet or any preprocessed foods, for that matter. I have never mentioned my reaction to any doctor manily because they would probably lock me up.
Nutrasweet gives me a feeling of not being where I am. I feel like I'm watching a movie. I'm sitting there, but, I'm not there, Feel like I'm looking through people. I have no ambition to do anything, I know whats going on around me ,but I don't care. It also makes my stomach feel really strange. Does this make any sense to you? Crazy, Huh!. It also makes me think, and react differently than I normaly would.
Thanks for the space.

Subject: Aspartame

I have had a brief, but distinct experience with Nutra-Sweet that I would like to share. You may include it in reports to appropriate agencies.

Two summers ago I experimented with drinking one or two diet Seven-Up sodas perhaps three to four days a week. I don't believe I ever drank

more than six to eight sodas a week. Normally I don't have anything "artificial" in my diet, but I wanted something sweet tasting and didn't want the sugar intake. Within a month I began to notice increasingly numbness and tingling in my hands. This concerned me because I work with my hands a lot. I wondered what I had done to cause this. The only difference I could think of was the Aspartame intake, so I stopped all intake of it. Within another month the symptoms had vanished completely!

I am grateful to have noticed this sooner rather than later and to have been able to stop these problems before they got more serious.

Subject: Re: THANK YOU!

I've always known I had problems with anything with Nutrasweet in it, and I finally convinced my family of it, but most people look at me like I'm crazy when I refuse a diet cola... Now when they tell me it's all in my head, I can send them here and they can read this for themselves! Thanks so much!
I've learned to avoid it like the plague after several bouts of almost crippling headaches immediately after drinking a diet cola, and itching for several days after I got even the slightest amount.... I'm allergic to so many things though, I thought it was just another weird quirk of being me. Now I know I'm not the only one with problems with it.

Again, THANK YOU!

Subject: [FIT-L] Re[2]: [FIT-L] Aspartame
To: FIT-L@MAELSTROM.STJOHNS.EDU

I can't back this up with a source, but I used to eat & drink a lot of this stuff, and got a lot of terrible-need-to-lie-down headaches. One time, as I was lying down with one of these headaches (about 6-7 years ago when I was living in Austin, TX), I picked up the paper and read an article about aspertame, and how it has been proven to cause migraines, seizures, and a bunch of other symptoms that I

can't recall today. So I quit nutrasweet and never had
another headache like that again. Since then, (and as I
said, I can't remember where I read this) I have read a
couple of times that the good ole USA is one of the only
countries in which aspartame is not considered a poison. It
does not pass the USDA's standards, and the only reason that
it is everywhere is that there is SOOOOOO much money to be
made on this stuff, they went ahead and approved it anyways.
Attack if you will, but I really believe that there's at
least an element of truth in this. I know way too many
people who have adverse reactions to think it's harmless.

Newsgroups alt.support.depression.manic,soc.support.depression.manic

Maybe this is just coincidence, but I gave up everything "diet" months ago. This topic is very timely because it made me realize that for "years" I have been complaining about poor cognitive functionality and memory loss to my pdoc. We blamed it on everything from the meds to depression, which we all know definitely does cause a certain degree of both memory loss and cognitive functioning. However, I can say that my functionality has much improved over the past months, as has my memory. Granted my depression is improved, never gone, but improved and I am on fewer meds than I have been on in a long time, but maybe there is something to this. I've personally always been convinced that aspartane, especially, did something unpleasant to the way I felt.

Subject: Re: Natural Nutrition #105 - Special Issue - Aspartame

I have waited a respectable amount of time to send this post, to be sure what I am about to report to you is in fact, accurate. I am now satisfied that I have enough facts to do so.

After reading the special issue report on Aspartame, I decided that since I had already been without the additive for 10 days prior, because of a diet plan I was trying out (that I since abandoned), I would continue to refrain from aspartame and see if there was any credence to this information.

You see, I was diagnosed with FMS in 1992, suffered horribly from hip joint pain and morning immobility. Being a hypoglycemic since childhood, artificial sweetners were always a part of my diet - a substantial part. Because I am an advocate for complementary medicine and nutritional healing, I gave this bulletin very serious consideration.

At the same time I gave up aspartame, I also started Physical Therapy, as my hip joints and lumbar area of my back had become so immobile, I could no longer toilet properly. Now, I'm a senior in school for Occupational Therapy - there is nothing that can set an OT reeling more than the loss of an Activity of Daily Living - trust me on this.

After 4 weeks of therapy, I saw little change, but some. Magically, in the 5th week, which corresponded to a little over 6 weeks without aspartame, something magical happened. A rapid progression that I know from my training as an OT, is not something that occurs in therapy - progressions in therapy are usually slow and steady. Having a scientific mind, I decided to be my own test subject and I completely discontinued the Physical Therapy, but continued to avoid aspartame.

Guess what - it's now been 8 weeks without the dreaded chemical and I (and those around me) am happy to report that I am pain-free, mobile and feel better than I have in as many years as I can remember. Almost all of the signs of the FMS and joint immobility are gone. I am working on regaining my muscle tone, now that I have proven my theory to me.

Needless to say, my husband is thrilled to have his wife back, and is telling everyone he knows and meets of my story - in his words - he lost his wife to something as stupid as diet soda and all of the doctors and

health practitioners could not help. It was his sharing the post about the Nutrition Newsletter with me that ultimately led to my recovery.

xxxxxxx, and xxxxx, and xxxx - THANK YOU, THANK YOU, THANK YOU. I am grateful for the service you provide and will continue to spread the word. Anyone with questions that wishes to address me directly may do so at: andrea_keil@juno.com.

being an avid fan of diet drinks (I drank the first diet drink as a kid...diet rite cola, moved to diet dr. pepper, and then to tab and diet coke, I can speak the truth.....LISTEN TO THIS WOMAN!!!!!!!!!!!!!!! I had to quit secondary to arthralgias, memory problems, massive edema problems, arrhythmias, etc. I also started having problems at higher altitudes due to aspartane. I drank a 32oz-1liter/day maximum only on days I worked. I quit and my problems have resolved 100%. It took 6 months, but it was worth it.

Subject: Another Aspartame Testimonial

I am 49 years old and first experienced disorientation/confusion spells

while at work starting in 1986. I had always drank other soft drinks
and only began drinking diet coke in 1986 when my company replaced our
other drink machines with Coke machines.
These disorientation spells progressed in frequency and severity when,
in 1990 I suffered a grand-mal seizure at work after drinking 2 diet cokes
and a chocolate candy bar. I suffered another grand-mal seizure
in 1991 and have had 8-10 grand-mals since that time experiencing spells
of severe disorientation almost regularly every 3-4 weeks. The most recent
experience was this prior weekend after attending a party in which I drank
5-6 diet cokes - much more than my usual 1 or 2. This grand-mal resulted in
my heart stopping and quitting breathing. Had I
not been in the company of my girlfriend who is an RN, I am sure I would
be dead right now.
I have been on dilantin, tegretol, felbatol and after this weekend's
experience my neurologist plans to put me on lamictal since none of these
medications have been able to eliminate my disorientation spells
which I have continued to experience at least monthly.
I was alerted to aspartame in 1994 by a co-worker who provided me
several articles which I found alarming. I quit drinking diet cokes
for about one year and experienced no grand-mals and only one or two
minor disorientation spells.
I guess I resumed drinking diet cokes as I either forgot their potential
impact or didn't really believe the connection. I DO NOW !!
I can't believe the volume of testimonials on the Web. I accidentally
hit print and went through all my paper stock. I find it very gratifying
that people are taking the time to share their experiences on
the Internet.
I have had every test known to mankind, numerous times. These included
MRI's, CT, EEG, blood, blood and more blood. Cysternogram (?)
to check for infection of the brain fluid and proper flow. NOTHING
turned up in any of these tests. All very, very frustrating as I have
always been very active and this condition was becoming debilitating.
I had also experienced grand-mals over the pacific on the way to
Hawaii vacationing as well as numerous other vacations that ended in a
911 call.
My family has no history "anywhere" of epilepsy and I have found it
very trying to be labeled with this stigma. I have also lost one job
as a result of excessive absences when I experienced 3-consecutive
grand-mals toward the end of a 2-week vacation. My childred are
petrified for me to visit them at school (embarassment I guess) as they
witnessed one of my grand-mals while dining out.
Irealize now there is ONE COMMON ELEMENT - DIET COKE !!! For some
reason, the other diet drinks don't affect me as severely. Is it

possible that diet coke has a higher concentration of Nutrasweet ??
I DON'T GET IT ! IT SEEMS THIS PROBLEM COULD BE EASILY VERIFIED WITH A CONTROLLED TEST. SURFING THE INTERNET, I SUSPECT THERE WOULD BE PLENTY OF
VOLUNTEERS OR SUBJECTS. I CERTAINLY WOULD VOLUNTEER.
ALSO....HOW ABOUT A CLASS-ACTION LAWSUIT ??? IF THE TOBACCO INDUSTRY
CAN EVENTUALLY BE DEFEATED, I SUSPECT THE MAKERS OF NUTRASWEET COULD AS
WELL.!!!!!!
What is this drug doing to our children who are being weened on it ?
What will the effects be on them when they get older ?? Hopefully all
this documentation will still be around for evidence of negligence on
the part of the NutraSweet makers and those food/drink companies that
have elected it as the food additive of choice.
I personally plan to post warning posters on all Coke machines at
work and anywhere else I can as I feel this has had such an adverse
affect on my life that I am going to take this as a personal vendetta.
I AM PISSED !!!! My quality of life has suffered for 10 years +. I
KNOW it is directly attributed to aspartame as I can demonstrate its
effects.
HELLO FDA - ANYBODY HOME ??? OUR TAX DOLLARS AT WORK !!!!

Subject: Asparatme Settlements ??

By the way, I quit drinking Diet Coke on September 2nd this year
after suffering a "Status Epilepticus" (as in "dead") and immediately my
seizure, disorientation spells, chronic fatigue, migraines, sore muscles
and joints all went away completely !

This was the only change in my diet and prior to that time I had been
experiencing seizures, disorientation every 2-3 weeks at a minimum.
Also, my "woman-friend" is an RN and has witnessed my condition,
seizures etc. for the past 1 and 1/2 years. She also was the one who
administered CPR after my September 2nd incident. She has also kept
a very detailed log during this time (as I find out) which has come
in very handy at this point.

Subject: Re: What a difference quiting Aspartame has made!!

My name is xxxxxxxxx xxxxxx. I am 28 years old and started drinking Diet Coke back in 1990 after a friend convinced me that the sugar content in normal coke was bad for me. Earlier this year (Jan-Feb) while surfing the net I stumbled across the article on your home page entitled "The Bitter Truth About Artificial Sweetners".

As I was "addicted" to diet coke and consuming around 1-2 litres a day, I was absolutely horrified to read about the dangers of aspartame. I was so shocked I gave up the stuff that day and have not had another drop since.

Prior to stopping,I suffered from alot of the symptoms mentioned in the article - terrible muscle spasms, vertigo, dizziness, nausea, depression, slurred speach etc. Within 7 days of stopping, most of the above symptoms had disappeared and to date I have not had any recurrences of these.

There is no doubt in my mind that aspartame causes the ailments mentioned in the article. As I live in Australia, I would like to know if there is an action group here that I can offer my assistance too.

If not I will continue to warn those that I come into contact with.

It is an absolute crime that this substance has been offered to an unsuspecting and ill-informed public. It must be stopped.

Subject: Re: Overwhelming Thanks!

I am writing to thank you for your crusade against nutrasweet. I am a type 1 diabetic for 25 years now. I received my first article from you by accident, as I was a member of the email users list for xxxxxx xxxxx when your article accidently got posted to all of us last year. I wish I could say I followed your advice at the time, but I chose instead to believe the "other side", and thought you were simply a reactionary (very sorry). I did lay off nutrasweet for about a week just for laughs at the time because I was starting an exercise program, and wanted to rid my body of all artificial stuff. However, when my blood sugars improved, I attributed it

to the exercise. Eventually, I added the nutrasweet back into my diet, nothing too much, just a diet snapple here and there - maybe 3 a week. And my blood sugars were no longer quite as good, and I began having what I refer to as "knock-down, drag-out hypoglycemic reactions. I just thought I needed to do more exercise! Last December, I was told by a dietician that nutrasweet was perfectly safe, and I just went wild eating it in everything and upping my snapple intake to two or more a day. Who knew? Well, my blood sugars went from difficult to horrible. My appetite was running rampant, I was waking up with 500 blood sugars and going to be with lows of 35-40. I was depressed and angry all the time. No one could figure out what was wrong with me. I didn't want to have sex with my husband and I even began having hot flashes (I'm 36). Some minor tingling, which I have always passed off as "just one of those diabetic things", which never was more than just a minor sensation, was getting worse. I was gaining weight, feeling uncoordinated and spacey, like I always had a hangover, and felt like death.

One day, I was looking up menopause in my medical advisor, and happened by the section on multiple sclerosis. I read the symptoms and it sounded just like me, with all the tingling and stuff. I panicked, then I remembered your email from a year and a half ago that talked about nutrasweet possibly causing MS-like symptoms, and decided to give up nutrasweet to see if it would help. The next day, my blood sugars were perfect, and I re-read the article and saw that nutrasweet has been implicated in swinging sugars!! My blood sugars have been perfect for almost two weeks now. It is uncanny. I am so beside myself with glee I can hardly stand it. I have energy, my vision is better, my constipation is gone, I can think far more clearly, my stamina has improved, and I want to live life again. My blood sugar meter average has dropped from 200 to 165 in the time span of 10 days, and still falling. It is once again easy to correct low blood sugars, and they are very minor occurances now. My insulin dosage has gon efrom 30 to 17 total units per day. I have, simply put, been reborn.

A chemistry teacher in my diabetes support group says it is true that aspartame converts to formaldehyde and methanol in the body. A very respected neurologist where I work (I work at a research institute within a medical center) said that she had a patient who was having seizures and eating lots of nutrasweet. As you can guess, the seizures stopped when nutrsweet was eliminated from his diet.

I am telling everyone about this. I have forwarded the info to my diabetes educator at the University of xxxxxxxxxxxxxxxxxxxxxxxxxx. She theorizes that if the nutrasweet was the culprit, it may have caused a mimicking of gastropherisis (delayed emptying of injested foods), which in turn caused

my swinging sugars. A research tech also told me she systematically eliminated foods from her diet to find out what was causing her constipation and severe abdominal pains. Her search was over when she tested the nutrasweet.

I am going to fill out one of the action report forms. Is there any other way I can help in this effort? I don't even know if you respond to emails, but I just wanted to add my testimony to the growing list of nutrasweet recoveries.
Deep thanks and God bless you.

Thanks so much for the information you sent. I was off aspartame for awhile and was so much better that I started using it again. I am in big trouble right now with dizziness, memory, and ms symptoms. It is frightening what it does when it gets above 86 degrees. I have left cases in my garage before. I am unloading my Montsanto stock as fast as i can.

My husband has taken all the info to the nurses at the radiology department. They can't believe it. My hubby specializes in mammography. I'd love to do some research asking ladies with diagnosed breast cancer how much aspartame they have in their normal diets. I bet there is a huge connection.

Course all these symptoms can come from so many things. The proof is when you improve by being totally off the darn stuff. Then you know.

Thank-you, thank-you for your knowledge and sharing.

Aspartame Consumer Safety Network Questionnaire

Name_xxxxxx xxxxxxx_____
Age_23___ Sex: Female

Medical problems that you believe are caused from using aspartame:

Every single time that I eat or drink something that contains aspartame I get very dizzy, and very strong headaches to the point of being unable to leave my bed. When I get like this I can't even move my head nor stand due to the extreme pain.

Why do you believe aspartame caused these problems?

I don't know for sure, but I truly believe in all of the papers I've read about the toxic and poisonous effects of aspartame. When I first read "The Sweet Poison" I opened my eyes, and began to identify with some of the symptoms.

Did the symptoms go away when you stopped using the products?

Yes, definitely, but it takes time: once I took a free sample of "I can't believe it's yogurt" on Friday, and I was sick the whole weekend, I wasn't feeling OK until next Tuesday.

Did you see a Doctor about symptoms?

No, at that time I didn't think I was sick because of the aspartame, I thought it wasn't important.

Did Doctor think it related to aspartame?

Later on, I did consult a physician, I told her about the symptoms I experience every time that I take aspartame and about the time that I took some vitamins with a Scooby Doo shape (originally meant for kids) that contained phenylalanine and that caused me to get sick, again with dizziness and headaches. She said that phenylalanine was a substance that my body had difficulty to methabolize it or synthetize, and that it was hazardous for all people, but that some of them show the symptoms more quickly than others.

Did you report your symptoms to the FDA (Food & Drug Admin.) or any other group?

No, I live in Mexico, and I think that here, there isn't much information about these issues.

What specific products(s) containing aspartame were you consuming when you experienced these symptoms?

"I can't believe it's yogurt" vanilla yogurt

Scooby-Doo shaped supplement vitamins (for kids)
Diet Coke

On the average, what quantity were you consuming (how often, how much each time, etc.)

They were very low doses, for instance the yogurt was just a free sample (just one in my life); I took about 3 tablets of the phenylalanine vitamins; and one Diet Coke was just enough to give me a headache. I've taken I think about six diet cokes in my entire life, and I learned that I shouldn't take no more.

How long had you been consuming these products before you experienced the symptoms?

I noticed the symptoms immediately.

Subject: Welcome Back To Life, Aspartame Free

I wanted to write to let you know that I have now been completely off of aspartame for one month and I can feel the results!

First, for two years I have had fibromyalgia-like symptoms. I hurt all over. Shoulders, legs, back, neck ankles, all were painful most of the time. I had chronic insomnia and could hardly sleep at night. My vision was getting worse all of the time. In the single month that I eliminated aspartame, I feel 100% better. I don't hurt. The carpal tunnel in my wrist and shoulder has finally subsided. My memory seems to be improving. I have more energy and I don't get as hungry.

I found that I was drinking 3-4 diet Cokes everyday. Fortunately, I did not use Equal in my tea or coffee. I use either sugar or sweet n low. I don't know much about saccharin testing but I cannot believe that it is as bad as aspartame. I am going to get some stevia and try that.

I have made copies of some of the articles and sent them to a number of people who have also "sworn off" of aspartame.

Obviously the FDA does not care one bit about product safety. If a company is as big as Monsanto, they can market any kind of poison they please without a whimper from the FDA. And, it appears that Congress is powerless

to stop them. Or, that Congress is too busy with their "in-fighting" to do anything for the people who voted them into office.

I, too, suffered severly from neuropathy. My feet would hurt so badly at night that my husband had to rub them. I work on my feet all day and they were either numb or hurting. I would elevate them every night and my doctor recommended pepper cream. The cream was terribly expensive so I never bought it. Through research, I started to wonder if nutrasweet was my demon. Sure enough....I went of ALL nutrasweet and artificial sweetners. Within one month.....I could make a fist again and I have NO pain whatsoever in my feet, legs or hands. My fingers were to the stage that they would buckle on me. NO MORE!!!! It would be worth a try for you.

Subject: toxicity review
To: xxxxxxx@xxxxxx.xxxxx.xxx

The summer is over and I missed it thanks to aspartame. This is my toxicity reaction summary. It started on Father's Day June 9th. My husband and I went out for breakfast. In the middle of the meal and "out of nowhere" I felt like I was fainting. I was so shocked by this sudden onset, I went to the restroom and splashed cold water on my face trying to regain my composure. I felt weak the rest of that day.

A few days later I had another fainting spell at work only this time it was worse - accompanied by rapid heart beat and shortness of breath. I left work saying I didn't feel well. I thought I had too much caffeine and if I went home for a while it would pass. It didn't. In fact it got worse - to the point I called 911. I thought I was having a heart attack. My resting heart rate was 120. They gave me 02 and my heart rate came down to 80. I declined a ride to the hospital still thinking it would pass.

I then started having nighttime tremors/panic disorder. I would wake up in

the middle of the night with a dry mouth and then the tremors would start. At one point I think I had a seizure becuase I was shaking so badly.

Then on the fourth of July - I was in the emergency room with the same symptoms.

They ran all kinds of test, EEG, Thyroid - all fine. The only thing abnormal was my blood count. Hemoglobin was 11 and the red cells were small. I was diagnosed with iron-defiency anemia. Told to get off my vegetarian diet and eat some red meat! Great advice from a doctor huh? Followed up with a visit to my doctor. She was surprised that my blood count was 11, she expected it to be 5 or 8, normal is 15. I started taking a prescription for iron.

Well the night tremors and shortness of breath continued. I kept calling my doctor and she thought I might be having panic disorder as a result of the anemia so I started taking Valium and Prozac. This helped the nighttime panic attacks.

I started researching Prozac and Seratonin and this is what led me to you. Thank goodness someone is watching out for us! I had developed a bad chewing gum habit. Chewing 1 large pack of Extra surgarfree gum daily. I stopped this immediately and here it is Sept. and I am finally staring to sleep and feel like a normal person! I am no longer taking Prozac or Valium but switched an herbal remedy called St. John's Wort. I'm convinced the aspartame destroyed the Serotonin level in my brain and destroyed my blood. I don't drink or smoke and had been in perfect health prior to this.

I am schedculed to have a complete blood count done this month with a test for Ferritin. Is there any blood test for aspartame toxicity? Why not? How should I approach my doctor? Everyone thinks I got sick because of my vegetarian diet. I know it's not so. I probably consume more iron than the average carnivore!

What happened to summer?

Subject: NutraSweet

I need some questions answered. I have a 14 year old son, xxxxxx, who has been having what the doctors are calling optical migranes.

At the age of 11 years old xxxxxx was diagnosis as hypoglycemia. I was a mother who never believed in letting her kids to eat or drink anything with NutraSweet in it until xxxxxx became hypoglycemic. Since then he has drank Diet pops.

Since January 1997 he has been having problems that he loses his peripheral vision. The first time he lost it for around 20 minutes and then when his vision came back his lips went numb. (He got a headache after his vision returned, it lasted through out that day.) I took him to the doctors and he sent us to an opthomoligist. He then a through check of his eyes and said everything look good and healthy. He thought that he may have had an optical migrane. He said he may never have another one but if he did he would like an CAT scan ran.

In March he had another episode. This time it lasted 20 minutes and the headache lasted for two days. I called the doctor and he had a CAT scan ran. The test came back normal. Still they feel that it is just an optical migrane. If it happens again he will see an pediatric neurologist.

In April he had another episode, this one lasted 10 minutes and the headache lasted two days. He was set up to see the neurologist. The neurologist said he felt that it was just optical migranes. That he should just take an extra strenght Tylenol and a benadryl then sleep. He also said he would set up a EEG to be ran to make sure he is not having seizures or mini strokes.

Five days after seeing the neurologist he have another episode. This time it lasted 45 minutes with no periphial vision and during this time his tongue on the right side and his right thumb went numb. I panic and took him into emergency. The checked him and refered to his neurologist. They both decide that it was an optical migrane. (this headache lasted for one and a half days.) He is set up for May 12 to

have an EEG ran.

What I am wondering is if he is toxic from the NutraSweet? Has anyone had this symtoms? I am trying everything. I told xxxxxx he is not to eat or drink anything that has anything with NutraSweet in it for two weeks.

[more information]

Date: Tue, 13 May 1997 09:56:39 -0700
To: xxxxxx
Subject: NutraSweet

Thank you for all the information you sent to me. xxxxxx had his EEG ran yesterday, everything came back normal. The only thing he saw was that he had two irregular heartbeats. But he felt this is someting that he will outgrow.

While reading some of the information I see that maybe the NutrSweet can be causing this. We are going to eliminate this from his diet for the next 60 days, to see if this is his cause.

Again, I thank you for the information and if there is anymore you can send me please do.

I had looked at several of the Internet references on Aspartame recently, but about a year ago I had also become aware of a report (or reports) regarding airline pilots losing their licenses because of problems with aspartame. It took a while for them to figure out what was causing the problem.

Personally, I cannot tolerate aspartame at all. It causes confusion, memory loss, and other nasty reactions. The last time knocked me out for almost 2 weeks.
....
How I got it the last time was a fast-food establishment had their hoses crossed -- the diet cola was hooked to the regular cola faucet. This is the second time that has happened -- at different chains. And the kids they have working their are have not lived long enough to realize that people can die from this stuff if they have a bad reaction. The first time this happened, I realized that the cola tasted like "diet" instead of like regular. I asked them to check and sure enough the hoses were crossed, and they fixed it. This last time, it was hot, I was dehydrated, my husband was in the car suffering, so I didn't ask them to check the hoses -- I just drank it -- and suffered the consequences for almost 2 weeks. Never again!

Subject: NutraSweet & UTIs

Have read through part of your NutraSweet web page with great interest. I used to regularly consume 2-3 cans Diet soda/day. I also used to live with urinary tract infections averaging one/month. I work in a medical lab and these are confirmed infections by routine urinalysis and culture.

Two years ago I had a terrible UTI, and had been having some resistance to antibiotics by this time. I had to go to California for a meeting, so I trudged onward with antibiotics and my soda. When I arrived in my hotel room, I went to get a pop and found out it was $1.50/can. On grounds of principal, I couldn't buy it. I recovered from my UTI, bought a soda and was ill by the afternoon. After doing some of my own cause and effect, I figured it was the soda and thought maybe it was carbonated beverages. SO NO MORE SODA FOR ME!. It took awhile to pinpoint the NutraSweet, but I have been free of urinary tract infections for 2 years and you can't believe the relief! I tell everyone I know who has a UTI, to stop the diet drinks if they take them. Thanks for your web site.

Subject: the dark side of aspartame
Date: Thu, 7 Aug 1997 21:49:10 -0600

I had been drinking aspartame in diet coke/coffee/crystal light and

eating it in snack foods for about six years and began to have chronic urinary tract infections - at least two major episodes per year for three years. Medical professionals blamed it on caffeine. So I gave up all caffeine which, of course, decreased my aspartame intake, which caused my symptoms to improve slighty. However, even without caffeine, I was still having infections. My friend who is a nurse suggested that artificial sweeteners can cause bladder irritation. Because I love coffee and coke, and was hoping caffeine was not the cause, I gave up all aspartame, in foods and drinks. For one year I had no infections while continuing to enjoy about 1 cup of coffee and 1 coke per day (my usual intake). Everything was going along well when all of the sudden, I had an infection. While I'm wondering what could have happened (was it really caffeine after all?) I started looking at the foods and drinks I had recently purchased. Although I am fastidious about checking labels, I had missed a very small label on the corner of a box of Fiber One cereal. It did indeed contain aspartame and it only took eating a small bowl of cereal three days in a row to cause a major urinary tract infection. I have had no reactions for three years since that last episode, and I can enjoy as much coffee and coke as I like as long as I do not ingest aspartame in any amount. I will not even chew a stick of gum that contains aspartame. I also noticed, about a year after I stopped ingesting aspartame that I felt more alert. I hope this information is helpful. I would be interested in working towards having aspartame pulled by the FDA (even if that hope is slim). Luckily, as a health educator, I have the opportunity to increase awareness of the dangers of aspartame.

To: xxxxxxxxx@xxxxxx.xxxxx.xxx
Subject: Aspartame Consumer Safety Network Questionnaire

Aspartame Consumer Safety Network Questionnaire

Name: xxxxxx xxxxxxx
Age: 29 Sex: Female

Medical problems that you believe are caused from using aspartame:

Migraines, memory loss, weight gain, rash all over body.

Why do you believe aspartame caused these problems?

Because whenever I would eat or drink something with Nutrasweet in them within 30 minutes I would get a horrible migraine and my skin would turn red. I also felt really "strange", almost like I was drugged.

Did the symptoms go away when you stopped using the products?

Yes! Completely. I have not had anything with aspartame in it for 5 years now. I avoid it like the plague.

Did you see a Doctor about symptoms?

Yes.

Did Doctor think it related to aspartame?

He thought it was unlikely. I disagreed because the symptoms disappeared when I stopped using aspartame and would reoccur when I accidentally did.

Did you report your symptoms to the FDA (Food & Drug Admin.) or any other group?

No, because I didn't think my symptoms were that profound.... (compared to others with seizures and the like).

What specific products(s) containing aspartame were you consuming when you experienced these symptoms?

Diet Rite sodas and Crystal Light drinks mostly. And chewing gum.

On the average, what quantity were you consuming (how often, how much each time, etc.)

I would have roughly two sodas a day, and 2 servings of Crystal Light.

How long had you been consuming these products before you experienced the symptoms?

Only a few days.

FOR THOSE CONCERNED ABOUT WEIGHT:
Did you begin using products with aspartame when you began a restricted calorie diet?

Yes, I did.

Did you use aspartame products only for some of your meals to save calories?

No, I never didn't eat.

Did aspartame seem to help you lose weight at first?

Yes, at first I lost 20 lbs.

What were the long term weight loss effects of using aspartame.

I started retaining huge amounts of water and my face always had a puffy look to it, while using those products.

It wasn't until I realized that consuming anything with aspartame in it was causing me problems, that I stopped and then was able to regain my health. Now I tell everyone that it's poison.

I have a friend who was in an accident many years ago and suffered brain damage. She has seizures often, and seem to have them more frequently when she consumes anything with aspartame. I've tried to get her off of the products, but she said she's addicted.

Subject: Re: How Are you?

Yes, I'm doing much better since I swore off NutraSweet! Most people I know can't believe I quit drinking diet coke. They've always known me to carry a can or bottle of it around with me. That was part of my image: long blond hair, Ray-bans, and a can of Diet Coke.

I have been waking up feeling rested. I'm not as achy. I'm not as tired. I don't crave sweets anymore. I haven't lost any weight, but that's probably because I drink a lot of Coke Classic now. I don't NEED a coke first thing every morning now like I did a Diet coke. I used to get headaches if I didn't have my Diet Coke within an hour or two after waking up. Now I can go all day without a coke and not have any problems. I kept telling myself it was caffeine withdrawals, but if it's not happening now, that can't be the case. I drink as much caffeine now as before, only now my caffeine is Nutra-Sweet free!

My son's behavior problems are improving now that he's off NutraSweet and mostly off artificial colors. He's working better in school, and he's doing really well at learning to read and to add and subtract. He seems to be sleeping better now, too. Now when he climbs up onto my lap it's not painful like it used to be. Uncomfortable, yes, since he's 50-something pounds! But not painful.

My vision is improving and so is my memory. I've been working full-time for more than 6 months, and I just completed a quarter of college full-time as well, making two B's and an A. I'm still prone to depression; in fact, I've been depressed lately. But my bouts are not as bad as they've been in the past. Before when I'd get depressed, I couldn't drag myself out of bed or have enough interest to do housework. I'd sit around eating brownies by the panful and Ben and Jerry's by the pint. Now, I can still get my day-to-day work accomplished if I'm depressed, just not as quickly and efficiently. I think when I start taking my anti-depressants again, they may actually work since I'm not constantly depleting my seratonin levels and counteracting the effects of the medicine with aspartame.

I'm working on losing the weight I've gained in the past couple of years (some 40 or 50 lbs--thank you Diet Coke, Duncan Hines, and Ben and Jerry!), and I think I might have a fighting chance now that aspartame isn't tricking my body and brain. I honestly can't believe how my taste buds react to sweets now. Thanksgiving day I ate pumpkin bread and pumpkin pie for dessert instead of reaching for the chocolate cake and chess pie. I couldn't even bring myself to taste the chocolate dishes! That is so unlike me! I remember when I was younger I used to crave salty foods and protein, like ham slices or something. That's what I've been craving again lately. That and healthy foods like salads and vegetables. Amazing! Incidentally, I decided to drink a Diet Coke

about a month ago just to see what it tasted like and made me feel like after a couple of months without it. Blech! That tasted nasty! Made me feel funny, too. Gave me a headache. Funny how I could come up with all sorts of explanations for symptoms instead of facing the truth that I was poisoning myself.

I talked to a woman at church a couple of weeks ago who was puzzled why she had been feeling bad lately. I found out she had just started drinking Diet Coke about a month earlier. She had been drinking only water before. I asked her if she felt like she'd been beaten with a baseball bat every morning when she woke up, if she felt like she hadn't slept a wink, if her kids were finishing her sentences for her, if her vision was a bit blurry, if she'd been craving sweets lately, if she got headaches more frequently especially if she'd missed her morning cup of diet coke, and if her muscles hurt when her kids climbed up onto her lap. She answered yes to all those symptoms, most of which she hadn't really thought about or noticed until I brought it up! I told her my story and gave her the info I got from you, and she said she'd quit drinking it and see how she felt. I haven't talked to her in about a month, but I should see her soon and I'll ask if she's doing better.

Thank you so much for helping spread the word. I probably would've kept drinking the stuff until I killed myself if it hadn't been for you and your crew. If I can help, I'd be glad to. I'd like to have an even better success story for you 6 months from now since I feel better physically and better about myself after getting off the poison. I feel like I can accomplish more of my goals now! My depression and achy body won't get the best of me anymore! Hey, if I can work 43 hours a week and take 3 college courses and make a 3.33 average while being a single mom of a kindergartener, I think there's probably even more that I can do!

Subject: Thanks for your story

Thank you kindly. And thank you for your great work against the deadly genetically engineered drug aspartame.

We all owe you a debt of gratitude. I had my own aspartame story also. I was having lots of problems concentrating and thinking clearly for over two years. I was drinking a half gallon of Diet Coke most days. I had no idea!!

I never would have suspected that stuff as the cause had it none been for your work.

Now they want to screw up the rest of the food supply.

I gave up aspartame almost a year ago and I do feel much better. Now I also am avoiding the other genetically engineered foods.

To: xxxxxxxxx@xxxxxx.xxxxx.xxx

I have had arythmia and severe headaches from aspartame. In my teen years I consumed quite a bit of NutraSweet. Eventually, my family realized that the "heart palpitations" may be connected and I stopped consuming it.

In my early 20s I decided to try it again. Same thing. After just a small amount, I was again experiencing the arythmia and severe headaches. I get a headache almost immediately after consuming as little as four ounces of a nutra-sweet laced product.

I've never believed in activism, but since I started studying NutraSweet, I've been interested in spreading the word. Especially to the people who are risking their children's lives.

I still wonder why nutrasweet is allowed to be on the market. I no longer touch anything that has it in it. When I was drinking the diet soda with nutrasweet I started having serious memory lapses and my short term to long term memory transfer ability was debilitated. Even though I haven't touched nutrasweet in 5 years I still feel that I haven't regained my full memory back. I know some of my memory trouble is due to "fog" but "fog" can't cause everything.

Thank you so much for your report on Aspartame....
I am 47, female, and I truly feel that aspartame has been a big part of my problem along with MSG, cheese, and caffeine. I have given up all of these for the past 40 days and my symptoms have improved by 85% I would guess.

I had all the tests like you - over seven months.....and they said they also felt I was beginning with seizures - the partial kind. I hadn't lost conciousness yet but was feeling close to it.....that diagnosis just didn't sit well - it didn't feel right, you know what I mean? They put me on anti-seizure medicine (Neurontin) for 3 months...
to see if my symptoms would go away.... (I was still using Nutrasweet alot) the medicine didn't phase one symptom.....then they put me on Inderal thinking it was a migraine type problem - migraine equivalents they called it - but Inderal didn't phase my symptoms either - plus I gained weight !! I got so disgusted I tried the avoidance of migraine trigger foods - a list my sister sent to me thru E-Mail.
Nutrasweet was on the list. As I said in a few weeks my symptoms were so much improved I couldn't believe it!! How long does it take for that chemical to get completely out of your system? I suspect it might take a while - what do you think?

There have been questions about aspartame since it's inception. I've recently stopped ingesting it and to me it's quite noticeable that I feel better. No headaches or memory lapses which could have come from it.

To: xxxxxxxxx@xxxxxx.xxxxx.xxx
Subject: Aspartame Consumer Safety Network Questionnaire
Date: Fri, 27 Jun 1997 14:02:58 -0500

Name___xxxxx xxxxxxxx_____
Age_32__ Sex: _F

Medical problems that you believe are caused from using aspartame:

I get violent headaches when I consume aspartame

Why do you believe aspartame caused these problems?

Because I don't get that kind of headache when I don't consume aspartame.

Did the symptoms go away when you stopped using the products?

Yes. I noticed this in 1991. I would have a diet sprite with lunch, and along about 1:30 or 2:00, I would get a pounding headache. I mentioned it to someone I worked with, and since he is extremely sensitive to aspartame, he mentioned that I might be having a reaction. I had been out of the country for a couple of years and hadn't had any aspartame before.

Did you see a Doctor about symptoms?

No, they went away when I stopped drinking the diet pop.

Did Doctor think it related to aspartame?

Did you report your symptoms to the FDA (Food & Drug Admin.) or any other
group?

No, I didn't know there was any recording going on.

What specific products(s) containing aspartame were you consuming when you experienced these symptoms?

Diet pop. That was about it. I'm not a candy or gum person.

On the average, what quantity were you consuming (how often, how much each time, etc.)

One can of pop with lunch, maybe one later in the afternoon.

How long had you been consuming these products before you experienced the symptoms?

As previously stated, I had been out of the country for some time. Nutrasweet was being introduced when I left. When I came back, everything was Nutrasweet. I noticed the headaches right away after I started consuming large quantities of it.

FOR THOSE CONCERNED ABOUT WEIGHT:
Did you begin using products with aspartame when you began a restricted calorie diet?

Sort of. I grew up drinking diet pop, so regular sugar tastes too strong to me.

Did you use aspartame products only for some of your meals to save calories?

Yes, just pop.

Did aspartame seem to help you lose weight at first?

I didn't consume enough to notice any difference.

What were the long term weight loss effects of using aspartame.

At the time, learning to eat properly was more important than weight loss, so I didn't focus on losing weight.

FOR THOSE WITH DIABETES:
Any trouble controlling blood sugar while using aspartame?

I'm hypoglycemic rather than diabetic. After drinking a diet pop, it seemed my blood sugar levels dropped dramatically.

Did using products affect the types of food you selected to eat? How?

Yes, my bg levels were low, so I'd crave something to eat.
Sweet things looked more attractive.

Did aspartame affect your desire for sweet tasting food or drink?

increase

Subject: Aspertame

I discovered a few years back that aspertame gives me migraines.
I am very careful about what I purchase and read all suspect labels.
Aspertame shows up in the darndest places!

The other day I bought some Welch's juice bars. They were labeled
'No sugar added'. For some stupid reason, I did not search for the
dreaded nutrisweet on the label. I thought that 'no sugar added'
meant they were naturally sweet.

I ate one. Now I am on day 3 of a aspertame headache. I threw the
rest of the headache bars in the garbage.

I'm not sure how to contact Welch's about this misleading label.
I'm sure that an upstanding company like Welch's would not knowingly
mislead the public. :-o

I just read on your page that aspertame can hurt the optic nerve.
My mother has been using Nutri Sweet for 20 years and now she is
almost blind. She has had glaucoma for all this time, but has been
using eye drops and her pressure has been under control. Her eye
doctor says that her blindness is caused by optic nerve damage due
to the glaucoma. I'm sure Nutri Sweet hasn't helped.

Subject: Artificial Sweetneters

My wife is so sensitive to any artificial sweetener that any amount no
matter how small causes a severe reaction. Even one drop of Diet Coke

will make her sick for days. A gulp of diet soda is so deadly to her that it requires an immediate ambulance ride to the hospital.

You should know that these sweeteners are used in many things you don't realize. Toothpaste for example. Last year she discovered by accident that her toothpaste had aspartane in it and she was being poisoned by it on a daily basis.

We check every single thing she consumes but outside of the United States this is difficult because of the lack of labeling laws. England is especially bad. Last week while trying to buy off the shelf cough medicine, the pharmacist had to call each manufacturer to check what they contained. We found that every single brand on the shelf contained artificial sweeteners except one. Just a few days later she was almost poisoned again by a Sangria drink she ordered at a restrurant -- the lemonade in the drink was made with artificial sweeteners instead of sugar.

Because of her I've become more informed of how these sweeteners work and I can hardly believe it. They can only be described as mind altering drugs. The war on drugs should begin with artificial sweeteners.

In summary, beware. This dangerious stuff is not just in soda -- it's in all kinds of seemingly innocient stuff you buy at pharmacies and elsewhere.

Subject: Re: Persistent Sore Throat
To: ALLERGY@postal.tamu.edu

The beginning of my allergy discovery began this way. After reviewing my medical bills for insurance reimbursement, I noticed that I had lost my voice and had either an ear or sinus infection every month since I moved to California from the Pacific Northwest. Allergy tests by one doctor showed I was slightly allergic to dust. Another doctor's test showed I was negative to everything. He suggested I look into eliminating milk from my diet.

What I now understand two years later is that I was causing my own damage through preservatives. When I moved to California and began my long (1-1.5 hour) commutes, I drank a lot of soft drinks especially diet with Nutrasweet. I also am a lazy cook and ate a lot of preprepared foods.

I wish I understood then that additives in my diet were the problem. I wouldn't be on such a restricted diet today if I or the doctors could have seen the real issue.

By the way, the moment I cut out preservative from my diet, I felt remarkably healthy and energetic. I have not had a sore throat from nasal drip since.

Subject: Nutrasweet

I've noticed over the past few years that after using Equal for several months, I will have serious pains in the stomach area. The first time I went to a MD who fully examined me and told me to use Zantec, to no avail. I then started to omit various foods, etc and found that whe I eliminated nutasweet for a week the pain went away.

After a call to the company, without any meaningful comment by them, I then started using Equal after a month or so without difficulty for about a year. When the same pains started again I at once stopped using nutrasweet and the pain disappeared almost at once.

After the past eight months of usage, again, I today began the same pain and have stopped neutrasweet. If I am correct that the source of the pain is neutrasweet (Equal) the pain should stop in a day or so.

Subject: Aspartame review after 75 days
Date: Fri, 25 Jul 1997 14:26:43 -0400

I have been Aspartame, caffeine, and sugar-free for about 75 days now.
When I went off these three items on April 30, my main complaints were:
shaky handwriting and tremblor of hands; flickering lights in the outer
field of vision and joint pain. These have disappeared almost completely.
I have not gone back to Aspartame at all, but I have begun to drink regular
coffee without suffering any ill effects, except one day when I overdid the
caffeine bit by having about six cups. Then the shaky handwriting and the
flickering lights were back. While I am happy to be rid of most symptoms,
I cannot really say that all of the good effects were solely due to
quitting Aspartame. Thanks anyway for the information. Maybe we all consume
too much caffeine, also. If that is true, then the coffee and softdrink
industry will really be mad!

Subject: Nurenburg Trials/Responsibility for NutraSweet?

My name is Lynn and I live in St John's, Newfoundland, Canada. I have recently become very interested in the scourge of aspartame. I am a sufferer of migraine headaches, and have been so for many years. I have concluded that the culprit of my problem is indeed aspartame.

Unfortunately, after being diagnosed with the problem my doctor did not inform me that one of the possible causes of migraines may be aspatame, even though she did give me a list of may types of food that cause the disorder. At the top of the list was the warning that foods containing phenylalanine may be a problem to sufferers. However not even a hint as to any problems derived from consuming Aspartame. I continued to suffer from migraines even though I discontinued eating every food on that list. What a shock I received one day when I was purchasing 'sugar-free' yogurt at the supermarket. In the ingredients list it said that the product contained aspartame and that aspartame may contain phenylalanine. I immediately stopped using the product in my diet and the symptoms went away entirely. I was Amazed. Why wasn't I informed about the possiblity that aspartame may be the very thing that was making me sick.

I have been looking through the net and the symptoms listed on some pages include some of the scariest I experienced during what I called a migraine. These included memory loss (to the point where I couldn't remember my brother's or my roommate's name), and slurred and jumbled speech. I revisited my doctor to tell of these symptoms which were getting progressively worse (before the aspartame halt) and she said that she has had other patients complain of similar symptoms and that everyone experiences migraines differently. I question whether doctors are informed about the effects of aspartame or if they are just as blind as I was.

I'd like to add my .02 to Sandy's post. NutraSweet (aspartame) is also dangerous for people with hypoglycemia (low blood sugar). Most doctors will tell hypoglycemics to stay away from sugar, but mine never mentioned aspartame. If I eat or drink *anything* containing aspartame, my blood sugar plummets and I get a horrible migraine. It's even worse than eating a sugary snack. I read a few months ago that the reason for this is that it "tricks" your body into thinking it's had sugar (because of the sweetness), but the "energy" (calories) of sugar aren't even there to temporarily raise the blood sugar before it lowers the sugar in the blood. Now, when I get cravings for something sweet, I make tea and add stevia. I've never had an unfavorable reaction from it.

I don't know if you remember, but I contacted you about the possibilty of a connection between aspartame and Meniere's disease. My friend gave up her diet Pepsi and has not needed to take her diuretic except 3 times in one month . She was taking them daily to reduce the dizziness. She hasn't needed it. She said she really wasn't keeping track, but suddenly realized that she did have a decrease in symptoms.
I am now known as the Nutrasweet police, but I have given your infoe to everybody, including several physicians. I have not noticed much change in my fibromyalgia symptoms, but some times you don't know how good you feel until you feel awful again. I have had some sort of virus, we think. Jokingly we have decided that it is aspartame withdrawl. I will tell you that on reflection, I had a seizure disorder and the worst seizures were when I worked 11 PM-7AM shift and lived on diet pop for caffeine.
Two years ago, I had an EEG and No seizure actitvity was present! Imagine that.

Please forgive me for going on so long. I want to say THANK YOU!! and please continue your work.

Re: Headaches and DM?
Sun, 10 Aug 1997 22:42:08 -0500

When I was first diagnosed and made the transition from REAL soft drinks to diet... I started getting a lot of headaches.

It seems that one of the most common side effects of Nutri-Sweet (aspartame) is headaches, until your system becomes metabolized to it... And then from time to time when the aspartame builds up to toxic levels, it has been known to cause migraines.

I used to drink vast quantities of Diet Coke or Diet Pepsi (both caffeine free) -- they never seemed to quench my thirst and I suffered from terrible headaches. I quit using any products with Aspartame and the headaches have gone away.
....
I don't think this is merely anecdotal. There is mounting evidence that aspartame is NOT safe. Please remove this dangerous drug from the market.

[husband's case history]

Date: Fri, 1 Aug 1997 14:14:11 -0400
To: xxxxxxxxxxx@xxxxx.xxxx.xxx
Subject: Fw: NutraSweet

I know how hard it is to give up Diet Coke and Diet Pepsi -- I was addicted
to the stuff. Do you remember how much I used to put away? Athol (my husband) as almost as bad.

Here is my NutraSweet story -- I used to get horrible headaches and was thinking of taking out shares in Johnson & Johnson I was sucking down so many Tylenol! Mary Beth had told me that NutraSweet gave her terrible headaches and I poo-pooed her until it eventually got so bad that decided to try. The headache used to sit at the base of my skull and my neck would
crack horribly when I stretched it in an attempt to alleviate the pain. After going through a few weeks of withdrawal symptoms -- I was fine. I haven't taken ANY pain killer for over three years.

Now Athol's NutraSweet HORROR story. A couple of times in South Africa and then a couple of times here Athol had unexplained blackouts. It wasn't a faint -- he didn't crumple like a faint

-- he would go down like a felled tree! We saw an endless parade of heart specialists and neurologists, he had MRI's, EKG's, EEG's, zillions of blood tests. No answer.

Eventually one collapse (about 3 or 4 years ago) was so bad we thought he'd had a stroke -- he had all the symptoms of a stroke. Paralysis down one side, slurred speech -- the works. He was hospitalized -- more tests including a Doppler scan of the carotid arteries (clear). They finally let him come home after three days and we were really none the wiser. The doctor and hospital decided that a perfectly healthy 33 year old male with NO predisposing factors had had a TIA (transient ischemic attack) -- doctor-speak for mini-stroke. He had several more collapses after that.

Finally one at work which freaked everyone out. His boss insisted that he stay home until he was properly diagnosed. He saw yet another neurologist in the city and this one finally diagnosed epilepsy. Athol then went through a series of four anti-seizure drugs -- Dilantin (caused a suicidal depression), Depakote (came damned close to destroying his liver -- the liver enzyme SGOT measured 240 when it should be under 40), Tegretol (made him unbelievably moody and aggressive) and finally Lacmictal which seemed to be OK.

Problem was the initial dosage wasn't preventing the seizures. They kept increasing the dose until Athol was like a zombie. In the meantime I had read that NutraSweet could cause seizures. I begged Athol to stop using the stuff, figuring that someone who was already having seizures didn't need anything that could cause more.

Finally in October of last year he did stop. Unrelated to this he had decided to start reducing his medication because he hated how he was feeling. He decided that he would take his chances with the seizures rather than feel so lethargic and spacey all the time. He gradually reduced his dosage and on Christmas Day 1996 stopped using medication altogether. He has not had one seizure since. Co-incidence? I think not. He only started these seizures after he'd met me and I used aspartame.

When I think of the harm I must have done to myself, Athol and my kids by having us all use this poison in the mistaken belief that sugar was actually worse for us -- I feel physically sick. I can only hope that we quit in time.

Subject: OVER 30 DAYS WITHOUT ASPARTAME,,,,

Thanks for the e-mail today, it has been 34 days without any aspartame, and I feel great. Looking back, it amazes me that I was just going along, not really thinking about how I was feeling, when Jim said that he had really noticed that I wasnt in as much pain, as before.

As he said, I wasnt twisting all over the sofa trying to get comfortable. My pain level has gone down by at least 60% if not more. I am doing my gardening, and general housework, and other things without to much pain. I can carry on now, even when I am getting tired. Whereas before, I would have to lay down, and nap or at least rest.

I really havent got any down side, to anything, as yet. I really feel like I am getting my life back. I am much nicer to be around, my friends have noticed that, and I can even joke around now, I am not always spending my energies on fighting the pain. I just hope that it continues to get better for me.

To: xxxxx@xxxxx.xxxxx.xxxx
Subject: Re: Don't Buy Stock In Monsanto :)

I feel much better, thanks.

I no longer get blurry vision, have less tremor in my hands (although this is one symptom which I think will never go away completely), no more chronic "tickle" in throat which caused me to constantly clear my throat, less chronic depression, and best of all, I don't feel that deep down fatigue that

I used to feel in seemingly every bone in my body. Overall, I seem to sleep better also, although I still occasionally get one of those sleepless nights. I no longer get those inexplicable monster "back-of-the-eyeballs headaches" when I read anymore; although I used to be an enthusiastic reader at one time before aspartame, I couldn't tolerate reading for more than 15 minutes when I was on aspartame.

I still do get tired more than I feel I should, but I definitely am doing better than just 6 months ago. I believe that an important residual effect of aspartame use is that due to chronic fatigue and basically feeling sick all the time had led me to become much less active which caused me to gain weight and to lose endurance from lack of enough aerobic excercize.

xxx, in addition to removing aspartame from my diet, I have also cut my caffeine down to only one cup of coffee (seem to still need that jolt in the morning) per day which really minimizes that 2pm to 4pm "valley of fatigue" crash which used to hit me very hard usually right after lunch.

Other diet revisions which I have made: 1) almost compete substitution of soft drinks with fruit/vegetable juices such as V-8, oj, cranberry, grape, etc. about the only soft drink that I'll still have is ginger ale but even that I have rarely; 2) major reduction (but not fanatic abstinence) in consumption of red meats especially cold cuts; 3) we make a couple of big pots of different soups every weekend made with a lot of fresh veggies which we use as left overs which last through the week; 4) also have increased intake of vitamins upto at least 1500 mg of vit C and 400iu of vit E per day along with a multi for B vitamins which I always make sure to take along with meals to ensure more complete digestion and adsorption.

I really did not start my diet change until after my 60 day countdown of stopping aspartame use. So I guess it was somewhat "scientific" for whatever it's worth. We have also started experimenting with natural non-caffeine teas and oriental herbs.

The main idea that I have brought away from following the CFS and aspartame post lists and web info is that everyone has a right to actively take care of his own health and to have free access to the materials and information to do so. I think that the modern medical system has become too bureaucratic and unresponsive to individual needs, especially if your symptoms don't happen to fall neatly into an easy to diagnose and prescribe ailment. As time pemits, we're trying to read more books about holistic health approaches.

AOL/General Health Discussions/NutraSweet
Subj: Re: nutrasweet/indigestion
Date: 29 May 1997 00:07:23 EDT

Nutrasweet makes me sick, my husband and daughter. It started with me. Several years ago, I took two nutrasweet packets in several cups of coffee and had one pop a day. I noticed my eyes were always burning. I read a story in the tribune about two women who sued for blindness caused by it. I stopped taking it. The burning in my eyes went away.

I was afraid to have my daughter take it and wouldn't let her drink pop with it in it. She stayed over at a friend's house where a diabetic grandma lives and drank some of her nutrasweet pop. She was sick all night and half the next day with a horrible headache.

When my husband accidentally had a drink with nutrasweet in it -- he believes in sugar -- it made his head hurt, his nose run and his eyes burn.

I think this stuff is poison and i don't care what the FDA says is safe. they're acting more like a shill for corporations than a consumer protector. A friend of mine pulled a story off the net about a worker at the Searle plant dying from nutrasweet exposure. Apparently, all the workers have to wear space suits and this guy wasn't careful. Kind of like the food additive version of who killed karen silkwood. She also pulled a story off about the woman who died in the ER and smelled so bad? It was from nutrasweet. The chemicals in nutrasweet tuned into methyl...something that smells bad. Anyhow. I don't use it and I tell people it's poison, don't use it.

Re: Lyme & Nutrasweet
Date Sun, 25 May 97 13:27:46 EDT
Newsgroups sci.med.diseases.lyme

About a year ago I stopped drinking/eating anything with nutrasweet. This was truly amazing, because I practically lived on Diet Coke. I have noticed a marked difference in my mental abilities since giving up the nutra-sweet.

I made the decision after reading a newsletter from a group that was trying to inform the public about the dangers of nutrasweet. I can't find the publication now, or the name of the group, but I can tell you what some of their issues were.

They claimed that Nutrasweet only barely passed the FDA approval process,

and if it were not for appointing an additional researcher to the panel that was approving/or not nutrasweet it never would have been approved.

They claimed that in experimental animal studies, nutrasweet caused holes in the brains of animals given the product. If I rememeber correctly, this was not massive doses that caused this damage.

Also, this group claimed that studies showed that one of the metabolities of nutrasweet (what the product brakes down into in the body) is formaldehyde!!!! Just what I want running through my body!!!

As far as helping you lose weight, they claim it fails here too. This is what they claim happens. When you eat sugar, the brain detects the sugar and produces substances to metabolize it. When your body doesn't do this, it results in serious medical problems because of the inbalance. When you consume something super sweet as nutrasweet, your body is tricked into producing the same substance to metabolise the sugar it thinks you consumed. This creates an imbalance in the body. Your body uses cravings to help you to correct this problem. You end up craving sweets, and most likely you will end up consuming them one way or another. So the benefit from drinking diet sodas is negated!

Anyway, I have sweared off the stuff, and think I am better off for it. I used to have the "lyme brain fog" when out and about running errands. I would go crazy looking for a diet caffinated drink to help "clear my head" It was only making it worse.

I tested this on myself by not consuming nutrasweet for about a week or so, then drank a diet soda or two during the day. The increased confusion and brain fog was so marked, it convinced me to stop using nutrasweet. Now if I have 1 every once in a while it doesn't affect me, but if I have more than one, I'm feeling pretty bad. I noticed this one day when I was eating a birthday cake made without sugar and only nutrasweet. I did not know this at the time I was eating it, but I got very sick afterwards. Later, I heard the woman who made the cake boasting how it contained no sugar and was made with tons on the "blue stuff".

Subject: Re: aspartame/xxxxxx

Shortly after aspartame came on the market I started using it frequently. In 1983, desparate to take off some weight, I gave in to all the commercial hype and started using it regularly - everyday. I had gone to Florida to start a future there. I was consuming products with Nutra-Sweet in many of the things I ate daily. I started to feel like I was moving in slow motioin. The headaches - they were unbelievable. I would just lay on the bathroom floor (closest proximity to toilet) and just cry and throwup. Finally, one night, after being in terrible pain and confusion my roommate took me to Boca Raton Hospital. I thought my head was about to explode. Before being shot up with demeral, the doctor asked what I had been eating. I told him I was dieting and he immediately asked how much nutra sweet I was consuming. I was honest and told him I had been passing over healthy foods for things like pudding with aspartame in it or jello. As a compulsive eater, I couldn't settle for just one serving, I would eat the box at one setting instead of a regular meal. Then I ended up with what I call the nutra-sweet hangover. It took me days to get back to normal. That was it for me.

I moved back to Buffalo shortly after that and went back to college. I did my own little study for a graded project, which was video taped. I got an A. After reading some of the stories, I'm really glad my professer kept my project to show to future classes.

Every once in a while I used to tempt fate and see just how much I could get away with. I would actually try to consume a can of pop, and naturally, I would get sick.

My sister, who is very athletically inclined used to drink diet pop on the volleyball court. She told me how she would start to feel like her body was slowing down, as well as her reaction time. I certainly made a believer out of her. She won't go near the stuff.
....
I'm so glad I ran into this extremely important info on the net. Thank you for your organization.

Subject: Re: Aspartame experience

Thank you for your enlightening information regarding Aspartame. I would like to share my personal experience with you.

When the product hit the market in the early 1980's, I was a teenager. Because I was always watching my weight, I drank lots of diet soft drinks. At the time, as you will recall, Aspartame was added to soft drinks without any other type of sugar additive available. Since Nutrasweet was touted as safe, I, along with everyone else, continued to drink diet soft drinks. Approximately two months after the switch over, I started to have mild seizures. At the time, I was not sure what was happening and continued to drink diet soft drinks unknowingly. As the seizures continued, I went to a physician to find out why this was happening to me. They tested me and concluded that I must have had a mild form of epilepsy, although nothing conclusive ever showed up to indicate epilepsy. I was prescribed an anti-seizure medicine, Dilantin, at the age of 18. After being on the drug for perhaps six months, my father had heard a TV news report (back in the 80's) that some people were having a reaction to the sweetener. At that time, I went off of anything containing Nutrasweet, as well as my Dilantin, and within six months was completely normal again.

I am now 32 years old and will not touch Nutrasweet in any form. My children are not allowed to drink diet soft drinks or have anything that contains Nutrasweet. I feel that Aspartame is a dangerous food additive and should be taken off the market. What makes me angrier still is that no choice was ever given to the consumers regarding what type of sweetener they wanted. Saccharin had been on the market for years and I had had no problems at all with it. The lab mice that were injected with the Saccharin were injected with doses so large, no human could ever consume the quantity given to these animals. I'm angry because I was not given a choice. I would have rather continued to been able to purchase products containing Saccharin, instead of going through what I want through with the Nutrasweet products.

Please continue your good work! Hopefully, through your work, we will be able to see Nutrasweet come off of the market! Thanks again.

Re: Lyme & Nutrasweet
Date 24 May 1997 05:43:17 GMT
Newsgroups sci.med.diseases.lyme

My daughter drank diet coke until about 3 years ago. The diet brand started to make her sick gradually until she dropped them altogether and drank regular (classic) coke with no problems. She has to avoid all diet products with aspar. or nutrasweet or her symptoms make her very sick. Maybe there's some truth in your question. (But then again, both products make my brainstem swell. Think it could run in

the family?

hmmm.....seems there's something not hit on yet with the excacerbated symptoms and brainswelling, then with the nutrasweet with it. Because of my seizures I have to do without it. And also the right temporal lobe of my brain is swollen.....Ok, that's all i know:).....will leave the details of this one for another brilliant researcher out there:)

Re: other/nutra sweet

Newsgroups alt.med.cfs

I agree with what you said about nutra sweet not causing CFIDS. But it can cause problems. About 2 weeks ago I ate large doses of this in a jello salad (for 2 days!) without knowing it was sugar free jello. I have had a major set-back with SEVERE joint aches, esp my right knee which was hard to walk on, fever, sweats, chills, HEADACHES, & extreme exhaustion which put me back on the couch unable to function. I finally went to my Dr. for pain pills & he said, "What did you eat?" as it was an allergic reaction he said, & it would take about 2 weeks to clear out of the system. Much sorting out, I awoke late at nite saying I bet the jello was nutra sweet. And after tracking the source, it was.

Now the most pains have subsided, but he headaches are still here. I get up in the morining and cry because I feel so bad.

Subject: Re: Thanks for the info

I just wanted to say thanks for the information that you made available on the web about aspartame. I am a 27 year old male. For the past 10 or 11 years I have consumed large quantities of diet sodas. All of which contained aspartame. I would drink soda all day long. When I wasn't drinking diet soda, I was drinking coffee or ice tea sweetened with sweet & low or equal. All this time I was figuring I was doing my body good by not consuming all that sugar. That was until I heard about aspartame.
On December 31 my mother and my wife told me about the 60 Minuets show on the aspartme. I like to check these things out for myself, so I spent hours today on the web reading about this stuff. Most of this information came

from Dorway. I was sickened to read about my own governments sell out, not this type of thing surprises me.
I went down the list of reactions. At one time or another, all of us experience some of these things, but they can usually be explained. I am in good health. I am overweight, but I work out and do cardiovascular exercise a few days a week. I am often surprised at how fatigued I am. I have been getting headaches out of the blue for the past two years. I have experienced some hair loss from time to time. I lately have become dizzy a few times with no warning. My joints ache, at times I have memory loss.
I don't drink very often, and I don't use drugs. I try to eat right and take care of myself, and I generally stay well all the time except for these unexplained symptoms that I get from time to time. I don't go to the doctor unless Something is major is wrong, so I have never talked to anyone about these problems.
I was glad to hear about this from you. This might well be my problem. I have decided to try the 60 day test. I probably will never use the product again, but for the next 60 days I will not go near the stuff. I am also telling everyone I know about the Dorway website.

It has been about 120 days since I kicked the habit. I thought maybe my letter was lost in cyberspace since I had not heard from you in so long. My headaches are gone. Surprisingly my dizzy spells are gone as well. That was what was worrying me. I was keeping a record of these spells, and the last one I that accrued in early Jan. They would come at any time even watching TV. They are gone. My joints no longer ache, memory is better and I feel great. I will say I do miss diet coke etc.... I now drink allot of water, mostly sparkling or seltzer with only lime or something. I want to thank you again for the info.

To: xxxxx@xxxxx.xxxxx.xxxx
Subject: Nutrasweet Symptoms
Date: Fri, 18 Apr 1997 10:23:02 -0400

I had gotten used to living with headaches and fatigue. I thought I wasn't getting enough sleep (7 1/2 to 8 hours per day). Each day, I used around 6 packets of equal -- three in a large 20 ounce coffee in

the morning and three in a large 20 ounce tea in the afternoon. The reason I used the stuff was that it disolved quickly compared with sugar, and I actually do prefer the taste to sugar. Add in lots of sugarless gum and a diet soda from time to time, and it was consuming a lot of aspartame.

I am otherwise in good health and exercise frequently.

Almost immediately upon giving up Nutrasweet, my symptoms went away. No more fatigue and fog in the morning, and a clearer head throughout the day.

It was your web site listing hundreds of pages of toxicity reactions that convinced me to change my habits. You have got to keep getting the word out.

I don't have any documented proof by article. But I can tell you that I am positive my brilliant daughter lost her photographic memory the first year nutrasweet was out - that first summer. She is an electrical engineer now, but was afraid she wasn't going to make it during her last year of high school as valectorian. She did!!! But boy did she have to kill herself working on her studies. It would have been so much easier without the photo memory loss.

I myself, have a time with short term memory loss on just a couple cans of diet pop with aspartame. I can't even remember who I just talked to on the phone sometimes.

That stuff is really bad and it aggravates my fibromyalgia I found out just

recently.

AOL/General Health Discussions/NutraSweet
Subj: Re: Re:NutraSweet and fibromyalgia
Date: 10 Jun 1997 22:08:36 EDT

I'm another one with Fibromyalgia. When they first switched to Nutrasweet in the diet sodas, I started itching so bad from head to toe, that I had to be on Benedryl for a year. That's how long it took me to find out the cause of the itching. I suspected the itching was related to a food allergy, but when I went without the diet soda for three days, the itching continued. I found out the cause when I went two whole weeks without any sodas and the itching stopped. It takes two weeks for it to leave the fatty tissue in your body. It definitely effects people with Fibromyalgia. I wish they would wake up and realize how harmful it is.

Re: menopause joint pain?
Date Sun, 11 May 1997 11:21:30 -0600
Newsgroups alt.support.menopause

I am 50 years old and also have had joint pain for a few years which I attributed to approaching menopause. Accidentally, I discovered that the source of my pain was the use of Nutra Sweet. Once I stopped using it in my coffee and didn't eat or drink anything containing aspartame, my joint pain completely went away.

To: xxxxx@xxxxx.xxxxx.xxxx

Subject: Re: Whey to go!!!!!!

I loved your article. Just recently I found out the EVILS of Aspertame. As soon as I did I called my Mother and told her not to drink any more of her diet Pepsi, which by the way she has been drinking for 20 years plus. Well even though Aspertame hasn't been the market 20 years it was still wrong to change what ever they were using before. Well she hadn't drank diet Pepsi for a couple of weeks and she was starting to feel better. Out of habit she bought a diet Pepsi and drank a little, and soon after realized what she had done. With in the hour she starting having pains in her sides and the old familiar headache came back. She also just felt like crap the rest of the day. Needless to say she'll never do that again. By the way she has had continual stomach and intestine problems as far back as mid '86. And every doctor has given her one potion or another to treat the problem(poison in her system). I have introduced my mom to vitamins and minerals and she loves the results. The other day she bought some vitamin B complex. Well she took it and laid down took take a nap. When she awoke she had a headache, well guess what the vitamin had, ASPERTAME. I am so glad people like yourself are standing up and making the FDA take responsibility for its BIG mistake. (one of many) If we can get the politics out of the way maybe some common sense will kick in(fingers crossed). By the way I call Yoplait and grilled them on there use of the poison. Of course I fell on deaf ears. Well keep up the great work.
And if you need any more info on my story let me know!!!!

Here is another testimony to add to your thousands of others just discovered by me on the web. I have used aspartame for years, usually going back and forth between regular sodas and diet sodas as my "health consciousness" fluctuated. I knew that diet sodas caused me severe gastro-intestinal problems, but figured that was the price I had to pay for that "great taste and refreshing fizz". It wasn't until my husband informed me that he was sick of having to "rub my stomach" and maybe I should consider cutting back on the diet drinks that I decided to research Nutrasweet and found your website. (My stomach cramps were so severe that I was unable to sit down or eat or do anything other than go to sleep for the evening, and I also was a chronic headache sufferer.) Now I vow that I will never knowingly ingest aspartame again, and just regret all the years that I've allowed this harmful substance to ruin my body. What disturbs me the most is the children's vitamins I have religiously given my 3 kids...all containing aspartame, of course.

Carol's right. This stuff is so bad, it would take a month just to dent the surface.
And I get angry every time I see it or hear about it. It's bad stuff....and Carol didn't overstate it at all.

I'm one of the lucky ones....it makes me sick to even take a sip of something w/ aspartame in it. Makes my mouth feel greasy (like sorbitol does, only slimier). And if I'd been able to keep it down, I know I'd have been using it, since I'm one of the PWCs with the weight problem.

It took me a year to get my husband off aspartame after we met. Once he got off and the addiction wore away, he was *stunned* at what it had been doing to him.

If you have to drink carbonated stuff (also bad), do as Carol suggested, please, and mix soda water w/ your favorite juices. I can't even imagine what aspartame does to sick people. Honest. This stuff really screws up your thinking, too.

My son, who is 7, developed an allergy to nutrasweet when he was about 3. It alters his behavior. It is like Jekyl and Hyde right before your eyes. He gets so aggressive and hyper and he can not be controlled. Any one else have this problem? I thought it was sugar that was making him hyper and we put him on a sugar frre diet when he was 3. About 30 minutes after ingesting it, he went crazy. We tried this off and on for about a week and had the same results. He has had nutrasweet since then and it still makes him crazy.

Subject: Aspartame Reaction

I spent January through February aspartame free by cutting out Diet Coke. I am diabetic and have spent most of the 20+ years drinking diet sodas. I thought I was crazy cuz my husband said I had become belligerent and "testy." I've had back and shoulder pain (what I thought was bursitis) for most of these 20 years. And it's always been difficult to control my diabetes in all this time.

I had been going to an accupuncturist for the back and shoulder pain. It worked but was only temporary and expensive. Well, it didn't take long in those two months for the headaches and back and shoulder pain to go away. And my attitude has improved tremendously.

The unthinkable has now happened. I backslid and drank one diet coke, which then became three a day within a week's time. For the last six weeks I have been suffering from back and shoulder pain and headaches, and have become a bear again and very "emotional." And when I wake in the morning, my hands are stiff. Have been drinking probably 5-6 diet cokes for the last 5 weeks, and am trying desperately to get off the diet cokes again.

All the studies in the world are not going to convince me Aspartame is okay when my husband AND I get excruciatingly painful headaches when we ingest the stuff (and since we're not genetically related, that's pretty scary), and only when we ingest the stuff, and when we stop ingesting the stuff, our headaches go away. I will also never forget being told BY MY DOCTOR not to ingest Aspartame when I was pregnant, because it might cause fetal brain damage. I think this is a dangerous product, and I won't let my kids go near it.

Subject: NutraSweet case/headaches

Read with great interest the information on aspartame. What a tragedy! I repeatedly found myself plagued with severe migraines if I consumed as little as is found in four cans of diet soda. I thought I must be crazy; surely they can't be caused by the Nutrasweet. After testing my theory, the cause and effect finally became clear to me. I thought I was the only one until I found various sites dealing with the issue. Thank you for confirming what I really had already known in my heart - aspartame is very dangerous.

I just wantedto say THANK YOU for taking the time to put this vital information on the web. So many consider the subject taboo.

I am 33 years old and have kidney disease. Two years ago Duke University performed nurmerous test to find out why I had so many headaches, and other symptoms. I was told that I had an allergic reaction to aspartame which is found in most all diet products. Doctors would not comment if this was related to the kidney disease I have, but I believe it is possible.

As a diebetic, I have great concerns about nutrasweet. Several letters to the Nutrasweet Corporation have gone unanswered. God help all that are using these products to try and make themselves thin and beautiful for society. They are putting themselves in the grave.

Subject: Re: simple case history

my wife used to drink diet coke religously. we live in south texas, a hot and humid climate. Several nights, she couldn't sleep. She had heart palpitations and flutterings. (she's only 36) She is a non smoker, non drinker, exercises regularly and is 5'4" and 107 pounds.

I hate doctors. (I also have worked for American hospital supply co, been around the hospital long enough to know that they don't have all the answers.) We have used acupuncture and chiropractors, so use some alternate homeopothy treatments.

Anyway, after 2 nights of no sleep, I did what doctors do; I asked questions.

What did you eat differently?
" " " drink?

ANd the only unhealthy thing I could fathom was the Diet Coke.

The coke left our home that day.

She has been in the pink ever since- with one exception. The day she drank 4 oz of the stuff her sysmptoms reappeared-albeit mildly.

Now, for the first time in a long time, she perspires, sleeps and feels just fine.

Much more (filtered when possible) water, and an occasional herbal tea are the only changes in lifestyle.

Glad to have my wife back.

All this, and I had never read your stuff before!

http://www.newswest9.com/story/15110228/he...-office-resigns

SANTA FE, N.M. (AP) - The head of the resource protection division at the New Mexico Environment Department has resigned, but the agency isn't offering any details.

Department spokesman Jim Winchester confirmed Jim Davis' resignation was effective Tuesday morning.

Winchester also confirmed that the department restructured some operations Monday and that included removing the state's hazardous waste bureau from Davis' division.

The bureau is responsible for oversight and technical guidance related to the generation of hazardous waste as well as its storage and disposal.

This includes work at Sandia and Los Alamos laboratories and the federal government's nuclear waste repository in southeastern New Mexico.

Winchester says the decision was made at the discretion of the department's secretary and deputy secretary. He didn't provide any details.

Davis, reached Tuesday by The Associated Press, declined to comment.

EPA Drops Tough New Lead Paint Rule In Face Of Industry Opposition

18 Jul 2011
http://www.huffingtonpost.com/2011/07/18/e...e_n_901944.html

If you're not a regular reader of Professional Door Dealer magazine, you may have been unaware of the lobbying battle over a proposal to toughen lead paint rules in schools, day care facilities and homes. The Environmental Protection Agency dropped on Friday an effort to add more testing requirements to existing lead paint rules in the face of fierce opposition from construction groups and other businesses. The original rule requires strict regulations for businesses that repair old buildings to ensure low levels of lead, a substance that has been found to cause brain damage in children.

The proposal was strongly opposed by the home-building lobbying groups, which claimed that it would cost an extra $100 to $500 per project and hurt business. Recently, the Window and Door Dealers Alliance made the battle a top priority and "organized industry leaders to attend a White House meeting with top Office of Information and Regulatory Affairs officials in order to present the industry case against the regulation," National Glass Association vice president David Walker told Glass magazine.

In addition, the industry pressured members of Congress, including Denny Rehberg (R-Mont.) who offered last week an amendment to an appropriations bill that would make it more difficult for the EPA to enforce its Lead: Repair, Renovation and Painting rule.

In Switch, FAA Allows Aircraft Companies To Certify Safety Of Its Products

Today's must-read: The Seattle Times has an excellent look at how a new Federal

Aviation Administration program gives aircraft companies the power to certify the safety of their own planes.

Until now, the FAA appointed inspectors at the companies or outside contractors to report directly to the agency. Now, those those in-house staffers who assess the safety of products will report to the companies themselves. The self-certifying program applies to nine companies, including Northwest Airlines, Gulfstream, and Jamco, a supplier to Boeing and Airbus -- and by next year, aerospace giants like Boeing will join the program. The FAA emphasized that only companies with a track record of competence can qualify.

But aviation safety experts, such as Jim Hall, a former chairman of the National Transportation Safety Board, criticized the new approach.

"The federal government, because of shrinking resources, is turning over key parts of transportation-safety oversight" to private industry, Hall told the Seattle Times. "History tells us this could be a very dangerous path," he said, citing the 1998 crash of Swissair Flight 111 off the coast of Nova Scotia as a possible consequence of self-regulation.

Greyhound Supports Bus Safety Bill

Bus safety legislation got a major boost with the support of a bipartisan group of senators and Greyhound, the nation's largest bus company.

The Motorcoach Enhanced Safety Act, which was proposed in the wake of several high-profile fatal bus accidents earlier this year, requires safety improvements in the manufacture and operation of buses, and gives regulators more tools to crack down on unsafe drivers. Over the course of a few days in March, 17 people were killed in two separate bus accidents.

"I applaud Greyhound for their commitment to passenger safety and I hope others will follow their lead on this critical issue. Congress must move forward on passing this bipartisan legislation before more lives are wasted in tragedies that are entirely preventable," Sen. Hutchison (R-Texas) said.

U.S. Attorney: Nursing Home Billed Medicare For 'Worthless' Care That Led To Deaths

A nursing home chain that complained two weeks ago about lower Medicare reimbursement rates under health care reform was accused today of billing Medicare and Medicaid for "worthless" care that lead to deaths and injuries.

In the first such suit ever filed in Kentucky, the U.S. Attorney's office in the eastern district of the state filed a complaint alleging that a nursing home owned by Carespring Health Care Management defrauded Medicare and Medicaid by submitting bills for systemically poor care of residents -- numerous patients suffered serious injuries and

five patients died from 2004 to 2008, according to the complaint, reported the Lexington Herald-Leader. Officials at Villaspring Health Care and Rehabilitation have been cited several times for inadequate care in previous years.

On June 11, Carespring filed a comment with the Centers for Medicare and Medicaid Services, complaining about a proposed recalibration of the formula used by the agency to reimburse health facilities. "If the expectation is for us to continue to provide excellent care to the Medicare beneficiaries, ample reimbursement is a necessity in providing this care and to offset the rising costs of operations and staffing."

CFPB Picks Up The Pace Of Staffing

The pace is picking up at the Consumer Financial Protection Bureau. In addition to naming Richard Cordray as the new director in a much-anticipated decision, the new bureau has lured 172 staffers from other regulatory agencies, about half the number who were approached and offered transfers, according to a Treasury department inspector general's report released on Friday. The bureau is also hiring to fill several positions and has received several thousand applications. Areas that need people include the Supervision, Fair Lending and Enforcement division and the Consumer Education and Engagement division.

In addition to its Washington headquarters, the bureau plans to set up three regional offices in San Francisco, Chicago and New York. And the bureau's Consumer Response Center will begin taking website inquiries, phone calls and complaints starting on Thursday.

On a related front, iWatchNews.com has an excellent series of stories called "Debt Deception", profiling a variety of Americans who are suffering from borrowing nightmares, which the CFPB is intending to address. On Friday, Amy Biegelsen reported on Mildred Morris, a single mother in West Virginia who lost her Pontiac Sunfire after using it to secure a $700 loan to pay for her son's college dorm fee.

Goldman Floods Regulators To Influence Dodd-Frank

In other Dodd-Frank news, the Sunlight Foundation has a new feature that tracks every disclosed meeting financial regulators have with lobbyists, executives from Wall Street and the financial industry.

Goldman Sachs dominates the 2,000-plus meeting list with 83 meetings -- including one day, June 14, when the firm's reps went to four separate meetings with CFTC officials to discuss swaps-trading rules.

After Goldman comes JP Morgan Chase, with 73 meetings, Morgan Stanley, with 58 meetings, and Bank of America, with 55 meetings.

Morgellons: Terrifying New Disease Reaching Pandemic Status

Sunday, 17 July 2011 06:22 | Last Updated on Monday, 18 July 2011 23:15 | | |
by: Barbara L. Minton of Natural News
http://parasitologyblog.com/news/morgellon...pandemic-status

(NaturalNews) It sounds like something from a bad sci-fi movie. People report the sensation of creatures crawling under their skin, mysterious moving fibers appear, and finally bugs and worms pop out. Unfortunately, these terrifying symptoms are all too true. The people having them are experiencing Morgellons, the latest and scariest in the series of bizarre diseases appearing in the last few years, seemingly from nowhere. Morgellons is now reaching epidemic proportions in the U.S. and abroad.

Morgellons is a multi-dimensional disease

Morgellons starts with relentless itching, stinging or biting sensations. Cotton-like balls may appear on the body with no reasonable explanation. Soon skin rash develops along with lesions that will not heal. Many sufferers report string-like fibers of varying color popping out through the skin lesions. These fibers can be black, white, red or even iridescent blue. Others report black specks falling from their bodies that litter their sheets and bathrooms. Eventually a variety of bugs and worms begin to find their way out of the body through the lesions. Other accompanying symptoms include hair loss, debilitating and chronic fatigue, hard nodules beneath the skin, and joint pain.

Morgellons also has a cognitive aspect. People with the disease experience neurological damage that manifests as difficulty concentrating, inability to process and use language effectively, and generalized brain fog. The presence of reduced cognitive ability has made it easier for doctors to dismiss Morgellons and send patients away with

a diagnosis of delusional parasitosis, meaning they are imagining they are infected by parasites. After the typical eight minute visit, traditional doctors pull out their prescription pads and write these people prescriptions for antidepressants or antipsychotic medications.

As a result, Morgellons also has a psychological component. Once people become aware that symptoms such as theirs are treated as delusions they are reluctant to seek further medical attention and tend to withdraw from society with their only contact with others being through the internet. They begin living the lifestyle of the leper. Many have to give up their jobs and become dependent on public assistance. This adds to the psychological debilitation of the disease. Not being taken seriously when you know you have a terrifying and devastating disease causes permanent psychological damage.

Morgellon's victims feel the resentment other patients do when they are told it is all in their heads. As Morgellon's progresses and the neurological symptoms become more manifest, patients can become difficult to care for and deal with. Isolated with only the internet, they become less able to effectively care for themselves. Some Morgellons patients have committed suicide.

It is a sad situation that the traditional doctor's visit must often end in a diagnosis, but the doctor is unwilling or unable to take the time to make sure it is a correct diagnosis. The traditional medical set up is frequently unable to deal with patients who present with a variety of diverse symptoms affecting several body systems at one time.

Oakland A's player Billy Koch and his family all have Morgellons. They have been open about their disease and have made some attempt to educate others. Billy had to retire from his baseball career as a result of the disease. Singer Joni Mitchell also has Morgellons, and the disease has negatively impacted her career as well.

Many morgellons victims end up trying to treat themselves

Anyone with Morgellons's symptoms will probably spend a lot of time going from doctor to doctor. While the unhelpful ones simply tell them they are delusional, the helpful ones prescribe a variety of creams used for scabies, ring worm and other parasitic diseases, but nothing works for more than a few days. With no help from the medical community, people with Morgellons turn to the internet where they learn the name for their disease and the names for the parasites that are coming through their skin. As a result of desperation and the lack of information about the disease except from chat boards, many victims end up trying a variety of toxic treatments at home.

Authorities on the disease are emerging

One of the few people to take the disease seriously was Randy Wymore, a neuroscientist at Oklahoma State University Center for Health Science. He received

samples from a range of people who claimed the fibers had come through their skin. Although the samples all resembled one another, to him they looked like no other synthetic or natural fiber with which he compared them. He finally asked the Tulsa police department's forensics team to examine them.

The team identified the chemical structures of the fibers and compared them to their database of 800 fibers. They found no match, so they used gas chromatography to compare the fibers to their data on 90,000 organic compounds. The fibers did not match up with any of them. They concluded that the fibers were unknown, and not contaminants from clothing sticking to scabs on the lesions as had been thought by those so ready to dismiss what their patients were saying. Wymore and the forensic team concluded that the disease producing these fibers was very real and very frightening.

Wymore then asked the chief of the pediatrics department at Oklahoma State University Hospital, Rhonda Casey, to take a look at some of the patients. At first she was tempted to dismiss them too, but she began to realize how ill the people were. They had neurological symptoms that included confusion, loss of control of their feet that resulted in difficulty walking, and their mouths sagged when they spoke. Many had been diagnosed with neurological diseases.

Dr. Casey examined the patients, took biopsies of their lesions as well as from their healthy skin. Using a dermatoscope, she was able to observe fibers under completely unbroken skin. She found them embedded in the healthy tissue of the patients as well as the diseased tissue, and admitted seeing the full range of fiber colors. She reported seeing a lesion on a young girl's thigh with black fibers just barely protruding from it, and concluded that she could not have done this to herself.

Another person taking the disease seriously is Trisha Springstead, a registered nurse in Florida who has become a beacon of light for Morgellon's patients in the area. She has seen the fibers come through their skin, and has spent hours with patients extracting parasites embedded so deeply that a needle is required to extract them. According to her, a dermatoscope does not penetrate deeply enough to reveal the full extent of parasite involvement.

CDC begins epidemiologic investigation into Morgellons

In April, 2006, the CDC recommended an epidemiological investigation of what they were then referring to as a public health concern. In January, 2008 they announced a grant to health care giant Kaiser Permanente to test and interview 150 to 500 patients suffering from Morgellons. The study is being done in the Bay Area of northern California, where many Morgellons patients live. Kaiser Permanente doctors have been among the most ready to classify Morgellons as delusional parasitosis.

The National Center for Zoonotic, Vector-Borne, and Enteric Diseases (ZVED) provided statements posted on the CDC website regarding what the CDC now calls "Unexplained Dermopathy (aka Morgellons"). This organization was created in 2007 under CDC's Coordinating Center for Infectious Diseases. ZVED promotes itself as proving leadership, expertise, and service in laboratory and epidemiological science, bioterrorism preparedness, applied research, disease surveillance, and outbreak response for infectious diseases.

The term zoonotic refers to any disease that is able to jump the divide from animals to people. Microbes created for bioterrorism are zoonotic. There are many known zoonotic diseases, such as Lyme disease and malaria. Vectors are the transmitters of disease-causing organisms that carry the pathogens from one host to another. By common usage, vectors are considered to be invertebrate animals, usually arthropods. Technically, vertebrates can also act as vectors, including foxes, raccoons, and skunks, which can all transmit disease to humans through a bite. Mosquitoes and ticks are the most notable disease vectors, although mites and gnats may also carry disease. Enteric diseases are bacterial and viral infections of the gastrointestinal tract that account for an under appreciated burden of morbidity and mortality domestically and abroad.

The involvement of ZVED in creating the CDC webpage for Mogellons clearly implies acceptance by the CDC that Morgellons is a disease involving not just fibers but parasites.

ZVED's vision statement describes three goals: accelerating prevention, control, and preparedness of ecologically mediated microbial threats; global vision, global presence, global reach, and health impact; and working at the intersection of human, animal, and ecological health to achieve healthier people, places, and a healthier world.

The Morgellons, GMO link persists

About the time that Dr. Wymore's forensic investigation of fibers was completed, a specialist in infectious disease detection, Ahmed Kilani, claimed to have broken down two fiber samples and extracted their DNA. He found that they belonged to a fungus.

Meanwhile, Vitaly Citovsky, Professor of Biochemistry and Cell Biology at Stony Brook University in New York, discovered the fibers contained the substanceAgrobacterium Tumafaciens, the bacteria causing crown gall disease in plants (formation of tumors in more than 140 species of dicot plants). It is a genus of gram-negative bacteria capable of genetically transforming not only plants, but also other eukaryotic species, including humans.

Anonymous samples were provided to Professor Citovsky by the Morgellon's Research Foundation to use in investigating the potential presence ofAgrobacterium Tumafaciensin biopsies from Morgellon's patients. Control reactions included samples

provided by healthy donors. Only Morgellons, not healthy subjects, tested positive for the bacterium in these studies.

Professor Citovsky issued a statement saying his observation does not imply thatAgrobacterium Tumafacienscauses Morgellons, or that Morgellons is indeed an infectious disease. However, he has called for further study to determine (1) statistical significance of data, (2) whether the bacterium is not only present extracellularly, but also causes genetic transformation of the infected tissues, and (3) whether infection of laboratory animals with the bacterium can recreate symptoms of Morgellons.

Agrobacteerium Tumafaciensis a soil bacterium. Symptoms of grown gall disease are caused by the insertion of a small segment of DNA into the plant cell, which is incorporated at a semi-random location into the plant genome. They are parasitic and detrimental to the plant.

DNA transmission capabilities of Agrobacterium have been extensively exploited by biotechnologists as a means for inserting foreign genes into plants. They discovered the gene transfer mechanism betweenAgrobacteriumand plants, and developed methods to alterAgrobacteriuminto an efficient delivery system for gene engineering in plants. This is done by cloning the desired gene sequence into the transfer DNA (T-DNA) that will be inserted into the host DNA. Under laboratory conditions the T-DNA has also been transferred to human cells, demonstrating the diversity of insertion application. The mechanism through whichAgrobacteriuminserts materials into the host cell is very similar to mechanisms used by pathogens to insert materials (usually proteins) into human cells.

Description: *Europeans (and everyone else) should be*

TheUnhivedMind - July 18, 2011 01:07 AM (GMT)

The world’s largest human experiment part two: why Europeans (and everyone else) should be worried

Madison Ruppert, Contributing Writer
Thursday, July 14, 2011
http://www.activistpost.com/2011/07/worlds...iment-part.html

In part one of what will become a long-running series, I briefly outlined two recent papers published in the renowned peer-reviewed journal, Chemical Research in Toxicology, which revealed the horrifying effects of Monsanto’s best-selling glyphosate-based Roundup herbicide.

These two independent and highly rigorous studies found that Roundup caused critical cell damage including necrosis, a horrendous process in which cells break down and release their contents into the surrounding area, creating widespread, unmitigated cell death. The Monsanto formulation was found to be much more devastating to human cells than the glyphosate herbicide alone.

The studies that comprised the bulk of part one of this series were published in an American journal, yet the people of the United States seem, on the whole, ignorant of the dangers of Roundup and the specifically modified Roundup Ready genetically modified seeds made to be able to absorb the toxin and live.

Unfortunately, the problem is not an isolated one, and Americans are not the only people who should be attempting to tell as many of their fellow citizens about these dangers as possible. While Americans need to become vocal on this issue and make it clear to our representatives that we will not stand for anything less than mandatory genetically modified organism labeling requirements, Europeans are now on the front

lines of this battle as well.

In the summary report published in June of this year, Roundup and birth defects: Is the public being kept in the dark?, there is thorough evidence of the European Union attempting to deceive and betray their constituents as our so-called representatives have here in America.

The EU Commission responsible for representing the health of the people of Europe had dismissed credible and thorough scientific research showing considerable dangers associated with glyphosate and Monsanto’s Roundup. They recently dismissed a study published last year in which it was observed that frog and chicken embryos developed birth defects when exposed to solutions of Roundup and glyphosate much more diluted than the solutions utilized for home gardening and agricultural applications.

This dismissal was based solely upon a report manufactured by the German Federal Office for Consumer Protection and Food Safety (BVL) which cited “unpublished industry studies” to legitimize their claims.

We also learn that:
The Commission has previously ignored or dismissed many other findings from the independent scientific literature showing that Roundup and glyphosate cause endocrine disruption, damage to DNA, reproductive and developmental toxicity, neurotoxicity, and cancer, as well as birth defects. Many of these effects are found at very low doses, comparable to levels of pesticide residues found in food and the environment. (P. 5)
Unsurprisingly, the undemocratic European Union has delayed a thorough review of the toxic systemic herbicide Roundup and its main ingredient, glyphosate. All of this was done behind closed doors without any input from the people of Europe who will suffer the consequences of these deadly toxins.

The EU Commission has willfully put the lives of millions of Europeans and their future children at risk knowing full well the inherent dangers in these GMOs. Apparently the lure of power and money has made those responsible for such actions forget that they themselves will be subjected to these so-called foods.

Typically, safety reviews are conducted every ten years, the last being in 1992. Instead of conducting a review of the peer-reviewed independent scientific literature next year, the Europeans have decided to delay it at least another three years.

Due to the serious health risks involved in these products, the Earth Open Source report recommends that the EU Commission utilize what power they have to remove Roundup and glyphosate products from the market until real investigation takes place.

I seriously doubt that the endless coffers of Monsanto will be outweighed by a little bit of common sense or human decency on the part of the fascists responsible for the closed-door dealings that are all-too-common in the European Union.

The aforementioned study published in 2010 that found Roundup caused chicken and frog embryos to grow abnormally was conducted by the lead researcher for the Argentinian government research group CONICET, Andres Carrasco.

Professor Carrasco was inspired to carry out this research by the reports of unusually high rate of birth defects, similar to those found in the chicken and frog embryos, in the regions of his native Argentina that cultivate genetically modified Roundup Ready soybeans.

The idea behind a Roundup Ready GM seed is that, unlike all other vegetation, the Roundup Ready (RR) plant can tolerate the herbicide without withering away. It is important to note that this does not meant that the crop actually resists the toxin, instead it is able to absorb and live, passing the atypically high levels of glyphosate to your dinner table.

The major soy producing countries of South America have embraced GM RR soy with open arms as the report reveals on page 7:
In Brazil, nearly 90,000 tons of glyphosate-based pesticides in 71 different commercial formulations were sold in 2009. In Argentina, over half the cultivated land is given over to GM soy, which is sprayed with 200 million litres of glyphosate herbicide each year. Spraying is often carried out from the air, causing major problems of drift.
Drift is when the airborne particles of the Roundup herbicide travel unknown distances to water sources, farms in which they do not use GM RR seeds, and to homes. In all of these cases the consequences can be dire.

The United Nations Food and Agriculture Organization said in a 2005 report of the Joint meeting of the FAO Panel of Experts on Pesticide Residues in Food and the Environment and the WHO Core Assessment Group on Pesticide Residues that while the maximum residue limit for glyphosate in food for human consumption and animal feed products in the European Union is 20 mg/kg while soybeans have been measured to have glyphosate residue levels at 17 mg/kg.

Knowing the UN and their countless sub-organization, one would not be wrong to speculate that it is likely the case that much less than 20 mg/kg is dangerous to human health.

In Carrasco’s study, he injected 2.03 mg/kg of glyphosate into the frog and chicken embryos, resulting in malformations. While injecting glyphosate does not perfectly represent orally ingesting it through food, it is concerning that levels 10 times less than

the maximum residue limit cause these defects.

In a 2010 interview, Carrasco stated:
Bear in mind that Argentina is a unique case, with huge amounts of soybean acres – 19 million hectares – on more than half the cultivated area of the country, This is something rarely seen. So I say that, from the eco-toxicological point of view, what is happening in Argentina is a massive experiment.
However, it is not only the people of Argentina that are being subjected to a massive experiment, inhabitants of every continent have been forced, without their consent or knowledge, into a dangerous human trial.

The fact is that the governments of Europe and the United States have not bothered to carry out thorough independent investigations of the levels at which average human beings and animals ingest this toxin.

With Europe importing from 35-40 million tons of soybeans and their derivatives every year from the United States, Argentina and Brazil, according to GMO Compass, there is a considerable amount of product being consumed, the safety of which has not been verified independently.

The EU does not cultivate the GM soy themselves as it is officially forbidden; instead they just import it and pretend that it is somehow different than growing the modified beans themselves. Indeed many of these soybeans are GM RR crops, and only three of the ten applications as foodstuffs and feeds have been approved.

In the United States nine applications have been approved, Canada has seven, Japan has six, while Mexico and Australia have five, Taiwan has four, Brazil has three, South Africa has two, the Philippines and China have three, Korea has two, and Argentina, Uruguay, Paraguay, Colombia, Russia and Switzerland only have one application approved.

What about the United States makes these genetically modified crops safer than the many other nations that have far less instances in which the untested GMOs can be used? The answer is: there is no difference; it is just that we have the wonderful group known as the FDA that is quick to approve anything as long as there is money behind it.

Soon the EU will begin cultivating its own Roundup Ready "food," Monsanto's genetically modified Roundup Ready corn product called NK603. The EFSA (European Food Safety Authority) already gave the thumbs up to the GM RR corn, enabling the heavy herbicidal spraying that has been tied to increased birth defects in Argentina.

However, in September of last year, the startling research of Professor Carrasco was sent to the European Union's Commissioner for health and Consumer Policy, John Dalli. During the next month, the MEP of the Greek Green Party, Michail Tremopoulos

questioned what Dalli was going to do about Monsanto’s NK603 application.

In response, Dalli said that he had heard from the German Government that Carrasco’s study was not applicable or important for the following reasons:

- The study was conducted under “highly artificial” conditions

- The existing “comprehensive and reliable toxicological database for glyphosate” is substantial enough to not question its approval

Resulting in the conclusion that it was not necessary to move to restrict or ban the use of the systemic herbicide.

This inference does not align with the peer-reviewed scientific literature or even EU law. According to the new pesticide regulation 1107/2009, enacted in June of this year, the EU cannot rely on studies that are kept secret from the affected public under the pretenses of “commercial confidentiality.” The law makes it clear that real, open, peer-reviewed scientific literature must be assessed, especially the open literature published in the decade before the assessment.

The report reveals:
The entire decision-making process on the delay was done behind closed doors with a limited group of national representatives (mainly from the agricultural ministries of member states) and set into law without notifying stakeholders. This process is called “comitology” and is much criticized for being non-transparent, confusing (even to legal experts) and undemocratic. (P. 9)

We will protect your privacy...guaranteed!

The sad thing is that we need not be only concerned about Roundup being present in our food supply; we must also be concerned about the fact that any Tom Dick and Harry can get the highly toxic glyphosate-based herbicide at their local grocery or convenience store.

Those who do not go out of their way to get the real information on Roundup happily kill their weeds with the product since it is both easy and cheap.

Without the government making it clear that there are extreme dangers associated with this product, people will continue to spray their yards and gardens where their children and pets play. This is one case in which the government could actually do some good by stepping in and taking a firm stance, instead of just serving their corporate puppeteers.

The consequences of these widespread domestic and municipal uses have, as of yet, been completely ignored.

For those who are interested, please read (and download) the full review PDF here: Roundup and birth defects: Is the public being kept in the dark?

In part three of the series we will continue to break down this report and what it means for the people of the world. If you would like to review the report on your own before continuing with the series, please feel free. However, it is not necessary as I plan to break this down in detail for those who do not have the time to read the entire document or do not have the background required to appreciate the gravity of the document.

In part three we will continue to delve into this document and so much more. As always you can easily contact me with any information, requests or comments at admin@EndtheLie.com. I have received a few users telling me that the first part was a little bit hard to understand for those not familiar with the scientific terms. If this is the case please let me know exactly what you would like me to make clearer in the next installment.

I am trying to make this series as accessible as possible so anyone and everyone can share this with their family and friends as a great introduction to one of the most important battles the entire human race is engaged in currently.

Roundup and birth defects: Is the public being kept in the dark?

TheUnhivedMind - July 17, 2011 10:11 PM (GMT)

HIDDEN DANGER FROM ASBESTOS THREATENS 1.8M

Mick Knighton died of mesothelioma 10 years ago aged just 60

Sunday July 17,2011
By Hilary Douglas
http://www.express.co.uk/posts/view/259312...-threatens-1-8m

MORE than 1.8 million people are exposed to deadly asbestos every year, with one dying from asbestos-related cancer every four hours.

The shocking figures from the UK Health and Safety Executive reveal at least 5,000 deaths from mesothelioma a year are expected by 2015, although some experts say the figure could be far higher.

Almost every building erected before 1999 will have asbestos used in its construction, so even seemingly harmless DIY projects might have deadly consequences.

Chris Knighton, whose husband Mick died of mesothelioma 10 years ago aged just 60, now runs a research fund in his memory.

Mick came into contact with asbestos while in the Navy. “The helmet he was first issued with as a gunner and the gauntlets given to him were all made of asbestos,” explained Chris, 65, who has raised £1million for the Mick Knighton Mesothelioma Research Fund .

“When the Navy realised all the ships were riddled with asbestos, they had them refitted, but the crews helped rip out the piping and bits which were to be removed.

“They didn’t wear the proper protective clothing, they just got on with the job and many, many of them in effect condemned themselves to death in the process.

“While the Royal Navy freely admits this is where Mick was exposed to asbestos and that it led to his developing mesothelioma, no one can sue the Crown, so he wasn’t entitled to any compensation.

“We had just returned from a wonderful holiday in Corfu, all tanned and relaxed when Mick developed a bad cough. He was given antibiotics then a week or so later he turned to me and said he wasn’t able to get up the stairs, he just didn’t have the strength.

“We went to hospital and although we had trouble convincing them something was wrong as he was so tanned and healthy looking, they eventually did a chest X-ray.

“They put the X-ray on the wall. They said, ‘You do have two lungs don’t you?’

“About a week later he was given his death sentence. They tested the fluid and told him to go away and spend quality time with me as he had just six months to live. There was no treatment and no hope.

“Mick lived for seven months before he died. It was a quick and dreadful experience made even more frightening as it had been made so clear that nothing at all could be done for him.

“It’s not much different now, 10 years later, although one chemotherapy drug, Alimta, can benefit some sufferers, at least giving them a better quality of life for the time they do survive.”

Dame Helena Shovelton, chief executive of the British Lung Foundation, added: “The people most at risk are those doing extensive DIY or builders, carpenters and plumbers working in buildings where no one has bothered to see if there is asbestos or not.

“Most people not know what asbestos looks like, nor do they realise that it was used in homes built as recently as the Nineties.”

Title: My baby makes me eat furniture polish
Description: *[ARE THESE PEOPLE GOING MENTAL?]*

TheUnhivedMind - July 17, 2011 10:06 PM (GMT)

My baby makes me eat furniture polish: Pregnant woman despairs of her unusual craving

Last updated at 4:05 PM on 17th July 2011
http://www.dailymail.co.uk/health/article-...ure-polish.html

A pregnant woman with a constant craving for furniture polish has been diagnosed with a rare eating disorder after her three-times-a-day habit forced her to seek medical advice.

Seven months pregnant Emma Veness, 26, is inexplicably drawn to eating polish despite her own fears she could be harming her baby.

Craving: Emma Veness said she first started sniffing her dusters but then started to eat polish straight from the can

After the first time, Emma said she was determined not to do it again but every day her craving comes back with a vengeance, leaving her desperately searching for snacks in the cupboard under the sink.

Since her unusual habit started she has consumed three whole cans and now worries her craving will never go away.

Emma, from Birmingham, was first drawn to the cleaning product a few months into her pregnancy and now says she must eat it two or three times a day to keep her cravings at bay.

Her strange obsession with non-edible items started as a child when she began eating bubbles out of her bath - something she has done ever since.

As she grew up, Emma found herself drawn to the smell of cleaning products and anti-

bacterial handwash but it was not until she fell pregnant with her first child, daughter Darcie, now 11 months, that her obsession with polish began.

To begin with, she would sniff the dusters as she went about cleaning the house she shares with her partner, Gavin Wallis, a 27-year-old bricklayer.

But by the time she fell pregnant with the couple's second child, a little girl expected in October, she began eating the polish straight from the can.

Disorder: Ms Veness said the GP told her to eat a chocolate bar instead but that has done nothing to ease her condition

Emma said: 'I can't explain why I like it, I think it has a lot do with the texture and how it feels in my mouth. I normally spray a bit on my fingers and lick it off or I spray a bit on the duster and suck it.

'For ages Gavin had no idea what I was up to. I would be polishing the TV and I would turn my back to him to have a taste of it. When he found out he was not happy at all.

'My mum goes mad about it and has tried to get me to stop. The funny thing is both her mum and Gavin's grandmother had cravings for coal when they were pregnant.

'It's quite embarrassing; I've tried all the different brands but Asda Smart Price polish is the one that does it for me. The others are all too perfumed.

'The thing that really worries me is that it might not go away after the baby arrives. After Darcie was born my craving for sniffing polish and cleaning products stayed permanently and all my friends who had had babies were over theirs.

'While I'm pregnant I try to stop myself and limit it to just a few times a day, as I'm scared of harming the baby. But I know that if I only had myself to think about I would be eating can after can of the stuff.

'I'm only 26 and I don't want to be eating furniture polish in my 50s.'

Emma said she rarely drinks, has never smoked and tries hard to live a healthy lifestyle. But when it comes to her addiction, only polish will do.

Realising she had a problem, Emma, who suffers from low iron levels, went to her doctor to see if there was something she could do to curb her weird habit.

She said: 'I went to my GP and she just told me to stop doing it. I had looked up (the medical disorder) "Pica" on the internet and she confirmed that's what it was but she just said to have a chocolate bar instead.

'"I feel so guilty about doing it as I don't know whether it might be harming the baby, but I could have a million chocolate bars and it wouldn't make any difference - when I want polish, it's the only thing that will do.'

Emma describes how sometimes she wakes in the middle of the night craving the taste of polish and has in the past lain awake for hours trying not to give in to the urge before eventually succumbing in order to get back to sleep.

She said: 'I find it's worse if I am bored or stressed. If I'm keeping myself busy and running around after Darcie, I am all right. But as soon as I stop to sit down or watch a bit of TV, I think to myself: 'I want some polish now.'

'Once I've started thinking about it, it's so hard to stop. I imagine it's what addicts must feel like as eventually I start to feel sick if I haven't had some and I inevitably give in just to make the sick feeling go away - it's like I'm suffering from withdrawal.

'Certain things make me crave it even more, like simply talking about it or when adverts for polish come on the telly.'

Emma, a secondary school teaching assistant, added: 'I just wish someone could help me stop, but no one seems to know how to help me or what to do. Most people have never even heard of Pica.'

A spokesman for Beat, the eating disorders charity, said doctors needed to educate themselves about Pica.

He said: 'It's important that any individual has a well-balanced diet and if they are worried that something like this is affecting them they should seek help at the earliest opportunity.

'We do on occasion get people coming to us to say they are suffering from this condition. It doesn't provide any nutritional intake at all and can have long term health implications. Particularly when someone is pregnant, it's important to provide suitable nutrition for them and the growing baby.

'We would urge GPs to make themselves more familiar with this condition and other disordered eating patterns so people can get the help they need.'

Pica is a form of eating disorder. More information and help can be found at Beat and the National Centre for Eating Disorders

Title: Monsanto official Beaten by farmers in India over
Description: *Failed GMO Bt Cotten Seeds*

TheUnhivedMind - July 15, 2011 06:53 PM (GMT)

Monsanto official Beaten by farmers in India over Failed GMO Bt Cotton Seeds

July 13, 2011
http://salem-news.com/articles/july122011/...o-beaten-tk.php

We have reported in the past an alarming suicide rate among farmers in India that is connected to the failure of American GMO (genetically modified organism) cotton seeds.

Monsanto, the U.S. company responsible for Agent Orange, a cancer-causing chemical sprayed on the jungles of Vietnam, is now in the GMO food and seed business.

Monsanto stands accused of having an international monopoly of the notorious bio-engineered Bt cotton seeds.

Advocates for the agricultural industry say they never dreamed of the tragedy to come, when a 2005 decision was announced to allow the seeds in India.

Now an agrarian crisis has hit Maharashtra itself thanks to the Monsanto program.

Farmers are buying 11 packets of 450 gm per hectare as per the company's guide for the recommended "population method" but the sudden demand and ill-managed Indian sub agents have brought the company big trouble as 50% of the Bt cotton seeds failed to germinate even after it's second sowing.

Now cries are being heard in other part of India too.

The Vidarbha Janandolan Samiti farmers advocacy group has approached the local

state Govt. of Maharashtra to arrange a high level probe of all complaints received from farmers of west Vidarbha where more than 10,000 cotton farmers have committed suicide since June 2005 after the introduction of the killer Bt cotton seeds in this region.

Around Rs.10,000 crore has been pumped in by Indian and state Govt. to bailout cotton farmers from the agrarian crisis which is likely to get worse if corrective action are not taken immediately, Kishore Tiwari of Vidarbha Janandolan Samiti said today.

The Monsanto Bt cotton seed crisis heated up in early June when all Bt cotton seeds ordered by Maharashtra dealers sold out it to the adjourning Andhra farmers and there was no seed available to cater to the local market.

Monsanto sub-agents had failed to respond to a state govt. request, and then suddenly Bt cotton seeds were freely available in the market by the third week of June.

A source supply was immediately discovered and Yavatmal police raided the house of Nerendra Indurkar in the very small village of Munjala and reportedly caught him red handed packing local cotton seed in the pockets of branded Bt cotton.

Police have sealed the advanced imported pocket packing machines and thousands of packets of Bt cotton seeds being sold on the premium.

However the alleged culprit, Nerendra Indurkar, was allowed to go without any interrogation.

When news of a Monsanto senior official's arrival from Mumbai reached the nearby village of Munjala, cotton farmers of the village Karanji, about 140 K.m. from Nagpur located the Monsanto official and took him to their field where a complete failure of ‘Paras Sudarshan’ Bt cotton seed was shown to him.

When the Monsanto representative failed to admit the lapse, he was severely beaten up by the farmers.

It was reported that even a local agriculture officer did not come to his rescue.

This, from accounts in daily papers in Vidarbha and the Marathwada region of Maharashtra where more than 4 million hectares under Bt cotton cultivation are reporting the flood of bogus seed supplied local agents of American cotton seed MNC giant Monsanto.

At this point, although the situation was reported, the administration has failed to take any action of this serious issue.

So, Vidarbha Janandolan Samiti has written to Maharashtra Chief Minister Prathiraj Chavan to order a judicial enquiry into the supply racket of bogus BT. cotton seed in

Maharashtra, and also to start criminal action against the culprit, Tiwari added.

Exactly where Monsanto's trail across the globe that has left so many dead and dying begins is not known, nor is the future this model agency of the American military industrial complex known.

The company has never accounted for its role in the deaths of so many Vietnamese and American and Australian Vietnam Veterans who have fought so hard for so government accountability in return.

Agent Orange doesn't just affect the person who comes into contact with it, it goes on to affect their children, and their children's children. I suspect there are a great number of people who cracked a smile when they read this account of a Monsanto official being beaten up in an Indian farm field. Violence is never a good answer, but particularly in light of the horrific, staggering suicide rate, it is understandable why some might embrace it as a last resort.

Description: *why Europeans (and everyone else) should*

TheUnhivedMind - July 15, 2011 06:32 PM (GMT)

The world’s largest human experiment part two: why Europeans (and everyone else) should be worried

July 15, 2011
By Madison Ruppert - BLN Contributing Writer

In part one of what will become a long-running series I briefly outlined two recent papers published in the renowned peer-reviewed journal, Chemical Research in Toxicology, which revealed the horrifying effects of Monsanto’s best-selling glyphosate-based Roundup herbicide.

These two independent and highly rigorous studies found that Roundup caused critical cell damage including necrosis, a horrendous process in which cells break down and release their contents into the surrounding area, creating widespread, unmitigated cell death. The Monsanto formulation was found to be much more devastating to human cells than the glyphosate herbicide alone.

The studies that comprised the bulk of part one of this series were published in an American journal, yet the people of the United States seem, on the whole, ignorant of the dangers of Roundup and the specifically modified Roundup Ready genetically modified seeds made to be able to absorb the toxin and live.

Unfortunately, the problem is not an isolated one, and Americans are not the only people who should be attempting to tell as many of their fellow citizens about these dangers as possible. While Americans need to become vocal on this issue and make it clear to our representatives that we will not stand for anything less than mandatory genetically modified organism labeling requirements, Europeans are now on the front lines of this battle as well.

In the summary report published in June of this year, Roundup and birth defects: Is the public being kept in the dark?, there is thorough evidence of the European Union attempting to deceive and betray their constituents as our so-called representatives have here in America.

The EU Commission responsible for representing the health of the people of Europe had dismissed credible and thorough scientific research showing considerable dangers associated with glyphosate and Monsanto's Roundup. They recently dismissed a study published last year in which it was observed that frog and chicken embryos developed birth defects when exposed to solutions of Roundup and glyphosate much more diluted than the solutions utilized for home gardening and agricultural applications.

This dismissal was based solely upon a report manufactured by the German Federal Office for Consumer Protection and Food Safety (BVL) which cited "unpublished industry studies" to legitimize their claims.

We also learn that,

"The Commission has previously ignored or dismissed many other findings from the independent scientific literature showing that Roundup and glyphosate cause endocrine disruption, damage to DNA, reproductive and developmental toxicity, neurotoxicity, and cancer, as well as birth defects. Many of these effects are found at very low doses, comparable to levels of pesticide residues found in food and the environment." (P. 5)

Unsurprisingly, the undemocratic European Union has delayed a thorough review of the toxic systemic herbicide Roundup and its main ingredient, glyphosate. All of this was done behind closed doors without any input from the people of Europe who will suffer the consequences of these deadly toxins.

The EU Commission has willfully put the lives of millions of Europeans and their future children at risk knowing full well the inherent dangers in these GMOs. Apparently the lure of power and money has made those responsible for such actions forget that they themselves will be subjected to these so-called foods.

Typically, safety reviews are conducted every ten years, the last being in 1992. Instead of conducting a review of the peer-reviewed independent scientific literature next year, the Europeans have decided to delay it at least another three years.

Due to the serious health risks involved in these products, the Earth Open Source report recommends that the EU Commission utilize what power they have to remove Roundup and glyphosate products from the market until real investigation takes place.

I seriously doubt that the endless coffers of Monsanto will be outweighed by a little bit of common sense or human decency on the part of the fascists responsible for the closed-door dealings that are all-too-common in the European Union.

The aforementioned study published in 2010 that found Roundup caused chicken and frog embryos to grow abnormally was conducted by the lead researcher for the Argentinian government research group CONICET, Andres Carrasco.

Professor Carrasco was inspired to carry out this research by the reports of unusually high rate of birth defects, similar to those found in the chicken and frog embryos, in the regions of his native Argentina that cultivate genetically modified Roundup Ready soybeans.

The idea behind a Roundup Ready GM seed is that, unlike all other vegetation, the Roundup Ready (RR) plant can tolerate the herbicide without withering away. It is important to note that this does not meant that the crop actually resists the toxin, instead it is able to absorb and live, passing the atypically high levels of glyphosate to your dinner table.

The major soy producing countries of South America have embraced GM RR soy with open arms as the report reveals on page 7,

“In Brazil, nearly 90,000 tons of glyphosate-based pesticides in 71 different commercial formulations were sold in 2009. In Argentina, over half the cultivated land is given over to GM soy, which is sprayed with 200 million litres of glyphosate herbicide each year. Spraying is often carried out from the air, causing major problems of drift.”

Drift is when the airborne particles of the Roundup herbicide travel unknown distances to water sources, farms in which they do not use GM RR seeds, and to homes. In all of these cases the consequences can be dire.

The United Nations Food and Agriculture Organization said in a 2005 report of the Joint meeting of the FAO Panel of Experts on Pesticide Residues in Food and the Environment and the WHO Core Assessment Group on Pesticide Residues that while the maximum residue limit for glyphosate in food for human consumption and animal feed products in the European Union is 20 mg/kg while soybeans have been measured to have glyphosate residue levels at 17 mg/kg.

Knowing the UN and their countless sub-organization, one would not be wrong to speculate that it is likely the case that much less than 20 mg/kg is dangerous to human health.

In Carrasco’s study, he injected 2.03 mg/kg of glyphosate into the frog and chicken embryos, resulting in malformations. While injecting glyphosate does not perfectly represent orally ingesting it through food, it is concerning that levels 10 times less than the maximum residue limit cause these defects.

In a 2010 interview, Carrasco stated,

“Bear in mind that Argentina is a unique case, with huge amounts of soybean acres – 19 million hectares – on more than half the cultivated area of the country, This is something rarely seen. So I say that, from the eco-toxicological point of view, what is happening in Argentina is a massive experiment.”

However, it is not only the people of Argentina that are being subjected to a massive experiment, inhabitants of every continent have been forced, without their consent or knowledge, into a dangerous human trial.

The fact is that the governments of Europe and the United States have not bothered to carry out thorough independent investigations of the levels at which average human beings and animals ingest this toxin.

With Europe importing from 35-40 million tons of soybeans and their derivatives every year from the United States, Argentina and Brazil, according to GMO Compass, there is a considerable amount of product being consumed, the safety of which has not been verified independently.

The EU does not cultivate the GM soy themselves as it is officially forbidden; instead they just import it and pretend that it is somehow different than growing the modified beans themselves. Indeed many of these soybeans are GM RR crops, and only three of the ten applications as foodstuffs and feeds have been approved.

In the United States nine applications have been approved, Canada has seven, Japan has six, while Mexico and Australia have five, Taiwan has four, Brazil has three, South Africa has two, the Philippines and China have three, Korea has two, and Argentina, Uruguay, Paraguay, Colombia, Russia and Switzerland only have one application approved.

What about the United States makes these genetically modified crops safer than the many other nations that have far less instances in which the untested GMOs can be used? The answer is: there is no difference; it is just that we have the wonderful group known as the FDA that is quick to approve anything as long as there is money behind it.

Soon the EU will begin cultivating its own Roundup Ready “food,” Monsanto’s genetically modified Roundup Ready corn product called NK603. The EFSA (European Food Safety Authority) already gave the thumbs up to the GM RR corn, enabling the heavy herbicidal spraying that has been tied to increased birth defects in Argentina.

However, in September of last year, the startling research of Professor Carrasco was sent to the European Union’s Commissioner for health and Consumer Policy, John Dalli. During the next month, the MEP of the Greek Green Party, Michail Tremopoulos questioned what Dalli was going to do about Monsanto’s NK603 application.

In response, Dalli said that he had heard from the German Government that Carrasco’s study was not applicable or important for the following reasons:

· The study was conducted under “highly artificial” conditions

· The existing “comprehensive and reliable toxicological database for glyphosate” is substantial enough to not question its approval

Resulting in the conclusion that it was not necessary to move to restrict or ban the use of the systemic herbicide.

This inference does not align with the peer-reviewed scientific literature or even EU law. According to the new pesticide regulation 1107/2009, enacted in June of this year, the EU cannot rely on studies that are kept secret from the affected public under the pretenses of “commercial confidentiality.” The law makes it clear that real, open, peer-reviewed scientific literature must be assessed, especially the open literature published in the decade before the assessment.

The report reveals,

“The entire decision-making process on the delay was done behind closed doors with a limited group of national representatives (mainly from the agricultural ministries of member states) and set into law without notifying stakeholders. This process is called “comitology” and is much criticized for being non-transparent, confusing (even to legal experts) and undemocratic.” (P. 9)

The sad thing is that we need not be only concerned about Roundup being present in our food supply; we must also be concerned about the fact that any Tom Dick and Harry can get the highly toxic glyphosate-based herbicide at their local grocery or convenience store.

Those who do not go out of their way to get the real information on Roundup happily kill their weeds with the product since it is both easy and cheap.

Without the government making it clear that there are extreme dangers associated with this product, people will continue to spray their yards and gardens where their children and pets play. This is one case in which the government could actually do some good by stepping in and taking a firm stance, instead of just serving their corporate puppeteers.

The consequences of these widespread domestic and municipal uses have, as of yet, been completely ignored.

For those who are interested, please read (and download) the full review PDF here: Roundup and birth defects: Is the public being kept in the dark?

In part three of the series we will continue to break down this report and what it means for the people of the world. If you would like to review the report on your own before continuing with the series, please feel free. However, it is not necessary as I plan to break this down in detail for those who do not have the time to read the entire document or do not have the background required to appreciate the gravity of the document.

In part three we will continue to delve into this document and so much more. As always you can easily contact me with any information, requests or comments at admin@endthelie.com. I have received a few users telling me that the first part was a little bit hard to understand for those not familiar with the scientific terms. If this is the case please let me know exactly what you would like me to make clearer in the next installment.
I am trying to make this series as accessible as possible so anyone and everyone can share this with their family and friends as a great introduction to one of the most important battles the entire human race is engaged in currently

TheUnhivedMind - July 15, 2011 05:43 PM (GMT)

Big Coal: Inbreeding, Not Mining, to Blame for Birth Defects

— By Gavin Aronsen| Tue Jul. 12
http://motherjones.com/blue-marble/2011/07...)&utm_content=T

Last month, when coal execs read the report linking birth defects to mountaintop removal mining, they weren't exactly thrilled. One rebuttal, penned by four attorneys with the firm Crowell & Moring, which represents the National Mining Association, accused the study's authors of using cherry-picked and misleading data. But that apparently wasn't convincing enough, so they went a step further and employed a discredited stereotype about inbreeding in West Virginia.

"The study failed to account for consanquinity [sic], one of the most prominent sources of birth defects," the attorneys' statement said. It then went on to advertise the firm's services to coal companies looking to "counter unfounded claims of injury or disease" from potential lawsuits sparked by the study.

The statement, which had been on the firm's website for more than a week, was quickly removed yesterday after Charleston Gazette blogger Ken Ward Jr. pointed out its insinuation that inbreeding hicks, not mountaintop mining, were to blame for spikes in the rate of birth defects, which it also said didn't exist in the first place. Wrap your head around that one. (Thanks to Ward, you can still read the statement here.)

Ward asked one of the study's co-authors, West Virginia University's Michael Hendryx, to weigh in. His response:

The criticisms raised are to be expected. I disagree that we overstated our findings. I think we've been appropriately cautious in what we say about limitations of the study

and conclusions. This paper can’t be considered in isolation but should be taken with the more than dozen other studies that continue to document serious health problems related to mining.

The four lawyers didn't get back to Ward, but a spokeswoman from the National Mining Association did, telling him that she didn't think anyone was really implying that a failure to look at inbreeding rates discredited the study. Maybe not, but the incident certainly won't sit well with opponents of mountaintop removal mining in Appalachia.

View Full Version: Diesel fumes 'increase the risk of heart attacks'

Title: Diesel fumes 'increase the risk of heart attacks'

TheUnhivedMind - July 15, 2011 02:33 AM (GMT)

Diesel fumes 'increase the risk of heart attacks'

Last updated at 3:51 PM on 14th July 2011
http://www.dailymail.co.uk/health/article-...rt-attacks.html

Diesel fumes are as bad for your heart as they are for the lungs, new research revealed today.

Scientists in Scotland have found that tiny particles produced when diesel burns are harmful to blood vessels and can increase the chances of blood clots forming in arteries, leading to a heart attack or stroke.

The research by the University of Edinburgh measured the impact of diesel exhaust fumes on healthy volunteers at levels that would be found in heavily polluted cities.

Scientists compared how people reacted to the gases found in diesel fumes - such as carbon monoxide and nitrogen dioxide - with those caused by the ultrafine chemical particles from exhausts.

The research, funded by the British Heart Foundation, showed that the tiny particles, and not the gases, impaired the function of blood vessels that control how blood is channelled to the body's organs.

The 'invisible' particles - less than a millionth of a metre wide - can be filtered out of exhaust emissions by fitting special particle traps to vehicles.

Particle traps are already being fitted retrospectively to public transport vehicles in the US to minimise the potential effects of pollution.

Dr Mark Miller, of the university's Centre for Cardiovascular Science, said: 'While many people tend to think of the effects of air pollution in terms of damage to the lungs, there is strong evidence that it has an impact on the heart and blood vessels as well.

'Our research shows that while both gases and particles can affect our blood pressure, it is actually the miniscule chemical particles that are emitted by car exhausts that are really harmful.

'These particles produce highly reactive molecules called free radicals that can injure our blood vessels and lead to vascular disease.

'We are now investigating which of the chemicals carried by these particles cause these harmful actions, so that in the future we can try and remove these chemicals, and prevent the health effects of vehicle emissions.'

Researchers want environmental health measures that are designed to reduce emissions to be tested to determine whether they reduce the incidence of heart attacks.

Professor Jeremy Pearson, associate medical director at the British Heart Foundation, said: 'We've known for a long time that air pollution is a major heart health issue and that's why we're funding this team in Edinburgh to continue their vital research.

'Their findings suggest that lives could be saved by cutting these harmful nanoparticles out of exhaust - perhaps by taking them out of the fuel, or making manufacturers add gadgets to their vehicles that can trap particles before they escape. The best approach isn't clear yet.

'For now our advice remains the same - people with heart disease should avoid spending long periods outside in areas where traffic pollution is likely to be high, such as on or near busy roads.'

The results are published in the European Heart Journal.

The worlds largest human experiment: GMOs, Roundup and the Monsanto monstrosity – part one

Madison Ruppert, Contributing Writer
Monday, July 11, 2011
http://www.activistpost.com/2011/07/worlds...iment-gmos.html

Informed consent is one of the most basic aspects of patient-physician relations, as well as subject-researcher relations in the case of research studies. This involves making the patient aware of and verifying that they understand the risks, benefits, facts, and the future implications of the procedure or test they are going to be subjected to.

In the case of genetically modified organisms we have not been made aware of the risks. In fact, the GMO industry has deliberately hidden the real dangers behind the seeds and herbicides they peddle. The Food and Drug Administration of the United States of America has defined informed consent in the following bureaucratic jargon: Except as provided in 50.23 and 50.24, no investigator may involve a human being as a subject in research covered by these regulations unless the investigator has obtained the legally effective informed consent of the subject or the subject's legally authorized representative. An investigator shall seek such consent only under circumstances that provide the prospective subject or the representative sufficient opportunity to consider whether or not to participate and that minimize the possibility of coercion or undue influence. The information that is given to the subject or the representative shall be in language understandable to the subject or the representative. No informed consent, whether oral or written, may include any exculpatory language through which the subject or the representative is made to waive or appear to waive any of the subject's legal rights, or releases or appears to release the investigator, the sponsor, the

institution, or its agents from liability for negligence.
Under all of these definitions, including the exceptions which you can peruse at the above linked official website, what Monsanto is doing with GM crops and their Roundup products are ethically wrong and illegal.

Some might say, “So what? It doesn’t matter since genetically modified products are perfectly safe! Why would I care, if it helps farmers, and it is safe, then what is wrong with doing it without informed consent?”

Well, so many people disagree that after much argumentation, the United States was forced to drop their opposition to the labeling of products that have genetically modified ingredients. Unfortunately, this step forward was a very small one, as this is completely voluntary. Since many consumers do not want to eat these products, it is almost guaranteed that we won’t see them on the ingredient list on our food labels any time soon.

This would be quite hilarious if it wasn’t so dangerous: the new “guidance” approved by the Codex Alimentarius Commission simply “allows countries to label genetically modified foods without [breaching] international free trade laws.”

That is, of course, unless the people of America start realizing the real dangers that these products pose and demand that all companies be legally required to identify if any ingredients were genetically modified anywhere along the line of production.

This means that if corn was grown from a Monsanto GM seed, the producer would be forced to identify that the corn is indeed genetically modified on the label.

Are there real health risks, or is this just a bunch of hype attempting to defame the good name of the multinational giant known as Monsanto?

In this article we will review the scientific findings and compare them to what we are told by the media and government about the total safety of these products.

In a report published in June 2011 in Earth Open Source, written by several professors and researchers from across the world entitled, Roundup and birth defects: Is the public being kept in the dark? significant evidence is presented showing that the best-selling herbicide Roundup is indeed linked with birth defects.

Roundup, a product of Monsanto, is comprised mostly of the isopropylamine salt of glyphosate, which is the most used herbicidal chemical in America. Monsanto’s Roundup has been outselling every other herbicide worldwide since four years after its introduction to the market in 1976. For those who are not familiar with the history of

Monsanto and their Roundup product, I highly recommend the documentary entitled The World According to Monsanto.

Roundup is far from the only dangerous GM product, as you will see as this article continues.

So what exactly are the dangers of Roundup? Should you be worried about your food source using it or using “Roundup” ready genetically modified seeds?

To put it simply: yes, in fact you should be very concerned and this article will lay it out so anyone can understand exactly why we need to get active and fight back against the monster that is Monsanto and the gargantuan genetically modified organism market.

First I must describe what a “Roundup ready” genetically modified crop entails. The GM plant has been specially engineered to be able to handle the incredibly toxic herbicide Roundup. It does not resist the herbicide but instead it has been modified so it can uptake the poison and still live. The Roundup then makes its way into your system, and anyone will tell you that eating a ton of glyphosate is not a good idea.

Roundup is not backed by any impartial, independent, rigorous scientific research. The studies used to back up the claims of governments around the world and especially in the EU are unpublished industry studies.

The real research shows a very different picture.

In 2002, a scientific research paper was published in Chemical Research in Toxicology, a publication of the American Chemical Society, entitled Pesticide Roundup Provokes Cell Division Dysfunction at the Level of CDK1/Cyclin B Activation. This bombshell paper reveals the real inherent dangers of the world’s most popular systemic herbicide.

The model they used to test the effects of the glyphosate based Roundup was an embryonic sea urchin in the first cell divisions after successful fertilization. This is suitable for an analog study (meaning that it can be applied to human cell division) because these first divisions represent the universal cell cycle regulation.

They found that a solution containing just 8 mM (millimolar, or 8/1000 moles) of glyphosate “induces a delay in the kinetic of the first cell cleavage of the sea urchin embryos.” This means that the initial cell division, which starts with cleavage of the single cell zygote is delayed, something which could prove destructive in human beings.

Anyone who has taken a biology course can tell you that the human reproductive cycle is a beautiful, finely tuned, and remarkably elegant system. When this system is upset, say by toxins in the mother’s blood, the results are not pretty.

They further reveal, “The delay in the cell cycle could be induced using increasing

glyphosate concentrations (1-10 mM) in the presence of a subthreshold concentration of Roundup 0.2%, while glyphosate alone was ineffective, thus indicating synergy between glyphosate and Roundup formulation products." While the effects of the toxin were "not lethal," it still induced "a delay into M-phase of the cell cycle."

CDK1 and cyclin B universally regulate the cell's M-phase, and Roundup delayed the activation of these compounds in vivo. Furthermore, "Roundup inhibited also the global protein synthetic rate" and "affects cell cycle regulation by delaying activation of the CDK1/cyclin B complex" which leads to the ominous conclusion: "our results question the safety of glyphosate and Roundup on human health."

Why is this not headline news? Why are the people of the world not up in arms about these toxins being present in our foods, possibly affecting the embryonic development of our children?

Shockingly, this is not the only scientific study published in the prestigious journal Chemical Research in Toxicology. In 2009, two French researchers at the University of Caen in France out of the Laboratory for Estrogens and Reproduction in the Institute of Biology published Glyphosate Formulations Induce Apoptosis and Necrosis in Human Umbilical, Embryonic, and Placental Cells.

For those unfamiliar with the terms, Apoptosis is the natural process of programmed cell death that allows human fetuses to develop fingers, toes and other features. This is distinct from necrosis because the cells break up into fragments that are easily consumed by phagocytic cells (cells that consume other cells) which quickly remove the dead cell fragments before they can cause damage to surrounding cells.

Necrosis, on the other hand, is the premature death of living cells and living tissues, which is not naturally occurring and necessary process like apoptosis. Unlike the vital process of apoptosis, necrosis can prove fatal. Necrotic tissues are not consumed by the phagocytic cells, which means that the tissues usually have to be "debrided" which is the surgical removal of the necrotic tissue.

If you want to witness the effects of necrosis and have a strong stomach, you might want to search for images of necrosis online; although I must emphasize that you should have a strong stomach before viewing these images.

This study was especially conservative, evaluating the toxicity of four different glyphosate-based herbicides in Monsanto's Roundup products in solutions diluted 100,000 times. This is clearly far below the level at which it is used in agricultural applications, which therefore corresponds to the low levels detected in food for human consumptions as well as animal feeds.

To make the study even more scientifically rigorous, they tested it on three distinct

human cell types, embryonic, placental, and umbilical as well as testing both glyphosate alone and the Roundup formula.
Unlike glyphosate alone, all of the heavily diluted Roundup formations caused total cell death within twenty four hours through necrosis. It was also found that Roundup induces apoptosis, causing DNA fragmentation, shrinkage of the nucleus, and fragmentation of the nucleus.

As I briefly outlined above, apoptosis is a necessary part of the human development process, however, when it is artificially induced, danger arises.

While Roundup induced complete cell death, glyphosate alone induced only apoptosis. They found conclusive evidence that the Roundup adjuvants (an agent that modifies the behavior and activity of another agent, while having few effects on its own) change the permeability of the three human cells studied.

This amplifies the toxicity already induced via glyphosate, proving that the adjuvants in Roundup are not inert.

They conclude the abstract of the paper with the following ominous sentence, “Moreover, the proprietary mixtures available on the market could cause cell damage and even death around residual levels to be expected, especially in food and feed derived from [Roundup] formulation-treated crops.”

Now that you know the horrors of Roundup and the inherent dangers of this systemic herbicide, would you like to eat it? I doubt it. If you don’t like the idea of consuming this necrosis-inducing toxin, you must know what contains the poison and what does not.

Unfortunately, without proper labeling practices, you cannot be sure unless you buy all of your food from farmers you know and trust and/or have a home garden that can sustain you.

Until these practices are put in place, I highly recommend that you seek out as much locally grown organic food as humanly possible. Inform your friends and family about the real dangers of Roundup and the hard science this is based upon.

When more people around the world start demanding that their food be properly labeled with warnings just like cigarettes or alcohol, some real change can occur. If we continue to sit back and hope our governments will actually represent us instead of their corporate interests, we will continue to be subjected to the largest human experiment in history, in which you never have to give informed consent.

In part two we will explore some of the newest research, including some of the details revealed in the study published in June of this year. If you would like me to cover something specific regarding GMOs or have some research and links to share, please do not hesitate to contact me at: admin@endthelie.com I would highly appreciate your

contribution.

Living in and Through The Poison Century

Sunday, 10 July 2011 16:27 | | |
http://www.domasjefferson.com/news/living-...-poison-century
Janet C. Phelan, Contributing Writer

Speaking on conditions of anonymity, an ex-DEA agent recently disclosed that the CIA did an aerial spray in California back in the fifties as part of a behavior modification experiment. The ex-DEA agent, former County Sheriff and one time California “super-cop” stated that the end result of the chemical exposure was a breakdown in normal human bonding behavior, feeding into what is often typified as the “Californication complex.” Given the pervasiveness of what may have first evidenced in California as the “sexual revolution,” one can only wonder if this aerosol behavior- mod project was introduced into other areas, as well.

We may well be living in a huge laboratory experiment –brought up on fluoride, GMO foods, BST milk, television-programmed to think there is a quick fix for any woe—Prozac for angst, booze for social awkwardness an a multitude of remedies for an unwelcome twinge of conscience. We spend hours each day basking in the false light of jazzy prime time solutions to complex human problems, which blur the lines between manufactured drama and reality. We are blasted with violence from television, movies and video games, which may not only desensitize us to human suffering, but may, in fact, make us enamored of bloodshed and pain.

We were told we were special, we were advanced when we failed, we were assured that our inadequacies were the sign of a special genius, all taking place in a social sphere while we were being plied with chemicals: Ritalin for active kids, zyprexa for aging adults and a host of other “helping hands” as we navigated through life.

Through all this, we were imbued with an attitude of American “exceptionalism.” We were the champions, we were the recipients of manifest destiny, as our conduct on the international stage became increasingly arrogant and forceful. After all, we are Americans—we are the best, right?—or so we convinced ourselves as the international murmurs of the “Ugly American” began to escalate to a roar.

Increasingly, this sense of “American exceptionalism” began to assert itself in our domestic policies as well, which began to smack of our collective sense of self-importance coupled with an uncontrollable desire to expand and subjugate. These domestic policies, launched from a perspective that "the government knows best," have had a devastating effect on the family unit, as children were taken and aging adults were separated from familial care and placed in “guardianship” programs, where their assets were plundered and their lives often shortened. Factor in the escalating divorce rates and we can see where the social unit was functionally reduced to a unit of one —“Me First.”

I first read “The Culture of Narcissism” by Christopher Lasch in the early eighties. At that time, I was unaware of the coupling of poison with culturally encouraged narcissism in an effort to create a uniquely American functional sociopath. The American functional sociopath, carrying the “Me First “ meme, is now so steeped in poison that he may be unaware of its effects on his behavior. The narcissistic aspect of functional sociopathy expresses itself in a multitude of ways—gas guzzling cars, ballooning credit card debt, the taking on of unaffordable mortgages, sex without strings and a seeming inability to join in with others to correct social ills. The internet has also, alas, given the functional sociopath a soapbox.

Don´t get me wrong. The internet has been an enormous blessing. We now have access to badly needed and otherwise suppressed information, which appears alongside the rantings of functional sociopaths. The internet is the great equalizer, and makes extraordinary demands on a person to sift through and evaluate what is truth and what is poison. As laws governing libel are scant to non- existent in terms of cyberspace, this has provided an excellent opportunity for the social poisoner to hawk his wares, without liability.

Thanks to the internet, many of the poison projects are now being brought to light—fluoride, chemtrails, vaccines, double line water systems, GMO foods, dangerous psychotropic drugs and more, including the recent disclosure of the flagrant violation of the international bioweapons treaty by the United States, which may open up a Pandora ´s box of toxins primed for release upon an unsuspecting world. These are but a few examples.

The manifestations of social poison may be less obvious. The signposts include a mish mash of positive and negative indicators, as signs of increasing awareness show up alongside the symptoms of social poisoning-- a fraying of the social fabric , a growing

distrust of government as people become aware of the poisoning aspects of spun corporate media, corruption in the courts and other branches of government, as well as the breakdown of the family unit under the weight of narcissism, which is a primary social poison. A swing towards fundamentalism in religious movements also generally heralds the breakdown of society reeling under the effects of social poison. Other indicators are the increased incidence of drug addiction and the lack of accountability for those who employ the currency of lies in pursuit of their own greed and fame.

We must wake up to the fact that we are being attacked, attacked by both physical and social poisons. We must understand that the reasons for this point to our enslavement and eventual planned demise. Each and every one of us must develop our own internal mechanisms to alert us to the attempted introduction of potential poison, whether through diet, television, newspapers, internet or casual water cooler gossip.

In closing, I am including a poem about poison. The poem specifically refers to the double line water system, yet another poison project, but attempts to reflect on the larger issues of The Poison Century. Employing the device of an off-planet perspective, the poem explores the possibility of a complete devastation and die- off, then moves towards an ultimate affirmation of life. We are, indeed, living in The Poison Century. Whether or not we can come through this is up to us—to come to grips with the mechanisms which are poisoning our planet and ourselves and to find our path to overcome.

View Full Version: Obesity charity paid £50k in secret by Coca-Cola

Title: Obesity charity paid £50k in secret by Coca-Cola
Description: *to promote sweeteners*

TheUnhivedMind - July 10, 2011 11:05 PM (GMT)

Obesity charity paid £50k in secret by Coca-Cola to promote sweeteners

By Jo Macfarlane
Last updated at 2:50 AM on 10th July 2011
http://www.dailymail.co.uk/news/article-20...sweeteners.html

A charity which criticised the Government for accepting money from junk food companies was itself secretly paid £50,000 by Coca-Cola to promote low-calorie sweeteners.

The National Obesity Forum signed a deal with Coca-Cola in January, a few months after trustee Tam Fry had said he was ‘horror-struck’ at plans for such companies to provide cash to back public health campaigns.

Mr Fry, 75, is understood to have brokered the Coca-Cola deal, despite accusing the Government last July of being ‘bribed’ by fast food giants.

The money is to develop part of the charity’s website devoted to low-calorie artificial sweeteners.

Many of Coca-Cola’s drinks, such as Diet Coke, Fanta Orange Zero and Lilt Zero, include sweeteners like aspartame, acesulfame-K and saccharin, which have been linked to health concerns.

Recent studies linked aspartame to pancreas damage, cancer and premature births.

A senior charity source said: ‘In July Tam Fry was horror- struck at the government handing the anti-obesity brief to the likes of Coca-Cola and by the following month he

was holding out the begging bowl.

‘Yet it has been known for years that diet drinks are bad in relation to obesity.’

A Coca-Cola spokeswoman said: ‘We provided the charity with an educational fund to support its communications regarding low and no-calorie sweeteners during 2011. There is no product endorsement as part of this affiliation.’

The charity’s chairman David Haslam said: ‘We have an independent board assessing the health benefits of artificial sweeteners. Coca-Cola has no influence over our findings.’

View Full Version: True fact: A common ingredient in commercial bread

Title: True fact: A common ingredient in commercial bread
Description: *is derived from human hair harvested in*

TheUnhivedMind - July 10, 2011 03:31 AM (GMT)

True fact: A common ingredient in commercial breads is derived from human hair harvested in China

Thursday, June 16, 2011
by Mike Adams
http://www.naturalnews.com/032718_L-cystei...l#ixzz1Rdgo6aCb

If you read the ingredients label on a loaf of bread, you will usually find an ingredient listed there as L-cysteine. This is a non-essential amino acid added to many baked goods as a dough conditioner in order to speed industrial processing. It's usually not added directly to flour intended for home use, but you'll find it throughout commercial breads such as pizza dough, bread rolls and pastries.

While some L-cysteine is directly synthesized in laboratories, most of it is extracted from a cheap and abundant natural protein source: human hair. The hair is dissolved in acid and L-cysteine is isolated through a chemical process, then packaged and shipped off to commercial bread producers. Besides human hair, other sources of L-cysteine include chicken feathers, duck feathers, cow horns and petroleum byproducts.

Most of the hair used to make L-cysteine is gathered from the floors of barbershops and hair salons in China, by the way.

While the thought of eating dissolved hair might make some people uneasy, most Western consumers ultimately have no principled objections doing so. For Jews and Muslims, however, hair-derived L-cysteine poses significant problems. Muslims are forbidden from eating anything derived from a human body, and many rabbis forbid hair consumption for similar reasons. Even rabbis who permit the consumption of hair would forbid it if it came from corpses -- and since much L-cysteine comes from China, where

sourcing and manufacturing practices are notoriously questionable, this is a real concern. In one case, a rabbi forbade the consumption of L-cysteine because the hair had been harvested during a ritual at a temple in India.

View Full Version: Monsanto accused of violating bio-safety rules

Title: Monsanto accused of violating bio-safety rules

TheUnhivedMind - July 6, 2011 12:29 AM (GMT)

Monsanto accused of violating bio-safety rules

Bangalore, July 5, 2011
http://www.thehindu.com/news/national/article2159367.ece

The Karnataka Rajya Raitha Sangha (KRRS), a farmers' organisation, on Monday joined hands with Greenpeace and sought an immediate ban on all open field experiments of Genetically Modified (GM) crops in the country by Monsanto (a bio-technology company), in the wake of alleged violation of bio-safety norms by the multinational seed firm in Bijapur.

The KRRS' demand comes in the wake of allegations by Greenpeace that Monsanto had flouted the norms of bio-safety, leading to fears of transgene leakage and subsequent contamination.

KRRS president Kodihalli Chandrashekar called upon Chief Minister B. S. Yeddyurappa to take swift action against Monsanto in the light of the alleged contamination caused due to gross violation of rules during field trials. “If the government does not respond positively to our demand, we will be constrained to take direct action against the multinational company,” Mr. Chandrashekar said at a press meet here.

“The company should be nationally blacklisted and thrown out of Karnataka,” he said.

Greepeace India's representative Shivani Shah, who was also present, claimed that Monsanto was caught “red-handed” violating bio-safety rules during field trials of GM corn in a village in Bijapur district's Sindagi taluk. “GM corn cobs with viable seeds have been lying at the field, which was harvested more than a month ago – on June 1, 2011– leading to concerns about the seeds from the plot dispersing to nearby areas. Thus, the rule to destroy all residues after the GM crop has been thrown to the wind,” she said.

Though the guidelines state that the refuge of the GM crops has to be destroyed, it has been left over by the company for the farmer to use as feed for cattle, she alleged.

“Alarmingly, there was neither a fence around the trial plot nor any signboard indicating that the field had untested GM corn in an experimental stage. Further, neither the Deputy Commissioner of Bijapur nor the senior Agriculture Department officials knew about any cultivation of GM crops in the district,” she said.

Convenor of Alliance for Sustainable and Holistic Agriculture (ASHA) Kavitha Kuruganti said the Bijapur field trials showed the company's “arrogance in defying norms.” Convenor of Coalition for GM Free Karnataka Krishna Prasad criticised the State government for not having a clear stand on GM crops.

Meanwhile, Monsanto has denied the allegations levelled against it.

A company spokesperson said the required permission was obtained from the Genetic Engineering Approval Committee (GEAC) for limited seed production of biotech corn. “Plantings took place in January 2011 and this information was proactively shared with State-level, district level and village level authorities.”

The area was fenced and display boards were put up. “The allegation that the residue was not burnt is false. In compliance with the guidelines from the regulatory authorities, we are monitoring the fields post harvest for a period of three months,” the spokesperson said.

Permission for 25 acres for each hybrid were obtained in November 2010 and the agreements with farmers were entered into subsequently before planting in Jan 2011, the spokesperson added.

View Full Version: Processed Meats Declared Too Dangerous for Human

Title: Processed Meats Declared Too Dangerous for Human
Description: *Consumption [BETTER THAN VEG OIL]*

TheUnhivedMind - July 6, 2011 12:02 AM (GMT)

Processed Meats Declared Too Dangerous for Human Consumption

By Mike Adams
http://www.totalhealthbreakthroughs.com/20...an-consumption/

The World Cancer Research Fund (WCRF) has just completed a detailed review of more than 7,000 clinical studies covering links between diet and cancer. Its conclusion is rocking the health world with startling bluntness: Processed meats are too dangerous for human consumption. Consumers should stop buying and eating all processed meat products for the rest of their lives.

Processed meats include bacon, sausage, hot dogs, sandwich meat, packaged ham, pepperoni, salami and virtually all red meat used in frozen prepared meals. They are usually manufactured with a carcinogenic ingredient known as sodium nitrite. This is used as a color fixer by meat companies to turn packaged meats a bright red color so they look fresh. Unfortunately, sodium nitrite also results in the formation of cancer-causing nitrosamines in the human body. And this leads to a sharp increase in cancer risk for those who eat them.

A 2005 University of Hawaii study found that processed meats increase the risk of pancreatic cancer by 67 percent. Another study revealed that every 50 grams of processed meat consumed daily increases the risk of colorectal cancer by 50 percent. These are alarming numbers. Note that these cancer risks do not come from eating fresh, non-processed meats. They only appear in people who regularly consume processed meat products containing sodium nitrite.

Sodium nitrite appears predominantly in red meat products (you won't find it in chicken or fish products). Here's a short list of food items to check carefully for sodium nitrite

and monosodium glutamate (MSG), another dangerous additive:
Beef jerky
Bacon
Sausage
Hot dogs
Sandwich meat
Frozen pizza with meat
Canned soups with meat
Frozen meals with meat
Ravioli and meat pasta foods
Kid's meals containing red meat
Sandwich meat used at popular restaurants
Nearly all red meats sold at public schools, restaurants, hospitals, hotels and theme parks

If sodium nitrite is so dangerous to humans, why do the FDA and USDA continue to allow this cancer-causing chemical to be used? The answer, of course, is that food industry interests now dominate the actions by U.S. government regulators. The USDA, for example, tried to ban sodium nitrite in the late 1970's but was overridden by the meat industry. It insisted the chemical was safe and accused the USDA of trying to "ban bacon." Today, the corporations that dominate American food and agricultural interests hold tremendous influence over the FDA and USDA. Consumers are offered no real protection from dangerous chemicals intentionally added to foods, medicines and personal care products.

You can protect yourself and your family from the dangers of processed meats by following a few simple rules:
Always read ingredient labels.
Don't buy anything made with sodium nitrite or monosodium glutamate.
Don't eat red meats served by restaurants, schools, hospitals, hotels or other institutions.

And finally, eat more fresh produce with every meal. There is evidence that natural vitamin C found in citrus fruits and exotic berries (like camu camu) helps prevent the formation of cancer-causing nitrosamines, protecting you from the devastating health effects of sodium nitrite in processed meats. The best defense, of course, is to avoid eating processed meats altogether.

[Ed. TheUnhivedMind - July 3, 2011 11:33 PM (GMT)

15 Food Companies That Serve You 'Wood'

By Miriam Reimer
03/02/11 - 04:58 PM EST
http://www.thestreet.com/story/11012915/1/...ed-so-good.html

(Wood pulp, or cellulose, in processed food report updated with the addition of Pepsi, Kellogg and Weight Watchers International.)

NEW YORK (TheStreet) -- Are you getting what you pay for on your plate?

The recent class-action lawsuit brought against Taco Bell raised questions about the quality of food many Americans eat each day.

Chief among those concerns is the use of cellulose (read: wood pulp), an extender whose use in a roster of food products, from crackers and ice creams to puddings and baked goods, is now being exposed. What you're actually paying for -- and consuming -- may be surprising.

Cellulose is virgin wood pulp that has been processed and manufactured to different lengths for functionality, though use of it and its variant forms (cellulose gum, powdered cellulose, microcrystalline cellulose, etc.) is deemed safe for human consumption, according to the FDA, which regulates most food industry products. The government agency sets no limit on the amount of cellulose that can be used in food products meant for human consumption. The USDA, which regulates meats, has set a limit of 3.5% on the use of cellulose, since fiber in meat products cannot be recognized nutritionally.

"As commodity prices continue to rally and the cost of imported materials impacts earnings, we expect to see increasing use of surrogate products within food items.

Cellulose is certainly in higher demand and we expect this to continue," Michael A. Yoshikami, chief investment strategist at YCMNet Advisors, told TheStreet.

Manufacturers use cellulose in food as an extender, providing structure and reducing breakage, said Dan Inman, director of research and development at J. Rettenmaier USA, a company that supplies "organic" cellulose fibers for use in a variety of processed foods and meats meant for human and pet consumption, as well as for plastics, cleaning detergents, welding electrodes, pet litter, automotive brake pads, glue and reinforcing compounds, construction materials, roof coating, asphalt and even emulsion paints, among many other products.

Cellulose adds fiber to the food, which is good for people who do not get the recommended daily intake of fiber in their diets, Inman said. It also extends the shelf life of processed foods. Plus, cellulose's water-absorbing properties can mimic fat, he said, allowing consumers to reduce their fat intake.

Perhaps most important to food processors is that cellulose is cheaper, he added, because "the fiber and water combination is less expensive than most other ingredients in the [food] product."

Indeed, food producers save as much as 30% in ingredient costs by opting for cellulose as a filler or binder in processed foods, according to a source close to the processed food industry who spoke with TheStreet on the condition of anonymity.

Inman said that in his 30 years in the food science business, he's seen "an amazing leap in terms of the applications of cellulose fiber and what you can do with it." He said powdered cellulose has a bad reputation but that more of his customers are converting from things like oat or sugar cane fibers to cellulose because it is "snow white in color, bland and easy to work with."

Most surprising, said Inman, is that he's been able to remove as much as 50% of the fat from some cookies, biscuits, cakes and brownies by replacing it with powdered cellulose -- but still end up with a very similar product in terms of taste and appearance.

"We're only limited by our own imagination," Inman told TheStreet. "I would never have dreamed I could successfully put 18% fiber in a loaf of bread two years ago."

He said cellulose is common in processed foods, often labeled as reduced-fat or high-fiber -- products like breads, pancakes, crackers, pizza crusts, muffins, scrambled eggs, mashed potato mixes, and even cheesecake. Inman himself keeps a box of Wheat Thins Fiber Selects crackers, manufactured by Kraft Foods(KFT_)' Nabisco brand, at his desk, and snacks on them daily, clearly unmoved by the use of wood pulp in its ingredients.

"Most consumers would be shocked to find these types of filler products are used as

substitutes for items that they believe are more pure," Yoshikami said. "We would expect increased disclosure to follow increased use of cellulose and other filler products as the practice increases in frequency."

To that end, TheStreet rounded up a list of popular foods that use cellulose. It's by no means an exhaustive list, and we suggest consumers read food labels carefully. Still, click through the slideshow to find out if your favorite foods contain the "all-natural" wood pulp...

(Please note the following lists are not exhaustive. Some companies list all ingredients on their Web sites. Other items were found in a local grocery store near TheStreet's headquarters on Wall Street in New York City.)

Greenpeace takes on Monsanto over 'pesticides arms race'

Tom Levitt
30th June, 2011
http://www.theecologist.org/News/news_anal..._arms_race.html

Main ingredient of Monsanto's Roundup weed killer is being linked to cancer, birth defects and Parkinson's disease and should be banned, according to campaigners behind new report

The use of the popular weedkiller, 'Roundup', in public parks and on agricultural crops is a danger to public health, according to a new analysis of scientific evidence.

One of the main ingredients of Roundup, as well as several other herbicides, is a chemical known as glyphosate. A review of academic research, conducted by Greenpeace and the anti-GM campaign group GM Freeze, suggests exposure to it can cause cancer, hormonal imbalance, birth defects and neurological illnesses including Parkinson's.

The glyphosate within weedkiller can also be damaging to wildlife and rivers, when it spreads through the soil and into watercourses with run-off.

As the Ecologist reported recently, the pesticide industry and regulators have been accused of repeatedly misleading the public with claims that glyphosate is safe.

In reality, academic studies including one commissioned by one of the main manufacturers Monsanto, showed as long ago as the 1980s that glyphosate caused birth defects in laboratory animals.

Despite more recent evidence of the health risks, including reports of escalating levels of birth defects and cancers in areas of South America where glyphosate is heavily sprayed on crops, the EU Commission followed the US and other countries in approving the use of the chemical as a weedkiller.

The approval has allowed Monsanto to claim that 'regulatory authorities and independent experts around the world agree that glyphosate does not cause adverse reproductive effects…or birth defects.'

Resistance is spreading

The new Greenpeace campaign, backed by the report, is targeting Monsanto in particular because of the spread of its GM crops, genetically engineered to be tolerant to glyphospate. This allows farmers to spray the chemical over the top of the crop, killing almost all weeds without affecting the crop.

The campaign-launch comes as US officials began investigating claims Monsanto provided cash incentives to farmers to use its glyphospate products between 2009 and 2010.

As well as the potential human health and environmental impact of the use of glyphosate, it is also presenting a growing weed-resistance threat.

Far from reducing the cost of weed control for farmers, the heavy use of glyphosate herbicides by farmers is seeing a rise in the number of weeds becoming resistant to the chemical.

According to Greenpeace, resistance to glyphosate has now been confirmed in more than 20 weed species, with over 100 resistant strains identified, covering nearly 6 million hectares, primarily in Argentina, Brazil and the US. It fears Monsanto and other chemical companies want to use even more toxic chemicals to combat the resistance, creating a 'pesticide arms race'.

'Whether we like it or not, we all receive exposure to herbicides: sometimes from aerial spraying, sometimes through chemical residues in our food and sometimes because of chemical run off from agricultural land that pollutes nearby fields, seas or rivers,' Greenpeace sustainable farming campaigner Lasse Bruun, said.

'There are no winners in the war against superweeds - but human health, the environment, farmers and you, the consumer, all the losers.'

View Full Version: Hexane may be lurking in the soy protein found in

Title: Hexane may be lurking in the soy protein found in
Description: *popular food bars*

TheUnhivedMind - June 30, 2011 09:34 PM (GMT)

Hexane may be lurking in the soy protein found in popular food bars

Thursday, June 30, 2011 by: Kas McNally
http://www.naturalnews.com/032862_soy_protein_food_bars.html

Protein bars, breakfast bars, really anything in bar form just makes sense in our dine while dashing society. The question is, what is it you're really eating? Most of these bars claim to offer healthy, wholesome energy, but what you may not have realized is that the process to create "soy protein isolate," which is often a primary ingredient in protein bars, utilizes a toxic solvent called Hexane.

Hexane is an industrial waste by-product of gasoline that, according to the EPA, can cause polyneuropathy in humans. Hexane is primarily used as a solvent to extract edible oils from seed and vegetable crops, such as soybeans, as well as a solvent for glues, varnishes and inks. Hexane is also used as a degreaser in the printing industry and as the liquid in low temperature thermometers.

Sounds yummy, doesn't it? So, if you're wondering why you rarely see "organic" soy protein, this is one of the reasons. Additionally, soy protein typically comes from genetically modified plants. Even non-genetically modified raw materials may contain small amounts of GMO-parts, claims GMO-Compass.org, because a total separation of conventional and GM soybeans is technically impossible.

In an effort to help you make smart "bar" choices, I spent a few quality hours in Whole Foods researching just which bars you may want to avoid and which ones you might want to check out. I was surprised to find that the majority of bars available do not contain soy protein. It would seem the newer brands of bars are becoming more savvy in their ingredient offerings. I was impressed enough to walk away with a few bars of my

own. Here's the lowdown.

Bars With Soy Protein:
Kashi Go Lean: Chocolate Peanut Butter and Chocolate Caramel contain soy protein.

Odwalla: Isolated Soy Protein is the #1 ingredient in their Original Super Protein Bar and their Chocolate Peanut Butter bar. Other flavors available did not contain soy protein.

Honey Stinger: Contains soy nuggets made up of soy protein isolate, rice flour, malt and salt.

Luna

Zone Perfect: Contains soy protein nuggets.

Balance

Clif bars: All bars available contained soy protein except Clif Kids bars.

ThinkThin: Their soy crisps are made from soy protein isolate.

Powerbar/Powerbar Pria

*NuGO: Contains soy protein but claims to use organic hexane-free soy crisps.

Bars Without Soy Protein:
Kind: The Blueberry Pecan bar, for example, is full of fruits and nuts, non-gmo glucose, chicory fiber and 5 grams of protein.

18 Rabbits: A granola bar with such fun flavors like Cheeky Cherry Chocolate and Haute Diggity Date. They're one of the lowest in sugar at 12 grams.

Perfect Foods: One of my favorites! Look for it in the refrigerated section.

Vega Whole Food Energy Bar: Is made from raw alkaline plant-based superfoods such as hemp protein.

Pro Bar Superfood Slam: Is a whole food meal bar with organic acai and wheat grass, 7 grams of protein and lots of fruits like papaya and pineapple.

Garden of Life: Their Organic Super Seed bar contains 18 sprouted grains including spelt and offers a probiotic blend.

Thunderbird Energetica: Their Cherry Walnut Crunch is made with sweet potato, turmeric and Hawaiian black lava salt. Unique, to be sure! I found them on the bottom

shelf, so you may have to search for it.

Raw Organic Food Bar: One of quite a few products that are specifying non-GMO ingredients. This one also comes with quinoa. My interest is piqued.

Vibrant Health: While their Green Vibrance Original Meal Bar sounds appealing with almond butter, honey, carob, cherries, raisins and sunflower seeds and dark chocolate, nowhere on the label do they describe the "Green Vibrance" ingredient. Although green in the health food industry usually brings to mind positive images, there are a lot of green things I wouldn't want to stick in my mouth.

Greens: Their Peanut Butter bar is full of super foods and exciting ingredients like organic alfalfa grass, Echinacea root extract, Siberian eleuthero root extract and Montana bee pollen but not a lot of protein. Their Daily Mocha Mantra, which contains hemp protein, was highly recommended by Eric, the Whole Foods employee, because it's delicious and high in Omega 3's.

Larabar: Very clean with few ingredients. My favorites are Banana Bread and Apple Pie.

Raw Revolution: Their Chocolate and Coconut offers organic flax seeds, 7 grams of protein from cashews, sunflower seeds and almonds.

Although it seems that companies are starting to use better ingredients, it's always important to read food labels. Just because you buy it at the health food store doesn't mean it's healthy.

View Full Version: Acid, chlorine mixed at Ark. plant

Title: Acid, chlorine mixed at Ark. plant

TheUnhivedMind - June 30, 2011 05:43 PM (GMT)

Acid, chlorine mixed at Ark. plant

KURT VOIGT - Associated Press (AP)
Posted June 29, 2011
http://www.kitsapsun.com/news/2011/jun/29/.../#ixzz1Qm9ThyHv

SPRINGDALE, Ark. (AP) — A solution of chlorine was poured into a drum of acid inside a Tyson Foods Inc. chicken processing plant in Arkansas this week, creating chlorine gas that sickened more than 170 people, authorities said in a report obtained Wednesday by The Associated Press.

About 300 workers were evacuated from the plant Monday morning in Springdale. Ten workers remained hospitalized Wednesday afternoon, none of them in intensive care, company spokesman Gary Mickelson said.

A Springdale Fire Department report obtained by The AP says the plant's safety director told authorities that a solution of chlorine had been poured into a drum of FreshFx LP, a mix of acids used for disinfecting.

Mickelson would not comment earlier Wednesday on what chemicals created the chlorine gas, which can cause respiratory problems up to sudden death. Company officials have said human error played a role in the accident.

"We believe we know what they were, but we don't want to speculate," Mickelson said.

Experts said Wednesday that many chicken plants use water mixed with chlorine to cool and clean chickens before they are processed. Acid is added separately to the water to make the chlorine more effective.

Adding chlorine directly to the acid can cause the mixture to expel gas, experts said.

"Any time you mix acid with chlorine, you can generate chlorine gas," said John Marcy, an extension food scientist at the University of Arkansas' Center of Excellence for Poultry Science.

The drum of acid was found inside a small mixing room in the plant when authorities arrived at the plant after 9 a.m. Monday, the report says. The gas had spread through an area with a "large number of employees," though all workers had been cleared, the report says. Authorities left at about 11:30 a.m., the report says.

The plant's work schedule was back to normal by Monday afternoon, Mickelson said.

The report doesn't say how the leaks occurred. Authorities do not believe the incident was criminal, and Springdale police do not have an open investigation, police spokesman Lt. Kevin Lewis said.

The Occupational Safety & Health Administration has opened an investigation that could take up to six months, an agency spokesman said.

Susan Watkins, an associate professor at the University of Arkansas, called such accidents rare. "To my knowledge, that's a very rare incident to occur," she said.

According to the U.S. Centers for Disease Control and Prevention, chlorine gas can cause a range of respiratory problems, from irritated tissue to sudden death from narrowing of the upper airway.

Sudden exposure to chlorine gas can bring on coughing and choking spasms, severe chest discomfort, vomiting and other symptoms, the CDC says.

The affected section of the Berry Street plant in Springdale is where chickens are slaughtered, Mickelson said. The two chemicals are used in the food safety process, and the plant doesn't use chlorine gas, Mickelson said.

A small number of chickens were discarded due to the incident, he said.

Tyson has opened a medical clinic at the plant, staffed with a doctor and nurses who are available to provide follow-up care to workers. The clinic will stay open for several days, he said.

Several Tyson workers declined comment when leaving the Berry Street plant Wednesday afternoon. Others, who declined to give their names, spoke of suffering from headaches during Monday's incident but offered praise for the quick and orderly evacuation.

One worker said he was told by his supervisor not to talk publicly about the incident and two Tyson security officials eventually told an AP reporter to leave the plant's employee parking lot.

View Full Version: Chemical in plastic containers makes male mice act

Title: Chemical in plastic containers makes male mice act
Description: *like females*

TheUnhivedMind - June 30, 2011 01:55 AM (GMT)

Chemical in plastic containers makes male mice act like females

By Agence France-Presse
Monday, June 27th, 2011 -- 6:51 pm
http://www.rawstory.com/rs/2011/06/27/chem...t-like-females/

WASHINGTON — Male mice who were exposed as babies to BPA, a chemical common in canned foods and plastic containers, act more like females and are seen as less desirable mates, a US study showed Monday.

The findings could have implications for how BPA, or Bisphenol A, may affect human development and behavior, said the study published in the Proceedings of the National Academy of Sciences.

"The BPA-exposed deer mice in our study look normal; there is nothing obviously wrong with them. Yet, they are clearly different," said lead author Cheryl Rosenfeld at the University of Missouri.

"Females do not want to mate with BPA-exposed male deer mice, and BPA-exposed males perform worse on spatial navigation tasks that assess their ability to find female partners in the wild."

Mother deer mice were fed a diet with levels of BPA that were proportional to the amount the US government considers safe for pregnant women to ingest.

The lab mice were fed this diet for two weeks prior to breeding and throughout lactation.

After their babies were weaned, the offspring were fed a BPA-free diet and their

behaviors were monitored into adulthood.

The male mice who were exposed to BPA showed less ability to navigate a maze safely. This skill -- useful in the search for potential mating partners -- is well developed only in male mice, since females do not seek out mates.

"The untreated mice quickly learned the most direct approach to finding the correct hole, while the exposed males appeared to employ a random, inefficient trial and error strategy," said the study.

When scientists observed how fertile females regarded the BPA males compared to the unexposed males, they found females preferred the chemical-free males by a factor of two to one.

"These findings presumably have broad implications to other species, including humans, where there are also innate differences between males and females in cognitive and behavioral patterns," Rosenfeld said.

"Whether there are comparable health threats to humans remains unclear, but there clearly must be a concern."

The US Food and Drug Administration has noted "some concern" with BPA, an industrial chemical that has been widely used in packaging since the 1960s, and is studying the risks of exposure, the regulatory agency said in January 2010.

The European Union and Canada have banned the use of BPA in baby bottles. However, there is no scientific consensus on the dangers BPA poses, the study said.

View Full Version: Monsanto Raises Forecast as Net Gains 77%

Title: Monsanto Raises Forecast as Net Gains 77%
Description: *[KNIGHT OF MALTA JOHN QUEENY]*

TheUnhivedMind - June 30, 2011 01:52 AM (GMT)

Monsanto Raises Forecast as Net Gains 77% on Herbicide Sales

By Jack Kaskey - Jun 29, 2011
http://www.bloomberg.com/news/2011-06-29/m...es-advance.html

Monsanto Co. (MON), the world's largest seed company, raised its full-year profit forecast and posted third-quarter earnings that topped analysts' estimates on higher sales of Roundup weed killer and genetically modified seeds.

Net income climbed 77 percent to $680 million, or $1.26 a share, in the three months through May 31, from $384 million, or 70 cents, a year earlier, St. Louis-based Monsanto said today in a statement. That beat the $1.10 average estimate of 17 analysts in a Bloomberg survey.

Profit excluding some items will rise to $2.84 to $2.88 a share in the fiscal year through August, compared with a previous prediction of $2.72 to $2.82. The average estimate of 20 analysts surveyed by Bloomberg was $2.82. Monsanto also said the Securities and Exchange Commission is investigating customer incentives for Roundup.

Roundup, the world's best-selling herbicide, and other crop chemicals returned to profit after a $175 million loss before interest and tax in the year-ago quarter. Gross profit from seeds and genetics rose 21 percent after Chief Executive Officer Hugh Grant cut prices of new corn and soybean seeds in an effort to stop gains by DuPont Co.'s Pioneer unit.

"Soybeans had better sales and gross profit than expected, which was probably the most upside in seeds," Chris Shaw, a New York-based analyst at Monness Crespi Hardt & Co. who rates the shares "neutral," said in an interview. "It will be interesting to

see whether the market rewards them for better Roundup earnings or discounts that as a bonus."

SEC Probe

Monsanto rose $2.30, or 3.4 percent, to $69.20 as of 9:35 a.m. in New York Stock Exchange composite trading. The shares declined 3.9 percent this year before today.

Monsanto said the SEC probe involves customer-incentive programs relating to glyphosate products, the generic name for Roundup, in fiscal years 2009 and 2010. Monsanto said it received a subpoena for documents and is cooperating. John Nester, a SEC spokesman, declined to comment.

The company planned to spend as much as $150 million "of incremental price concessions or trade incentives" in the Roundup business to establish the brand in Latin America, North America and Europe, Carl M. Casale, Monsanto's former chief financial officer, said in a February 2010 conference call.

Sales in the fiscal third quarter rose 21 percent to $3.59 billion, as crop chemicals such as Roundup gained 57 percent and seeds and gene license fees climbed 12 percent.

Fourth Quarter

Monsanto's loss in the fourth-quarter, traditionally a money-losing period because of crop-planting seasonality, will be 26 cents to 30 cents a share, the company said in a presentation posted on its website. The average estimate of 16 analysts surveyed was for a loss of 18 cents.

Roundup Ready 2 soybeans and reduced refuge corn, Monsanto's newest modified seeds, will meet forecasts for planting on mid-teens millions of acres in the U.S. this year, the company said.

High crop prices are generating record income for U.S. farmers, according to U.S. Department of Agriculture data. That typically helps boost demand for pricier seeds that Monsanto engineers to kill pests and tolerate applications of weed killer.

DuPont last year tied Monsanto for the lead in North American corn-seed market share, and the Wilmington, Delaware- based company said on June 14 that it gained more share this year in corn and soybeans.

View Full Version: Could food-packaging chemical rob men of their sex

Title: Could food-packaging chemical rob men of their sex
Description: *appeal?*

TheUnhivedMind - June 30, 2011 01:11 AM (GMT)

Could food-packaging chemical rob men of their sex appeal?

Last updated at 8:07 AM on 29th June 2011
http://www.dailymail.co.uk/health/article-.../Male-mice.html

A gender-bending chemical found in food packaging may reduce a man's ability to attract a female, researchers warn.

A study from the University of Missouri found male mice who were exposed to bisphenol A as babies became demasculanised and 'behaved more like females.'

Study author associate professor Cheryl Rosenfeld, said the chemical had suppressed the early production of testosterone, which the females could sense.

Relationship trouble? A study in male mice found exposure to the chemical BPA could turn off females later in life

'The BPA-exposed deer mice in our study look normal; there is nothing obviously wrong with them. Yet, they are clearly different,' she said.

'Females do not want to mate with BPA-exposed male deer mice, and BPA-exposed males perform worse on spatial navigation tasks that assess their ability to find female partners in the wild. '

The research could have implications on how BPA affects human development and behaviour.

'These findings presumably have broad implications to other species, including

humans, where there are also innate differences between males and females in cognitive and behavioral patterns,' Rosenfeld said.

'Whether there are comparable health threats to humans remains unclear, but there clearly must be a concern.'

Bisphenol A, or BPA, which is used to harden plastics, is one of the world's most widely manufactured chemicals and can be found in dozens of everyday items including baby bottles, CD cases and food and drink packaging.

Because the chemical mimics oestrogen, many scientists believe it interferes with the way hormones are processed by the body.

Although several animal studies have shown it to be safe, others have linked Bisphenol A to breast cancer, liver damage, obesity, diabetes and fertility problems.

In the study, female deer mice were fed BPA-supplemented diets two weeks prior to breeding and throughout lactation.

The mothers were given a dosage equivalent to what the U.S. Food and Drug Administration considers a non-toxic dose and safe for mothers to ingest.

At weaning the deer mice offspring were placed on a non-supplemented BPA diet and their behavior tested when they matured into adults.

Male deer mice exposed to BPA were less desirable to female deer mice, who literally turned their noses up at them. This meant the females did not consider them genetically suitable mates.

'We can use this evolutionary approach to the study of BPA to determine to best way to assess differences in the risks to boys and girls to early exposure to this chemical,' said David Geary MU Curators' Professor of Psychological Sciences.

The study was published in the Proceedings of the National Academy of Sciences.

Title: Action Alert: FDA Releases Draft Guidance on
Description: *Nanotechnology*

TheUnhivedMind - June 30, 2011 01:10 AM (GMT)

Action Alert: FDA Releases Draft Guidance on Nanotechnology

June 28, 2011
http://www.anh-usa.org/action-alert-fda-re...nanotechnology/

When is organic not organic? When nanoparticles are involved. A new Action Alert.

Last year we reported on nanotechnology, the process of manipulating matter at the atomic and molecular level. As we said then, it has no place in organic food. Like genetic modification, it is the antithesis of the organic concept. Canada has already amended its national organic rules to ban nanotechnology in food production as a “Prohibited Substance or Method.”

The FDA has just released its draft guidance for regulated industries describing what to consider when determining whether a product uses nanotechnology or nanomaterials. The comment period is open for 60 days.

The FDA seems to be trying to avoid any offense to Big Food. The agency emphasizes that it is not providing a regulatory definition of nanotechnology—merely guidance to get more clarification on the issue of what counts as nanotechnology and what doesn’t. And of course, the guidance makes no mention of organic foods.

The FDA needs to state explicitly that nanotechnology has no place in organic food production. There is nothing complicated about that. Please contact the FDA today and make your views known!

View Full Version: Why guzzling diet drinks could make you FATTER -

Title: Why guzzling diet drinks could make you FATTER -
Description: *they can trigger the appetite*

TheUnhivedMind - June 29, 2011 04:16 AM (GMT)

Why guzzling diet drinks could make you FATTER - they can trigger the appetite

By Fiona Macrae
Last updated at 1:58 AM on 29th June 2011
http://www.dailymail.co.uk/health/article-...r-appetite.html

They are the calorie-free way of having a sweet treat, but diet drinks could still make you fat, scientists have warned.

A ten-year study of almost 500 men and women linked low-calorie soft drinks with bulging waistlines – even when taken in small quantities.

Those who downed two or more diet fizzy drinks a day saw their waistbands expand at five times the rate of those who never touched the stuff, a diabetes conference heard.

The results were so dramatic that the American researchers advise that people ditch their diet drinks and use water to quench their thirst instead.

Those who cannot bear to give up the sugar rush may be better off drinking normal full-sugar fizzy drinks.

Professor Helen Hazuda, of the University of Texas's health science centre, said diet sodas and artificial sweeteners may foster a sweet tooth, distort appetite and even damage key brain cells. As a result, treating them as healthy alternatives may be 'ill advised'

The professor, who no longer drinks diet colas and lemonades, said: 'They may be free of calories but not of consequences.'

Professor Hazuda tracked the health and habits of 474 adults for an average of nine and a half years.

She then compared the growth in waistline of those who consumed diet drinks with the others, including some who only buy regular fizzy drinks.

Overall, those who favoured diet drinks saw their waists expand 70 per cent faster.

But ‘frequent users’ – defined as those who drink two or more cans a day – saw a 500 per cent greater increase in girth, the American Diabetes Association conference heard.

Significantly, the results still stood even when other factors such as exercise, social class, education and smoking were taken into account.

With pot bellies being blamed for ills from heart disease to diabetes and cancer, the researchers said: ‘These results suggest that amidst the national drive to reduce chronic consumption of sugar-sweetened drinks, policies that would promote the consumption of diet soft drinks may have unintended deleterious side-effects.’

A second study, involving some of the same researchers and carried out on mice, linked sweetener aspartame with the sort of damage in the pancreas that can occur early in diabetes.

The researchers said they think that artificial sweeteners may distort appetite, leaving us craving extra-sweet and unhealthy treats.

They may also damage brain cells involved in feelings of fullness, while the lack of real sugar could also stop us from feeling full.

Sharon Fowler, who was involved in both pieces of research, said: ‘Artificial sweeteners could have the effect of triggering appetite but unlike regular sugars they don’t deliver something that will squelch the appetite.’

Professor Hazuda said that her study was the fourth large-scale piece of research to link diet drinks with ill health.

She added: ‘I think prudence would dictate drinking water.’

Feds Refuse To Cleanup Buried Agent Orange That Is Kiling Gainesville Florida Residents

Posted by Alexander Higgins - June 26, 2011
http://blog.alexanderhiggins.com/2011/06/2...esidents-31021/

The Feds Refuse To Clean Up Agent Orange Buried At A Gainesville Florida Superfund Site That Is Killing Local Residents, Claiming The Area Is Free From The Deadly Toxin, Despite Testimony From Local Residents, Laboratory Tests And Even High-Res Satellite Photos Showing Agent Orange Barrels On Location.

As we all know the US Goverment sprayed the deadly toxin “Agent Orange” over jungles in Vietnam during the Vietnam war, in what we were told was an operation to clear the foliage that enemy troops were hiding under, but later learn that the agent was infact designed to kill enemy troops and locals on the ground, with US troops sprayed designated as collateral damage by our beloved pentagon and Department of Defense. Agent Orange

Agent Orange is the code name for one of the herbicides and defoliants used by the U. S. military as part of its herbicidal warfare program, Operation Ranch Hand, during the Vietnam War from 1961 to 1971. Vietnam estimates 400,000 people being killed or maimed, and 500,000 children born with birth defects.[1]

A 50:50 mixture of 2,4,5-T and 2,4-D, it was manufactured for the U.S. Department of Defense primarily by Monsanto Corporation and Dow Chemical. The 2,4,5-T used to produce Agent Orange was later discovered to be contaminated with 2,3,7,8-tetrachlorodibenzodioxin, an extremely toxic dioxin compound. It was given its name from the color of the orange-striped 55 US gallon (200 L) barrels in which it was

shipped, and was by far the most widely used of the so-called “Rainbow Herbicides”.[2]

During the Vietnam War, between 1962 and 1971, the United States military sprayed 12,000,000 US gallons (50,000,000 L) of chemical herbicides and defoliants in Vietnam, eastern Laos and parts of Cambodia, as part of Operation Ranch Hand.[3] The program’s goal was to defoliate forested and rural land, depriving guerrillas of cover; another goal was to induce forced draft urbanization, destroying the ability of peasants to support themselves in the countryside, and forcing them to flee to the U.S. dominated cities, thus depriving the guerrillas of their rural support base and food supply.[4][5]

The Vietnam Red Cross reported as many as 3 million Vietnamese people have been affected by Agent Orange, including at least 150,000 children born with birth defects.[35] According to Vietnamese Ministry of Foreign Affairs, 4.8 million Vietnamese people were exposed to Agent Orange, resulting in 400,000 people being killed or maimed, and 500,000 children born with birth defects.[1]

Children in the areas where Agent Orange was used have been affected and have multiple health problems, including cleft palate, mental disabilities, hernias, and extra fingers and toes.[36] In the 1970s, high levels of dioxin were found in the breast milk of South Vietnamese women, and in the blood of U.S. soldiers who had served in Vietnam.[37] The most affected zones are the mountainous area along Truong Son (Long Mountains) and the border between Vietnam and Cambodia. The affected residents are living in substandard conditions with many genetic diseases.[38]
[...]
Effects on U.S. veterans

Studies of veterans who served in the South during the war have increased rates of cancer, nerve, digestive, skin and respiratory disorders. Veterans from the south had higher rates of throat cancer, acute/chronic leukemia, Hodgkin’s lymphoma and non-Hodgkin’s lymphoma, prostate cancer, lung cancer, soft tissue sarcoma and liver cancer. Other than liver cancer, these are the same conditions the US Veteran’s Administration has found to be associated with exposure to Agent Orange/dioxin, and are on the list of conditions eligible for compensation and treatment.[35]

Military personnel who loaded airplanes and helicopters used in Ranch Hand probably sustained some of the heaviest exposures. Members of the Army Chemical Corps, who stored and mixed herbicides and defoliated the perimeters of military bases, are also thought to have had some of the heaviest exposures. Others with potentially heavy exposures included members of U.S. Army Special Forces units who defoliated remote campsites, and members of U.S. Navy river units who cleared base perimeters.[44] Military members who served on Okinawa also claim to have been exposed to the chemical.[45]

While in Vietnam, the veterans were told not to worry, and were persuaded the chemical was harmless.[46] After returning home, Vietnam veterans began to suspect their ill health or the instances of their wives having miscarriages or children born with birth defects may be related to Agent Orange and the other toxic herbicides to which they were exposed in Vietnam. Veterans began to file claims in 1977 to the Department of Veterans Affairs for disability payments for health care for conditions they believed were associated with exposure to Agent Orange, or more specifically, dioxin, but their claims were denied unless they could prove the condition began when they were in the service or within one year of their discharge.

By April 1993, the Department of Veterans Affairs had only compensated 486 victims, although it had received disability claims from 39,419 soldiers who had been exposed to Agent Orange while serving in Vietnam.[47]

[...]
Use outside Vietnam
United States

In 1978, the U.S. Environmental Protection Agency suspended spraying of Agent Orange in National Forests, due to a threefold increase in miscarriages in women living near forests that had been sprayed.[78][79]

A December 2006 Department of Defense report listed Agent Orange testing, storage, and disposal sites at 32 locations throughout the United States, as well as in Canada, Thailand, Puerto Rico, Korea, and in the Pacific Ocean.[80] The Veteran Administration has also acknowledged that Agent Orange was used domestically by U.S. forces in test sites throughout the US. Eglin Air Force Base in Florida was one of the primary testing sites throughout the 1960s.[81]

Source: WikiPedia

While sources cited within the Wikipedia article clearly indicate that the US tested the use of Agent Orange within the US, and in fact through out the world, the US Government has been complicit in covering up burial sites of the deadly toxin here with the US.

Yet instead of correctly dealing with the sites were the toxin was buried here within the US the feds have embarked in a campaign of coverup.

The Intel Hub points to the ongoing federal cover up and Agent Orange burial site occurring right here within the United States in Gainesville Florida.
Agent Orange Barrels Seen Buried In Gainesville’s Cabot-Koppers EPA Superfund Site

[...]

Agent Orange was illegally sprayed as chemical aerosols by US military aircraft over civilians, villages, jungles and farms.

The poisonous chemicals were illegally and criminally sprayed over Vietanam and three more countries for which Congress had not authorized funds for military actions including Cambodia, Laos and Thailand.

Agent Orange War Crimes Come Home to Roost in Gainesville, Florida

This 15 minute Gainesville, Fl mini-doc begins with a short clip from Clay Claiborne's 2006 Documentary, Vietnam: American Holocaust followed by the recent revelations of how Gainesville residents, UF students and school children are suffering the effects of Agent Orange because Real Estate Companies and Landlords have failed for decades, to disclose the existence of the a toxic Superfund site just down the street from their new home, apartment or public school.

[...]

Residents who lived around Cabot-Koppers in the post-Vietnam War years of the 1970's witnessed barrels of herbicides (presumed to be weaponized, military grade Agent Orange dioxins) being secretly buried on what was later designated by the EPA as a Superfund site in 1983.

In 2010 we had new witnesses who claimed that TETRA TECH, a company contracted for site cleanup by the designated clean-up corporation and owner, BEAZER EAST, was seen excavating "drums", (aka barrels) from under the ground on the northern section of the Superfund site in the Fall of 2010.

Witnesses within view of these activities say it was apparent that TETRA TECH used earthen burms and tarps to hide their diggings from enquiring eyes and camera lenses during the excavations.

In February, 2011 the Google Earth's Worldview satellite captured a high resolution image that revealed over 20 drums gathered on the Koppers site in a location near the rental home where the excavations were witnessed.

The landlord holding the lease to Mary Ann Jones' rental home, who is also president of Protect Gainesville Citizens, Kim Popejoy, was apparently taking the word of local officials when he agreed in published meeting minutes, that the Beazer sponsored "search" for buried drums by GEO HYDRO, a company now representing GRU, was diligent and that "No drums were found".

"Kim stated that in the near future the Florida Department of Health is supposed to give a presentation about their recent Koppers cancer study. He also presented information

received from John Herbert and Robin Hallbourg regarding the search for buried drums at the Koppers site. This search, conducted at Beazer's expense, was described as thorough and diligent. No drums were found." (Source: Protect Gainesville Citizens, Inc. May 12 Minutes Draft)

The complete timeline of events including multiple witness testimony suggests that the drums were secretly excavated by TETRA TECH crews in 2010 and early 2011 before the "official" search for buried drums was begun by a completely different company, GEO-HYDRO, in April and May of 2011.

Dioxins From 2 Sources Could make DoD a new responsible party with Beazer for complete Superfund clean-up.

When the EPA designated Cabot-Koppers as a Superfund site in 1983, it was assumed that on-site dioxins were generated from a sole source – wood treatment.

The newly revealed contamination from drums of dioxins that may have leaked to the surface to further contaminate a now known 2 mile radius has never been acknowledged by any local, State or Federal agency.

This newly discovered liability by the Department of Defense could add another remediation funding source with Beazer to provide immediate and compensated evacuation of the Stephen Foster families under extreme duress and to order a complete removal of toxins from the soils on the site to return the property to 100% marketable parity for futire development.

Indeed the article points us to the following YouTube video as evidence that the Agent Orange drums are infact being recovered from the super fund site were the EPA investigation has found they do not exist.

[dohtml]<object style="height: 390px; width: 640px"><param name="movie" value="http://www.youtube.com/v/Jim9ua6grNY?version=3"><param name="allowFullScreen" value="true"><param name="allowScriptAccess" value="always"><embed src="http://www.youtube.com/v/Jim9ua6grNY?version=3" type="application/x-shockwave-flash" allowfullscreen="true" allowScriptAccess="always" width="640" height="390"></object>[/dohtml]

That video and the following documentary has been brought to our attention by a local activists site that is trying to hold the Feds accountable in making sure they clean up the site for the health and safety of the community, including the adults and children in the area who are being sickened and dying from the lethal EPA coverup.

TheUnhivedMind - June 27, 2011 01:28 AM (GMT)

Anti-foaming agent found in Chicken McNuggets

Sunday, June 26, 2011
by Mike Adams
http://www.naturalnews.com/032820_Chicken_...ngredients.html

(NaturalNews) Ever wonder what's really found in Chicken McNuggets? Some of the ingredients, it turns out, seem to belong more to an industrial factory of some kind, not a food retailer. According to the McDonald's Corporation, its famous Chicken McNuggets are made with ingredients including autolyzed yeast extract (which contain free glutamate, similar to MSG), sodium phosphates and sodium aluminum phosphate. But that's not the freaky part. According to McDonald's own website, Chicken McNuggets are also made with "hydrogenated soybean oil with TBHQ and citric acid added to preserve freshness" and "Dimethylpolysiloxane added as an antifoaming agent." (http://nutrition.mcdonalds.com/nutr...)

At least two of these ingredients are artificially synthesized industrial chemicals. TBHQ, a petroleum derivative, is used as a stabilizer in perfumes, resins, varnishes and oil field chemicals. Laboratory studies have linked it to stomach tumors. "At higher doses, it has some negative health effects on lab animals, such as producing precursors to stomach tumors and damage to DNA. A number of studies have shown that prolonged exposure to high doses of TBHQ may be carcinogenic, especially for stomach tumors." (http://en.wikipedia.org/wiki/TBHQ)

Dimethylpolysiloxane, a type of silicone, is used in caulks and sealants, as a filler for breast implants, and as key ingredient in Silly Putty. Says Wikipedia:

"PDMS is also used as a component in silicone grease and other silicone based lubricants, as well as in defoaming agents, mold release agents, damping fluids, heat

transfer fluids, polishes, cosmetics, hair conditioners and other applications. PDMS has also been used as a filler fluid in breast implants, although this practice has decreased somewhat, due to safety concerns. PDMS is used variously in the cosmetic and consumer product industry as well. For example, PDMS can be used in the treatment of head lice..." (http://en.wikipedia.org/wiki/Dimeth...)

Not that the other ingredients are any better. Because cotton is not regulated as a food crop, cottonseed oil may contain chemical pesticides that are banned in food production. It is also almost always genetically modified. Hydrogenated oils, of course, typically contain trans fats, the artificially produced fats that are unusable by the body and that studies have linked to a number of detrimental health problems. And autolyzed yeast extract is a chemical taste-enhancing ingredient containing free glutamate that manufacturers use as a friendlier-looking replacement for MSG.

And what about the chicken in Chicken McNuggets? It's factory-farmed chicken, not free-range chicken. So it's the kind of chicken that's typically treated with vaccines and hormones while being fed conventional feed products that are medicated with pharmaceuticals and grown with pesticides.

Yum!! Don't forget to ask for extra dipping sauce. We haven't even talked about what you'll find in there...

"Level 1 hazmat suites were being used in our neighborhood immediately adjacent to the properties to test water wells and do sewage work."

Agent Orange dioxin contamination is not only about the increased risk of deadly and exotic cancers.

A long list of human and animal diseases has been positively linked to dioxins including damaged DNA, neurological diseases, birth defects, autism, and learning disabilities.

View Full Version: New Bill to Modernize 1938 Regulations that Allow

Title: New Bill to Modernize 1938 Regulations that Allow
Description: *Harmful Chemicals in Shampoos, Cosmetics*

TheUnhivedMind - June 25, 2011 04:24 AM (GMT)

New Bill to Modernize 1938 Regulations that Allow Harmful Chemicals in Shampoos, Cosmetics

http://www.prnewswire.com/news-releases/ne...-124505118.html

WASHINGTON, June 24, 2011 /PRNewswire-USNewswire/ -- Today, Rep. Jan Schakowsky, D-Ill., Rep. Ed Markey, D-Mass., and Rep. Tammy Baldwin, D-Wisc., introduced the Safe Cosmetics Act of 2011 (HR 2359), which would update the 1938 federal cosmetics laws that allow chemicals linked to cancer, birth defects, learning disabilities and other illnesses into the personal care products we use daily on our bodies.

"The growing number of reports of serious health problems arising from the use of dangerous chemicals in personal care products shows a need to update our laws and protect men, women, and children from harmful exposure," said Rep. Schakowsky. "Currently, manufacturers are not required to disclose all their ingredients on labels and the FDA has no power to supervise the use of toxic chemicals in cosmetics."

Recent scandals that have rocked the cosmetics industry include a study that found arsenic and lead in lip gloss and other cosmetics. In April, the federal Occupational Safety and Health Administration warned salons to stop using keratin hair-straightening products like Brazilian Blowout, which contain the carcinogen formaldehyde and have been linked to hair loss, nose bleeds and breathing problems.

"When there are cancer-causing chemicals in popular hair-straighteners and baby shampoos and neurotoxins like lead in makeup, you know the regulatory system is broken," said Lisa Archer, director of the Campaign for Safe Cosmetics. "Industry self-regulation just isn't working. This bill recognizes that consumers have a right to safe

personal care products and that companies have a responsibility to ensure their products are safe."

Rep. Markey commented, "The personal care products that make us clean should not make us sick. The Safe Cosmetics Act will close a gaping hole in the federal law that allows potentially toxic chemicals to remain in the cosmetic products we use every day."

Rep. Baldwin added, "The health risks caused by harmful chemicals such as formaldehyde in cosmetics products demonstrate the pressing need to see that the products we use are safe. The Safe Cosmetics Act is critical to ensuring that personal care products do not compromise the health of workers and consumers."

This bill updates last year's bill aimed at ensuring cosmetics safety while being more effective and manageable for smaller companies which are innovating many of the safer alternatives already on the market.

View Full Version: What’s Hiding in Your Veggie Burger?

Title: What’s Hiding in Your Veggie Burger?

TheUnhivedMind - June 25, 2011 03:38 AM (GMT)

What’s Hiding in Your Veggie Burger?

Many Veggie Burgers, Nutrition Bars and Other Soy Foods Contain Hexane

June 20, 2011 | Sarah Mosko | chemicals, food threats, soy, hexane
http://www.emagazine.com/blog/whats-hiding...r-veggie-burger

Soy-based foodstuffs like veggie burgers and nutrition bars are a go-to source of protein and generally considered “health foods.” We eat them because we believe they are a healthy alternative to meat and because soy foods have a reputation for being produced in a more environmentally friendly or sustainable fashion than animal sources of protein.

But the benefits of highly processed forms of soy protein—to people or the environment— was called into question by a November 2010 report from the Cornucopia Institute, a Wisconsin-based nonprofit which claims that non-organic soy protein is commonly extracted from the soybeans by literally bathing the beans in n-hexane, a chemical byproduct of petroleum refining.

Even popular brands of nutrition bars, veggie burgers and other meat alternatives marketed as “natural” are often guilty of this practice unless they are specifically labeled “USDA Organic.”

Soybeans were originally introduced to U.S. farmers in the 1930s from Southeast Asia where they were traditionally treated with hot water to yield soy milk and tofu or else fermented to obtain products like soy sauce, miso and tempeh. Soybeans were initially grown in the U.S. for use as soy cooking oil which was extracted mechanically (through pressure), and the protein-rich residue was and is still used as animal feed.

By the 1950s, soy oil was the most popular vegetable oil in the U.S., though rapeseed oil (canola) later surpassed it in popularity.

However, chemical extraction was applied to soybean processing in the latter half of the 20th century to derive the various protein derivatives now added to many human foods: soy protein isolate, soy protein concentrate, and textured soy protein. The first step in obtaining any of these is the chemical bath which extracts the soy oil, leaving behind “defatted” soy flour which undergoes further processing into the different forms of soy protein incorporated into foods.

Extracting Oils

Hexane remains today the chemical of choice for oil extraction for not just soy but other vegetable oils too, like corn and safflower. However, any oils meeting USDA organic standards, which prohibit processing with synthetic chemicals, are always extracted mechanically with pressure via an expeller, screw or ram press. The more traditional oils, like olive and coconut, are also often obtained through mechanical extraction, whether organic or not.

According to Cornucopia’s food policy analyst Charlotte Vallaeys, the standard hexane bath is literally 50%-60% n-hexane, and the rest is composed of other related petrochemicals – cyclohexane, methylcyclohexane and methypentanes.

Hexane is a readily available component of gasoline used as an industrial solvent for cleaning and degreasing all sorts of items. As to why it continues to be used for extracting soy protein when mechanically extracted organic soy protein has been available for many years, the answer is obvious: Hexane extraction is cheaper and the yield is greater.

The Hazards of Hexane

The U.S. Environmental Protection Agency classifies hexane as a neurotoxin affecting the nervous system of humans and lab animals, based on effects of chronic inhalation. Chronic workplace exposure increases risk for polyneuropathy, a neurological disorder characterized by muscle weakness, nerve damage and visual impairment. The agency cites no studies that have yet looked into the effect of oral exposure, and studies are also lacking to determine hexane’s carcinogenic potential except for one which linked brain tumors to workers exposed to hexane and other chemicals at a petrochemical plant.

Hexane is also regarded as a hazardous air pollutant because it contributes to ground-level ozone, a component of smog. According to Cornucopia, 19 million pounds were released into the air in 2009 from the processing of soybeans and other grains. Furthermore, hexane is highly explosive and has injured or killed both plant workers

and tanker truck drivers.

The U.S. Food and Drug Administration (FDA) has not set any restriction on the maximum level of hexane allowed in soyfoods, nor are manufacturers required to measure residues in foods, so how much hexane humans could be exposed to through consumption of processed soyfoods is unknown. The European Union, however, adopted a directive in 2009 targeting residues of solvents used in food processing and set a hexane limit of 10 ppm (parts per million) for foods containing defatted soy protein products.

Testing for Toxins

In 2009, Cornucopia sent a sample each of soy meal and soy grits to an independent testing lab which detected hexane residues of 22 ppm and 14 ppm, respectively. Cornucopia has since petitioned the FDA to measure both soy foodstuffs and human tissues for hexane contamination, with particular focus on products made for infants and children because of the greater vulnerability of youngsters to environmental toxins. The FDA has yet to respond.

According to Cornucopia, the more mainstream brands of infant soy formula (Enfamil, Similac and Nestle) rely on hexane-extracted soy protein, and the manufacturers offer no organic alternatives. At least three smaller companies do: Vermont Organics made by PBM Nutritionals, Earth’s Best from The Hain Celestial Group and Baby’s Only from Nature’s One.

Downloadable shopper’s guides are offered by Cornucopia which list popular brands of nutrition bars, veggie burgers and meat alternatives according to whether or not their soy ingredients are processed with hexane.

Twenty of the 44 nutrition bars inventoried, including those from Clif Bar, Odwalla, and Genisoy, are processed with hexane, and the same is true for 17 out of 31 meat alternatives, including popular products made by Boca, Morningstar Farms, Gardenburger, and Yves Veggie Cuisine.

A word of warning: It can be tricky to get the straight scoop from manufacturers of non-organic soyfoods on how the protein was extracted because most will have purchased it from one of the handful of corporate giants that actually do the extractions (e.g., Archer Daniels Midland or Solae). Soyfood makers can disingenuously skirt the issue by stating that their company does not use hexane.

Cornucopia emphasizes the importance of scanning the ingredient list for non-organic soy protein ingredients or, better yet, looking for the USDA Organic seal. A product labeled “made with organic ingredients” can still contain up to 30% non-organic ingredients, and a “natural” label conveys nothing about how the soybeans were

processed.

View Full Version: 50 Random Facts About . . . Carpet

Title: 50 Random Facts About . . . Carpet

TheUnhivedMind - June 25, 2011 01:55 AM (GMT)

50 Random Facts About . . . Carpet

http://facts.randomhistory.com/2009/08/03_carpet.html

The Norwalk virus or Norovirus (the virus that causes the stomach flu) can survive on an uncleaned carpet for a month or more.d
The term “carpet” derives from the Latin carpere, “to pluck,” probably because carpets were made from unraveled “plucked” fabric. “Carpet” has the same Latin root as carpe diem, literally “pluck/seize the day.”g
The oldest surviving carpet is the celebrated Pazyryk carpet, which is over 2,000 years old. It was found in the 1940s in a Scythian tomb in southern Siberia.k
Microbiologists have identified air blown from a running vacuum cleaner as one of the five places in the home that has the highest numbers of germs. Other places include dish sponges, washing machines, bathroom toilets during a flush, and kitchen trash cans.m
The term “carpet bagger” is a derogatory reference to Northerners who sought to take political and economic advantage of the South’s defeat after the Civil War. The name refers to the travel bag made from carpet that many Northerners used to carry their possessions.g

From the Sanskrit, swasti (well being), the swastika was both an ancient symbol of good luck and a common motif on carpets

The swastika design has been traditionally a symbol of good fortune and can be found on carpets from America, Europe, India, and China.l
The phrase “to sweep under the carpet” in its figurative sense was first recorded in 1963.k
Each year, several pounds of soil can accumulate in and under a carpet.e

The five-second rule is a myth: bacteria can live after four weeks on carpet. And, thanks to “microbial adhesion,” germs such as the following are immediately transferred to food: Salmonella typhimurium, Campylobacter, and Salmonella enteritis, a nasty bacterium that causes horrible diarrhea and vomiting.j
Bed bugs can live in carpet fibers and wooden floorboards. For their size, they are extremely fast and can crawl more than 100 feet to obtain a blood meal, usually at night from people who are sleeping. Engorgement takes about three to 10 minutes yet people rarely realize they are being bitten.e
A person sheds about 1.5 million skin flakes an hour, most of which becomes embedded in our carpets.m
Scientists believe that more than 43 million tons of dust falls over the U.S. every year. Indoor air usually contains about twice as much dust as the air outside. That’s a million microscopic particles in a cubic inch of air. About 2,000 dust mites can live happily on one ounce of carpet dust.b
Wall-to-wall carpeting is less healthy than smaller rugs because wall-to-wall carpets tend to be more permanent and harder-to-clean endpoints for moisture, chemicals, liquids, crumbs, and other spills that provide molds, mildew, yeasts, and bacteria (such as e-coli) with a rich and nearly continuous supply of nutrients.c
Naphthalene is commonly found in carpet cleaners. In concentrated form, it is dangerous to breath and can cause headaches, nausea, vomiting, and urinary irritation. It is a suspected carcinogen and can be toxic to children, infants, and pets.c
In an ABC News investigation, a black light illuminated traces of urine not only on hotel walls, bedspreads, and bathroom vanity stools, but also on the carpeting. In every room they tested, from rooms priced at $55 a night to $400 a night, lab results showed traces of urine or semen in every room. Additionally, hotel rooms that allow pets may harbor fleas or animal urine in the carpet.n
Some modern carpets are made from artificial plastic fiber, but other carpets are made from knotted wool, which can house beetle grubs or “woolly bears.” Special chemicals in their stomachs convert wool into sugar so they will munch through carpet like cotton candy.p
To make a carpet brighter, sprinkle salt onto the carpet and let it stand for an hour before vacuuming it up. Salt is also effective in removing muddy footprints.f
In the Middle Ages, floors were covered with rushes, which acted like a disposable carpet. If it got dirty, it was thrown away. Today, carpets are more permanent and vacuums often miss much of the dirt—and the germs.b

Mostly active at night, a firebrat will make its home in warmer carpets

Carpet near a fireplace can get very warm, making it a perfect place for an odd little creature called a “firebrat.” It has a long, flexible body and is able to eat almost anything. p
The caterpillar of the palm flower moth is fond of making its home in a deep cavity in a

carpet. Regardless of whether the carpet fibers are natural or man-made, the caterpillar will use the fibers to make a cocoon.p
Studies at Anderson Labs, international experts report that mice have dropped dead after breathing some new carpet fumes.c
Kawasaki Syndrome (named after a Japanese physician who first diagnosed it in the 1960s) is a rare illness that some scientists suggest may be triggered by the toxic chemicals in carpet cleaners. Actor John Travolta and wife Kelly Preston blame exposure to carpet cleaners for their son's disability and ultimate death. Currently, evidence for a causal link between the disorder and carpet cleaning is inconclusive.a
Dust mites thrive in warm, humid environments, eating dead skin cells and nesting in dust-collecting carpet. The residue that mites leave behind can mix with dust and become airborne, which may cause allergies.p
All carpet should be professionally cleaned a minimum of every 12 to 18 months.n
The popular song "Magic Carpet Ride" by the Canadian band Steppenwolf peaked at #3 in the US and became the band's second hit, behind "Born to Be Wild." It has been interpreted as describing an acid trip or as representing the hippy movement of the late 1960s.o

The toxic substances in cigarette smoke can become embedded in carpet fibers, placing both children and pets at risk for cancer

Carcinogens in cigarettes may accumulate in household carpet. Because dogs and cats, not to mention children and infants, spend a great deal of time on the floor, they may be at risk for developing lung cancer in households with cigarette smokers.d
New carpets can be a source of chemical emissions. Customers should ask retailers about selecting lower-emitting carpet adhesive or about airing out the carpet before it is installed.c
When properly cleaned and maintained, carpeting may improve the quality of air through trapping allergy-inducing dust and allergens. Most people, however, do not clean their carpets correctly, which can actually exacerbate allergies.e
Carpets are highly effective places for mature fleas to live because fleas thrive in the carpet's dry temperature. Conversely, flea eggs love wetter carpet that may be damp due to flooding, inadequate bathroom ventilation, or kitchen-generated moisture. Fleas can bite both people and animals.p
The vacuum cleaner is based on Edmund Heming's 1699 invention of a street-sweeping machine.b
When Melville Bissell invented the carpet sweeper, "Bisselling" (rather than "vacuuming") carpets became a popular term.b
Vacuum cleaners in the early 20th century were large, powered by coal, and required three people to operate them. Other early vacuums cleaners had to be parked outside a building and had long hoses that went through the windows. Yet another early version of the vacuum was installed in the house cellar and connected to a network of pipes

that led to each room in the house.b
Early Hoover vacuum cleaners were hard to sell because potential customers refused to believe (and were even insulted by the suggestion) that they could have that much dirt in their carpets.b
Club soda is effective in getting up fresh stains in carpet. Just pour some on the spot, let it set for a few seconds, and then sponge it up.f
To remove candle wax from a carpet, place a brown paper bag over the spot and put a hot iron over it. The wax will be absorbed into the bag.f
To remove red wine from a carpet, scrub the stain with club soda or cover the stain with salt to let it absorb the wine. Vacuum the residue. If the stain remains, wipe with a solution of detergent, water, and a few drops of white vinegar.f
Red carpets traditionally marked the ceremonial and formal routes of leaders and politicians. The first reference to a “red carpet” is Agamemnon (458 B.C.) by Aeschylus.i
One family kept falling ill with gastrointestinal problems because a leaky vacuum cleaner kept redepositing Salmonella germs from the carpet into the household air.d
To remove gum from carpet, try pressing ice cubes against the gum until it becomes brittle and breaks off. Then use a spot remover to get rid of the remnants.f
Carpets in particular can become heavily infested with mites. The chemical benzyl benzoate will kill mites, but their dead carcasses can still be allergenic and will need to be vacuumed up afterward. A diluted solution of tannic acid can be sprayed onto the carpet to kill dust mites, but tannic acid can be dangerous to humans.p
Stachybotrys chartarum is a house mold that grows on wet carpeting. It produces mycotoxins which causes dermatitis, mucosal irritation, and immunosuppression.d
To raise depressions in the carpet left by heavy furniture, hold a steam iron close enough for steam to reach the carpet, but don’t let the iron touch the carpet. Lift fibers by scraping them with edge of a coin or spoon.f

According the American carpet industry, a ”magic carpet” is technically a ”magic rug”

The American floor covering industry argues that the difference between a “rug” (related to the words “rag” and rough”) and a “carpet” is strictly a matter of size. Any piece smaller than 40 square feet is considered a rug while anything larger is a carpet. According to the American carpet industry, then, the “flying carpet” or “magic carpet” is technically a rug.h
Muslim prayer carpets are often woven with motifs such as a mosque lamp (symbolic of Allah), the water basin (symbolic of ritual ablution), a stylized mountain (to symbolically elevate the worshipper), or even the sacred stone, the Kaaba in Mecca.k
Although it is not known when the first carpets were produced, they were most likely being made centuries before Christ, probably by nomads in the heart of Central Asia as an attempt to insulate their tents. Over the centuries, carpet weaving was carried across Asia and into the Middle East by invading armies, traders, and migrating nomads.k
The floral designs known as palmettes on oriental carpets are mostly derived from the

lotus or peony. In regions of the world where water was a precious commodity, it is perhaps not surprising that flowers and fauna were the symbol of paradise.l
Oriental carpets are usually rich with symbolism. For example, large Persian carpets often present a small-scale plan of a part of the universe: Heaven above, with Earth below. Carpets also featured an “X,” or an eight-petaled flower, which represents the Four Directions (and, by extension, the World itself). Other symbols include a sky door leading to Heaven and combs, which served as a remainder that Allah demands high standards of cleanliness.l
The borders of some oriental carpets were seen to protect those sitting within its magic confines.k
Oriental carpets first became highly prized possessions in Europe during the Middle Ages when the crusaders likely returned home with them. The influence was very unilateral, with Europe hardly influencing the design of Oriental carpets.k
Some common carpet motifs include various medallions (heraldic qualities and amulets), Boteh (a paisley pattern named after a Persian village), Herati (fish in the pond), a tree of life (a symbol predating both Islam and Christianity representing the connection between this world and paradise), stars, “shou and fu” (symbolizing long life and good luck), animals, birds, plants, and cloud bands.k

Asbestos: Common Roofing Supply in India

By Akhila Vijayaraghavan | June 17th, 2011 1 Comment
http://www.triplepundit.com/2011/06/asbest...g-supply-india/

Asbestos pollution may be a waning issue in Europe and the US but it still remains a big problem in India. Richer nations like the UK and Germany banned asbestos decades ago after it was discovered that it leads to a condition called asbestosis which was first identified in 1906. Asbestos consists of six natural fibers about 1,200 times smaller than a strand of human hair that can be woven like fabric. The material is resistant to fire, heat and chemicals and is therefore well-suited to construction and auto industries.

It has been used for the last 140 years in construction and national bans were first enacted in the 1970s after harmful effects were noticed. When asbestos fibers are inhaled, they bruise the lung tissue. This leaves scars that accumulate and cripple the organ's ability to process oxygen. This damage can also lead to the development of lung cancers, shortness of breath and chest pains. There is no minimum safe level for asbestos exposure and sometimes it can take up to 20 years for symptoms to manifest.

Supply and Demand

According the United Nations Commodity Trade Statistics Database, India is the largest importer of asbestos. Most of it goes into making corrugated roofing sheets that sell for as little as $7. More than 100,000 people are employed by companies producing the material, according to the Asbestos Cement Producers Association, an industry lobby group.

Canada was India's second-largest overseas supplier of asbestos in 2009, trailing

Russia, according to the United Nations Commodity Trade Statistics database. According to Bloomberg, the Quebec government approved a $60 million loan guarantee to a group of Canadian and Indian investors, enabling them to expand production at the last remaining asbestos mines. It produces 250,000 metric tons annually, of which 40% may end up in India and sales will generate $130 million in revenue.

Poor Working Conditions

There are many companies actively involved in using asbestos to make roofing materials. The working conditions in such factories are dismal with workers not even being provided with a face mask for protection. Often factory floors are poorly ventilated with bad air circulation. Workers are provided with regular health checkups or compensation for medical issues related with asbestos exposure. Some of the migrant workers that work in these factories are so poor that they are even willing to risk their health in pursuit of temporary gain that companies are only too willing to take advantage of.

Workers are supposed to receive compensation for asbestosis but only some of them do. Due to the nature of the Indian judicial system as well as strong-arm tactics of Indian companies, compensations are often delayed or never received. Indian companies that use asbestos, including Everest, Gujarat Composites, Visaka Industries Ltd. and Hyderabad Industries Ltd. don't face the same kinds of disability claims that pushed Turner & Newall into insolvency. Tuner & Newall is a Manchester-based company that filed for bankruptcy in 2001 because they had to face a pay-out of $9.4 billion in death and injury claims triggered by asbestos-related conditions.

Goes Beyond CSR

The government of India must of course take a serious hand in this as the issues goes beyond merely CSR. Further subsidization of asbestos must be stopped and stringent guidelines must be hammered out for those companies still continuing in the trade. Immediate measures to protect workers from dismal working conditions should be taken not just by companies but also the government. Additionally, alternative roofing materials must be encouraged in order to bring this tragedy to an end.

Group Says Fire Retardant Not Worth Risk Or Money

U.S. Forest Service Asks For Input

JAMES JARMAN
POSTED: 8:57 pm MDT June 20, 2011
http://www.krdo.com/news/28302250/detail.html

COLORADO SPRINGS, Colo. -- The fire retardant being dropped to put out the wildfires may not be as safe or effective as we think it is.

The U.S. Forest Service wants to hear from you about the retardant they use. They were forced to do a new environmental study and the public comment period is currently underway.

The study found the retardant can be toxic to aquatic life, but overall the Forest Service stands behind it's use and says the chemical helps keep firefighters safe and stops the spread of wildfires.

But the group Forest Service Employees for Environmental Ethics, which sued the Forest Service over the retardant's use and won, disagrees with that assessment.

"Our analyses of the data shows that retardant use and wildfire fighting are completely separate," Andy Stahl, FSEEE told us, "there's no statistical link between the use of retardant and the forest services success in keeping fires small."

FSEEE's lawsuit forced the federal government to conduct the new environmental impact study on the retardant.

The federal government buys the retardant from an Israeli company, spending upwards of $30 million a year.

"The reason (retardant's) used is because the federal government has unlimited money to spend on fighting fire and it is simply spending the money," said Stahl, "dropping fire retardant is like dropping dollar bills on the fire."

No one with the Forest Service in our state is allowed to comment on this issue. We were directed to the Washington DC Office and told we'll get a response Tuesday.

To read the environmental impact study here. You have until June 27th to send your comments to Forest Service.

TheUnhivedMind - June 21, 2011 02:35 AM (GMT)

Europe's top industrial firms have a cache of 240m pollution permits

European Commission estimates energy-intensive sector will have accumulated allowances worth €7-12bn by the end of 2012

Damian Carrington
guardian.co.uk, Sunday 19 June 2011 15.38 BST
http://www.guardian.co.uk/uk/2011/jun/20/i...h-officer-trial

Some of Europe's largest industrial companies gained billions of euros from the carbon emission rules they lobbied fiercely against, new analysis reveals today.

Ten steel and cement companies have amassed 240m carbon pollution permits from generous allocations, according to a report by Sandbag, the carbon trading thinktank, seen by the Guardian.

The free permits, granted to companies with a market value of €4bn (£3.5bn), can be sold or kept for future use. The European commission estimates that the entire energy-intensive sector will have accumulated allowances worth €7bn-€12bn by the end of 2012.

"More and more businesses see that Europe's future lies in a highly efficient economy with low pollution," Baroness Worthington, Sandbag's founding director, said. "But a small group of carbon fat-cat companies are trying to stop this, in spite of making billions from a windfall of free pollution permits."

The steelmaker ArcelorMittal leads the list of companies in the report, with a current surplus valued at €1.7bn, followed by Lafarge, the cement group.

Tata Steel, in third place with a surplus valued at €393m, last month announced 1,500 job losses at its plants in Lincolnshire and Teesside, blaming emissions regulations as well as the economic downturn. Karl-Ulrich Köhler, chief executive of Tata Steel Europe, said at the time: "EU carbon legislation threatens to impose huge additional costs on the steel industry." Tata Steel declined to comment on the report.

The European Union emissions trading scheme (ETS) puts a cap on the carbon pollution emitted by energy and industrial companies. Those reducing their emissions can sell their spare permits to those who do not. But a combination of initial over-allocation by national governments and the economic decline has left the steel, cement, chemical, ceramic and paper sectors with many more permits than they need. The industries have lobbied hard against calls from governments including the UK for the tightening of the ETS and other emissions targets.

Eurofer, the lobby group representing all of Europe's steelmakers, said last month: "To remain competitive in the free, global steel markets, European steel needs … legislation that does not harm its competitiveness. But we are gravely concerned that EU climate change policy will do precisely that."

Cembureau, which lobbies for the cement industry, takes a similar line, stating: "It would be irresponsible to shift the [emissions] goalposts."

In the UK, the government has proposed incentivising low-carbon innovation by setting a British floor price for carbon from 2013. But this is opposed by the CBI. John Cridland, the director general of the employers' group, said: "It risks tipping energy-intensive industries over the edge."

The government has made some concessions, promising to produce plans later in 2011 to compensate businesses for any competitive disadvantage.

However, independent analysis by Bloomberg New Energy Finance found that the carbon permits held by the steel industry would cover its emissions for the next 12 years. "If the steel sector [on aggregate] did not sell any of its surplus, it would not have a need to purchase emissions until 2023," said Guy Turner at Bloomberg NEF.

The Sandbag report, based on public data, also found that nine of the 10 "carbon fat cats" bought between them 24.4m permits from the cheaper international market, mainly from companies in China and India. These can be used within the EU's trading scheme, enabling companies to retain the more valuable European ETS permits. Furthermore, despite the European companies claiming that tougher emissions rules would drive business overseas, some were paying overseas steel and cement companies for their international carbon permits.

"Purchasing carbon offsets from foreign competitors would not seem to be the actions

of businesses genuinely concerned that the ETS will drive business abroad," said Worthington.

Not all companies are resisting the tightening of the European ETS. Five major energy groups, including Britain's Scottish and Southern Energy, last week called for spare permits to be withdrawn, a proposal supported by Sandbag.

"Failure to do so could severely hamper business incentives to invest in low-carbon technologies, as the price signal will be skewed in favour of fossil-based solutions," their statement said.

The Guardian contacted all the companies named by Sandbag. Those who responded argued that the surplus permits arose from decreased production and might be needed when the economy recovered. They said that without protection, steel and cement making would be driven to countries with less CO2-efficient manufacturing practices. Many called for global regulation of emissions

A spokesperson for ArcelorMittal said: "As part of our corporate responsibility strategy, we have decided that any sale of such surplus allowances will be reinvested into projects aimed at the improvement of our energy efficiency footprint, as this will help to reduce our overall CO2 emissions."

Erwin Schneider, at the steelmaker ThyssenKrupp, said: "Companies make decisions based on expected future developments. Any earnings from the past will either have been reinvested already or paid out to shareholders. Therefore it seems to be very misleading to use historic numbers to address our future position."

TheUnhivedMind - June 20, 2011 06:23 PM (GMT)

Feds weigh comments on Monsanto Co.'s proposal to open new phosphate mine in eastern Idaho

First Posted: June 13, 2011
http://www.dailyjournal.net/view/story/f7c...Phosphate-Mine/

POCATELLO, Idaho — More time is needed to consider public comments following the release of an environmental study on plans by Monsanto Co. to open a new phosphate mine in eastern Idaho, federal officials say.

Officials with the U.S. Forest Service and Bureau of Land Management said they need several additional months to make sure their final decision complies with the Clean Water Act, Endangered Species Act and the Groundwater Protection Rule.

"We're pretty close to having the information we need to make a decision, maybe a month or two," said Jeff Cundick, minerals branch chief for the phosphate program of the Caribou National Forest and the Bureau of Land Management.

He added there are important issues that officials need to make sure were addressed appropriately in the environmental impact statement.

Monsanto is seeking approval to open the Blackfoot Bridge Mine in the area to produce ingredients for Roundup weedkiller because its current mine is expected to be depleted within a year and a half. The impact statement was released in early March following a process that included a draft impact statement.

Monsanto Co. officials said additional delays in opening the mine could harm the company financially and cost jobs.

"Many of the environmental safeguards designed into the Blackfoot Bridge Mine must be constructed when the ground is not frozen, and ambient temperatures are moderate to warm," Dave Farnsworth, minerals lead for Monsanto Soda Springs, told the Idaho State Journal. "In Soda Springs, that gives us a very short window for construction. If the delay is a few weeks, we may yet be able to make progress this year. A longer delay, however, could severely compromise our timetable for transition from the old mine to the new one. That, in turn, jeopardizes the competitiveness of our business and puts jobs at risk."

But Cundick said lawsuits in recent years against the federal government by the Shoshone-Bannock Tribes, the Greater Yellowstone Coalition and Nu-West over decisions about phosphate require careful steps.

"There's too much at stake," Cundick said. "We need to make sure it's done technically correct and legally correct, too."

Mines owned by Monsanto, Boise-based J.R. Simplot Co., and Agrium Inc. of Canada in the so-called phosphate patch near the Idaho-Wyoming border have captured public attention since selenium pollution in water began killing hundreds of livestock starting in the 1990s, including 18 cattle in 2009.

Besides the new mine proposed by Monsanto, Cundick said his office is also processing mine proposals from J.R. Simplot Col and Agrium Inc.

Title: Three Generations of Agent Orange

TheUnhivedMind - June 20, 2011 06:22 PM (GMT)

Weekend Edition
June 3 / 5, 2011
An Open Letter to Monsanto
Three Generations of Agent Orange

By LEN ALDIS
http://www.counterpunch.org/aldis06032011.html

24 August 2011
Board of Directors
Monsanto Company
800 North Lindbergh Boulevard
St Louis. MO 63167
c/o David F. Snively. Secretary

Ref: 10 August 1961 – 10 August 2011

Dear Mr Snively,

Fifty years ago this August, United States Forces began spraying an herbicide manufactured by your company over South Vietnam. During the ten-year period, eighty million litres were sprayed. Agent Orange is the commonly known name of the herbicide.

You may not be aware of the part played by your company in this criminal act, but there have been many protests here in the UK and many other countries at the use of Agent Orange on Vietnam. I have called in at your office in Ho Chi Minh City in the hope of meeting the director and inviting him to the Peace Village at Tu Du Hospital where he would have seen as I have seen the results of your product in jars containing unborn babies, a sight not many people could stomach seeing.

I would have then taken him to see the living victims of Agent Orange, the children with various deformities, no eyes, minus one or two limbs, twisted bodies etc etc etc, due to your product Agent Orange. Unfortunately he used the excuse that he would be out of the city when I was due to arrive, a pity, because he would have had the opportunity to speak to the doctors and nurses who give these youngsters their love and care, trying to help them live a normal life. And if he did not grasp the point, I would have told him that the youngsters were born many years after the war ended in 1975.

Mr Snively, you do not have to travel to Vietnam to see the people who have been affected by your company's product Agent Orange. In the US there are thousands of Vietnam Veterans suffering from illnesses and disabilities, as are their children, contact the various veterans' organisations in the US.

In Vietnam there are near to four million such victims, of all ages, many not able to be treated in a hospital or a clinic. Many live at home, in small towns and communes throughout the country. These tragic victims and their parents need our help and the help of your company that made profits running into $billions in manufacturing Agent Orange.

On leaving the peace village I would have asked your colleague in Ho Chi Minh City: "what does it feel like working for a company that has caused this to happen to the children of your country? I ask you the same question. Yes Mr Nively, there are many American children suffering from Agent Orange.

On 29th July I shall arrive in Ho Chi Minh City to see again these youngsters, and to have meetings, then on 6th August will fly up to Hanoi for an international conference being held on 8th, 9th and 10th, to commemorate the 50th anniversary of the use of Agent Orange, while there I shall, along with other international delegates, visit more victims.

In the speech I intend to make at the conference I shall call upon the companies such as yours to accept its responsibility for the horrific damage it has done to the people of Vietnam, and to make compensation to the victims, to fund the building of small clinics, to build respite homes in the communes where the parents can rest from their 24 hour caring of their sons/daughters.

I need not tell you or your board members that many thousands of Vietnamese have died in the past fifty-years and until Monsanto, Dow Chemicals, DuPont and the other companies accept responsibilities, many more thousands will die, those who survive birth in the coming years will suffer as today's victims are suffering. The effects of Monsanto's Agent Orange have gone into the third generation of the Vietnamese. Soon, if not already, it will enter into the fourth.

When you place this letter in front of your board members, I hope it will be met with a

positive response, not only for them to accept responsibility for the damage done to the people and land of Vietnam, but also to give financial and practical support to the victims and their families.

Such a response will be appreciated.

Look forward to your reply.

Yours sincerely
Len Aldis

Len Aldis is Secretary of the Britain-Vietnam Friendship Society

View Full Version: Vietnam begins 1st phase of Agent Orange cleanup

Title: Vietnam begins 1st phase of Agent Orange cleanup

TheUnhivedMind - June 20, 2011 02:39 AM (GMT)

Vietnam begins 1st phase of Agent Orange cleanup

AP foreign, Friday June 17 2011
http://www.guardian.co.uk/world/feedarticle/9699810

HANOI, Vietnam (AP) — Vietnam is kicking off the first phase of a joint plan with former enemy the United States to clean up environmental damage from the chemical Agent Orange.

The project concentrates on a hotspot where the defoliant was stored by Americans during the Vietnam War, which ended more than three decades ago.

A statement Friday by the U.S. Embassy says Vietnam's Ministry of Defense will begin sweeping areas around the Danang airport for unexploded ordnance. Then, both Vietnamese and Americans will work together to remove dioxin from soil and sediment at the site.

Contamination from dioxin — a chemical used in the herbicide that has been linked to cancers and birth defects — has been a lasting legacy of the war.

TheUnhivedMind - June 20, 2011 12:40 AM (GMT)

Greece: Eurozone ministers set to approve latest loan

Greece's new Finance Minister Evangelos Venizelos said the country could meet its targets

19 June 2011 Last updated at 21:36
http://www.bbc.co.uk/news/business-13832164

Eurozone finance ministers are meeting in Luxembourg, where they are expected to approve a 12bn-euro (£10-bn) loan to debt-stricken Greece.

The loan is the latest tranche of a 110bn-euro EU and IMF aid package.

The finance chiefs are also expected to discuss a second bail-out for Greece. PM George Papandreou confirmed that talks were taking place about a new deal "roughly equal" to the first.

Mr Papandreou urged a "national accord" in parliament to deal with the crisis.

"I have asked for a renewal of confidence in the government, because the country finds itself at a crucial point," he told parliament, at the start of three days of debate.

Mr Papandreou reshuffled his cabinet on Friday, with former Defence Minister Evangelos Venizelos replacing George Papaconstantinou as Finance Minister.

Even if there is another bail-out of around 110bn euros, Greeks have lost faith in the plan. All they see is debt piling on debt.

This is where the danger lies. A creeping despair. Injured national pride. Ten years of austerity.

Even so, the bet must be that the Greeks reluctantly, sullenly, will go along with new austerity but I have sensed a despair that last year just wasn't there, and no-one knows where that will

lead.

Read Gavin's thoughts in full

Arriving at the Luxembourg meeting, Mr Venizelos said Greece remained fully committed to the financial aid programme from the EU and the International Monetary Fund (IMF), and to achieving its targets.

"It is a great opportunity for me to repeat the strong commitment of the Greek government and the strong will of the Greek people for the implementation of the programme," he told reporters.

"We can achieve our target, thanks to the efforts of our people, and thanks to the co-operation and the assistance of our partners."

In Athens, thousands of protesters have again gathered outside parliament in Syntagma Square. They want changes to the austerity programme due to be voted on next week.

Waving banners and Greek flags, they shouted "Thieves! Traitors!".

"Most of the people here want all the measures to be rescinded and a part of the debt to be written off, or all of it, at least the part that comes from banks," businessman Grigoris Demestika, 39, said.
Referendum

Inside the building, members of parliament have begun a three-day debate on the package, which will culminate in a vote of confidence on Tuesday.

New short-term funding is dependent on the government winning that vote, says the BBC's Gavin Hewitt, in Athens.

In May last year, the EU and IMF agreed to lend Greece 110bn euros, but the loan is conditional on the government implementing a series of painful domestic reforms which have sparked nationwide strikes, rallies and violent riots on the streets of Athens.

Greece needs the latest tranche to avoid defaulting on its looming debts.

Mr Papandreou told parliament the country would soon run out of money if politicians did not take action.

The prime minister said his priority was "a national accord to tackle the Greek debt and deficit which are a national problem", warning that the image of disunity was damaging the country's reputation.

But he also said a reform of the political system was needed, and proposed a referendum later this year on possible changes to the constitution.

However, opposition politicians who oppose the government's austerity plans rejected Mr Papandreou's appeal and asked why the public should be asked to make sacrifices in vain.

There were calls for Mr Papandreou to resign and call elections.

Title: Symptoms of Chemtrail Spraying

TheUnhivedMind - June 18, 2011 03:53 AM (GMT)

Symptoms of Chemtrail Spraying

We've covered this before on this blog but I believe that one way to put an end to this is to educate people how they are being poisoned. Who in their right mind wouldn't want spraying to cease once they realize their health is being compromised? So here's a new article and a few links to refresh everyone.

Chemtrails – Health Effects on the General Population

by Claude-Michel Prévost
15/06/2011 17:40:58
http://beforeitsnews.com/story/718/575/Sym..._Spraying.html=

Over the past ten years, through research and the personal accounts of many individuals, it has become readily apparent that the aluminum and barium salt mixtures, polymer fibers, toxic chemicals and biologicals sprayed in the atmosphere are the irritants that are either directly or indirectly responsible for health problems on the rise in the United States and elsewhere.

These toxic particulates are rapidly absorbed from the respiratory system and / or the gastrointestinal tract and are deposited in the lungs, muscles, and bone.

This illegal aerial spraying is producing atmospheric and ground conditions detrimental to human and animal health but favorable to the growth of harmful molds / fungus.

This overview is a partial list of health problems reported by private citizens to Chemtrail researchers.

1.Nose and lung bleeds (the latter including several reports from nursing homes of

elderly dying from lung bleed outs, we believe being directly attributable to atmospheric aerosols);
2.Asthma and allergies;

3.Allergic bronchopulmonary aspergillosis (ABPA) (fungus on the lungs in both infants and adults),

4.Flu, Bronchitis and Pneumonia (in epidemic proportions, with doctors commenting to their patients on the many weeks it sometimes takes to improve and the lack of effective antibiotics to treat, including reports of pets having the flu, whole families being decimated), meningitis (inflammation / infection of the brain);

5.Upper respiratory symptoms (wheezing, dry cough), including Pulmonary Distress Syndrome (PDS) (in newborns, infants and adults alike), Sudden Infant Death (SIDS), and increased nationwide reports of the sudden death of athletes (reported in the news media as having possibly been attributable directly to air particulates / pollution);

6.Deaths from black mold; black or red mold on food crops (farmers reporting pH changes of soil and water), in buildings and ventilation systems (including school buildings);

7.Arthritis-like symptoms and muscular pain (young and old alike, sometimes crippling, and in pets);

8.Gastrointestinal distress (young and old alike, and in pets);

9.Bladder and yeast infections (includes bed wetting, not just in infants but adults);

10.Extreme fatigue (young and old alike);

11.Ringing of the ears, dizziness (increasingly reported immediately preceding or after a storm or weather system);

12.Eye problems – pink eye, blurred and deteriorating vision / nervous tics after exposure to the air outdoors;

13.Dry / cracking skin and lips, rashes, sores and fungal infections, aging of the skin;

14.Mental confusion / slow thinking and / or the feeling of mentally "being in a fog" (young and old alike, increasingly reported after actually being in heavy mists and fog banks);

15.Autoimmune disorders (Lupus, Crohn's, Addison's Disease, Rheumatoid Arthritis, etc.)

Note: Some of the above symptoms / illnesses can be related to other physical / environmental factors such as dehydration.)

Aluminum

by Remarkable-recovery.com

Aluminum Symptoms

Excessive amounts of aluminum can result in symptoms of poisoning. The symptoms include constipation, colic, loss of appetite, nausea, skin ailments, twitching of leg muscles, excessive perspiration, and loss of energy. People with aluminum poisoning should discontinue the use of aluminum cookware and the drinking of tap water. Small quantities of soluble salts of aluminum present in the blood causes slow form of poisoning characterized by motor paralysis and areas of local numbness, with fatty degeneration of kidney and liver. There are also anatomical changes in the nerve centres and symptoms of gastro intestinal inflammation.

In the last few years there has been much publicity about aluminum, as well as a tentative connection of aluminum to Alzheimer Disease. According to Dr. Terry L. Franks the clinical picture is clear that Alzheimers is concurrently involved with aluminum toxicity and he also believe it is the major contributing factor to Alzheimers. It will progressively worsen in North America in the coming year because of the pervasive use of aluminum. Aluminum has the tendency to freeze up or irritate nerve endings, producing spasm and contracture. When someone is going through aluminum detoxification can actually look like an advanced case of Alzheimers Disease.

Sources

Cooking utensils, antacids, baking powders, antiperspirants, some soft water, aluminum foils, concrete and process foods contain aluminum (table salt, cheese slices individually wrapped), bleached flour, fluoridated water increases leaching of aluminum.

How Aluminum Affects Health

Nervous system

In animal studies, aluminum blocks the action potential or electrical discharge of nerve cells, reducing nervous system activity. Aluminum also inhibits important enzymes in the brain (Na-K-ATPase and hexokinase). Aluminum may also inhibit uptake of important chemicals by nerve cells (dopamine, norepinephrine, and 5-hydroxytryptamine).

Behavioural Effects

Dementia resulting from kidney dialysis related to aluminum toxicity causes memory loss, loss of coordination, confusion and disorientation.

Symptoms of Aluminum Toxicity

Early symptoms of aluminum toxicity include: flatulence, headaches, colic, dryness of skin and mucous membranes, tendency for colds, burning pain in the head relieved by food, heartburn and an aversion to meat.
Later symptoms include paralytic muscular conditions, loss of memory and mental confusion. Other symtpoms may include:

Alzheimer's disease, amyotrophic lateral sclerosis, anaemia, haemolysis, leukocytosis, porphyra, colitis, dental cavities, dementia dialactica, hypo-parathyroidism, kidney dysfunction, neuromuscular disorder, osteomalacia, Parkinson's disease, ulcers.

Digestive system

Aluminum reduces intestinal activity, and by doing so can cause colic.

Treatmnet of Toxicity

Decreasing contact with and use of aluminum-containing substances will reduce intake and allow more aluminum to leave the body. Oral chelating agents will also help clear aluminum more rapidly. Calcium disodium edetate (EDTA) binds and clears aluminum from the body; this substance is fairly nontoxic and used as the agent for "chelation therapy,: an intravenous treatment used to pull metals such as lead from the body, and more recently used in the treatment of atherosclerosis and cardiovascular diseases.

Deferoxamine, an iron chelator, also binds aluminum. In a study with Alzheimer's patients, nearly 40 percent of the patients showed an improvement in symptoms with deferoxamine treatment. There is some evidence that intravenous chelation with EDTA helps Alzheimer's patients. More research is needed to evaluate aluminum's involvement with this disease. Recovery is excellent for removing heavy metals.

Vitamin C

Has been found to bind aluminum. The average dose, if the patient is relatively comfortable, is about six grams a day. Up to twelve grams is not excessive. The average time on an aluminum detoxification is three to four weeks.

Prevention

The best way to prevent aluminum buildup is to avoid the sources of aluminum. Eliminating foods that have aluminum additives is probably healthier overall. Not using common table salt is a positive health step as well. Some tap waters contain aluminum,

this can be checked. Avoiding aluminum cookware and replacing it with stainless steel, ceramic, or glass is a good idea. Blocking skin and sweat pores with aluminum anti-perspirants.

Barium

by Testcountry.org

The possibility of barium poisoning is a reality among people working in and living near heavy industrial sites such as chemical plants, factories that produce rubber products and other such places. That is because barium is one of the components used in manufacturing the products created in these plants.

However, because many of these products end up in ordinary households, it is also possible for a person who does not work in or live near an industrial plant to experience barium poisoning. Rat poison, for instance, contains barium compounds. Some fluorescent bulbs have coatings made from barium oxide. Fish caught in waters near industrial sites may have absorbed barium from the water.

Given the considerable probability of a person becoming afflicted with barium poisoning, how would you know for sure if you or someone living with you ingested barium at toxic levels? If you find yourself or someone living in your household with symptoms of barium poisoning, then you should act immediately.

What Is Barium?

In order to understand how serious barium poisoning is, we need first to understand what barium is in the first place. Barium is a heavy metal that naturally occurs in the environment. It is silvery white in appearance.

Barium is valuable in many industries that make use of heavy metal because it can remove traces of oxygen in some chemical compounds. It also increases the luster of glass. However, barium is explosive and can react violently when mixed with water. Also, it cannot be digested by the body; barium can be poisonous if the amount the body contains exceeds tolerable levels.

Symptoms of Barium Poisoning to Look For

When barium accumulates in the body, it usually affects the functions of the nervous system. Barium poisoning displays symptoms that are similar to flu, which is why it is not strange to find the condition misdiagnosed as flu. Common symptoms of barium poisoning include:

1. Muscle weakness and tremors
2. Difficulty in breathing

3. Stomach irritations accompanied by diarrhea
4. Anxiety
5. Cardiac irregularities such as abnormally high blood pressure and rapid heartbeat
6. Paralysis

What to Do in Case of Barium Poisoning

In case someone in your household has just ingested something that contains barium, the first thing you need to do is to induce him or her to vomit. This will get some of the barium out of the victim's system. You can also mix a tablespoon of Epsom salts (sodium sulfate or magnesium sulfate) with a glass of water and get the victim to drink it. Afterwards, you should bring the victim to the emergency room of the nearest hospital to make sure that he or she does not succumb to barium poisoning.

You can also prevent barium poisoning from happening in your home. For one, you should keep your rat poison or any other chemical substances in your house that contains barium out of reach of children. Make sure that you have labeled their containers properly.

You should also avoid eating fish that was caught near industrial sites and ascertain that the fish and seafood you eat does not contain barium or any other heavy metal. This will prevent you from accumulating barium in your system and suffer from barium poisoning later on. Source

View Full Version: Government Releases Partial List Of Chemicals

Title: Government Releases Partial List Of Chemicals
Description: *Found in Oil Spill Dispersants*

TheUnhivedMind - June 17, 2011 12:35 AM (GMT)

Government Releases Partial List Of Chemicals Found In Oil Spill Dispersants

New York, NY - A year after the BP Gulf oil disaster and under pressure from environmental groups, the EPA finally released a list of the chemical components in oil dispersants.

http://media-newswire.com/release_1152238.html

(Media-Newswire.com) - New York, NY — A year after the BP Gulf oil disaster and under pressure from environmental groups, the EPA finally released a list of the chemical components in oil dispersants. The federal agency also disclosed health and safety information about the chemical components that were previously withheld from the public as “confidential business information.” The potential health and environmental effects of the unprecedented use of dispersants in the Gulf of Mexico, both in volume and the underwater application, however, remain unknown.

EPA released a list of the 57 ingredients in all of the dispersants eligible for use in oil spills and identified the specific ingredients of some of them—in particular, Dispersit, Mare Clean, and COREXIT 9500 and COREXIT 9527, which were used in response to the oil disaster in the Gulf. The 57 ingredients were part of a larger list of 150 chemicals made public by EPA, which also included components found in consumer products.

The new chemical dispersant data was released as a result of a lawsuit filed in July of 2010 on behalf of Florida Wildlife Federation and Gulf Restoration Network, represented by Earthjustice. However, EPA continues to withhold the identity of specific ingredients found in most of the dispersants that are eligible for use in response to oil spills.

“This disclosure was long overdue,” said Earthjustice attorney Marianne Engelman Lado. “These dispersants were used in massive quantities, nearly 2 million gallons, exposing workers, community residents, and wildlife to toxic chemicals, without adequate information about whether they were adding injury to the already tragic circumstances.”

In July of 2010, Earthjustice filed a lawsuit in federal court on behalf of Gulf Restoration Network and the Florida Wildlife Federation to force EPA to release health and safety information related to dispersants.

“The public has a right to know what the dispersants being used in the Gulf will do to the Gulf—and to its wildlife,” said Manley Fuller of the Florida Wildlife Federation.

“It is just bad policy to pre-approve the use of chemicals when we have very little understanding for their short-term and long-term toxicity,” said Casey DeMoss Roberts of the Gulf Restoration Network.

Earthjustice attorneys are also monitoring progress made by the EPA to strengthen regulation of dispersants. In a separate petition to the EPA, groups in the oil producing regions, represented by Earthjustice, have asked the EPA to significantly improve the way dispersants are tested and approved.

“The EPA has been sitting on this crucial information about what is in dispersants and their toxicity, and they continue to withhold information—such as the identity of specific ingredients in individual dispersant products—that would be extremely helpful to healthcare providers and response workers in future oil spills,” said Engelman Lado of Earthjustice.

The groups asked that the EPA require disclosure of dispersant ingredients when warranted to ensure protection of human health and the environment and would give EPA much-needed authority to better control dispersant use. The Chemical Dispersant Safety Act, introduced by Senator Frank Lautenberg, would also require the EPA to take strong action to regulate dispersants.

View Full Version: What Dow Chemical Doesn’t Want You to Know About Y

Title: What Dow Chemical Doesn’t Want You to Know About Y

TheUnhivedMind - June 13, 2011 12:21 AM (GMT)

What Dow Chemical Doesn’t Want You to Know About Your Water (VIDEO)

June 7th, 2011 By Anna Lappé
http://civileats.com/2011/06/07/what-dow-c...out-your-water/

[dohtml]<object style="height: 390px; width: 640px"><param name="movie" value="http://www.youtube.com/v/xT2GElHIuJ8?version=3"><param name="allowFullScreen" value="true"><param name="allowScriptAccess" value="always"><embed src="http://www.youtube.com/v/xT2GElHIuJ8?version=3" type="application/x-shockwave-flash" allowfullscreen="true" allowScriptAccess="always" width="640" height="390"></object>[/dohtml]

Earlier this year, I was contacted by a PR firm working for Dow Chemical to contribute a 60-second video for The Future We Create virtual conference on water sustainability the company launches today. As a vocal advocate for strict regulation of toxic chemicals—especially for food and farming—I was surprised the company would approach me. Dow is the country’s largest chemical maker, and profits handsomely from developing some of the world’s most polluting products, many of which are widely used in industrial and consumer goods as well as agriculture.

In the video I submitted, which you can watch below, I stress that one of the greatest threats to clean water is chemical contaminants—and that Dow Chemical has a long history of water pollution. The PR representative e-mailed to say “unfortunately we can’t use your video,” but that she would be happy to include me, still, if I would consider re-recording it. When we discussed what that would mean she said, no “fingerpointing;” they wanted a “positive, inclusive discussion.”

I believe in inclusiveness and engagement, but I also believe we must pursue those principles within a context that is honest. To do otherwise is to participate in what is popularly called “greenwashing,” painting a veneer of environmentalism on an

otherwise unchanged product or practice—a corporate strategy many of us are all too familiar with.

In this spirit, I felt it would be disingenuous to engage in a conversation about water sustainability, for a campaign paid for by Dow Chemical, without pointing out the direct relationship between Dow's core business products—a source of its $8 billion in profit last year—and toxins in our environment.

At the same time Dow launches this initiative, the company is actively fighting multiple lawsuits from communities who contend their water has been polluted by the company, including from its hometown manufacturing plant in Midland, Michigan. In 2007, the EPA detected the highest level of dioxin ever discovered in the country's rivers or lakes in waterways near Dow's global headquarters. Dioxin levels in some places were a thousand times higher than the residential standard, according to the Michigan Department of Environmental Quality. A recent study found women living in Midland, as well as Saginaw and Bay counties, have significantly higher rates of breast cancer; dioxin was to blame. A class action lawsuit is pending.

"In the backyard of Dow's corporate headquarters, the company for decades through philanthropy, public relations, and politics has made the choice to push back at every regulatory level instead of addressing their dioxin contamination of 52 miles of freshwater and Lake Huron," said Michelle Hurd Riddick of the Saginaw Bay grassroots environmental organization, Lone Tree Council. "The company has mastered the art of greenwashing while poisoning a whole watershed and getting away with it."

Community members in another Midland—Midland, Texas—filed suit earlier this year against Dow and three other companies for contaminating groundwater there with hexavalent chromium. Barred from use in the European Union because of its toxicity, hexavalent chromium is a known carcinogen. The EPA's own hazard report notes that exposure, including through contaminated drinking water, "may produce effects on the liver, kidney, [and] gastrointestinal and immune systems."

Dow also continues to drag its heels and fight regulators in order to continue production of some of its most toxic and water polluting products.

In 2000, for instance, the EPA announced it was phasing out approval of Dow's insecticide, and potent neurotoxin, Dursban for new home construction in the United States because the product is linked to serious illnesses and even death in children. Five years later, the chemical was still in use in U.S. homes. And in 2003, Dow settled a $2 million lawsuit with the state of New York, the largest penalty ever in a pesticide-related case, for repeatedly violating an agreement about proper advertising of Dursban and making misleading safety claims.

Dow is also a leading manufacturer of Bisphenol-A (or BPA), used in numerous

consumer products such as baby bottles, children’s toys, and the linings of food cans. It’s a particularly dangerous chemical, with proven toxicity even in low doses, especially in utero. The National Institutes of Health’s National Toxicology Program has found the chemical may increase the risk of certain cancers and alter brain development. The chemical, a synthetic estrogen, has also been linked to reproductive and hormonal problems. New research is showing that a vast majority of Americans is exposed to low concentrations of BPA not only through consumer products, but from surface water, too.

The future we should be creating is one in which everyone has access to clean water. No one should worry whether their water is tainted with endocrine disruptors, carcinogens, or neurotoxins—produced by Dow or any of the country’s other biggest chemical manufacturers. Dow has the power, and resources, to do more than create a faux “inclusive conversation” about water sustainability. The company should discontinue its most toxic products and pay to clean up communities it has contaminated. Until it does, I will not be complicit in its greenwashing.

The article also appears on TheNation.com

View Full Version: Food-Container Chemical Added to Carcinogens

Title: Food-Container Chemical Added to Carcinogens

TheUnhivedMind - June 12, 2011 03:15 AM (GMT)

Food-Container Chemical Added to Carcinogens

By Jeffrey Young - Jun 11, 2011
http://www.bloomberg.com/news/2011-06-10/e...arcinogens.html

The widely used preservative formaldehyde, and styrene, found in food containers and coffee cups, are among eight agents added to a list of known and suspected carcinogens by the U.S. National Institutes of Health.

Formaldehyde, linked to leukemia and a rare type of nasal cancer, is “known to be a human carcinogen,” according to the congressionally mandated report published today on the health agency’s website. Styrene is categorized by researchers as “reasonably anticipated” to be cancer-causing.

The new compounds bring the total number of substances linked to cancer to 240. Aristolochic acids, found in herbal products used to treat arthritis and gout, were also listed as a known carcinogen because they can cause bladder or urinary-tract cancer in people with kidney disease. The U.S. Food and Drug Administration cautioned consumers against taking supplements containing aristolochic acid in 2001, according to the report.

“A listing in the report does not by itself mean that a substance will cause cancer,” said John Bucher, associate director of the National Toxicology Program of the National Institute of Environmental Health Sciences in Research Triangle Park, North Carolina, in a conference call with reporters.

The cancer-causing risk from formaldehyde and styrene comes from the products’ widespread use in industrial applications and less from their presence in consumer products, Bucher said.

'Unfounded' View

The report makes "unfounded classifications" about formaldehyde and styrene that will scare consumers, said Cal Dooley, president and CEO of the American Chemistry Council, a Washington trade group, in a statement. Formaldehyde manufacturers include Georgia-Pacific LLC, based in Atlanta.

The American Composite Manufacturers Association disputed the link between styrene and cancer.

"The styrene-based composite material system has been used safely for over 60 years," the Arlington, Virginia-based trade group said in a statement. The organization's members include Owens Corning (OC) Inc. of Toledo, Ohio, and Pittsburgh-based PPG Industries Inc. (PPG)

Styrene is a component of the polystyrene used in food and drink containers, as well as the manufacturing of plastics, fiberglass, insulation, carpet backing and other products, according to the National Toxicology Program. Cigarette smokers face higher risks of exposure than others because the smoke contains styrene, the agency said.

Consumers don't need to worry about polystyrene cups and food containers though they should seek versions of products like cosmetics that don't contain formaldehyde, said Otis Brawley, chief medical officer of the Atlanta-based American Cancer Society.

"I see no problem with Styrofoam cups," Brawley said today in a telephone interview. "If I were using nail polish or nail polisher remover, I would try to get formaldehyde-free versions of those, which are available."

The report is the 12th issued by the U.S. since the National Toxicology Program was established in 1978.

View Full Version: 6 Real Examples of Food Terrorism

Title: 6 Real Examples of Food Terrorism

TheUnhivedMind - June 9, 2011 05:50 PM (GMT)

6 Real Examples of Food Terrorism

Recent food terror warnings hide reality

http://farmwars.info/?p=6205

The latest warning coming from British intelligence that al-Qaeda and other political organizations could contaminate the food supply is part of a continuing plot line that hides the obvious: our food already has been poisoned under the auspices of oversight agencies who have been complicit in the very real threats to the public food supply. The following toxins offered into the marketplace by corporate-government collusion have contributed to far more sickness and death than E. coli or salad bar terrorists ever will . . . unless of course the terrorists have bioengineered a superbug, or it has escaped from a bioweapons lab like the one at Fort Detrick, Maryland.

Pesticides: Aside from the fact that pesticides have been linked to lower IQ in children, thus altering the future potential of human society, DDT and the cocktail of other pollutants and synthetic chemicals now include those used in GM food production (Bt), such as glyphosate. Even more alarming is that pollutants that have been banned for decades are still present in 100% of pregnant women, while those from GM food appear in 80% of unborn fetuses. The presentation below offers additional analysis of the health effects, particularly on the immune system:

[dohtml]<object style="height: 390px; width: 640px"><param name="movie" value="http://www.youtube.com/v/0_BbQxAs5us?version=3"><param name="allowFullScreen" value="true"><param name="allowScriptAccess" value="always"><embed src="http://www.youtube.com/v/0_BbQxAs5us?version=3" type="application/x-shockwave-flash" allowfullscreen="true" allowScriptAccess="always" width="640" height="390"></object>[/dohtml]

Fluoride: Sodium fluoride (silicofluoride), is an industrial-grade hazardous waste material made during the production of fertilizer. Its past history includes patented use as rat poison and insecticide. Dr. Paul Connett is leading the fight against mandatory water fluoridation. People are finally waking up to the hazards and are now demanding that governments remove this deadly poison. Let's keep in mind that it was put there with full knowledge of its toxicity and has led to massive negative health effects. Dr. Connett explains all in a must-see, one-hour interview:

[dohtml]<object style="height: 390px; width: 640px"><param name="movie" value="http://www.youtube.com/v/zo6SnvmMP9k?version=3"><param name="allowFullScreen" value="true"><param name="allowScriptAccess" value="always"><embed src="http://www.youtube.com/v/zo6SnvmMP9k?version=3" type="application/x-shockwave-flash" allowfullscreen="true" allowScriptAccess="always" width="640" height="390"></object>[/dohtml]

Mercury: In both organic and inorganic form, mercury wreaks havoc with the nervous system — especially the developing nervous system of a fetus. It penetrates all living cells of the human body, and has been documented most as increasing the risk for autism. This calls into question mercury's use in dental fillings, vaccines, and just about anything containing high fructose corn syrup — a near staple in the American diet . . . including baby food. It has also been known for years that mercury fumes from CFL compact fluorescent tube light bulbs pose a serious threat which goes far beyond eyestrain, migraines, and depression, but still they have been pushed under the green agenda and are set to be completely phased in by 2014. We offer the following video of truth-telling comic relief from 2007 to illustrate the absurdity of such legislation, with a more serious presentation available HERE :

[dohtml]<object style="height: 390px; width: 640px"><param name="movie" value="http://www.youtube.com/v/BqrCij6CbHA?version=3"><param name="allowFullScreen" value="true"><param name="allowScriptAccess" value="always"><embed src="http://www.youtube.com/v/BqrCij6CbHA?version=3" type="application/x-shockwave-flash" allowfullscreen="true" allowScriptAccess="always" width="640" height="390"></object>[/dohtml]

GMO: Monsanto owns nearly 90% of staple GMO crops such as corn, soy, and cotton. Monsanto started as a chemical company that brought the world poisons like Agent Orange and Roundup. Independent studies of "frankenfood" have shown a link to organ failure; a Russian study has concluded near-total sterility in GMO-soy-fed hamsters by the third generation; and other animal studies have shown potentially pre-cancerous cell growth, smaller brains, livers, and testicles, partially atrophied livers, and damaged immune systems, according to a comprehensive article by Jeffrey M. Smith that also highlights the process of intimidation that even well-regarded scientists have been subjected to when publishing their research. Perhaps a recent mainstream article

theorizing that a massive 64% increase in bowel cancer among young people is attributable to “heavy drinking and obesity” should be redirected toward the rise in the prevalence of GMO. Here is Jeffrey M. Smith interviewed about the GMO threat:

[dohtml]<object style="height: 390px; width: 640px"><param name="movie" value="http://www.youtube.com/v/HVeS1yIA7x0?version=3"><param name="allowFullScreen" value="true"><param name="allowScriptAccess" value="always"><embed src="http://www.youtube.com/v/HVeS1yIA7x0?version=3" type="application/x-shockwave-flash" allowfullscreen="true" allowScriptAccess="always" width="640" height="390"></object>[/dohtml]

Bisphenol-A: The FDA failed to warn the public about this chemical found in plastic packaging including baby food containers, baby bottles, and pacifiers. Animal research has shown many adverse health effects such as damage to the reproductive system, immune system, and neurological development, as it mimics sex hormones. In humans this seems to be leading to early puberty, reduced sperm count, and prostate cancer. The two-part episode below offers key details about the history and dangers of Bisphenol-A that the FDA continues to officially allow despite finally acknowledging its dangers, even as other countries ban it and many companies have proactively removed its use:

[dohtml]<object style="height: 390px; width: 640px"><param name="movie" value="http://www.youtube.com/v/3iJTBv3RV5g?version=3"><param name="allowFullScreen" value="true"><param name="allowScriptAccess" value="always"><embed src="http://www.youtube.com/v/3iJTBv3RV5g?version=3" type="application/x-shockwave-flash" allowfullscreen="true" allowScriptAccess="always" width="640" height="390"></object>[/dohtml]

Aspartame: Among the many dangerous food additives that plague the modern-day plate, Aspartame is one of the most widespread and toxic. Aspartame is a neurotoxin that interacts with natural organisms, as well as synthetic medications, producing a wide range of proven disorders and syndromes as outlined in the following must-see, full-length documentary, Sweet Misery, showing how a neurotoxin became part of the food supply with FDA approval:

[dohtml]<object style="height: 390px; width: 640px"><param name="movie" value="http://www.youtube.com/v/DJ0lEZQF1-Y?version=3"><param name="allowFullScreen" value="true"><param name="allowScriptAccess" value="always"><embed src="http://www.youtube.com/v/DJ0lEZQF1-Y?version=3" type="application/x-shockwave-flash" allowfullscreen="true" allowScriptAccess="always" width="640" height="390"></object>[/dohtml]

Conclusion

The list above is merely the tip of the iceberg that doesn't even include corporate/ military poisoning of the planet through environmental disasters like Fukushima, the BP oil disaster, geo-engineering, or the ongoing use of depleted uranium. As the food terror news is guaranteed to be used to cast a wider net of potential shadowy terrorist groups and lone nuts in order to usher in total food control, we would do well to remember the millions who already have died from corporate-government malfeasance . . . and from exactly where the provable death sentence has been issued. Terrorists have been striking the food system for decades now. They're just not the cave-dwellers we've been conditioned to fear.

View Full Version: The Pesticides and Politics of America's Eco-War

Title: The Pesticides and Politics of America's Eco-War

TheUnhivedMind - June 9, 2011 05:20 PM (GMT)

The Pesticides and Politics of America's Eco-War

June 9, 2011
By Mike Ludwig - Truthout
http://www.truth-out.org/pesticides-and-po...-war/1307539754

Keith Starvrum stands on the banks of Willapa Bay, where the low tide has revealed long lines of mudflats speckled with empty oyster shells. The sun is making a rare appearance in southwestern Washington State, but the perfect spring weather fails to cheer up the lumbering Starvrum, whose loud outbursts and biting sarcasm keep his employees' eyes rolling. He served overseas as a special ops soldier in his youth and he has some interesting things to say about the recent uprisings in Arab countries and the CIA's dirty habit of quietly "rearranging" governments amid apparent political turmoil. But he has a lot more to say about oysters.

Starvrum points to a lone oysterman gathering the day's catch from neighboring mudflats and shakes his head. Starvrum used to harvest oysters from the thick mud exposed by the low tide, but he has not brought in a catch in three years. He refuses to participate in the lucrative business, a traditional mainstay of the local economy, because the pesticides sprayed on adjacent mudflats drifted onto his oyster beds.

"That's why we don't sell our oysters, 'cause we know what they're in," Starvrum says. "But when we do, they will be 100 times better." Other oystermen have used pesticides to kill pests for generations, but Starvrum did it differently. He harvested oysters by hand, without using chemicals, and hauled them right from the bay to the kitchen of a small hotel on the same property. The rest were shipped to natural foods restaurants. Starvrum says his oyster farm was "as organic as you can be in Willapa Bay."

The pesticides that finally drove Starvrum to cancel his oyster harvests were not

sprayed by his fellow oystermen, however. State agencies sprayed the chemicals to combat a saltwater marsh grass "infestation." Like industrial gardeners weeding a giant brackish plot, government workers came in boats and helicopters, slowly spraying thousands of gallons of herbicides into the bay's shallow waters.

Some call this grass spartina alterniflora and others call it cord grass. Fritzi Cohen just calls it "spartina." Cohen runs the Moby Dick Hotel and Oyster Farm with Starvrum, and she loves spartina. Cohen says she used the grass to make homemade paper and compost for her garden. A wide smile grows on her face as she recalls the days before public officials slated spartina for complete annihilation. "I mean, this was a beautiful grass," Cohen says. "When people took photographers here, that's what they wanted to take pictures of, because it's so beautiful."

Most people living on the peninsula that separates Willapa Bay from the Pacific Ocean do not share Cohen's love for spartina. Some of them even helped fight a war against the grass, an effort known as a species "eradication."

Cohen is a lifelong activist who has challenged the "military industrial complex," as she puts it, since the Vietnam War, and now she says she is fighting the military-industrial complex in her backyard. Cohen and a small group of allies have spent two decades fighting to save spartina grass from those who consider spartina an invasive weed that must be destroyed. Cohen also fights to save Willapa Bay from the herbicidal chemicals used to kill spartina. But the spartina eradicators say they are fighting for the bay, too. They argue that spartina grass is a bigger threat to the bay than the chemicals could ever be.

Cohen and Starvrum's campaign has been unsuccessful, and during the past decade, an herbicide-drenched eradication effort has reduced the number of solid acres of spartina in Willapa Bay from an estimated 8,500 to fewer than 20. Cohen fought the eradication for years, butting heads with other locals who believed spartina would permanently change Willapa Bay, a clear threat to the local oyster industry and to a migratory bird sanctuary.

The fight got ugly. Lawsuits were filed. Politicians pledged to have spartina destroyed. The Monsanto Co. swooped in to save Willapa Bay from spartina with its patented chemicals. Congress provided millions of dollars. At one point it looked like neo-Nazis could get involved.

Spartina is a constant topic of conversation at the Moby Dick Hotel. When two former guests from California show up, Cohen gives them a rapid-fire update on the herbicide sprays in the bay. She later complains that people consider her a spartina fanatic. She sees herself instead as a seasoned activist, but admits that fighting for spartina and against pesticides has taken up much of her time and money. "There's a part of me that keeps that says, 'why am I doing this?'" Cohen says. "Why am I basically spending my

children's inheritance? When my husband died he left me some insurance; basically I don't travel around the world like my friends do."

Cohen's story has the ring of an oddball, not-in-my-backyard kind of struggle, but her efforts open a new chapter in the politics of pesticides that reveals the gritty details of an emerging debate within the environmental movement over invasive species like spartina. The controversy also raises deep questions about what it means to be an environmentalist in an age when big business teams up with the government to provide high-tech solutions to the inconveniences of the natural world.

The Eradication

Before coming to Willapa Bay to become an oysterman a decade ago, Starvrum ran his own roofing business and did other odd and dirty jobs. He doesn't seem like the type of guy who would care about natural produce, but he keeps an organic garden and is obviously proud of harvesting oysters in a more sustainable way than the big-money operations. He's loud and grumpy and he blames his rude disposition on the drugs he takes to battle lymphoma. Cohen wonders if the chemicals sprayed on spartina are to blame for Starvrum's illness. She feels guilty for sending him out there when she knew that "poisons" were lurking in the mudflats.

Starvrum is a Minnesota native; Cohen and her late husband Edward came to Willapa Bay from Washington, DC, in the late 1980s. Spartina grass is also from the East Coast and can commonly be seen there, bending in the wind on sandy meadows between estuaries winding toward the sea. Spartina is prized on the eastern coastline for acting as a natural erosion buffer, filtering pollution from water and gathering nutrients. But state agencies on the West Coast consider spartina to be a dangerous alien invader that threatens native habitats by dominating tidal mudflats in areas like Willapa Bay. Big oyster harvesting firms don't like spartina either. The grass can slowly transform parts of the mudflats into estuarine rivers and some oystermen fear the grass could get in the way of their dredging efforts to pull the valuable mussel from the muck.

Starvrum walks to the bank of the bay and points to small posts in the tidal mud marking the property line. On either side, patches of tiny spartina sprouts are emerging from the mud. If it were allowed to grow, the grass could reach four to six feet in height by the end of the summer. But spartina is considered a Class A Noxious Weed in Willapa Bay and eradication is a mandatory measure enforced by the local noxious weed board, with herbicide being the weapon of choice. Bayside residents with spartina on their property must allow the herbicide sprays or spend their own time and money removing the grass.

"They sprayed for three years and it's still coming up," Starvrum says, pointing out that bigger patches of the green stubble are coming up on his neighbor's property. Their neighbors chose to allow eradication teams to spray glyphosate and imazapyr

herbicides on their mudflats, but Starvrum and Cohen fought back, attending heated local weed board meetings and eventually taking the board to court. After a brief legal battle in 2009, a judge granted Starvrum and Cohen the right to remove the spartina on their mudflats by mowing the grass with a weed whacker.

Mud from Starvrum's flats later tested positive for the herbicides that drifted in the waters and Starvrum quit harvesting in protest and out of fear for his own health and the health of his customers. "If anyone else tested, no one in the bay would be selling," Starvrum scowls. "That's why it all goes to China."

Cohen and Starvrum say the spartina eradication has implications beyond oyster farming. Wiping out an entire species of grass because it decided to grow in your neighborhood just doesn't seem right, and forcing herbicide sprays on property owners seems to infringe on some basic freedoms. To Starvrum and Cohen, the idea of mandatory eradication smells like some kind of ecological fascism. So, last spring, Starvrum announced at a weed board meeting that Cohen would sell her property if the county sprayed more herbicides near her oyster beds, and they had heard that the Aryan Nation was looking for a new place to call home. A man in black sitting next to Starvrum later stood up and suggested they keep spraying so his "group" could move in.

The local media reported on the stunt and rumors erupted across the tiny communities on the Long Beach peninsula. The man in black was said to be Aryan Nation leader Paul Mullet. The real Mullet would soon angrily deny being anywhere near Willapa Bay and pledged to inform the police that he had been illegally impersonated in public.

Starvrum laughs until his face turns red when recalling the stunt. Cohen says the Nazis were angry because someone had suggested they would do business with a Jewish woman. She admits that bringing up white supremacists in the local media may have scared off some tourists, but she doesn't regret it. "I never denied anything," she says with a tiny smirk. "But I just get so angry sometimes."

The stunt was a tasteless publicity grab, but it was also a metaphor for the spartina eradication and the dominant attitude toward invasive species in general. For many environmentalists, eradicating invasive species is good ecological policy for preserving ecosystems, but Cohen and a growing number of researchers consider eradications to be a symptom of species xenophobia.

Invasive species are plants and animals living in areas outside what ecologists consider their native habitats. Invasive species are usually introduced to new habitats by humans and, without the competition from species in their native environments, are said to be a threat to native species and a nuisance to industries like agriculture and forestry. In the case of spartina, oyster fisherman introduced the grass to Willapa Bay more than a century ago. The grass was used as packing for non-native East Coast oysters the fisherman hoped to introduce to Willapa Bay, and spartina has continued to spread until

a coalition of conservation groups and state agencies began wiping it out.

A war on invasive species is being waged across the country. Non-native mangrove trees in Hawaii are being poisoned with Monsanto's Roundup herbicide. Tamarisk trees in the Southwest are being poisoned, mowed down and treated with tree-killing beetles. Purple loosestrife is pulled up and poisoned in wetlands across the Midwest. Most conservationists agree that invasions should be prevented, but once established, these invaders must be decimated in order for the purely native species to flourish.

Science is always changing, and every species and ecosystem is different. Some biologists and conservationists are now questioning the idea that every species deemed "invasive" is actually bad for ecosystems. Others flat out say that the invasion biology "greenwashing" myth was created by the land management industry to sell pesticides and generate an endless stream of government contracts.

Cohen admits that she had never heard of invasive species before moving to Willapa Bay. But in her effort to stop the herbicide sprays and save spartina, Cohen became a crusader for plants and animals so often despised by other environmentalists. "These are living things, even if they are offensive to some people," Cohen says. "But if you have to get rid of them, at least don't use chemicals."

The Chemicals

Willapa Bay made it on the front page of Monsanto's company magazine in 1991 and was featured in an article titled "No Time to Lose: Will Rodeo Save Willapa Bay?" The agribusiness giant was scoping out the bay as a potential market for Rodeo, the aquatic version of the company's popular Roundup herbicide.

The active ingredient in Roundup and Rodeo is glyphosate, the chemical that many of Monsanto's crop seeds are genetically engineered to tolerate, allowing farmers to spray whole fields with the weed killer while sparing their crops. The article suggested that the spartina grass, which had been established in the bay for nearly a century, was now spreading out of control and threatened Willapa Bay with an "ecological disaster." Rodeo was the only aquatic pesticide approved for use in estuaries at the time and Monsanto suggested Rodeo was the only product that could wipe out spartina and save Willapa Bay from being choked out by stands of insidious marsh grass.

Critics like Cohen believe Monsanto demonizes invasive species like spartina in order to develop a new market for its chemicals. "They figured if they could spray [Rodeo] in a pristine bay, then they could spray it anywhere," Cohen says. Spartina grows in many areas across the world where it is considered non-native. If Rodeo proved effective for eradicating spartina from Willapa Bay, Monsanto could establish new markets in coastal areas ranging from New Zealand to Europe.

Monsanto lost its patent on glyphosate and its interest in Willapa Bay before the spartina eradication campaign gained real momentum in 2003, when federal funding secured by Washington senators would pump more than $1 million into the project each year for the next five years. With federal tax dollars in hand, conservation workers could fill their tanks with off-brand glyphosate for a lower price.

Glyphosate alone would not "save" Willapa Bay from spartina, and in 2004, the herbicide imazapyr joined the eradication arsenal. Following a petition from biotech company BASF, the Environmental Protection Agency (EPA) approved the use of imazapyr in aquatic environments and the herbicide was immediately put to the test on a massive scale in Willapa Bay. Chad Phillips, who coordinates Washington's statewide spartina eradication program, calls imazapyr the "silver bullet" for killing spartina. Along with glyphosate, imazapyr-based herbicides reduced spartina by thousands of acres in Willapa Bay each year from 2004 to 2008. Phillips and his colleagues say it's the largest aquatic eradication on record and a model for similar projects on the West Coast.

Cohen and Starvrum believe glyphosate and imazapyr make for toxic oysters and a polluted bay, but state officials say both chemicals have undergone rigorous testing and are relatively safe.

When it comes to pesticides, only one thing is ever certain: the companies that produce them and regulators that approve them will say they are safe when used correctly, and critics will point to crucial data gaps and independent research to prove these authorities wrong.

Glyphosate is the poster child for the global pesticide controversy due to its place in the ongoing debate over mega-farming and genetically engineered crops. Industry scientists say its one of the safest herbicides in the world, while independent scientists have discovered potential links among the widespread use of glyphosate-based herbicides and non-Hodgkin's lymphoma, birth defects and even attention deficit disorder. Research also shows that additives like surfactants in glyphosate in herbicides like Roundup are more toxic than glyphosate itself and can increase the toxicity of glyphosate.

Imazapyr lacks the notoriety of glyphosate, and little independent testing has been done on the weed killer, but it deserves a hard look considering thousands of gallons of imazapyr-based solution was sprayed across Willapa Bay during the past decade. Imazapyr is a salt that kills plants by inhibiting amino acid synthesis needed for DNA and cell growth. The EPA assessments show the chemical has low toxicity levels when it comes to animals and humans. A long look at EPA documents, however, reveals that regulators used data from tests on freshwater species to assume that imazapyr would be just as safe in saltwater areas like Willapa Bay. In other words, no testing was done on the long-term effects imazapyr could have on saltwater fish and the tiny organisms that form the based of the marine food chain. Nowhere in the assessments by the EPA

is data on the toxicity of imazapyr when mixed with the other chemicals like additives or glyphosate in herbicide formulas used in the field. The EPA, however, told Truthout that the assessment is sound and no data gaps exist.

Busy schedule? Click here to keep up with Truthout with free email updates.

Washington State's own risk assessment for the spartina project admits that little is known about imazapyr's long-term effects on organisms that make up the foundation of the food chain, such as invertebrates and phytoplankton, and there is no data on how long imazapyr stays active within dead spartina. The report concludes that the toxicity of imazapyr is so low that these data gaps are not of concern.

Cynthia Lopez says there are too many holes in this story. Lopez is a former Washington Health Department official, who chaired an interagency committee on pesticides and public health until the program was slashed in 2009 due to state budget cuts. She reviewed the EPA's assessment of imazapyr and concluded that more testing should have been done before allowing massive sprays in Willapa Bay. "[Imazapyr] is dangerous in that the effects are unknown," Lopez says in an interview. "There really hasn't been any long term investigation into the safety of this product." Lopez points out that, when imazapyr was first registered, it was restricted from use near water and very little new data was used to justify its use in aquatic areas. "We have this ongoing experiment going on ... and is this the way to do it?" Lopez asks.

Kim Patten could be one of the only researchers who has studied imazapyr's effects on marine habitats and, more specifically, Willapa Bay. Patten, a researcher with Washington State University, has worked for two decades to eradicate spartina from the bay. His studies on glyphosate and imazapyr created the scientific basis for the chemical eradication. Patten also helped establish a coalition of public and private groups to support the eradication, including the Washington Department of Agriculture (WSDA), US Fish and Wildlife and The Nature Conservancy.

Standing on the grassy banks just a few miles down the road from Cohen's property, Patten points out over 400 acres of shallow water and bare mudflats that make up the southern tip of Willapa Bay. Most of the area is part of a national wildlife refuge and, before the eradication, it was covered with spartina. Now, only a few small flags stuck in the mud mark tiny clusters of spartina sprouts that will be killed this summer before they grow big enough to spread their seeds in the wind.

Migratory birds land on the mudflats and dig up little invertebrates to eat. It's like a rest stop and buffet for sand pipers and ducks, heading north or south depending on the season. Patten explains that spartina had changed all that, converting the mudflats to meadows that were of no interest to the birds. Patten says spartina had simply coexisted with native species until the 1990s, when, for unknown reasons, the spartina population reached a "critical mass" and more than quadrupled from 2,200 acres to

nearly 10,000. Patten says the infestation was poised to decimate the wildlife refuge and local oyster industry. Looking out over the bare mudflats and tidal streams, it's easy to imagine that watching a vast spartina meadow come and go was simply dramatic.

Cohen and Starvrum affectionately call Patten "Chemical Kim," but he doesn't seem like a chemical industry lackey and gives straight answers about the herbicides and the pros and cons of eradiation. Patten says he and other researchers spent $5 million exploring alternatives to herbicides: drilling the mudflats with expensive machines, covering the spartina with large mats to block the sunlight and even pulling it up by hand. All of these techniques proved too expensive and ecologically intrusive and it was decided that herbicides were the best bet. "It was basically a matter of dollars and cents," Patten says.

"Nothing is benign in the world," Patten admits. "You're using significant amount of chemical over large areas, so you're going to have an effect, not necessarily directly from the chemical itself, but by killing massive amounts of spartina your having a big effect on the whole ecology of the area because you're changing it, you're changing to back what it was before."

Patten admits that spraying herbicides across a wildlife refuge is not ideal, but in the end, conservationists must make a judgment call. "The cure is worse than the poison, in some cases, some of the things they use to control invasive species have been worse than the species themselves," Patten says. "But I think overall, you have to look at the health of the whole ecosystem." If spartina was ignored, Patten says, it would have permanently changed the wildlife refuge and the social demographics of the whole peninsula, where the economy is based on tourism and oysters. "How do you weigh one person's opinion versus these bigger things?" Patten asks in a veiled reference to Cohen. "We spent ten years doing that, it was well vetted, I can't tell you how many public meetings, how many times we went over this issue."

Patten says its been a "spiritual experience" watching the birds come back to the mudflats, but he has some surprising things to say about the motivations driving others in the anti-spartina coalition. Patten says that, since the 1990s, federal and state legislatures just threw money at the spartina problem and the funding paid for sluggish bureaucracy between state agencies and conservation groups. As the eradication winds down, Patton is finding it difficult to squeeze support out of an inefficient system. "It's a bureaucracy, people don't create it to make money, but they don't want to give it up."

Think Monsanto

At a recent environmental law conference in Eugene, Oregon, conservation biologist and author David Theodoropoulos begins his talk on invasive species with the name of the world's most notorious biotech company looming on the overhead screen. "Every

time you hear the term 'invasive species,' think Monsanto," Theodoropoulos says. His audience laughs.

Theodoropoulos says the idea that a wild plant or animal can be invasive is a myth. Species have moved, adapted and changed in different ecosystems for millions of years. "Change and movement are natural," Theodoropoulos says during his presentation , which was sponsored by Fritzi Cohen's latest activist group, the Fearless Fund. "Forests ebb and flow across the landscape and they continually change in content, from oaks, to conifers to beach to birch and so on."

Theodoropoulos' position is not a popular one. Most ecologists are alarmed when a non-native species is accidentally introduced to a new area and begins to spread rapidly. What attracts many environmentalists to the war on invasive species is the goal of preserving native or endangered ones, never mind that invasive weeds and pests are said to cost big industries billions of dollars every year. According to conservationists like Theodoropoulos, however, misleading science and persistent propaganda has exacerbated this concern for native species.

Theodoropoulos can rattle of names of so-called invasive species that he believes have been wrongly demonized by the herbicide and regulatory industry. The zebra mussel, for example, caused a scare a decade ago when it was introduced to Lake Erie in ballast water from ships. The mussel was deemed invasive and said to be taking over, but over the years, it spread and filtered out pollution in the notoriously dirty Rust Belt lake and game fish populations actually increased in its presence. Giant piles of zebra mussel shells used to wash up on Lake Erie shores, but over the years, the piles disappeared and lake was noticeably cleaner.

Recent research by Dov Sax, an assistant professor at Brown University, has shown that little is actually known about how invasive species change ecosystems because their impact is often coupled with other disruptions caused by human activity, and some so-called "invaders" can be beneficial to ecosystems. The time scale is also critical: invasions have occurred for millions of years as the face of the planet has changed, and the idea that a species can be "native" or "alien" is the result of a short-term and human view of ecosystems.

The rhetoric of the invasive species debate has become strangely social. It's alarming to see a new species arrive in an area, and with headlines screaming about the threat of invaders, a certain psychology seems to have been aroused among environmentalists.

"There seems to be something in our biological nature, related toward our xenophobia towards other humans, that colors are view of alien plants and animals," Sax wrote in a 2004 essay on the invasive species war. "There is a tendency to treat foreigners different than natives: with distrust, dislike, even loathing. Coupled with this is a

tendency to view some prior condition as 'pristine' or most natural and therefore the state that should be preserved."

Other critics have compared invasive species to illegal immigrants. Theodoropoulos goes as far as crediting Hitler's Nazis with developing the first invasive species control program to purify the German countryside.

Comparing species "nativists" to Nazis and xenophobes has ruffled a lot of feathers in recent years, and those familiar with the debate say emotions are running high. The debate even carries an element of identity politics: some researchers now refer to invasive species as "non-native" or "exotic" to distance the species from the idea that all foreigners are evil invaders.

Environmentalists can disagree on whether species like the zebra mussel or spartina are benign, beneficial or ecosystem destroying invaders, but one thing is clear: the herbicide and land management industries helped design America's war on invasive species.

"Forty years ago, the threats to nature were pollution, pesticides, poisons, bulldozers and chainsaws," Theodoropoulos tells his audience, which includes those on both sides of the debate. "Now we are told that the greatest threats to nature are wild plants and animals and the cure: poisons, bulldozers and chainsaws. Now ask yourself, who does this serve?"

Endless War

While Monsanto was scoping out Willapa Bay as a potential market for Rodeo in the early 1990s, conservation biologist Jono Neiger was busy fighting invasive plants on wildlife preserves near the Sacramento River in California. Neiger was working for The Nature Conservancy, a wealthy conservation group that partners with big companies like Monsanto. "We used a lot of Roundup," Neiger says in an interview, describing all-terrain vehicles with long booms that sprayed glyphosate-based Roundup during off-road rides through the wilderness.

A flowering shrub called scotch broom was Neiger's target, and he was livid when he later found one of his instructors planting the flowering bush, but his instructor explained that scotch broom could be beneficial to some ecosystems by fixing nutrients in the soil. Neiger soon had what he describes as an "ah-ha moment."

"I realized how my work with The Nature Conservancy got me into this mindset of fighting a war," Neiger says. His attitude toward some invasive species changed as he went on to study and teach permaculture, and he realized that he had succumbed to the rhetorical "hysteria" that had clouded the science around invasive species.

Neiger explained that many so-called invasive plants are "pioneer species" that often

take to areas where disturbances caused by people have weakened native ecosystems, acting like a natural scar tissue on the wounds caused by development. As long as people continue moving species from one area to another and disturbing wild areas, there will be money to be made combating these so-called invasions. "We have created this massive disruption and the species are simply responding ... and we are scapegoating," Neiger says.

Controlling invasive - or perhaps non-native - species became a billion-dollar industry under the Bush administration, which pumped more than $6 billion into invasive species programs. In 2007, the Bush administration proposed a total of $1.2 billion for invasive species programs, including $222 million on research and $446 million on invasive species control and eradication, according to the National Invasive Species Council (NISC). Agencies like the Department of Defense and the EPA received a total of $227 million for "innovative control technologies." While the Department of Defense was defending America from ecological invaders, only $131 million went to preventing invasions. But why prevent invasions when there is so much money to be made combating them?

Shortly before leaving office, President Clinton created the NISC, which was quickly inherited by the Bush administration. The original NISC included GOP big wigs like Condoleezza Rice and Donald Rumsfeld, who probably had bigger issues than invasive species to worry about back in those days. So, the Invasive Species Advisory Committee (ISAC) was created to write reports, map out a national bureaucracy and write policy toward dealing with invasive species. In his controversial book, "Invasion Biology: Critique of a Pseudoscience," Theodoropoulos points out that Dr. Nelroy Jackson represented Monsanto on ISAC from 2000 to 2006. A closer look reveals that Jackson co-edited some of the council's founding reports.

Jackson, now retired, says he was first recruited by the Clinton administration two years before the NISC and ISAC were created. Monsanto had employed him for years to research herbicides as invasive species control methods. When he was invited to Washington, Jackson saw the opportunity to foster political support for a nationwide movement.

"I realized that we had to get some kind of movement going ... on the federal, state and local level," Jackson says in an interview.

Jackson is an award-winning scientist, who is well known in the weed control industry. He founded the Invasive Species Awareness Week, an annual event held in Washington, and most recently sponsored by the pro-industry Weed Science Society of America and the herbicide division of Dow Chemical.

As a member of ISAC, Jackson joined a myriad of regulatory officials, academics and industry lobbyists. Taylor Industries, one the largest shellfish and oyster producers in

Willapa Bay, had a representative on ISAC from 2002 to 2008 during the height of the spartina eradication. BASF, the company that petitioned to have imazapyr registered for aquatic use, was represented on the council from 2006 to 2008.

"Glyphosate and imazapyr are two of the, I can't say safest, but best tools available," Jackson says.

Since the inception of ISAC, The Nature Conservancy has also had a representative on the advisory council and has played a leading role in establishing large invasive species eradications across the country. The Nature Conservancy is the richest land-owning conservation group on the planet and partners with some of the world's biggest polluters. The Conservancy's International Leadership Council includes Monsanto, BP, Dow Chemical, American Electric Power, Exxon-Mobile, and the list goes on. Before becoming the Conservancy' president and CEO, Mark Tercek worked for Goldman Sachs, where he developed "market-based solutions for environmental challenges," according to The Conservancy web site.

The Conservancy is known for promoting phrases like "alien invaders" and "war on invasive species" in thrilling headlines in the media, and the organization recently congratulated Mexico for starting its own war that mirrors America's efforts.

"I think [The Conservancy] is a well-meaning organization ... but on this issue, there is a lot of people going down the wrong track," Neiger says. "When the thinking is that we need to wage war, then you start thinking that we'll do whatever it takes ... and ethics go out the window."

The Conservancy has also played in integral role in the eradication of spartina in Willapa Bay. The organization has since helped secure state and federal funding to the project, coordinated with eradication groups on the ground and sent out workers to spray glyphosate and imazapyr.

"I think it's a friggin big joke that they have these conservation groups on board to buy and sell their chemicals," Neiger says. "I was there. We bought giant barrels of Roundup. To me, it's the same old story."

For many environmentalists, big biotech companies like BASF and Monsanto are the bad guys, and conservationists like Theodoropoulos hope that revealing their role in developing invasive species policy will change some minds about invasive biology. But corporations are more than faceless monoliths; they are large groups of individuals, many of whom say they are doing the right thing.

"I've personally been called all kinds of names," Dr. Jackson says with a laugh when asked about critics of Monsanto and herbicides. "All of us who are working in industry are also people. If we are human beings, why would any one of us develop something

that could hurt our children or grandchildren?"

Cohen and Starvrum believe the Dr. Jacksons and the Chemical Kims of the world are definitively the bad guys, bent on doing whatever it takes to make money and dominate the natural world. Patten and Jackson say they simply made tough decisions when trying to do what's best for society and the environment.

The war on invasive species is a war on a fact of life. Humans have caused or exacerbated these species "invasions" by changing habitats and introducing species to new areas, and now we are trying to turn back the clock in an attempt to prevent nature from taking its new course. As long as people attempt to dominate the land, extract its resources and shape it to their liking, there will be money to be made and dramatic consequences for other livings things. The search for a balance between supporting our collective desire to prosper and a healthy natural world is sure to spark more heated debates for years to come.

Back on the banks of Willapa Bay, Starvrum's expression is grim, but determined, as he looks across the mudflats where he used to harvest oysters. "One day I'll get out there again," he says. Cohen and Starvrum are still fighting against what is left of the spartina eradication. They hope to establish a bigger buffer zone between their oyster farm and any upcoming herbicide sprays, and Cohen is currently suing the state over the loss of their oyster farm.

Spartina itself could be the biggest loser in this eco-war, but the grass deserves some credit. Washington is facing a budget crisis and funding for the eradication is drying up. A short stroll down the beach near the northern tip of the Long Beach peninsula, where Willapa Bay meets the roaring Pacific, bears a testament to spartina's resilience. Shorebirds gather there, on the soft mudflats, to rest their wings and grab a bite to eat. Patten's marker flags are nowhere to be seen. The hungry birds wander between patches of familiar green stubble, little spartina sprouts poking out of the muck to greet the warm spring sun.

View Full Version: New study finds arsenic in chicken

Title: New study finds arsenic in chicken

TheUnhivedMind - June 9, 2011 04:34 PM (GMT)

New study finds arsenic in chicken

A new study finds traces of a known carcinogen in chicken.

06/08/2011 10:02 PM
http://wnyt.com/article/stories/S2147643.shtml?cat=300

The Food and Drug Administration says the traces are very small and there is no immediate health risk.

But one environmental health expert says finding any trace of arsenic in food is worrisome.

The FDA says the arsenic is coming from an ingredient in chicken feed manufactured by Pfizer.

The ingredient is called Roxarsone.

It's used to reduce the number of intestinal parasites in chicken - and it's been used since the 1950's.

Previous studies showed the arsenic in this ingredient was eliminated in chicken waste, but now it appears some small traces may be left in the actually chicken.

Doctor David Carpenter is an expert in Environmental Health Sciences.

While the FDA says it's still safe to eat chicken, Carpenter says "We don't know enough just how dangerous it is to eat chickens that have been exposed to this chemical."

The traces found in chickens from Roxarsone are inorganic arsenic, which is the

dangerous kind.

The FDA says Pfizer has suspended sales of chicken feed made with this ingredient, and they will no longer use it.

Again, the FDA saying there is no immediate health risk - but alerting the public about these findings.

View Full Version: Fluoridation in UK is now illegal

Title: Fluoridation in UK is now illegal

craig-oxley - September 13, 2008 04:43 PM (GMT)

A VERY VERY FINE EXAMPLE OF USING THEIR OWN LAWS AGAINST THEM. THEY SURE DONT LIKE IT BUT ITS CONSTITUTIONAL.

QUOTE

´Fluoridation in UK is now illegal´

Press Release

Embargoed 1.00am Nov 1st 2005

NAMAF - North and Midlands Against Fluoridation
& The National Register of Children with Dental Fluorosis

Campaigners will lobby Directors of the Board for the newly formed Consumer Council for Water (known as CCWater)

Venue : Consumer Council for Water - Victoria Square House, Victoria Sq. Birmingham, B2 4AJ

Time: 1st November 2005 10.00am - 12.00 o clock

New EU legislation - DIRECTIVE 2004/27/EC OF THE EUROPEAN PARLIAMENT AND OF THE COUNCIL of 31 March 2004 amending Directive 2001/83/EC
(see 9 below) has an impact on all existing fluoridation schemes which currently affect 6 million people in the UK who are forced to drink, cook with and bathe in fluoridated water.
I
All ingestible substances are either foods or medicines, when fluoride - in ANY form - is added to water with the intent to medicate then that water becomes a medicine, and must comply with the regulations relating to the registration,

licensing, sale and administration of medicines.

This is now an absolute requirement, and enforceable under EU legislation, the UK Government´s dispensation for silicofluorides to be used to medicate dental caries is without substance.

Douglas Cross - Environmental Analyst - EurProBiol,CBiol,MIBiol,BSc
also comments

"From 31st October ´05 it will be illegal to to use silicofluorides with the intent to medicate. Nomination of silicofluorides by the UK government for fluoridation does not constitute the issue of a marketing authorisation which is mandatory for any substance used with the intent of treating or preventing any medical condition."

Professor Vyvyan Howard, toxico-pathologist in the Centre for Molecular Bioscience at the University of Ulster said “I am glad that there now appears to be a legal framework to test the dubious practice of mass medication via the water supply. There are so many unanswered questions relating to the addition of hexafluorosilicic acid to the water supply, particularly to the unborn and infants, that it is my personal and professional opinion that the practice should cease until the basic toxicological research required has been performed”.

Cllr. Susan King - Secretary of NAMAF is delighted that the new EC legislation will bring to an end the deliberate pollution of water supplies with hexafluorosilicic acid at the rate of 1 part per million. For the last 60 years fluoride has been condoned as the ´protected pollutant´ with unknown effects on our general health and the health of the environment.

She added

´There is now compelling evidence from the US that fluorides are carcinogenic linking them with bone cancer affecting young males. Water suppliers are not pharmacists! Its totally unacceptable to add a known cumulative protoplasmic poison to our tapwater. The fluoride dosing equipment must be switched off now!´

Notes for Editors

1) Press release on first Consumer Council for Water meeting - Birmingham Nov 1st 2005
http://www2.watervoice.org.uk/aptrix/ofwat...tent/ccwater605

Water supplies top the agenda at first CC Water meeting in public

2) DWI - Press release on formation of Consumer Council for Water - CCWater
(replacing Water Voice)
http://www.dwi.gov.uk/consumer/ccwater.shtm

3) Doug Cross - analysis of implications of Codified Pharmaceutical Directive in relation to
EC definition of a food.

The medicinal regulations are essentially unchanged from the wording of the 2001 Codified Pharmaceuticals Directive. However, the Food Directive has more recently been updated, and now provides additional confirmation of the status of ´normal´ drinking water, and therefore of fluoridated water as a medicine. Remember, any ingestible substance is either a food or a medicine.

Note the use of the phrase ´Water is ingested directly or indirectly like other foods,´ in section 6 of the Preamble. This is also saying that water is a food, like any other. The key ruling is the European Court of Justice´s decision that the intent to medicate renders any chemical so used a medicinal substance.

´REGULATION (EC) No 178/2002 OF THE EUROPEAN PARLIAMENT AND OF THE COUNCIL
of 28 January2002 laying down the general principles and requirements of food law, establishing the European Food Safety Authority and laying down procedures in matters of food safety´

Article 2
Definition of ‘food’
For the purposes of this Regulation, ‘food’ (or ‘foodstuff’) means any substance or product, whether processed, partially processed or unprocessed, intended to be, or reasonably
expected to be ingested by humans. ‘Food’ includes drink, chewing gum and any substance, including water, intentionally incorporated into the food during its manufacture, reparation or treatment. It includes water after the point of compliance as

defined in Article 6 of Directive 98/83/EC and without prejudice to the requirements of Directives 80/778/EEC and 98/83/EC

Preamble (6) Water is ingested directly or indirectly like other foods, thereby contributing to the overall exposure of a consumer to ingested substances, including chemical and
microbiological contaminants. However, as the quality of water intended for human consumption is already controlled by Council Directives 80/778/EEC (5) and 98/83/EC (6), it suffices to consider water after the point of compliance referred to in Article 6 of Directive 98/83/EC.

So, the quality of drinking water is covered by the EU food and water regulations as long as it does not contain any substance added with the intent to medicate any medical condition. Therefore, the presence of calcium fluoride in drinking water, as long as it is derived from natural sources, does not alter the status of drinking water as a food whose quality is regulated under the Water Quality Regulations.

However, immediately any form of fluoride, whether ´natural´ or artificial, and including those fluorides that do have medicinal Marketing Authorisations, is added to water with the intent to prevent or reduce dental caries, that water ceases to be a food and becomes a medicine.

Neither authorized fluorides (potassium and sodium fluoride) nor any form of silicofluoride have Marketing Authorizations under the EU or UK legislations. Their use with the intent to medicate is therefore illegal - and absolutely so - from the end of this month.

So any authority faced with this illegal administration of an unlicensed medicine as from that date can, and should, apply for an injunction against any water company actively fluoridating its product, or proposing to do so. This action can also be taken against any Strategic Health Authority proposing to order a water company to carry out this illegal act.

of 31 March 2004 amending Directive 2001/83/EC on the Community code relating to medicinal products for human use Article 1 Directive 2001/83/EC is hereby amended as follows:
1) Article 1 shall be amended as follows:

(B) point 2 shall be replaced by the following:

‘2. Medicinal product:
(a) Any substance or combination of substances presented as having properties for treating or preventing disease in human beings; or

(B) Any substance or combination of substances which may be used in or administered to human beings either with a view to restoring, correcting or modifying physiological functions by exerting a pharmacological, immunological or metabolic action, or to making a medical diagnosis.’

UNQUOTE

I'm gonna be writing to my water company (Seven Trent).see what

they have to say. Anybody else gonna write?

craig-oxley - September 13, 2008 04:43 PM (GMT)

Here was the reply in full:

The decision as to whether a particular product is a medicinal product is made by the Medicines and Healthcare products Regulatory Agency (MHRA) using the definition of that term in Article 1 of Directive 2001/83/EC, relevant legal precedent and its own published guidance. The question as to whether fluoridated drinking water is a medicinal product has been put to the MHRA on a number of occasions over the past few years. The MHRA considers that neither fluoride added to drinking water nor the resulting fluoridated water are medicinal products which require marketing authorisations as medicines. As drinking water is quite clearly a normal part of the diet the MHRA does not regard it to be a medicinal product.

The press release which you attached to your e-mail placed great emphasis on the change to the definition of the term ‘medicinal product’. The MHRA’s views on this were not sought on this before publication and I am afraid that the author was incorrect in thinking that the changes would affect the status of fluoridated drinking water. The definition was changed to explain the modes of action by which medicinal products work. This was not a relevant factor in the decision that fluoridated drinking water was not a medicinal product. In fact, the MHRA believes that the change in definition of that term has the greatest impact on products on the borderline between medicinal products and medical devices. Products on the medicinal products/food borderline and medicinal product/cosmetic product borderline will not be affected.

You may be interested to know that there is one currently licensed homoeopathic product which contains sodium silicofluoride. This is a product licence of right which dates back to 1972. There were other product licences of right for calcium silicofluoride but these have lapsed. Other licensed medicinal products containing a form of fluoride mainly contain sodium fluoride. The various forms of fluoride have many uses and it is not correct to say that their inclusion in an ingested product automatically makes that product a medicine. As an example, some are permitted in oral hygiene products under the legislation which applies to cosmetics. Some are also permitted under the Directives on Food Supplements and the Addition of Nutrients to Foods. The legislation which controls cosmetic products and foods contains safety requirements, details of these can be obtained from the Trading Standards Service of your Local Authority.

Yours sincerely

David Carter

Manager, Medicines Borderline Section

View Full Version: EPA: Fluoride Must be Phased Out

Title: EPA: Fluoride Must be Phased Out

TheUnhivedMind - July 15, 2011 06:27 PM (GMT)

EPA: Fluoride Must be Phased Out

13 Jul 2011
By Bob Tuskin
http://www.bobtuskin.com/2011/07/13/epa-fl...-be-phased-out/

The EPA recently released a proposal to “phase out fluoride pesticide” which is an “insecticide and fumigant used on stored grain, such as wheat and oats; driedfruit; coffee and cocoa beans; and other foods”.

If EPA’s plan becomes final, many food uses of this fluoride-based pesticide would stop within 90 days.

Although this is a major break through, the EPA has not yet announced any plans for the removal of this dangerous poison from our water supply.

If you are reading this article and still think that fluoride is somehow good for you, perhaps you should take a look at a recent study that shows it can damage the brain.

- “The prolonged ingestion of fluoride may cause significant damage to health and particularly to the nervous system,” concludes a review of studies by researchers Valdez-Jimenez, et al. published in Neurologia (June 2011), reports New York State Coalition Opposed to Fluoridation, Inc. (NYSCOF).

The research team reports, “It is important to be aware of this serious problem and avoid the use of toothpaste and items that contain fluoride, particularly in children as they are more susceptible to the toxic effects of fluoride.”

“Fluoride can be toxic by ingesting one part per million (ppm), and the effects are not immediate, as they can take 20 years or more to become evident,” they write.

Most fluoridating U.S. public drinking water suppliers add fluoride chemicals to deliver 1 ppm fluoride (equal to about 1 milligram per quart) intending to benefit teeth and not to purify the water.

“Fluoridation clearly jeopardizes our children and must be stopped,” says attorney Paul Beeber, President, NYSCOF. ”We can actually see how fluoride has damaged children’s teeth with dental fluorosis; but we can’t see the harm it’s doing to their brains and other organs. No U.S. researcher is even looking,” says Beeber.

Paul Beeber will be coming on The Bob Tuskin Show Thursday 7/14/11 to talk about the recent EPA proposal.

And if that is not enough check out the various resources at The Fluoride Action Networks website or at http://www.jpands.org/vol10no2/kauffman.pdf .

Major
Victory?

In a letter from the Environmental Working Group they high lite this possible major step forward

The Environmental Working Group strongly supports EPA’s proposed order. It reflects a growing consensus that the American public is exposed to excessive fluoride. For decades, public health agencies have erroneously reassured the public that fluoride is entirely safe. As a result, generations of children have been exposed to amounts of fluoride that could damage teeth and bones and that emerging science indicates could harm thyroid function and increase risks of bone cancer.

EPA’s 2011 proposal came in response to objections filed by Environmental Working Group, Fluoride Action Network and Beyond Pesticides to the use of sulfuryl fluoride on food. In the same month, the U.S. Department of Health and Human Services proposed to reduce its recommended maximum level of fluoride in tap water from 1.2 to 0.7 parts per million, a 42 percent decrease.

Sulfuryl fluoride, manufactured by Dow AgroSciences and approved by EPA in 2004 as an alternative to ozone-depleting fumigant methyl bromide, is used for control of pests in food storage and processing facilities. EPA statistics indicate that sulfuryl fluoride is used in approximately 40 percent of such facilities across the country. Once sprayed, sulfuryl fluoride breaks down into fluoride, which can contaminate food. Over-exposure to fluoride from oral ingestion has been associated with multiple adverse health effects, including dental fluorosis (mottling and loss of tooth enamel) and skeletal fluorosis (joint pain, stiffness and bone fractures).

EPA’s original permit to allow sulfuryl fluoride for use on foods relied on an outdated health risk assessment and significantly underestimated children’s exposures to fluoride

from all sources. After a new exposure and risk assessment was done, the EPA Office of Pesticide Program concluded that the current legal limit of the pesticide residue on food does not adequately protect children from excessive fluoride exposures. After considering the aggregate exposures to fluoride from all sources, including drinking water and toothpaste, EPA found that sulfuryl fluoride does not meet the children's health protection requirements set under the Food Quality and Protection Act of 1996, which regulates pesticide safety.

EPA's decision to stop sulfuryl fluoride use is a step in the right direction, but, as EPA's recent exposure assessment indicates, sulfuryl fluoride represents just a fraction of Americans' overall fluoride exposure. Children under the age of 7 are particularly at risk of excessive fluoride exposure. It is of great concern that even if sulfuryl fluoride is eliminated from their diets, many children will still ingest too much fluoride. Further reductions in fluoride exposure are necessaryto protect children's health more fully.

EWG has provided detailed comments to Health and Human Services about the impact of new water fluoridation guidelines, including shortcomings of EPA's new risk and exposure assessments for fluoride (copy of the letter is attached). Actions to reduce fluoride ingestion via drinking water and pesticide residues represent a step in the right direction toward protecting Americans from fluoride exposure.

Yet EWG found that a significant body of scientific evidence supports an even more dramatic reduction to protect the health of infants, children and others who are most vulnerable to the surprising array of health problems associated with this common water additive. We urge EPA's Office of Pesticide Programs and Office of Water to join other agencies in committing to reduce substantially human exposures to fluoride from sources other than sulfuryl fluoride.

EPA's decision to withdraw sulfuryl fluoride tolerances is significant both in regard to the particular pesticide tolerances involved and in the context of reevaluating the health effects of fluoride. It sets an important example for future initiatives to address cumulative exposures to pesticides from multiple sources, a concept that is on the cutting edge of research and policy. EWG strongly supports EPA's action on sulfuryl fluoride. Yet in order to protect Americans from over-exposure to fluoride, the agency must go further by lowering fluoride content in drinking water.

Sincerely,

Sonya Lunder, MPHEWG Senior Analyst
Olga V. Naidenko, PhDEWG Senior Scientist

The EPA has both national and county based representatives. What is needed is a true grassroots effort. It is important that we work in our cities and counties to get it taken out of our water supply.

Many cities around the world have been successful in doing so, and many more are making major headway. I hope this EPA announcement will inspire the total abolition of this nasty poison.

Description: *study*

TheUnhivedMind - July 13, 2011 03:14 AM (GMT)

Fluoride consumption leads to brain damage, says study

Monday, July 11, 2011 by: Ethan A. Huff
http://www.naturalnews.com/032957_fluoride_brain_damage.html

It is becoming increasingly difficult for fluoride fanatics to defend the practice of artificial water fluoridation, thanks to a plethora of new reports highlighting its many dangers. A new study published in the journal Neurologia reveals that chronic exposure to, and ingestion of, the synthetic fluoride chemicals added to water supplies can cause serious brain and neurological damage. Confirming several others recently published, the study further exposes the lunacy of deliberately adding toxic chemicals to the water supply in the name of saving teeth.

"The prolonged ingestion of fluoride may cause significant damage to health and particularly the nervous system," write researchers Valdez-Jiminez, et al. in their report. "Fluoride is capable of crossing the blood-brain barrier, which may cause biochemical and functional changes in the nervous system during pregnancy, since the fluoride accumulates in brain tissue before birth."

There you have it, folks. Fluoride chemicals, which are derived from the waste emitted by the aluminum and phosphate mining industries, by the way (http://www.naturalnews.com/031541_F...), cross directly into the brain where they lodge themselves and cause disease. They also enter the thyroid and pineal glands and disrupt proper hormone production, which leads to various other illnesses.

There simply is no denying the deadly truth about fluoride anymore. Ample evidence is continually being released that exposes fluoride as a highly-toxic chemical poison, and even the US Environmental Protection Agency (EPA) admits that fluoride is a toxin. The US Centers for Disease Control (CDC) also initiated damage control recently by

lowering its fluoridation recommendations following the release of studies showing that fluoride harms children (http://www.naturalnews.com/030952_C...).

"It's apparent that fluorides have the ability to interfere with the functions of the brain," says the US National Research Council's (NRC) expert fluoride panel. "Fluorides also increase the production of free radicals in the brain through several different biological pathways. These changes have a bearing on the possibility that fluorides act to increase the risk of developing Alzheimer's disease."

It is also worth mentioning that the April 12, 2010, issue of TIME magazine lists fluoride as one of the "Top Ten Common Household Toxins." Dubbing fluoride "neurotoxic and potentially tumorigenic if swallowed," and it is difficult to determine how anyone can suggest that adding such a chemical to drinking water is in any way beneficial.

"Fluoride can be toxic by ingesting one part per million (ppm), and the effects are not immediate, as they can take 20 years or more to become evident," adds the new report.

View Full Version: Symptoms of Fluoride Poisoning

Title: Symptoms of Fluoride Poisoning

TheUnhivedMind - June 30, 2011 09:49 PM (GMT)

Symptoms of Fluoride Poisoning

Do you think you may be fluoride poisoned?

http://www.slweb.org/ftrcsymptoms.html

As with other toxins, fluoride affects different individuals differently. Symptoms can vary widely and depend on many factors, such as one's genetic predispositions, body burden (overall body accumulation from all sources), mode of exposure, and length of exposure time (whether acute, as in the workplace, or chronic, as with ingestion of fluoridated water and food).

Also involved are synergistic effects that occur, for instance, when fluoride enhances other drugs people may be taking, or by combining with substances in the water and forming even more potent toxins (such as with Aluminum Fluoride, a dangerous neurotoxin).

Fluoride poisoning can be manifested in seemingly harmless symptoms, such as white spots in teeth (dental fluorosis), or chronic problems, such as arthritic joints, or more serious problems, including respiratory disease or cancer, or a complex of problems, whether acute or chronic.

Fluoride sensitivity (i.e. not being able to tolerate any amount of fluoride in food, water, or even taking showers) may occur if one is fluoride poisoned, or it may occur if one is chemically sensitive due to toxic exposure to other chemicals or because of allergy or some other body imbalance.

We believe that many, many people are either fluoride poisoned or fluoride sensitive and simply do not know that they are. They know that they feel sick and may be treated for symptoms with any number of drugs, but neither they nor their doctors have any

idea that fluoride is the culprit.

This FTRC WebCenter page offers a wide range of possible symptoms that may affect individuals, one symptom at a time, or as a syndrome or complex.

If you suspect you may be, indeed, fluoride poisoned, we offer you a self-help protocol for immediate response to your symptoms.

DISCLAIMER: FTRC WebCenter and Second Look/SLweb do not diagnose or treat any conditions. We are providing information to be used only as guidelines. Only the individual's medical providers can make medical diagnoses and prescribe treatments.

View Full Version: Newly published research in leading journals

Title: Newly published research in leading journals
Description: *AGAINST fluoride and vaccines*

TheUnhivedMind - June 26, 2011 02:36 AM (GMT)

Newly published research in leading journals AGAINST fluoride and vaccines

Carl Herman, Contributing Writer
Friday, June 24, 2011
http://www.activistpost.com/2011/06/newly-...in-leading.html

Excerpts below, articles here and here. To understand that Big Pharma and "health care" companies do not act for the public benefit, continue reading the excerpt from this. Explanation, documentation and proof that US corporate media makes the choice to keep Americans ignorant of these game-changing stories is here, with an excerpt of one game-changing examples.

Fluoride:
"The prolonged ingestion of fluoride may cause significant damage to health and particularly to the nervous system," concludes a review of studies by researchers Valdez-Jimenez, et al. published in Neurologia (June 2011), reports New York State Coalition Opposed to Fluoridation, Inc. (NYSCOF).

The research team reports, "It is important to be aware of this serious problem and avoid the use of toothpaste and items that contain fluoride, particularly in children as they are more susceptible to the toxic effects of fluoride." (1)

"Fluoride can be toxic by ingesting one part per million (ppm), and the effects are not immediate, as they can take 20 years or more to become evident," they write.

Most fluoridating U.S. public drinking water suppliers add fluoride chemicals to deliver 1 ppm fluoride (equal to about 1 milligram per quart) intending to benefit teeth and not to

purify the water.

Vaccines:
A shocking new study published in a prestigious medical journal has found a direct statistical link between higher vaccine doses and infant mortality rates in the developed world, suggesting that the increasing number of inoculations being forced upon children by medical authorities, particularly in the United States which administers the highest number of vaccines and also has the highest number of infant deaths, is in fact having a detrimental impact on health.

The study, entitled Infant mortality rates regressed against number of vaccine doses routinely given: Is there a biochemical or synergistic toxicity?, was conducted by Neil Z. Miller and Gary S. Goldman. It was published in the reputable Human and Experimental Toxicology journal, which is indexed by the National Library of Medicine...Despite the fact that the United States administers the highest number of vaccine doses to children in the entire developed world, 26 before infants reach the age of one, its infant mortality rate is higher than 33 other nations, all of which administer less vaccines. The study clearly illustrates the fact that developed countries which administer less vaccines have lower infant mortality rates, suggesting a direct statistical link between vaccination side-effects and infant deaths.

For example, the two developed countries that require children be immunized with the least amount of vaccines, Japan and Sweden, also top the table for the lowest infant mortality rates.

Big Pharma, "Health care":

The cartels taking billions of our dollars are in many industries. Dr. Marcia Angell, former Editor in Chief of the New England Journal of Medicine and currently a Senior Lecturer at Harvard Medical School documents:
“The combined profits for the ten drug companies in the Fortune 500 ($35.9 billion) were more than the profits for all the other 490 businesses put together ($33.7 billion).”

Importantly, “profit” is distinct from “research” in understanding these figures. This is prima facie evidence of unlawful collusion among a cartel, yet government doesn’t investigate. Dr. Angell concludes that US government will never provide universal health care because both political parties’ “leadership” obeys health insurance companies’ lobbyists rather than legislate for the public good. The lack of health care kills about 45,000 Americans every year according to the recent study championed by Harvard’s Medical School. Cost-benefit analyses range between $100 to $300 billion annual cost increase to the US by keeping health care companies between doctors and patients.

Corporate media "reporting":

You should also know that the King family's civil trial found the US government guilty of Dr. King's assassination (click link for a summary and documentation of the overwhelming evidence). US Corporate media refused to cover the trial or interview Dr. King's wife. His family's opinion is that the US government murdered Dr. King to end his protests against unlawful US wars and his call to end poverty.

In conclusion: The century within which we were all born witnessed over 250 million human beings slaughtered by governments in war and atrocities. War is used as a continuous “foreign policy,” with the US in present egregious and unlawful abuse of their superpower status. History will judge when Americans developed the education competence to evolve beyond endless wars.

We can help make that time now.

Carl Herman is a National Board Certified Teacher in economics, government, and history. His hobby is research, education, and lobbying for improved public policy. A principal project of his 30-years’ experience working with US “leadership” in government, economics and corporate media was to grow the citizen’s lobby, RESULTS, that led to two UN Summits (1990 World Summit for Children - the largest meeting of heads of state in world history - and the 1997 Microcredit Summit - topic of the 2006 Nobel Peace Prize). Because US political leadership of both parties reneged on each and every public and private promise to end poverty, and US corporate media behaved as their political propagandists, Carl shifted his hobby to "follow the money." His conclusions are explained and documented in these two articles (academic/ professional voice, and more passionate citizen voice):

Title: New Study: Fluoride Can Damage the Brain - Avoid
Description: *Use in Children*

TheUnhivedMind - June 23, 2011 03:27 AM (GMT)

New Study: Fluoride Can Damage the Brain - Avoid Use in Children

http://www.prnewswire.com/news-releases/ne...-124299299.html

NEW YORK, June 21, 2011 /PRNewswire-USNewswire/ -- "The prolonged ingestion of fluoride may cause significant damage to health and particularly to the nervous system," concludes a review of studies by researchers Valdez-Jimenez, et al. published in Neurologia (June 2011), reports New York State Coalition Opposed to Fluoridation, Inc. (NYSCOF).

The research team reports, "It is important to be aware of this serious problem and avoid the use of toothpaste and items that contain fluoride, particularly in children as they are more susceptible to the toxic effects of fluoride." (1)

"Fluoride can be toxic by ingesting one part per million (ppm), and the effects are not immediate, as they can take 20 years or more to become evident," they write.

Most fluoridating U.S. public drinking water suppliers add fluoride chemicals to deliver 1 ppm fluoride (equal to about 1 milligram per quart) intending to benefit teeth and not to purify the water.

"Fluoridation clearly jeopardizes our children and must be stopped," says attorney Paul Beeber, President, NYSCOF. "We can actually see how fluoride has damaged children's teeth with dental fluorosis; but we can't see the harm it's doing to their brains and other organs. No U.S. researcher is even looking," says Beeber.

Valdez-Jimenez, et al. describe studies that show fluoride induces changes in the brain's physical structure and biochemistry which affects the neurological and mental development of individuals including cognitive processes, such as learning and memory.

"Fluoride is capable of crossing the blood-brain barrier, which may cause biochemical and functional changes in the nervous system during pregnancy, since the fluoride accumulates in brain tissue before birth," they write.*

Animal studies show fluoride's toxic brain effects include classic brain abnormalities found in patients with Alzheimer's disease, Valdez-Jimenez's team reports.

A different research team (Tang et al.) reported in 2008 that "A qualitative review of the studies found a consistent and strong association between the exposure to fluoride and low IQ." (Biological Trace Element Research) (2)

In 2006, the U.S. National Research Council's (NRC) expert fluoride panel reviewed fluoride toxicology and concluded, "It's apparent that fluorides have the ability to interfere with the functions of the brain." And, "Fluorides also increase the production of free radicals in the brain through several different biological pathways. These changes have a bearing on the possibility that fluorides act to increase the risk of developing Alzheimer's disease." (3)

On April 12, 2010, Time magazine listed fluoride as one of the "Top Ten Common Household Toxins" and described fluoride as both "neurotoxic and potentially tumorigenic if swallowed." (4)

Phyllis Mullenix, Ph.D., was the first U.S. scientist to find evidence that fluoride damages the brain. She published her animal study in a respected peer-reviewed scientific journal in 1995 (5) and then was fired for doing so.(6)

Vyvyan Howard, M.D., Ph.D., a prominent fetal toxicologist and past-President of the International Society of Doctors for the Environment, said that current brain/fluoride research convinces him that we should stop water fluoridation.

Many communities have stopped or rejected fluoridation in the past several years – the most recent is Fairbanks, Alaska. This year, seven New York City Council Members co-sponsored legislation to stop fluoridation in NYC.

Title: The Case Against Fluoride London Ontario [Vd]

TheUnhivedMind - June 4, 2011 05:45 PM (GMT)

The Case Against Fluoride London Ontario

The first segment of the presentation is by Pam Killeen (www.pamkilleen.com). She presents her case against fluoride by explaining the work of Canadian dentist, Dr. Weston A. Price. She emphasizes the point that tooth decay is not caused by a fluoride deficiency; rather, it is caused by a combination of the over-consumption of nutrient-deficient, industrially processed foods and under-consumption of nutrient-dense, high quality animal fats in the diet. Then, Dr. Paul Connett, executive director of the Fluoride Action Network (www.fluoridealert.org), outlines several scientifically valid reasons why fluoride should be removed from our city water. Dr. Connett's PowerPoint presentation is here --http://tinyurl.com/3wzlo3h. The event was filmed on March 2, 2011 in London, Ontario, Canada.

Title: Leading paediatrician asks for rethink on infant
Description: *fluorie exposure in Irish Republic*

TheUnhivedMind - June 1, 2011 11:36 PM (GMT)

Leading paediatrician asks for rethink on infant fluoride exposure in Irish Republic

Science & Communications Officer, ANH-Intl

KEY POINTS

http://www.anh-europe.org/news/leading-pae...-irish-republic

A leading paediatrician has sent an open letter to Commissioner John Dalli, asking him to consider a ban on fluoridation of water supplies in the Irish Republic
The call follows the logic of the recent ban on bisphenol A in baby feeding bottles

On behalf of Dutch non-governmental organisation, Ecobaby, and others from Amsterdam University in the Netherlands, leading paediatrician Dr Gavin ten Tusscher has sent an open letter to Commissioner John Dalli calling for vulnerable Irish infants to be protected from fluorosilicates in drinking water. The letter, written in light of European Union (EU) Directive 2011/8/EU that bans bisphenol A in baby bottles, was brought to the attention of Dublin-based EU Ambassadors by Ireland's longest-standing anti-fluoride campaigner, Robert Pocock.

The open letter to Mr Dalli points out that Directive 2011/8/EU outlaws bisphenol A in baby bottles for three main reasons:
The bottle may be the only source of nutrition for bottle-fed babies
Parents are given no official warnings about the risks of bisphenol A
No product labels exist advising parents of the risks associated with bisphenol A

Exactly the same reasoning applies to fluorosilicates in drinking water, say Dr ten Tusscher and Ecobaby, and they urge Commissioner Dalli to develop legislation to end the fluoridation of Irish water supplies.
Fluoride in Ireland: “untrialled and unauthorized”

Mr Pocock's letter to Irish EU Ambassadors slams the practice of water fluoridation in the Republic, describing it as "[a] clinically untrialled [process whereby] unauthorized fluorosilicates are added to most public drinking water". This is a perfectly justified criticism when one considers that fluoride should be licensed as a medicine according to EU law! It is, after all, designed to prevent or treat a disease, dental caries (tooth decay), but it is not licensed as a drug by the European Medicines Agency (EMA) or the Irish Medicines Board (IMB). Furthermore, not a single clinical trial was performed on fluorosilicic acid before the fluoride began flowing into drinking water across the country – whether the Irish people wanted it or not.

"What leading paediatricians in Europe have done is to expose the lax controls applying to medicinal products in Ireland," said Mr Pocock. "Consumers, and especially children, in the rest of Europe are protected from these falsified and prohibited medicines, but not in Ireland".

Ambassadors urged to educate populace on risks

Until regulations that prohibit such falsified medicines are enforced EU wide, Mr Pocock calls on Irish EU Ambassadors to alert the population to the risks of bottle-feeding using fluoridated water, which can lead to fluoride over-dosing. "Every third Irish teenager now has dental fluorosis or permanent disfigurement of their teeth," reads the letter, "and the fluorosis risk commences at birth".

Inescapable logic – and a logical Houdini

Dr ten Tusscher and Ecobaby have what appears a water-tight argument here. However, they are dealing with a man who can in one sentence laud the concept of bureaucratic openness and transparency, and then stonewall an important question in the very next breath! For the sake of the Irish people, and their infants yet unborn, we sincerely hope that Mr Dalli will hold to a more logically consistent line on this occasion.

Title: Fears over fluoride plans

TheUnhivedMind - June 1, 2011 03:48 AM (GMT)

Fears over fluoride plans

by JAMES CHAPMAN, Daily Mail
http://www.dailymail.co.uk/health/article-...ride-plans.html

Ministers have triggered a major health row by unveiling plans to allow fluoride to be added to all drinking water in England and Wales.

Water companies will be forced to add fluoride if local health authorities order it, despite controversy over the long-term effects on health, the Government confirmed.

The authorities will have to demonstrate that the local population broadly supports such a move, which is designed to reduce dental decay.

But campaigners said they feared fluoridation would be given the green light in many parts of the country after minimal public consultation.

The policy will infuriate environmentalists and consumer groups.

Some believe fluoridation has links to cancer, Down's syndrome, infant mortality and bone damage.

Up to half of those drinking fluoridated water also suffer 'dental fluorosis' - a mottling of the teeth thought to be caused by its effects.

However, studies have shown conclusively that fluoride - similar to an ingredient in many toothpastes - cuts the amount of tooth decay in children by strengthening the enamel in growing teeth.

About one in ten people in Britain drink fluoridated water, with some water companies adding it and others refusing to.

Amendments to the Water Bill will shift responsibility for deciding to treat water away from the companies to regional strategic health authorities.

Campaigners said they would be much more likely to agree to add fluoride.

Public health minister Melanie Johnson told MPs that schemes would go ahead only after wide-ranging consultations 'and the majority of the population have indicated that they are in favour'.

She said large chunks of the country - 'roughly from Hartlepool down to Essex' - had naturally-occurring fluoride in the water.

Another five million people in areas such as Birmingham had fluoridated supplies.

The NHS Centre for Reviews and Dissemination found no evidence of a negative effect on health with fluoridation.

But Jane Jones, campaign director of the National Pure Water Association, said: ' Fluoridation is indiscriminate mass medication.

' People have an absolute right to determine for themselves what they will and will not put into their bodies. This right is denied when medicine is added to the public drinking water supply.'

View Full Version: FLUORIDE GETS THE BOOT FROM CALGARY WATER

Title: FLUORIDE GETS THE BOOT FROM CALGARY WATER

TheUnhivedMind - May 20, 2011 02:50 AM (GMT)

Fluoride gets the boot from Calgary drinking water

Fluoride occurs naturally in the drinking water supplies from the Bow and Elbow Rivers, in concentrations that vary throughout the year.

Updated: Thu May. 19 2011 16:14:05
http://calgary.ctv.ca/servlet/an/local/CTV...hub=CalgaryHome

The city of Calgary is shutting off the equipment that pumps fluoride into the supply of drinking water for Calgarians.

The move was made on a direction from council and the official receipt of Alberta Environment's authorization.

Water Services say that it will take approximately one week for fluoride concentrations to return to natural levels.

Fluoride occurs naturally in the drinking water supplies from the Bow and Elbow Rivers, in concentrations that vary throughout the year.

Fluoridation of water is known to prevent tooth decay but opponents claim that it can cause greater health problems, is not effective enough based on costs, and has a dosage that cannot be precisely controlled.

Water Services constantly monitors the condition of the water and you can see a water quality report on the city's website at calgary.ca/waterservices.

Description: *@ The Gibson Hotel, Dublin City On May 1*

TheUnhivedMind - May 8, 2011 10:21 PM (GMT)

FREE EVENT : NHF Ireland Presents Dr Paul Connett @ The Gibson Hotel, Dublin City On May 11th @ 6pm

http://www.sovereignindependent.com/?p=19546

Dr Paul Connett a world recognised expert on fluoridation will be speaking in the Gibson Hotel -Dublin City Centre on May 11th at 6pm

Seats are limited and will be given out on a first come basis so please arrive early

Paul has researched the literature on fluoride's toxicity and the fluoridation debate; interviewed many leading researchers and critics of fluoridation on video; given many presentations in several countries (to both community groups and public bodies, including the National Research Council and the US EPA); challenged leading proponents to debate the issue publicly (they nearly always decline).

In October 2000, he was invited by the Irish government to present his views on fluoridation before the Fluoridation Forum, a panel established by the Irish Ministry of Health. At his testimony he challenged the forum to respond in writing to his "50 Reasons for Opposing Fluoridation" (http://www.fluoridealert.org/50reasons.htm). After initially setting up a sub-committee to do this, the Forum has failed to issue a response after four years, despite editorials in the Irish Medical News and questions in the Irish Parliament (the Dail).

View Full Version: Australia Drops a Bombshell on Water Fluoridation

Title: Australia Drops a Bombshell on Water Fluoridation

TheUnhivedMind - April 12, 2011 12:05 AM (GMT)

Australia Drops a Bombshell on Water Fluoridation

By FAN, on 04-06-2011 04:54
Published in : Eugenics, Food
http://www.noonehastodietomorrow.com/eugen.../2858?task=view

Merilyn Haines, the director of the newly formed group FAN-Australia (Fluoride Action Network Australia), has found some startling statistics buried deep in official research material by ARCPOH (The Australian Research Centre Population Oral Health at the Adelaide Dental School) that could scuttle the water fluoridation program once and for all.

Haines has found in the ARCPOH statistics that the permanent teeth of children in largely unfluoridated (<5% before 2009) Queensland were erupting on average two years earlier than the children in the rest of Australia, which is largely fluoridated (see the figure below). A two-year delay would negate all the small reductions in tooth decay claimed by dental researchers since 1990. In other words fluoridation doesn't work. Any difference in tooth decay claimed to be due to fluoride is simply an artifact of the delayed eruption caused by fluoride.

Source – Published and unpublished data from 2003- 2004 Australian Child Dental Health Surveys
(unpublished data obtained by Freedom of Information application)

According to Professor Paul Connett, director of the Fluoride Action Network, who is currently on a fluoride-tour of New Zealand, “Critics of fluoridation, like Dr. Hardy Limeback in Toronto, have long pointed out that any reduced tooth decay touted by promoters could easily be accounted for by the delayed eruption of the teeth. Even when this argument received strong experimental support from Komarek et al. in 2005,

this has still has been ignored by those promoting fluoridation. But they cannot ignore it any longer: the figures of the dental department research team most associated with the promotion of fluoridation in Australia (and beyond) demonstrate that this delay is real."

Less teeth erupted for any given age would mean less surfaces available for tooth decay to have taken place. A delayed eruption of one – two years would account for the small reductions claimed in ALL the US and Australian studies published since 1990 (Brunelle and Carlos, 1990; Slade et al., 1996; Spencer et al., 1996; Armfield et al., 2009; Armfield, 2010). These studies have found reductions ranging from 0.12 of one permanent tooth surfaces saved in Western Australia (Spencer et al., 1996) to 0.6 permanent tooth surface saved in the largest survey ever conducted in the US (Brunelle and Carlos, 1990). This is not very much when you consider that there are five surfaces to the chewing teeth and four to the cutting teeth, and by the time all the child's teeth have erupted there are a total of 128 tooth surfaces. One tooth surface saved amounts to less than 1% of all the surfaces in a child's mouth. Now even this small benefit has evaporated.

More on the history.

In 1999, the National Health and Medical Research Council, Australia's peak Medical Research body, stated that, "evidence exists that tooth eruption is delayed in fluoridated areas. It has been suggested that a proper comparison of caries rates should involve children one year older in fluoridated areas than in non- fluoridated areas."

In 2000, the York Review pointed out that none of the studies that they had reviewed had controlled for "the number of erupted teeth per child" (McDonagh et al., 2000, p.24).

In 2005, Komarek et al. did control for eruption of teeth and reported no difference in decay between children living in Belgium receiving fluoride supplements (and those who weren't) that was relatable to fluoride exposure (as measured by the severity of dental fluorosis).

In 2009, Peiris et al. reported that children in largely fluoridated Australia had a delay in "dental age" of 0.82 years compared to children in largely unfluoridated UK. However, the authors did not discuss the possible reasons for this delay and the number of children involved in the study (about 80 in each country) was not very large.

2011. Now the bombshell – the delay has been found and it is in the official statistics. ARCPOH has failed to respond to several inquiries on this matter. According to Haines, "Surely, this must end water fluoridation. If it doesn't work what's the point of putting this toxic substance into the drinking water and what reason can they possibly have for forcing it on people who don't want it?"

However, this isn't just about teeth. The finding could be even more significant than that. If fluoride causes a delayed eruption of the teeth then the most likely mechanism for doing so is fluoride's ability to lower thyroid function (see chapter 8 in the 2006 National Research Council review, “Fluoride in Drinking Water.” According to Connett, “Lowered thyroid function in infants would mean slower growth of their tissues and could explain the 24 studies that have found an association between lowered IQ in children and exposure to moderate levels of fluoride in China, India, Iran and Mexico.”

It also raises the possibility that millions of people in fluoridated countries suffering from hypothyroidism have had this condition caused, or exacerbated, by exposure to fluoridated water. Haines’ asks “If ingesting fluoride delays tooth eruption for 1 to 2 years what other effects is it having on our bodies?”

Meanwhile, if swallowing fluoride does not reduce tooth decay, why would any reasonable person, decision maker or regulatory official continue to sanction adding fluoride to the public water supply

View Full Version: Documentary exposes fluoride truth: Industrial

Title: Documentary exposes fluoride truth: Industrial
Description: *waste passed off as medicine*

TheUnhivedMind - March 2, 2011 03:26 AM (GMT)

Documentary exposes fluoride truth: Industrial waste passed off as medicine

Mike Adams
March 1, 2011
http://www.naturalnews.com/031547_fluoride...rial_waste.html

Water fluoridation around the world is achieved through the purchase of chemically contaminated toxic waste chemicals from China which are then labeled “fluoride” and dumped into public water supplies in local cities and towns. That’s the conclusion of a shocking new mini documentary released today by the Consumer Wellness Center (www.ConsumerWellness.org).

The video is now available for viewing on NaturalNews.TV:
http://naturalnews.tv/v.asp?v=42652…

The 12-minute video documents the history of fluoride and how this toxic chemical is produced as an industrial byproduct of the phosphate mining industry. Decades ago, fluoride used to be released into the air through the smokestacks of phosphate mining operations, but this resulted in the widespread death of cattle and plants on nearby farms and ranches. To stop the deaths, phosphate mining companies installed “wet scrubbers” that captured the toxic fluoride chemical vapors.

While consumers might think that deadly fluoride chemicals captured in these wet scrubbers are disposed of as hazardous industrial waste, the surprising truth is that they are sold to cities and towns as “fluoride” to be dumped into the local water supply where they are consumed by adults and children. This is all being done to “prevent cavities” — a medical claim that technically turns fluoride into an unapproved drug being used in an illegal mass medication scheme.

The FDA has never approved fluoride as a drug, and no recipient of fluoride has ever

been medically evaluate for their “need” for the drug.

The full story of fluoride is revealed in The Fluoride Deception, available for viewing at the Consumer Wellness Center website: www.ConsumerWellness.org

The making of The Fluoride Deception

The video was created and narrated by consumer health advocate Mike Adams, the executive director of the CWC. Adams is best known for creating the “Blueberry Deception” documentary which revealed many name-brand breakfast cereals that claim to be made with blueberries are actually made with petrochemicals and artificial colors (and contain no blueberries at all). That video is also available at the CWC website.

“Consumers have a right to know what’s in their water,” Adams explained. “They have a right to know where chemical fluoride really comes from, because if they knew the truth about this industrial chemical, they would never allow their children to consume it.”

The Fluoride Deception also takes aim at doctors and dentists who have long recommended fluoride without telling people where the chemical fluoride really comes from. “They tell you it’s good for your teeth,” Adams explained. “But they don’t tell you how it damages your brain, your bones, your health and the environment. They don’t tell you about the toxic cadmium, lead and other deadly materials that routinely contaminate the fluoride dumped into the water supply.”

As The Fluoride Deception ultimately reveals, the practice of water fluoridation is a method by which the phosphate mining industry can dispose of its toxic waste byproducts by passing them through the bodies of people first.

The video is available for viewing at:
http://naturalnews.tv/v.asp?v=42652…

Additional resources for learning more about fluoride

Mike Adams recommends these websites for learning more about the scam of water fluoridation:

View Full Version: URGENT: Tell Arkansas Senators to Kill Fluoride

Title: URGENT: Tell Arkansas Senators to Kill Fluoride
Description: *Bill*

TheUnhivedMind - February 25, 2011 04:29 AM (GMT)

URGENT: Tell Arkansas Senators to Kill Fluoride Bill

http://salsa.democracyinaction.org/o/2477/...action_KEY=5980

With almost no warning, a group of Arkansas State Senators and Representatives introduced a bill this week that, if passed, will require that all public water systems fluoridate their drinking water if they serve 5000 or more residents. Within 24 hours of the bill being introduced, a 10 minute long public hearing was held and a committee vote was taken, with only one dissenting vote against the bill. Tomorrow (Thursday, Feb. 24) the full Arkansas State Senate will vote on SB359, "an act to provide for certain water systems to maintain a level of fluoride to prevent tooth decay; and for other purposes".

We need you to take a few moments to send a clear message to Arkansas Senators that it's simply wrong to shove fluoridated water down citizens throats, especially without their consent and with their tax dollars.

Important:

1.) If you live in Arkansas, PLEASE STATE THAT IN THE TITLE AND FIRST SENTENCE!

2.) If you do not live in Arkansas, then please only enter your name and email address, we would prefer you not specify where you live. Legislators actually get angry when they see many emails from "out-of-state", and this will decrease our chances of defeating the bill.

3.) Please take an extra few seconds to customize the title of your message. This will increase the likelihood that your email will be opened by Senators. Customizing the

message itself will also increase the chance that your message will be read, and will also be more influential. Legislators prefer to see personalized messages.

View Full Version: Fluoridation: The scam of the century

Title: Fluoridation: The scam of the century

TheUnhivedMind - February 17, 2011 03:08 AM (GMT)

Fluoridation: The scam of the century

Hesh Goldstein
Feb 15, 2011
http://www.naturalnews.com/031335_water_fluoridation.html

This scam starts as follows: the CDC (Centers For Deceit Control and Procrastination) in their Morbidity and Mortality Weekly Report of August 17, 2001/Vol 50/ No. RR-14 entitled “Recommendations for Using Fluoride to Prevent and Control Dental Caries in the United States, says on page 4, 5th paragraph, “that fluoride’s predominant effect is after the tooth comes into the mouth and on the surface of the tooth”.

The question posed to the CDC, the EPA, and the Public Health officials of “why then do we have to ingest it?” NEVER gets answered.

Then there’s the issue of INFORMED CONSENT. Every doctor knows that they can’t force any medication on an individual without their informed consent. The doctor has to tell the patient of the benefits and of any side effects of a prescribed medication. This puts the final decision to take or not take the medication in the hands of the patient. In addition, the patient has the right to question any treatment so as to make a better decision.

Fluoridation clearly violates this principle.

One of the arguments presented by those that push this crap is to say that no one is forced to drink the water. Yes, the fluoride comes to the tap but ultimately it’s the individual’s choice to open the tap and drink the water. Please stop laughing. This is their serious argument.

Another argument is that fluoride is not a drug but rather it is a nutrient. So when the

question of since when is the toxic waste by-product of the phosphate fertilizer industry or the aluminum or steel industry a nutrient? They usually look at their watches and tell you that they hear their mother calling them and they have to go.

If it is indeed a nutrient why then do the CDC and the ADA (American Dimwit Association), the major pushers of fluoridation in the U.S., say that tooth decay is a “chronic infectious disease” and recommend fluoride to combat this disease? And why does the Fraud and Drug Administration call fluoride an “unapproved” drug? What a classic example of blatant hypocrisy and the anything goes mentality to make money for the pimp.

Earl Baldwin, a member of the British House of Lords and one of the advisory board members for the York Review, the UK sponsored review of fluoridation had this to say: “What physician do you know, who in his or her right mind, would treat someone he does not know and has never met, with a substance that’s meant to do change in their bodies, with the advice: ‘Take as much, or as little, as you like, but take it for a lifetime because it may help someone’s teeth’?”

With fluoridation there is no control over who gets the “medication” or the dosage. What if someone is particularly sensitive to the substance? Tough! What if you’re an athlete and drink a gallon of water a day? Tough!

When a person consumes a medication, say aspirin for example, isn’t the dose for an infant or a child different that that for an adult? Obviously. With fluoride it’s a one-fits-all mentality.

Let’s say for a moment that the ingestion of fluoride is a good thing. Who gets more? Your body or your dishes when you wash them, your car when you wash it, your lawn when you water it, or the environment when you flush the toilet? You answer that one and then let me know if mandated fluoridation is a good thing or a bad thing.

Should you raise the issue of reduced tooth decay it has already be proven and documented that those living in unfluoridated communities have virtually the same rates of tooth decay as those living in fluoridated communities. But, there is one profound difference: those living in fluoridated communities have a much, much greater risk of dental fluorosis, which is symptomatic of the discoloration and eventual mottling of the teeth leading to a lifetime of cosmetic veneers or living with the disfiguration.

As if ruining your teeth isn’t enough there has been credible documentation showing other debilitating effects. Dr. Phyllis Mullenix proved that fluoride had an adverse effect on the brain. As a result she was told that her work “was no longer relevant to dentistry” and fired. Peer-reviewed studies showing adverse effects on the thyroid gland were ignored as were studies linking fluoride to damage of the pineal gland. The pineal gland is located between the two hemispheres of the brain and is responsible for the

synthesis and secretion of melatonin. Melatonin affects jet lag, sleep patterns and aging and by the time old age hits, the accumulation of fluoride in the pineal gland is in very high concentrations.

But wait, there's more. There is also a profound connection between fluoride and bone damage. With symptoms almost identical to arthritis beginning with aching bones and joints. But the best cover-up had to come out of Harvard University. Elise Bassin, as part of her 2001 doctoral thesis for her dental degree, found a connection between fluoride and bone cancer in adolescent boys. When she submitted her finding to Dr. Chester Douglas, the head of Harvard's Dental School, he omitted that finding when releasing her thesis. Why would he do this? Maybe the fact that he was on the payroll of the Colgate-Palmolive Company had something to do with it. Somehow, years later, Bassin's finding were found and released causing Harvard to do a complete investigation on Dr. Douglas. During the investigation Dr. Douglas made a $2 million donation to Harvard and was eventually exonerated.

One other finding was an adverse effect on the kidneys. It was found that fluoride can damage the kidneys at high levels and that someone with poor kidney function would have limitations clearing fluoride from the body making that person especially vulnerable to fluoride's other toxic effects.

With all this adversity is there any group, organization or government agency accepting any responsibility? No, No, No! One would think that of the entities heavily involved in fluoridation someone would take charge or accept liability. The American Dental Association does not. The CDC does not. The EPA does not. The FDA does not. The U. S. Department of Health and Human Services does not. The National Sanitation Foundation does not. Yet, all these government agencies pass the buck to the National Sanitation Foundation who in turn accepts no liability for the safe levels or the safety of the chemicals it recommends. Pimps, hookers and tricks!

So what started out as an experimental program in 1945, without any health studies done whatsoever, turned out to be a "cash cow" for industries that previously had to dispose of this toxic waste to the tune of millions of dollars a year.

There is a book out there entitled, Protecting Public Health and the Environment: Implementing the Precautionary Principle. The Precautionary Principle means that if there is uncertainty, yet credible scientific evidence or concern of threats to health, precautionary measures should be taken.

Applying the Precautionary Principle to fluoridation the following questions and answers arise:

1. Is the risk of harm plausible? Yes.
2. Is the evidence of harm supported by a number of peer-reviewed published studies?

Yes.
3. Is the potential harm serious? Yes.
4. Are the effects reversible? Many are not.
5. Is the public being fully informed of the potential health risks? No.
6. Does the proposed intervention achieve the desired benefit? No.
7. How significant are the consequences if the practice is halted? Not very.
8. Are there alternatives? Yes.

Joel Tickner and Melissa Coffin, two scientists that examined the water fluoridation controversy in the context of The Precautionary Principle, raised the following questions in the March 2006 issue of the Journal of Evidence-Based Dental Practice.

*Whether there are other ways of delivering fluoride besides the water supply.
*Whether fluoride needs to be swallowed to prevent tooth decay.
*Whether tooth decay has dropped at the same rate in countries with and without water fluoridation.
*Whether people are now receiving fluoride from many other sources besides the water supply.
*Whether studies indicate fluoride's potential to cause a range of adverse systemic health effects.
*Whether, since fluoridation affects so many people, one might accept a lower level of proof before taking preventative actions.

It should be noted that even if you are not living in a fluoridated community you are ingesting fluoride. When you eat foods and drink beverages that are not produced in your community you are likely ingesting substances that were produced with fluoridated water.

Despite the recommended ingestion of fluoride at 1.2 ppm, the reality is that people are ingesting fluoride at at least 8 ppm.

To solve the issue of tooth decay the proponents of fluoridation say more fluoride is necessary. The opponents of fluoridation say that more education is necessary. Education is needed about better diets, better dental habits and the dangers of sugar in relation to the teeth.

People with open minds need to get involved. Letters to Editors need to be written. City and state politicians need to be inundated with requests to discontinue the practice of water fluoridation. Pressure of non-reelection needs to be thrust upon them if they do not introduce bills to discontinue the practice.

Remember there are more tricks than pimps and hookers and we need to solidify to end this health damaging practice. The life you save and the health you restore may be your own.

Aloha!

Chris Bryson, “The Fluoride Deception”

About the author:
I have been doing a weekly radio show in Honolulu since 1981 called “Health Talk”. In 2007 I was “forced” to get a Masters degree in Nutrition because of all the doctors that would call in asking for my credentials. They do not call in anymore. Going to www.healthtalkhawaii.com enables you, among other things, to listen to the shows. I am an activist. In addition to espousing an organic vegan diet for optimum health, I am strongly opposed to GMOs, vaccines, processed foods, MSG, aspartame, fluoridation and everything else that the pimps (Big Pharma, Monsanto and the large food companies) and the hookers (the doctors, the government agencies, and the public health officials) thrust upon us, the tricks.
After being vaccinated with the MMS vaccine as a toddler I developed asthma. After taking the organic sulfur crystals in November of 2008 for 10 days my asthma reversed and has not come back over 2 years later. You can find out more about this incredible nutrient also on my website.
I am 72. I have been a vegetarian for 36 years and a vegan for 21. I have no illnesses and take no meds. I play basketball 2 hours a week, am in 2 softball leagues, racewalk, body surf, do weight workouts and teach women’s self defense classes based upon 25 years of Wing Chun training.
My firm belief – if it had a face and a mother or if man made it, don’t eat it.
Aloha!

Southampton water fluoridation was not unlawful

Fluoridation supporters said the move would reduce tooth decay

11 February 2011 Last updated at 15:47

The High Court has ruled that a health authority was not acting unlawfully in seeking to add fluoride to Southampton's tap water.

A judge rejected claims by resident Geraldine Milner that the decision-making process was "defective".

Ms Milner brought the application for a judicial review, backed by local anti-fluoride campaign groups.

Mr Justice Holman dismissed the legal challenge saying there was no substance in the grounds of complaint.

The South Central Strategic Health Authority (SCSHA) welcomed the ruling.

It said: "The board remains satisfied that water fluoridation is a safe and effective way to improve dental health and will now be considering its next steps."

The authority had instructed Southern Water to add fluoride to improve dental health in February 2009.
'No illegality'

Other local authorities had put their fluoridation schemes on hold, pending the outcome of the case.

The judge expressed sympathy for people who disagreed with fluoridation but said there was no illegality in the decision-making process.

He said: "I appreciate that that will deeply disappoint Ms Milner and the many objectors in the affected area, to whose position I am sympathetic.

"However it is important to stress that our democratic Parliament decided long ago that water can, in certain circumstances, be fluoridated.

"As I have endeavoured to show, and contrary perhaps to the belief of Ms Milner and others, it is not the law that fluoridation can only occur when a majority of the local population agree.

"Parliament has firmly entrusted area-specific decision making to the relevant strategic health authority (SHA).

"This SHA have not acted unlawfully and no court can interfere with their decision."
Local opposition

Ms Milner was not in court to hear the ruling because one of her children was unwell.

During the hearing, Ms Milner's counsel David Wolfe had argued that residents would have "no choice" but to drink fluoridated water.

Campaign groups, which backed the mother-of-three's case, said potential side effects range from bone cancer to thyroid problems and brown spots on the teeth.

The decision to add fluoride to water came after 72% of those who responded to public consultation opposed it, with 28% in favour.

An opinion poll commissioned by the SCSHA produced a narrower result, with 38% against the scheme and 32% in favour and 29% "don't knows".

Mr Wolfe said the authority's move was contrary to government policy that no new fluoridation schemes should be introduced unless it could be shown that the local population was in favour.

Fluoride is currently consumed by 5.5 million people across the country.

TheUnhivedMind - February 11, 2011 07:58 PM (GMT)

How dare these cretins claim in this color of law commercial court that this wasn't unlawful. This court is working commercially and should only use legal and illegal fiction terms. The fact of the matter is that Southampton has been poisoned and it WAS unlawful. These cretins are going by commercial law not Common Law as they should by Oath and should be released from duty through DISHONOR.

National Fluoride Database Launched by USDA

By Mary Sparrowdancer

http://www.rense.com/general60/nationalflouridedatabase.htm

"An error does not become a mistake until you refuse to correct it."
--Orlando Battista, Chemist.

Upon first learning that a "new database" on fluoride levels in foods and drinks had been published in October, 2004 by the United States Department of Agriculture (USDA), I dropped what I was doing and rushed to look at the publication. A sense of hope welled in me - hope born from hope that perhaps at last, those governing what is left of our "government" had finally come to their collective senses, and were finally "fessing up" to the 60-year-old charge that graft, incompetence and lies are behind the mass-medicating of Americans via our drinking water - a scheme that was a mistake from the very beginning. It is an ongoing mistake that has resulted in so much disinformation pertaining to fluoride that this toxic substance has now been poured into most of America's water, it is in our foods, in household goods, in the air and it is in a growing number of drugs that Americans take daily.

I was scarcely able to wade through the emailed press release and then the introduction of this latest report, before once again feeling the curious sensation that seems to accompany the reading of most government publications - that odd feeling which occurs when my eyes roll upward in exasperation. The confession has not yet come; it is still a long way off. But this was at least one small step for us all into the direction where ignored truth has patiently awaited discovery for over a half a century. It is in embarking upon this path that the education of the American public regarding fluorine, fluoride, organofluorides and fluorinated products can finally take place.

It is within the first three or four sentences of the press release, titled, "Tracking Fluoride in the National Food Supply," that we catch a glimpse of what this report is really all about. In reality, it is about the accumulating consequences of deliberately contaminating America's water supply with the industrial waste product commonly referred to as "fluoride."

"For more than half a century," the opening remarks of the press release state, "to prevent tooth decay, small amounts of fluoride have been added to many U.S. municipal water supplies. That fluoride, as well as naturally occurring fluoride from wells and other water sources, subsequently finds its way into water-based beverages and foods."

Moving onto the introduction of the study, we discover what our "Adequate Intake" of fluoride is. According to various professional studies, and as can be seen in the Physician's Desk Reference, (PDR), "there is no evidence that fluoride is an essential nutrient for humans." Despite this, an "Adequate Intake" has been determined for us by those who are promoting pharmaceutical-grade fluoride products, and promoting the industrial waste fluoride that is being added to our drinking water.

The promoters have determined that in order to "prevent dental caries," our "Adequate Intake" for their product has been set (by them, and those partnered with them) at 0.01 mg a day for infants up to six months, and it is 0.05 mg/kg for infants and children older than six months. The dose for adults is simply 3 mg a day for women, and 4 mg a day for men - one size fits all per gender. Whether we are toothless or not, the promoters have been assuring us for over fifty years that fluoride added to our drinking water will "prevent dental caries."

In order to "prevent dental fluorosis," however - the mottling and discoloration of the teeth that is considered by the American Dental Association to be a "purely cosmetic" problem - the USDA quotes from the Institute of Medicine (which is also promoting fluoride), stating that the Tolerable Upper Intake Level for fluoride ingestion is capped off at "10 mg a day" for everyone over the age of eight.

Unfortunately, dental fluorosis is one of the only clearly visible signs of fluoride poisoning (other than death due to catastrophic fluoride accidents) that is medically recognized in this country. The Upper Intake Level for preventing problems that are far more serious than dental fluorosis - problems that are internal, systemic and may not be clearly visible or even recognized in this country at this time - are not even mentioned.

In addition, according to information that can be found on the American Dental Association's website, dental fluorosis is the result of an "intake of too much fluoride while the enamel is forming before teeth erupt." Therefore, for those of us whose teeth have already erupted, monitoring them for signs of fluoride poisoning in the post-eruption years of our lives is apparently of questionable benefit.

In keeping all attention deflected away from overall health and focused with tunnel vision only upon the pre-erupted tooth, no mention is made of the other problems that systemic ingestion of various fluoride compounds via skin, mouth and nose have been associated with, such as thyroid malfunction, altered mental status including depression and violent, uncharacteristic behavior, memory problems, gastrointestinal problems, cardiac arrhythmias, liver problems, bone problems, and joint, tendon and muscle problems, including rhabdomyolysis.

The USDA then states that similar suggested dosages and upper limit levels of fluoride ingestion have also been endorsed by the American Dental Association and the American Dietetic Association, as though the mere mention of such names commands immediate and unquestioned respect and suggests something akin to authoritarian infallibility.

Both of the above ADA groups, however, are unyielding fluoride promoters, which, in and of itself, indicates neither group has been doing any real homework.

It is the American Dental Association - a professional association of dentists - that staunchly backs the systemic, mass-medication of Americans under the claim that this drinking-water maneuver will "reduce cavities." And yet, one might reasonably think that after waiting for sixty years for any signs of the miraculous dental health claim to occur, we might have seen something by now that would favorably back up this aging, empty promise. The promised results have not yet occurred. In fact, in 2000 the Surgeon General issued the "first ever" call to action due to increasing dental problems in the U. S., although we are now, as a country, completely inundated with fluoride.

Kentucky would have been a very good place to set up camp and watch for the long-awaited dental miracle to happen, because Kentucky was 100% "optimally fluoridated" in 1992, and remained over 96% "optimally fluoridated" in 2000, in spite of eight more years of patient but meaningless miracle-waiting.

Despite this grand level of fluoridation, in a 2002 article in the Cincinnati Enquirer it was noted that, "In Kentucky, nearly half of the commonwealth's 2- to 4-year-olds have cavities." This is approximately twice the national average.

In 2003 the American Dental Association and the Centers for Disease Control (CDC) gave Kentucky a "Fifty Year Award," which is an award given to states in recognition of their community water fluoridation. In 2002, however, in a Morbidity and Mortality Weekly Report, the CDC named Kentucky as the top state in the U.S. in which residents had lost all of their teeth. According to the CDC report, 42% of Kentucky's adults are completely edentulous.

Given the steady flow of fluoride coursing through Kentucky and its residents and given

the over half-century-old promise of dental benefits, one might have realistically expected a very different dental score for this state that has complied so thoroughly with the demands and pressures to become "optimally fluoridated."

The little-known truth, however, is that this edentulous outcome and problematic score is exactly what might be expected from a highly fluoridated population.

Fluoride is known to precipitate and exacerbate periodontal disease, because it stimulates the body's production of prostaglandins. The wording in a patent claim filed in the U.S. Patent office in 1996 for a topically applied fluoride product clearly states this fact -

"The term periodontal diseases relates to conditions in which the gingiva and underlying alveolar bone are attacked...We have found that fluoride, in the concentration range in which it is employed for the prevention of dental caries, stimulates the production of prostaglandins and thereby exacerbates the inflammatory response in gingivitis and periodontitis."

In order to prevent the fluoride-induced periodontitis from occurring, the above claim for a patent describes a product that also delivers a dose of an NSAID (non-steroidal anti-inflammatory drug) to counteract the expected problems caused by the delivery of fluoride.

One cannot help but wonder if this might be the real reason behind the national push for Americans at risk of heart attacks to take one aspirin a day to help prevent further cardiac problems. Aspirin is categorized by Merck as one of the NSAIDs that relieves inflammation by blocking prostaglandins. According to the FDA, prostaglandins appear to be associated with heart attack.

Sadly, and in keeping with this question, the leading cause of death in Kentucky is heart attack. Also falling into place is the fact that Kentucky is among the top five states in which the people are suffering from and struggling with one of the highest percentages of obesity in the United States. Fluoride - as cannot be stated often enough - interferes with the functioning of thyroid hormones. Sadly, however, very few physicians appear to be currently aware of this.

Because influential groups such as the American Dental Association continue to make their unproven medicinal claim about water fluoridation while at the same time demanding that all Americans be subjected to this dental treatment via their drinking water regardless their age or existing medical conditions, it is time for the rest of the medical community to begin taking a serious look at the potential problems associated with fluorine and fluoride compounds, the most serious problem being the complete lack of awareness and education pertaining to the toxicity of this substance.

Studies on the effects of systemic ingestion of fluoride via drinking, breathing and bathing in it are medically indicated and long overdue. The suggestion that "the dose is the poison" is also overdue for an overhaul. Fluorine readily attaches to other substances, not only altering biochemical properties, but at times potentiating toxic effects many fold.

Fluoride is known to interfere with the functioning of thyroid hormones, it is a neurotoxin, it is a potent liver toxin, it has been found to be grossly accumulating within the pineal gland, it is associated with cancer, it is the substance that turns Sarin into a deadly nerve gas, and when it is added to water, it can eat its way through a titanium container. According to the PDR, "Fluoride absorbed from the stomach appears to be absorbed as hydrofluoric acid." According to a study on its toxicity that can be found on eMedline, "Once absorbed, fluoride binds calcium ions and may lead to hypocalcemia."

Clearly, this is not a substance that the majority of an entire nation should be forced to swallow, bathe in, inhale, cook with, and ingest via their drinking water on a daily basis.

The other group mentioned by the USDA above as endorsing the "fluoride Adequate Intake" levels, is the American Dietetic Association. According to information that was located on their website on November 13, 2004, this group not only joins hands with the other ADA in promoting fluoride via mass-medication, but it is also endorsing the USDA's "Food Pyramid," despite published evidence indicating the Food Pyramid is a deliberately altered fraud. The Food Pyramid is, in fact, so fraudulent, that no one who truly values their health or the health of their family should be following the dietary recommendations contained within it.

The deliberately altered Food Pyramid encourages Americans to consume as the primary base of their diet, the "Bread, cereal, rice and pasta group: 6-11 servings" a day.

The correct, actual and true suggested servings for whole grain cereals and grains had actually been capped-off at 2 to 4 servings, maximum, with the 4 serving's level set aside for larger, physically active males. Baked goods, crackers, etc., had been removed from the "daily" area, and placed into the "occasional treat" area. The real suggested base of our diet before the behind-the-scenes switch took place was 5 to 9 servings a day of fresh fruits and vegetables.

My information about the alteration of the real Pyramid has been obtained directly through personal discussions with Luise Light, M.S., EdD., the nutrition expert who was recruited by the USDA to create the Food Pyramid. It was she and her team who actually created the real Food Pyramid.

Dr. Light and her team were later stunned to find that their Pyramid had been completely altered prior to its being given to the unassuming American public. Instead

of the fresh fruits and vegetables that the team of nutrition experts had suggested as the base of our diet, the base had been switched to "6 to 11 servings" of starchy foods daily. It was a switch that created a potential windfall profit for industries marketing such refined goods, as well as a windfall profit for those who would profit from treating the problems caused by such a diet.

"In fact," Luise stated, "the health consequences of encouraging the public to eat so much refined grain, which the body processes like sugar, was frightening!"

Perhaps it is at this point that we should pause for a moment and consider that it has been individuals holding key government positions who have permitted and promoted the mass-medication of Americans via fluorinated drinking water, and individuals holding other government positions who have told us to eat "6-11 servings" of starch a day. It is time for Americans to begin asking questions, and to take an active role in protecting their own health.

Add to the daily overload of starch, a daily dose of fluoride, which is known to interfere with thyroid functioning, and one has the perfect recipe for creating an entire nation of formerly robust people who are now struggling with their weight, their teeth, their bones, their depression, their inflamed GI tracts, and so on. Add to that picture the push on soy products, which also interfere with thyroid functioning, and one might begin to understand why there is an epidemic of obesity and diabetes in the United States.

The conditions, however, are being blamed on lifestyle, laziness, lack of personal willpower, too much computer time, lower education. Blame is attached to everything but the real, underlying cause.

Strangely synchronistic, it was while I was looking at the "causes" suggesting the victims are somehow to blame for their problems, when I received an email from a veterinarian whose observations indicate the problem has nothing to do with laziness, computers or educational status. She stated that when she moved from a rural area served by well-water to the fluoridated area where her new practice is currently located, she observed numerous dogs and cats in that new practice being medicated for hypothyroidism. She had not seen this in her previous practices.

"The latest diagnosis of hypothyroidism in a dog here was just last week," wrote Mary Emerick, DVM, adding, "Diabetes in both dogs and cats seems more prevalent here, and more so within the last 5 years."

In addition to the animals being subjected to the same water that their owners are receiving, some commercially prepared animal foods now contain soy and grains.

To this picture of a nation of people - plus their pets - in need of medications, enter now the pharmaceutical industry, one of the most profitable industries on the face of the

earth.

With the agrochemical corporations forming partnerships with the pharmaceutical corporations, and pharmaceutical corporations now somehow openly partnered with the government, itself, ("Homeland Health"), a large and unhealthy picture begins to take shape. It is a picture we should look at very carefully, because it represents a growing corporate entity that is powerful but without conscience. It is this insatiable entity that is deciding for us what we shall eat and drink, how we will be medicated with or without our consent, and it now even appears to be venturing on, unchecked, into spiritual realms, wherein its gods of choice have been chosen.

Immediately following the parroted endorsements mirrored by the two fluoride promoters - the ADA and the ADA - the following statements are then made, based in part on an article found in the Journal of the American Dental Association: "Fluoride works primarily via topical mechanisms to inhibit demineralization, to enhance remineralization, and to inhibit bacteria associated with tooth decay."

A statement suggesting the exact opposite of the above claim that fluoride works "to enhance remineralization," can be found on Chapter 3, Page 54 of the Surgeon General's 2004 study on bone problems in the United States, (Table 3-3, American Society for Bone and Mineral Research). We find here, in the Surgeon General's study, that fluoride has been placed into a well-deserved category reserved for substances that are known to cause "Direct impairment of mineralization."

More importantly, however, is the statement that fluoride works "primarily via topical mechanisms."

"Topical," means applying something to the surface.

If this is the mechanism by which fluoride primarily works, then where is the prudence, the soundness of judgment, the practical intelligence of putting this HAZMAT toxic waste into our drinking water under the false and tired claim that it is good for us - and worse, telling us that it is good for our children?

It is not natural or normal for an entire nation of people - and their pets - to be suffering to such an extent that the United States is now requiring the largest amount of pharmaceuticals on Earth in order to treat its symptoms on a daily basis.

Happiness, joy, compassion and well-being are normal states of existence for the human being.

Unfortunately, our normalcy has been traded in for anxiety, depression and the long list of warning signs now plaguing this country as our bodies and our minds have become "optimally fluoridated."

It is also not normal for an entire nation of children to be suffering from heartburn and gastrointestinal disorders. Yet, according to a 2002 report by Reuters, the number of drugs used to treat heartburn and other gastrointestinal disorders in children alone has "increased by 660 percent over the past five years." Small stomachs are not meant to be absorbing hydrofluoric acid.

While some hopeful studies have suggested that perhaps fluoride might be of some use in the treatment of osteoporosis (surely it must be useful for something other than making bombs, rat poison, insecticides, nerve gas and nuclear reaction), other studies have found that the bone produced by fluoride "has an abnormal texture and is less mineralized and relatively less strong." Reports have found, "An increased fracture incidence was observed." A Dutch study also states, "Fluoride often causes upper gastrointestinal complaints and a lower extremity pain syndrome, which is caused by stress fractures."

In one study in the Archives of Internal Medicine, Vol. 164: 1525-1530, No. 14, July 26, 2004, "National Trends in Osteoporosis Visits.1988-2003," the authors discovered that, "The number of physician visits for osteoporosis increased 4-fold between 1994 (1.3 million visits) and 2003 (6.3 million visits), whereas it had remained stable in prior years."

Now, with Americans thoroughly riddled with fluoride due to a sixty-year-old medical experiment that never produced its promised results - now, with most of the entire nation currently suffering from gastrointestinal complaints, mood and sleep disturbances, bizarre aches and pains, elevated blood pressure, bone density problems, cancers, heart problems, liver problems, kidney problems, dental problems, thyroid problems and obesity, attention is finally being paid to the cumulative effects of fluoridating the water supply.

Because fluoride is foolishly added into drinking water rather than prescribed individually as are other medications that may cause severe allergic symptoms in some individuals, and may be contraindicated in many others, it should not come as too great a surprise to learn that the American food supply is also now riddled with fluoride. In fact, this inevitable development has been known for some time, and yet the corporate entities now partnered with, and masquerading as our government have blindly ignored this. Giving credence to the charge that they are without conscience, they have continued on in their efforts to "optimally fluoridate" 100% of America by every means possible. Fluoridating the current two-thirds of the nation is not enough to satisfy them. They want the whole country.

The new National Fluoride Database lists the amounts of fluoride found in selected foods and beverages in micrograms per 100 grams. (One hundred grams is about 3.5 ounces - a few swallows. Most popular beverages come in 12-ounce containers.) Among the most concentrated sources of fluoride in this database is brewed tea, which

is calculated at 381 mcg/100g, when brewed in the "South." Other geographical oddities can also be observed because some areas of the US are more "optimally fluoridated" than others.

While drinking a Pepsi in the West will only add 13 mcg of fluoride per 100g to one's daily "Adequate Intake," drinking a Pepsi in the South will add 45 mcg of fluoride/100g. Drinking a Coca-Cola in the West is calculated at 36 mcg of fluoride/100g, while having a Coke in the South will result in 57 mcg of fluoride/100g added to the human being. Drinking a Sprite in the West will add 29 mcg of fluoride/100g, while a Sprite down South will add 59 mcg of fluoride/100g. This is potentially troublesome because those living in hotter climates (i.e., the "South"), might normally be expected to consume more beverages, including the ever-popular beverage of the South - iced tea.

Of the baby foods tested, all but two of the products were positive for fluoride contamination. The worst was "apple and cherry juice," at 67 mcg/100g.

All of the baked products, breakfast cereals and cereal grains and pastas were positive for fluoride contamination. Oddly, however, the majority of the testing that was done on this group - the starch group - took place back in the 1980s, indicating that fluoride contamination has been known, quietly acknowledged and studied since at least the 1980s. Nationwide fluoridation has increased overall since the 1980s, however, not decreased. This means that the rates of contamination in our foods are ostensibly much higher now.

We need a database showing us the contamination rate of the starch group in the current century rather than what it was in the 1980s. This is especially important, since some poor souls are still attempting to follow the fraudulent Food Pyramid's advice to consume "6 to 11" servings of starch daily.

Of the bottled waters, Dannon's "Fluoride to Go" was predictably among the highest, with fluoride at 78 mcg/100g. However, another unnamed, carbonated, fruit-flavored water topped even the "Fluoride to Go" with 105 mcg of fluoride in it. Other bottled waters ranged from 2 mcg up to 34, but calcium content was not included in this study. The calcium content would be of great importance because some of the spring waters contain generous amounts of calcium. According to statements found in this USDA report, calcium plays an important role in blocking the absorption of fluoride.

For the most part, according to this Database, fresh fruits and vegetables contain the least amounts of fluoride. However, it appeared in this report that cooking the products resulted in greatly increased levels. For instance, "carrots, raw" contained only 3 mcg of fluoride versus "carrots, cooked" containing 47 mcg fluoride/100g. How or why this occurred was not explained in the report. It is not known, for instance, if the laboratory was using nonstick cookware that was also releasing fluoride into the foods during the heating process, or if it was the municipally fluoridated water that caused the increased

fluoride content - or perhaps it might have been a combination of both. Cooking times were also not mentioned, and this is also of importance because lengthy cooking times with fluoridated water will result in more concentrated amounts of fluoride being left behind in the boiling water as the pure vapor or steam escapes.

Perhaps the most important observation about the National Fluoride Database is what is missing from it.

One cannot look only at our drinking water, our foods, our nonstick cookware, our inundation with pesticides and fertilizers, our ever-present plastics and our ever-present air pollution - and assume that we have covered all of the bases regarding our potential exposure to toxic levels of fluoride.

One must also look at the growing number of fluorinated pharmaceutical products that have been widely prescribed, including, but certainly not limited to: Lariam, Cipro (ciprofloxacin), Crestor, Flonase, Lipitor, Luvox, Diflucan, Lexapro, Paxil, Lescol, Prozac, Stelazine, Haldol, Levaquin (levofloxacin), Celexa, Celebrex, Prevacid, Zagam, Tequin, Halfan, Propulsid, Advair Diskus, Flovent, Baycol, Avelox, Redux, Trovan, Casodex and so on. Some of the above named pharmaceuticals have already been removed from the market due to side effects.

According to a recently released study showing data gathered by the government on trends and healthcare in the US, 44 percent of Americans take prescription drugs, and 17 percent of the population takes three or more prescription drugs. Between the study range of 1994-96 and 2000-02, the number of doctor's visits by school-aged children requiring antidepressants rose from 1.1 million to 3.1 million. It would be particularly helpful for the physicians and patients to know the amounts of fluoride contained in their medications, as well as the "bioavailability" of the fluoride. Bioavailability would indicate the amount, rate, extent and degree to which the drug or its metabolite actually reaches the circulatory system.

In looking at fluoroquinolones, for instance, a group of fluorinated antibiotics, information appears that warrants further study and further questions.

The chemical name of the fluoroquinolone known as levofloxacin is: "(-)-(S)-9-fluoro-2 ,3-dihydro-3-methyl-10-(4-methyl-1-piperazinyl) -7-oxo-7H-pyrido[1,2,3-de]-1, 4-benzoxazine-6-carboxylic acid hemihydrate." Its empirical formula is C18 H20 FN3 O4 1/2 H2O. Its molecular weight is 370.38. The atomic weight of fluorine (F) is approximately 19. A 750 mg dose of the above was looked at for the purpose of finding out how much F would be contained in a high dose.

According to professionals, the formula for determining this would be:

19/370.38 = 0.0512986 X 750 = 38.47.

This means there are 38.47 mg of F in one 750 mg dose of levofloxacin. The question that must then be asked is: what is the bioavailability of all that F? Is it safely bound so that it cannot be metabolized into free F ions in the body?

Another of the fluoroquinolones is ciprofloxacin. It is "1-cyclopropyl-6-fluoro-1, 4-dihydro-4-oxo-7-(1-piperazinyl)-3-quinolinecarboxylic acid." Its molecular weight is 331.4. Its empirical formula is C17 H18 FN3 O3. Again, a 750 mg dose was looked at to see the amount of F it contained.

Therefore, 19/331.4 = 0.0573325 X 750 = 42.99.

Even the fluoride promoters have decided that our "Tolerable Upper Intake Level" of F should be capped-off at 10 mg a day if we are over eight years of age. The PDR takes a slightly different view, and specifically states, "Intakes of fluoride of higher than 4 milligrams daily for adult males and 3 milligrams daily for adult females are not recommended."

It would appear, therefore, that a dose of F nearing 43 mg might be something worthy of notice. It is certainly a dose in which we, the potential recipients, are deserving of answers. Again, the first question that must be asked pertains to the bioavailability of F. Have actual tests been done to see what the levels of F are in the blood or urine after ingestion of ciprofloxacin?

It appears that one such study was actually done in 1995 by the Department of Pediatrics at All India Institute of Medical Sciences. What they found was, "After the first dose of ciprofloxacin (10 mg/kg), serum fluoride levels increased at 12 h in 15 of 19 (79%) patients; 24-h urinary fluoride excretion was higher on day 7 compared with basal values in 16 of 18 (88.9%) patients." They concluded their study stating there is a need for further studies to evaluate the tissue accumulation of fluoride and its potential to cause toxic effects."

According to Michael Connett of the Fluoride Action Network (FAN), "The findings of this study heighten the importance of testing other fluorinated drugs to see if they, too, could increase the body-burden of F in a similar manner."

While studies of carefully measured doses of medications might show us how much F we can expect to receive from them, finding the dose we can expect to ingest via mass-medicated drinking water is next to impossible to determine at this time.

We might know that a person taking ciprofloxacin can expect to have an elevation of F in their systems. Before even sitting down to a typical American breakfast of starch, sugar and fluoride, however, the overall intake of the day's fluoride quickly becomes utterly impossible to determine for anyone who dares to start the day off with an "optimally fluoridated" shower or bath.

Although it has been known since 1932 that people with overactive thyroids could be effectively treated by bathing in water containing a fluoride compound, it is still not clearly known - or apparently even of concern - how much of the fluoride from municipal waters we are absorbing via our skin and inhalation while showering and bathing. In addition, people suffering from diabetes also suffer from excessive thirst. The amount of water actually ingested that has been "optimally fluoridated" by a toxic waste never approved by the FDA, is unknown.

Upon reaching this point in this paper that is focused on fluoride and its associated toxicities, we have covered not only the known toxic effects of fluoride, but we have also covered nine of the principles contained within the Nuremberg Code of medical ethics. The paragraph below pertains to the tenth and final principle of medical ethics.

Those administering the fluoride to the public in the United States of America are not medical or scientific experts, and many of them do not even know what the "optimum dose" is. A two-year study published in 2001 examined the knowledge level of operators controlling both small and large water plants. The two-year study found that only 64 percent of plant operators knew the correct fluoride concentration to be added for their plant. In small plants, however, "Only one-fourth of operators were able to maintain the fluoride concentration to within 0.1 mg/L of the optimal concentration."

There are ten principles contained in the Nuremberg Code of medical ethics. The fluoridation of America's water is in violation of all ten.

The USDA's National Fluoride Databank gives us clear evidence now showing us that we have contamination of fluoride on a national level. Immediate countermeasures should be taken in all communities that are adding to this contamination problem. An immediate moratorium should be responsibly announced banning the deliberate addition of further fluoride wastes to our drinking water.

Fluoridation has been an uncorrected mistake for almost sixty years. An uncorrected mistake of this magnitude is better described as a national disgrace.

The Nuremberg Code

Permissible Medical Experiments

1. The voluntary consent of the human subject is absolutely essential.

This means that the person involved should have legal capacity to give consent; should be so situated as to be able to exercise free power of choice, without the intervention of any element of force, fraud, deceit, duress, over-reaching, or other ulterior form of constraint or coercion; and should have sufficient knowledge and comprehension of the elements of the subject matter involved as to enable him to make an understanding and

enlightened decision. This latter element requires that before the acceptance of an affirmative decision by the experimental subject there should be made known to him the nature, duration, and purpose of the experiment; the method and means by which it is to be conducted; all inconveniences and hazards reasonably to be expected; and the effects upon his health or person which may possibly come from his participation in the experiment.

The duty and responsibility for ascertaining the quality of the consent rests upon each individual who initiates, directs or engages in the experiment. It is a personal duty and responsibility which may not be delegated to another with impunity.

2. The experiment should be such as to yield fruitful results for the good of society, unprocurable by other methods or means of study, and not random and unnecessary in nature.

3. The experiment should be so designed and based on the results of animal experimentation and a knowledge of the natural history of the disease or other problem under study that the anticipated results will justify the performance of the experiment.

4. The experiment should be so conducted as to avoid all unnecessary physical and mental suffering and injury.

5. No experiment should be conducted where there is an a priori reason to believe that death or disabling injury will occur; except, perhaps, in those experiments where the experimental physicians also serve as subjects.

6. The degree of risk to be taken should never exceed that determined by the humanitarian importance of the problem to be solved by the experiment.

7. Proper preparations should be made and adequate facilities provided to protect the experimental subject against even remote possibilities of injury, disability, or death.

8. The experiment should be conducted only by scientifically qualified persons. The highest degree of skill and care should be required through all stages of the experiment of those who conduct or engage in the experiment.

9. During the course of the experiment the human subject should be at liberty to bring the experiment to an end if he has reached the physical or mental state where continuation of the experiment seems to him to be impossible.

10. During the course of the experiment the scientist in charge must be prepared to terminate the experiment at any stage, if he has probable cause to believe, in the exercise of the good faith, superior skill and careful judgment required of him that a continuation of the experiment is likely to result in injury, disability, or death to the experimental subject.

"Trials of War Criminals before the Nuremberg Military Tribunals under Control Council Law No. 10, Vol. 2, pp. 181-182.. Washington, D.C.: U.S. Government Printing Office, 1949."

Mary Sparrowdancer is an investigative journalist, a spiritual seeker of the truth, and is the author of "The Love Song of the Universe," published in 2001 by Hampton Roads. Her ongoing studies have included bacteriology, microscopic analysis, hematology, electroencephalography, ornithology, veterinary studies pertaining to wild animals and biblical translations from Latin, Hebrew and Greek. She was a wildlife rehabilitator for a number of years, during which she cared for over 20,000 wild birds and animals, including endangered species. She and her two children reside in Tallahassee, Fl(u) orida.

Special Thanks

I wish to thank the following people for their time and patient assistance:

Valerie Guernsey, D.O., psychiatrist specializing in adolescent behavior; Luise Light, M. S., EdD, nutrition expert recruited by the USDA to create the Food Pyramid; Michael Connett of the Fluoride Action Network, an international coalition working to broaden public awareness on fluoride's impact on human health and the environment; Dr. J. William Hirzy and Dr. James Murphy of the EPA NETU 280 headquarters professional employees union, who along with many other government professionals are completely opposed to fluoridation; Arthur Evangelista, former investigator for the FDA and head of the Public Health and Medical Fraud Research Cooperative, dedicated to accurate public health education and exposing corporate and regulatory malfeasance or corruption; Mary Emerick, DVM who took time to alert me to hypothyroidism in dogs and cats in the fluoridated area of her clinic; Diane Heather Phillips, MB, BS, BSc for her kind help pertaining to F; Wade Frazier, whose educational writings are a must-read, and can be seen here, http://www.ahealedplanet.net/home.htm; and to "CJ," who first alerted me to the fluoride problem.

Intended goal of fluoridation: Delivery of 1 milligram of fluoride per day

1 milligram/liter = 1ppm (parts per million)
**mcg/100g = ppm * 100 (beverages corrected for specific gravity)
Food Group Item Mean mcg/100g **
Baby Foods:
Cereal, mixed, with applesauce and bananas, junior 1
Cereal, oatmeal, with applesauce and bananas, junior 8
Cereal, rice, with applesauce and bananas, strained 16
Cereal, rice, with mixed fruit, junior 3
Dessert, custard pudding, vanilla, junior 4
Dessert, dutch apple, junior 2
Dessert, fruit dessert, junior 18
Dessert, peach cobbler, junior 8
Dinner, chicken noodle, junior 29
Dinner, macaroni and cheese, junior 6

Dinner, spaghetti, tomato, meat, junior 2
Dinner, turkey and rice, junior 20
Dinner, vegetables and beef, junior 21
Dinner, vegetables and ham, junior 14
Dinner, vegetables and turkey, junior 8
Fruit, apple and blueberry, junior 1
Fruit, applesauce, junior 2
Fruit, applesauce, strained 1
Fruit, apricot with tapioca, junior 0
Fruit, bananas, pineapple with tapioca, junior 16
Fruit, bananas with tapioca, junior 36
Fruit, mango with tapioca, strained 12
Fruit, peaches with sugar, strained 0
Fruit, peaches, junior 3
Fruit, pears and pineapple, junior 1
Fruit, pears, junior 9
Fruit, pears, strained 1
Fruit, plums with tapioca, junior 34
Fruit, prunes, without Vitamin C, strained 2
Juice, apple 12
Juice, apple and cherry 67
Juice, apple and grape 45
Juice, apple and peach 19
Juice, apple and prune 13
Juice, apple-cranberry 10
Meat, beef, junior 2
Meat, ham, junior 3
Meat, lamb, junior 10
Meat, turkey, junior 44
Vegetables and bacon, junior 3
Vegetables, carrots, strained 1
Vegetables, carrots, junior 12
Vegetables, corn, creamed, junior 32
Vegetables, green beans, junior 12
Vegetables, green beans, strained 16
Vegetables, peas, strained 25
Vegetables, squash, junior 5
Vegetables, squash, strained 1
Vgetables, sweetpotatoes, junior 10
Vegetables, sweetpotatoes, strained 1
Baked products:
Biscuits, refrigerated dough, baked 26
Bread, all (white and whole wheat) 39

Bread, rye 51
Bread stuffing, prepared, baked 51
Brownie, with nuts 38
Cake, all 22
Cookies, without raisins, all 16
Cookies, oatmeal raisin 69
Cornbread 11
Crackers, all 24
Doughnuts 30
Éclair, chocolate 13
Muffin, blueberry 39
Pancakes, buttermilk, frozen 20
Pie, apple, frozen, heated 13
Pie, pumpkin, frozen, heated 32
Rolls, hamburger and hot dog 25
Snack type, cake roll 49
Snack type, chocolate cup cake, cream filled 38
Snack type, oatmeal cream pie 41
Tortillas, flour 33
Waffles, frozen, KELLOGG'S EGGO 35
Beef products:
Beef, cooked and raw 22
Beef, liver, pan cooked with added fat 5
Beverages:
Alcoholic beverage, beer, light 45
Alcoholic beverage, beer, regular 44
Alcoholic beverage, distilled, all (gin, rum, vodka, whiskey), 80 proof 9
Alcoholic beverage, wine, red 105
Alcoholic beverage, wine, white 202
Carbonated, cola, diet, fast food type, without ice 78
Carbonated, cola, fast food type, without ice 65
Carbonated, cola, PEPSI, all regions 32
Carbonated, cola, PEPSI, Mid-West 36
Carbonated, cola, PEPSI, Northeast 27
Carbonated, cola, PEPSI, South 45
Carbonated, cola, PEPSI, West 13
Carbonated, cola, COCA-COLA, all regions 49
Carbonated, cola, COCA-COLA, Mid-West 46
Carbonated, cola, COCA-COLA, Northeast 53
Carbonated, cola, COCA-COLA, South 57
Carbonated, cola, COCA-COLA, West 36
Carbonated, cola, DIET PEPSI, all regions 48
Carbonated, cola, DIET PEPSI, Mid-West 46

Carbonated, cola, DIET PEPSI, Northeast 46
Carbonated, cola, DIET PEPSI, South 66
Carbonated, cola, DIET PEPSI, West 25
Carbonated, cola, DIET COKE, all regions 60
Carbonated, cola, DIET COKE, Mid-West 69
Carbonated, cola, DIET COKE, Northeast 58
Carbonated, cola, DIET COKE, South 72
Carbonated, cola, DIET COKE, West 33
Carbonated, cola, PEPSI ONE, all regions 40
Carbonated, cola, PEPSI ONE, Mid-West 47
Carbonated, cola, PEPSI ONE, Northeast 31
Carbonated, cola, PEPSI ONE, South 56
Carbonated, cola, PEPSI ONE, West 18
Carbonated, ginger ale 80
Carbonated, grape soda 93
Carbonated, lemon-lime, fast food type, without ice 64
Carbonated, lemon-lime, SPRITE, all regions 48
Carbonated, lemon-lime, SPRITE, Mid-West 47
Carbonated, lemon-lime, SPRITE, Northeast 48
Carbonated, lemon-lime, SPRITE, South 59
Carbonated, lemon-lime, SPRITE, West 29
Carbonated, orange soda 84
Carbonated, root beer 83
Carbonated, water, fruit-flavored 105
Chocolate-flavor beverage, mix for milk, powder 5
Coffee, brewed 91
Cranberry juice cocktail and blends, light, ready-to-drink 70
Fruit drink, CAPRI-SUN, ready-to-drink 71
Fruit drink, HAWAIIAN PUNCH, ready-to-drink 44
Fruit drink, HI-C, ready-to-drink 22
Fruit drink, MINUTE MAID punch, ready-to-drink 17
Fruit drink, other brands, ready-to-drink 54
Fruit flavored drinks, prepared from powder 42
Fruit flavored drinks, KOOL-AID, ready-to-drink 43
Fruit flavored drink, SUNNY DELIGHT, ready-to-drink 68
Fruit juice drink, apple, ready-to-drink 104
Fruit juice drink, blends (not cranberry), ready-to-drink 49
Fruit juice drink, FIVE ALIVE, ready-to-drink 8
Fruit juice drink, grape, ready-to-drink 32
Fruit juice drink, orange, ready-to-drink 55
Lemonade, ready to drink 25
Tea, brewed, microwave, all 322
Tea, brewed, microwave, Mid-West 319

Tea, brewed, microwave, Northeast 309
Tea, brewed, microwave, South 322
Tea, brewed, microwave, West 310
Tea, brewed, decaffeinated, all 269
Tea, brewed, decaffeinated, Mid-West 293
Tea, brewed, decaffeinated, Northeast 279
Tea, brewed, decaffeinated, South 264
Tea, brewed, decaffeinated, West 247
Tea, brewed, regular, all 373
Tea, brewed, regular, Mid-West 393
Tea, brewed, regular, Northeast 357
Tea, brewed, regular, South 381
Tea, brewed, regular, West 355
Tea, iced, ARIZONA, ready-to-drink 123
Tea, iced, COOL NESTEA Natural Lemon, ready-to-drink 90
Tea, iced, LIPTON BRISK Lemon, ready-to-drink 72
Tea, instant, powder, unsweetened 89772
Tea, instant, powder, unsweetened, prepared with tap water 335
Tea, instant, powder, with lemon and sugar 584
Tea, instant, powder, with lemon and sugar, prepared with tap water 116
Thirst quencher (sport drink), GATORADE, ready-to-drink 34
Thirst quencher (sport drink), POWERADE, ready-to-drink 62
Water, bottled, AQUAFINA 5
Water, bottled, CALISTOGA 7
Water, bottled, CRYSTAL GEYSER 24
Water, bottled, DANNON 11
Water, bottled, DANNON FLUORIDE TO GO 78
Water, bottled, DASANI 7

Water, bottled, NAYA 14
Water, bottled, PERRIER 31
Water, bottled, POLAND SPRINGS 10
Water, bottled, PROPEL FITNESS WATER 2
Water, bottled, SARATOGA 20
Water, bottled, VERYFINE FRUIT2O Water 6
Water, bottled, VOLVIC 34
Water, bottled, store brand 16
Water, frozen (ice) 11
Waters, tap, all regions, all (includes municipal and well) 71
Waters, tap, all regions, municipal $ 81
Waters, tap, all regions, well 26
Waters, tap, Mid-West, all (includes municipal and well) 88
Waters, tap, Mid-West, municipal 99

Waters, tap, Mid-West, well 53
Waters, tap, Northeast, all (includes municipal and well) 69
Waters, tap, Northeast, municipal 74
Waters, tap, Northeast, well 9
Waters, tap, South, all (includes municipal and well) 76
Waters, tap, South, municipal 93
Waters, tap, South, well 10
Waters, tap, West, all (includes municipal and well) 47
Waters, tap, West, municipal 51
Waters, tap, West, well 24
Breakfast cereals:
Corn flakes 17
Farina, enriched, cooked 51
Granola, with raisins 33
Grits, cooked 56
Oatmeal, cooked 72
Oatmeal, instant, flavored, prepared 50
Oat rings 50
Presweetened, ready-to-eat 24
Raisin bran 65
Rice, ready-to-eat 17
Rice and corn, lightly sweetened, ready-to-eat 31
Wheat, ready-to-eat 27
Cereal grains and pastas:
Macaroni and spaghetti, cooked 7
Macaroni and spaghetti, uncooked 18
Noodles, egg, cooked 6
Rice, cooked 41
Dairy and egg products:
Butter 3
Buttermilk 4
Cheese, American, processed 35
Cheese, cheddar 35
Cheese, cottage 32
Cream, fluid, half and half 3
Cream substitute, powdered 112
Egg, cooked 5
Egg, raw 1
Milk, chocolate 5
Milk, evaporated 8
Milk, 1% 3
Milk, 2% 3
Milk, skim 3

Yogurt, fruit, strawberry 9
Yogurt, plain, low-fat 12
Fast foods:
Chicken McNUGGETS, McDONALD'S 16
Coleslaw 11
Dessert, DAIRY QUEEN, BLIZZARD 13
Dessert, WENDY'S, FROSTY 19
French fries, McDONALD'S 115
Hamburger on roll, quarter pound patty, with condiments 28
Pizza 31
Shake 14
Steak and cheese sandwich 37
Fats and oils:
Mayonnaise 9
Margarine 5
Margarine-like spread 25
Salad dressing, mayonnaise type 4
Salad dressings 27
Vegetable oil, corn 1
Finfish and shellfish products:
Crab, canned 210
Fish, cooked (includes broiled and fried) 18
Fish sticks, baked 134
Shrimp, canned 201
Shrimp, fried 166
Tuna, light, canned in water 19
Tuna, canned in oil, drained 31
Fruits and fruit products:
Apple juice, DOLE, ready-to-drink 58
Apple juice, JUICY JUICE, ready-to-drink 48
Apple juice, MINUTE MAID, ready-to-drink 28
Apple juice, MOTT'S, ready-to-drink 28
Apple, raw, with peel 3
Applesauce, sweetened 5
Avocado, raw 7
Bananas, raw 2
Cantaloupe, raw 1
Cherries, sweet, raw 2
Cranberry sauce 2
Fruit cocktail, canned 9
Grapefruit, raw 1
Grapefruit juice 45
Grape juice blend (apple and grape), JUICY JUICE, ready-to-drink 102

Grape juice blend (apple, grape and pear), MINUTE MAID, ready-to-drink 43
Grape juice blend (apple and grape), MOTT'S, ready-to-drink 27
Grape juice, WELCH'S, ready-to-drink 72
Grape juice, white 204
Grapes, raw 49
Nectar, fruit 12
Orange, juice, frozen, concentrate 20
Orange, juice, frozen, concentrate, prepared with tap water 58
Orange juice, DEAN, ready-to-drink 52
Orange juice, MINUTE MAID, ready-to-drink 31
Peaches, canned 7
Peaches, raw 4
Pears, raw 2
Pears, canned 8
Pineapple, canned, juice pack 2
Pinapple juice, canned 6
Plums, dried (prunes), uncooked 4
Plums, purple, raw 2
Prune juice 60
Raisins 234
Strawberries, raw 4
Watermelon, raw 1
Lamb, veal and game:
Lamb chop, pan cooked with added fat 32
Veal cutlet, breaded, pan cooked with added fat 21
Veal, liver, pan cooked with added fat 5
Legumes and legume products:
Beans, baked, canned, with pork 54
Beans, mature, boiled 2
Cowpeas common (blackeyes), boiled 3
Peanut butter, creamy 3
Peanuts, dry roasted, salted 16
Meals, entrees and sidedishes:
Beef stew 57
Casserole, beef, tomato and pasta 67
Chicken potpie 75
Chicken and noodle casserole, homemade 16
Chili con carni, beef and beans, canned 45
Frozen meal, fried chicken, mashed potatoes, cornbread, and/or vegetable 48
Lasagna, homemade 18
Macaroni and cheese, prepared from mix 33
Mashed potato and gravy 84
Meatloaf 30

Spaghetti, with meat sauce 38
Spaghetti, with sauce, no meat, canned 24
Ravioli, CHEF BOYARDEE, beef, with meat sauce, canned 13
Turkey, broccoli, cheese bake 28
Turkey potpie 166
Nut and seed products:
Pecans, packaged, unsalted 10
Pork products:
Bacon, cooked 22
Bacon, raw 4
Ham, cured, baked 20
Pork, chop, baked 38
Pork, chop, pan cooked, with added fat 129
Pork, roast, cooked 42
Poultry products:
Chicken, cooked (includes fried and roasted) 15
Turkey, roast 21
Sausages and luncheon meats:
Bologna 29
Ham and cheese loaf 36
Hot dogs, beef 48
Sausage, pork 18
Sausage (includes salami, not hard) 41
Snacks:
Chips, corn and tortilla 50
Popcorn, oil popped 6
Potato chip 65
Potato chip, baked 106
Soups, sauces, and gravies:
Sauce, cheese 29
Sauce, spaghetti, canned 37
Sauce, tartar 30
Sauce, white 4
Gravy, beef 99
Gravy, brown, prepared from mix 57
Soup, beef bouillon, canned, reconstituted 29
Soup, chicken broth 61
Soup, chicken noodle, canned, reconstituted 35
Soup, clam chowder 36
Soup, corn chowder 132
Soup, minestrone 86
Soup, pea 76
Soup, tomato, canned reconstituted, with milk 7

Soup, vegetable beef, canned, reconstituted 43
Spices and herbs:
Pepper, black 34
Salt, iodized 2
Sweets:
Candies, caramels 27
Candies, milk chocolate 5
Candies, M&M MARS, "M&M's" Milk Chocolate Candies 17
Candies, REESE'S Peanut Butter Cups 9
Candies, M&M MARS, SNICKERS Bar 36
Gum 5
Frozen novelties, ice type, regular, all flavors 74
Frozen novelties, ice type, sugar free, all flavors 89
Frozen novelties, juice type 77
Frozen novelties, ice cream sandwich 27
Frozen yogurts, chocolate 40
Frozen yogurts, vanilla 26
Gelatin desserts, strawberry, prepared 69
Honey, bottled 7
Jam, strawberry 19
Jellies 73
Ice creams, chocolate 23
Ice creams, vanilla 15
Bread pudding 74
Puddings, instant, prepared with whole milk 22
Sugar, granulated 1
Syrup, pancake 44
Vegetables and vegetable products:
Asparagus, cooked 22
Beans, snap (includes cooked, canned, frozen) 19
Beets, canned 26
Broccoli, boiled 4
Cabbage, boiled 1
Carrots, cooked 47
Carrots, raw 3
Catsup 12
Cauliflower, boiled 1
Celery, raw 4
Coleslaw 10
Collard greens, boiled 27
Corn, frozen, kernels cut off cob, unprepared 15
Corn, canned 18
Corn, cream style, canned 28

Cucumber, raw 1
Lettuce 5
Lima beans, immature seeds, frozen, boiled 7
Mixed vegetables, canned 37
Mushrooms, canned 10
Onion rings, breaded, fried, frozen, heated 55
Onions, raw 1
Peas, green (includes cooked and canned) 29
Peppers, sweet, green, raw 2
Pickles, cucumber, dill 24
Potatoes, boiled 49
Potatoes, french fried, frozen, heated 26
Potatoes, hashed brown 44
Potatoes, mashed 39
Potatoes, puffs, frozen, prepared 6
Potatoes, russet, baked 45
Potatoes, scalloped 31
Radishes, raw 6
Sauerkraut, canned 7
Spinach, cooked 38
Squash, cooked (includes summer and winter) 2
Sweet potatoes 14
Sweet potatoes, candied, home prepared 8
Tomatoes, canned 6
Tomatoes, raw 2
Tomato juice, canned 7
Tomato sauce, canned 35
Tossed salad 5

WeAreChange Tampa Confronts Commissioners about Fluoride Poisoning

We Are Change Tampa
January 26, 2011
http://www.youtube.com/watch?v=2j0o9XRe7QY...player_embedded

Fluoride poisoning exposed by WAC Tampa we slam county commissioners for accepting putting a certified toxin in our water and forcibly medicating the public.

City resident challenges fluoridation bid

Wednesday, 19 January 2011
http://www.independent.co.uk/news/uk/home-...id-2188667.html

A health authority was accused in the High Court today of unlawfully attempting to force through the fluoridation of a city's tap water.

The legal challenge was brought by Southampton resident Geraldine Milner, backed by local campaign groups.

Ms Milner's counsel David Wolfe told a judge that, if the scheme goes ahead, the mother of three teenagers would be left "with no choice but to drink water to which fluoride has been added".

As opponents of fluoridation demonstrated outside the Royal Courts of Justice in London, Mr Wolfe said approximately 195,000 people in Southampton and parts of south-west Hampshire "would have fluoride added to their water whether they liked it or not".

He told Mr Justice Holman this was contrary to Government policy that no new fluoridation schemes should be introduced unless it could be shown that the local population was in favour.

The South Central Strategic Health Authority (SCSHA) used statutory powers to instruct Southern Water, the local water provider, to go ahead with fluoridation in February 2009 to improve dental health.

The controversial decision came after 72% of those who responded to public consultation opposed fluoridation, with just 28% in favour.

An opinion poll commissioned by the SCSHA produced a narrower result, with 38% against the scheme and 32% in favour and 29% "don't knows".

Mr Wolfe accused the SCSHA of failing in its legal obligation to properly assess the cogency of the arguments for and against mass fluoridation.

Mr Wolfe said today's application for judicial review was not about the actual merits and health arguments over fluoridation, which were "not all one way by any means".

It was about the legality of the compulsory scheme, the first of its kind in the UK for 20 years.

Mr Wolfe said: "Four out of five local authorities and three out of four local MPs expressed their opposition within the consultation process."

He added: "Ms Milner is in good company, whether she is right or wrong."

The health authority is opposing Ms Milner's legal challenge.

In a two-day hearing, John Howell QC is arguing on behalf of the SCSHA that the authority was required to make a decision on the merits of the scheme, having taken into account local opposition.

But the authority was not legally bound to give effect to whatever the majority of consultees thought, one way or the other.

James Eadie QC, appearing for Health Secretary Andrew Lansley, is supporting the

SCSHA's stance.

Arriving at court today, Ms Milner said her family had no need of fluoride in their water, which the authority particularly wanted to introduce to prevent dental decay in children.

Ms Milner said: "We do not wish to have it.

"What has not been listened to is that there are cheaper, thoroughly researched and proven, effective ways of targeting children who are at risk of dental decay."

The case today was not about the safety of fluoride, but about whether the SCSHA had acted legally in making its decision.

"It is about whether an unelected body have the right to do this when 72% of respondents to the consultation said no.

"It is about Southampton residents' fundamental freedom of choice over their bodies and rights to democracy and justice."

Elizabeth McDonagh, chairman of the National Pure Water Association, which campaigns against fluoridation, described it as a very important case because of its general implications for democracy.

Ms McDonagh said: "Politicians both in Parliament and outside Parliament have said over the years that fluoridation would never be imposed on a community - and yet SCSHA is doing just that after they had a consultation with the public in which 72% of the 10,000 responses from the local community came out against fluoridation."

A phone poll supposed to reflect the views of a mix of the local population also opposed fluoridation, even though by a reduced margin.

"It is absolutely clear, the SCSHA wholly ignored local people's views," said Ms McDonagh.

Stephen Peckham, chairman of Hampshire Against Fluoridation, said there was "huge controversy" over water fluoridation.

He said: "Other countries, including Canada, Ireland and now even the US, are actually lowering the amount of fluoride."

This was because of health concerns, particularly over dental fluorosis, in which tooth enamel was damaged by too much fluoride.

There were other health concerns, although medical sources had conceded not enough was known about either the effectiveness of fluoride, or the safety of fluoride in water.

Mr Peckham added that strategic health authorities were facing abolition, and the SCSHA scheme was likely to be the last one to be permitted by such an authority.

"In just over a year's time it will be up to local authorities to take over these responsibilities," he said.

"Everybody elected democratically in the local area is against it. Local people are against it, but the SCSHA is determined to go ahead.

"The SCSHA has put aside £400,000 to fight their case after already spending over £500,000 on the consultation itself.

"An enormous amount of public money has been spent, but I cannot see there is any value."

The hearing continues tomorrow

Are We Accidentally Medicating Ourselves Into a Mind-Numbing, Body-Weakening Stupor?

Saturday, January 22, 2011
http://www.washingtonsblog.com/2011/01/by-...water-with.html

The Chairman of the Department of Medicine at Cedars-Sinai, Glenn D. Braunstein, M. D., noted Wednesday:

In a ... study by the United States Geological Survey that tested for 95 contaminants in water supplies nationwide, 80 percent of the samples from 139 streams in 30 states had at least one of the substances being tested for, with an average of seven contaminants in each sample. These findings included traces of anti-anxiety medications in the drinking water delivered to approximately 18.5 million Southern Californians. In western Montana, the study found aquifers had been penetrated by waste water from a high school, and contained trace elements of acetaminophen, caffeine, codeine, antibiotics and warfarin, in addition to a mood-stabilizing drug for bipolar disorder and nicotine.
***

Is Bottled Water the Solution?

Not necessarily. Tap water suppliers are required to perform regular water quality tests and publish the findings; makers of bottled water aren't. In fact, in a survey by the Environmental Working Group (EWG), 38 contaminants were found in 10 big-selling brands.
The United States Geologic Survey reports:

In streams and rivers across the Nation, scientists are finding detectable concentrations of pharmaceuticals and other organic wastewater chemicals. For example, a recent study of the water-quality of streams in the Boulder Creek Watershed, Colorado, found a diverse set of pharmaceuticals and organic wastewater chemicals in water samples. In fact, U.S. Geological Survey (USGS) scientists found 12 of the 22 (55 percent) pharmaceuticals, and 32 of the 47 (77 percent) organic wastewater chemicals looked for in the watershed. Many of the water samples contained a complex mixture of pharmaceuticals, wastewater chemicals, pesticides, and trace metals .... The scientists found that:
The concentration of many of these chemicals, such as sulfamethoxazole (an antibiotic used to treat a wide range of bacterial infections), triclosan (an antimicrobial agent commonly used in soaps), and caffeine, increased dramatically downstream from the first major wastewater treatment plant .... However, some organic wastewater indicators (such as triclosan) were also found in much lower concentrations in the relatively pristine upper part of the watershed, and scientists attributed their occurrence to home septic systems and other sources on the landscape.
Few of the detected compounds exceeded water-quality standards; however, many do not have water-quality standards.... Native fish populations were found to exhibit endocrine disruption, including low male-to-female sex ratio and fish having both female and male reproductive organs (gonadal intersex).
And in a webpage entitled "Antidepressants in Stream Waters! Are They in the Fish Too?", the U.S. Geological Survey points out:
For some fish living downstream of sewage treatment plants the answer is yes. U.S. Geological Survey (USGS) scientists and their colleagues published a paper in Environmental Science and Technology documenting that specific antidepressants and their degradates found in wastewater discharged into streams by municipal wastewater treatment plants are taken up into the bodies of fish living downstream of the plants. The antidepressants were found in fish collected over 8 kilometers (approximately 5 miles) downstream of the location of the wastewater discharge. The scientists detected several commonly used antidepressants in water, streambed sediment, and the brain tissue of white suckers, a native fish species. Fish collected upstream from the wastewater discharge did not have antidepressants present in their brain tissues....
AP reported in 2009:

U.S. manufacturers, including major drugmakers, have legally released at least 271 million pounds of pharmaceuticals into waterways that often provide drinking water — contamination the federal government has consistently overlooked, according to an Associated Press investigation.

***

Last year, the AP reported that trace amounts of a wide range of pharmaceuticals — including antibiotics, anti-convulsants, mood stabilizers and sex hormones — have been found in American drinking water supplies. Including recent findings in Dallas,

Cleveland and Maryland's Prince George's and Montgomery counties, pharmaceuticals have been detected in the drinking water of at least 51 million Americans.

Most cities and water providers still do not test. Some scientists say that wherever researchers look, they will find pharma-tainted water.

***

Researchers have found that even extremely diluted concentrations of drugs harm fish, frogs and other aquatic species. [This may be part of the reason that amphibians are disappearing.] Also, researchers report that human cells fail to grow normally in the laboratory when exposed to trace concentrations of certain drugs. Some scientists say they are increasingly concerned that the consumption of combinations of many drugs, even in small amounts, could harm humans over decades.

A year earlier, the Associated Press noted:
A vast array of pharmaceuticals — including antibiotics, anti-convulsants, mood stabilizers and sex hormones — have been found in the drinking water supplies of at least 41 million Americans, an Associated Press investigation shows. [The estimate was raised to 46 million a couple of months later.]

***

Bottlers [i.e. bottled water producers], some of which simply repackage tap water, do not typically treat or test for pharmaceuticals, according to the industry's main trade group.

***

There's growing concern in the scientific community, meanwhile, that certain drugs — or combinations of drugs — may harm humans over decades because water, unlike most specific foods, is consumed in sizable amounts every day.

Our bodies may shrug off a relatively big one-time dose, yet suffer from a smaller amount delivered continuously over a half century, perhaps subtly stirring allergies or nerve damage. Pregnant women, the elderly and the very ill might be more sensitive.

Many concerns about chronic low-level exposure focus on certain drug classes: chemotherapy that can act as a powerful poison; hormones that can hamper reproduction or development; medicines for depression and epilepsy that can damage the brain or change behavior; antibiotics that can allow human germs to mutate into more dangerous forms; pain relievers and blood-pressure diuretics.

The University of Arizona College of Agriculture and Life Sciences wrote in 2000:

Certain pharmaceuticals are now attracting attention as a potentially new class of water pollutants. Such drugs as antibiotics, anti-depressants, birth control pills, seizure medication, cancer treatments, pain killers, tranquilizers and cholesterol-lowering compounds have been detected in varied water sources.

Where do they come from? Pharmaceutical industries, hospitals and other medical facilities are obvious sources, but households also contribute a significant share. People often dispose of unused medicines by flushing them down toilets, and human excreta can contain varied incompletely metabolized medicines. These drugs can pass intact through conventional sewage treatment facilities, into waterways, lakes and even aquifers. Further, discarded pharmaceuticals often end up at dumps and land fills, posing a threat to underlying groundwater.

Farm animals also are a source of pharmaceuticals entering the environment, through their ingestion of hormones, antibiotics and veterinary medicines. (About 40 percent of U.S.-produced antibiotics are fed to livestock as growth enhancers.) Manure containing traces of such pharmaceuticals is spread on land and can then wash off into surface water and even percolate into groundwater.

***

Researchers Christian G. Daughton and Thomas A. Ternes reported in the December issue of “Environmental Health Perspectives” that the amount of pharmaceuticals and personal care products entering the environment annually is about equal to the amount of pesticides used each year.

***

In the United States, the issue might have attracted earlier notice if officials had followed up on observations made 20 years ago. At that time, EPA scientists found that sludge from a U.S. sewage-treatment plant contained excreted aspirin, caffeine and nicotine. At the time, no significance was attached to the findings.

***

Europeans, however, took the lead in researching the issue. In the mid-1990s, Thomas A. Ternes, a chemist in Wiesbaden, Germany, investigated what happens to prescribed medicines after they are excreted. Ternes knew that many such drugs are prescribed, and that little was known of the environmental effects of these compounds after they are excreted. He researched the presence of drugs in sewage, treated water and rivers, and his findings surprised him.

Expecting to identify a few medicinal compounds he instead found 30 of the 60 common pharmaceuticals that he surveyed. Drugs he identified included lipid-lowering

drugs, antibiotics, analgesics, antiseptics, beta-blocker heart drugs, residues of drugs for controlling epilepsy as well as drugs serving as contrast agents for diagnostic X rays.

***

At the recent American Chemical Society conference, Chris Metcalfe of Trent University in Ontario reported finding a vast array of drugs leaving Canadian sewage treatment plants, at times at higher levels than what is reported in Germany. Such drugs included anticancer agents, psychiatric drugs and anti-inflammatory compounds. North American treatment plants may show higher levels of pharmaceuticals because they often lack the technological sophistication of German facilities.

***

Scientists generally agree that aquatic life is most at risk, its life cycle, from birth to death, occurring within potentially drug-contaminated waters.... For example, recent British research suggest that estrogen, the female sex hormone, is primarily responsible for deforming reproductive systems of fish, noting that blood plasma from male trout living below sewage treatment plants had the female egg protein vitellogenin. Discovery News pointed out last year:

Scientists are particularly concerned about a class of pharmaceuticals known as endocrine-disruptors. Traces of estrogen from birth control pills, for example, are now known to affect animals at really tiny concentrations.

Antibiotics are another concern, because once they are unleashed in the environment, they can prompt the development of dangerously drug-resistant bacteria.

Even drugs that don't fit into those categories have been shown to cause problems in some cases, especially when levels get high enough, said Bryan Brooks, director of the Environmental Health Science program at Baylor University in Waco, Texas.

A 2004 paper in the Journal Nature, for example, documented a catastrophic vulture die-off in India. It turned out that the birds were eating the carcasses of cows that had been given a type of non-steroidal anti-inflammatory medication, similar to ibuprofen or naproxen. The drug was making the birds sick.

In a paper published earlier this year in the journal Environmental Toxicology and Chemistry, scientists reported that minnows exposed to certain antidepressants were slower to flee from predators. Another paper in the same journal issue found that tadpoles exposed to antidepressants -- at levels similar to what might show up in the environment in some places -- ate less and grew more slowly.

As the New York Times' Lede notes:
"We recognize it is a growing concern and we're taking it very seriously," said Benjamin H. Grumbles, the Environmental Protection Agency's water chief. But the government has not established any safety limits for pharmaceutical drugs in drinking water, as it has for many other chemicals; the agency is just learning how to detect low concentrations of drugs in water, let alone assess the risk posed by them.

And see this, this, this, this, this and this:

[dohtml]<object style="height: 390px; width: 640px"><param name="movie" value="http://www.youtube.com/v/RE7OK9sMDvo?version=3"><param name="allowFullScreen" value="true"><param name="allowScriptAccess" value="always"><embed src="http://www.youtube.com/v/RE7OK9sMDvo?version=3" type="application/x-shockwave-flash" allowfullscreen="true" allowScriptAccess="always" width="640" height="390"></object>[/dohtml]

As If That's Not Bad Enough ...

As if that's not bad enough, some well-known public figures have suggested intentionally adding drugs to water to prevent heart disease, prevent suicidal depression, and to combat other illnesses.

For example, the American psychiatrist Peter Kramer - best known for his work Listening to Prozac - has suggested that lithium be added to the water supply to reduce the number of suicides. Fox News medical expert Dr. Archelle Georgiou seems to like the idea as well:

Story link: MyFoxTWINCITIES.com

And as Paul Joseph Watson writes:

Drug companies claim that statins have been proven to lower cholesterol and help prevent heart disease and strokes, leading many health experts to insist that they be artificially added to public water supplies, but dangerous side-effects buried by drug companies conducting statin trials have now come to light, in addition to the fact that "for three quarters of those taking them, they offer little or no value."

A new study published in the Cochrane Library, which reviews drug trials, examined data from 14 drugs trials involving 34,000 patients and found evidence of "short-term memory loss, depression and mood swings," that had been deliberately underplayed by the drug companies funding the research.

The researchers warn that, "Statins should only be prescribed to those with heart disease, or who have suffered the condition in the past. Researchers warn that unless a patient is at high risk of suffering a heart attack or stroke, statins may cause more harm

than good."

However, despite the fact that statins have also been linked to a greater risk of liver dysfunction, acute kidney failure, cataracts and muscle damage, health authorities have been pushing for the drug to be added to public water supplies as part of a mass medication program that is not only illegal without consent, but also threatens a plethora of unknown consequences.

Only last week, George Lundberg, MD, the editor of MedPageToday..., wrote an op-ed entitled, Should We Put Statins in the Water Supply?

In May 2008, renowned cardiologist Professor Mahendra Varma called for statins to be artificially added to drinking water.

Putting statins in the water supply was also considered during a November 2008 discussion which featured Robert Bonow, M.D., of Northwestern University in Chicago, Gordon F. Tomaselli, M.D., of Johns Hopkins University in Baltimore, and Anthony De Maria, M.D., of the University of California at San Diego.

Also in November 2008, CNBC aired a segment lauding the effectiveness of statins, after which one of the hosts remarked, "Why don't they just put statins in the water supply," to which CNBC's medical expert replied, "A lot of people have said that and they are in the water in fact."

[dohtml]<object style="height: 390px; width: 640px"><param name="movie" value="http://www.youtube.com/v/VmBnaJIQdUw?version=3"><param name="allowFullScreen" value="true"><param name="allowScriptAccess" value="always"><embed src="http://www.youtube.com/v/VmBnaJIQdUw?version=3" type="application/x-shockwave-flash" allowfullscreen="true" allowScriptAccess="always" width="640" height="390"></object>[/dohtml]

And bioethicist and medical historian Jacob M. Appel wrote in the Huffington Post in 2009:
Lithium may actually be the tip of the fortification iceberg. The cholesterol-lowering agents known as statins might also be good candidates for inclusion in the water supply ....

Other possible agents are still in development. If researchers could effectively isolate a chemical that safely blocks pleasure pathways involved in the use of toxic substances, such as tobacco and cocaine, those blocking agents might also be added to the water supply. Preventing nicotine highs through such a novel distribution mechanism would save millions of lives annually.

***

Some nay-sayers will inevitably argue that medically fortifying the public water is a violation of individual liberty. Of course, nobody is forcing those dissident individuals to drink tap water. They are welcome to purchase bottled water, as do a few hold-outs who still fear the pernicious effects of fluoride, or to dig their own wells.

***

Unfortunately, some opponents will likely attempt to hold the public water hostage, arguing that because drug-free water is natural, is it somehow better. However, if the vast majority of people gain health benefits from fortifying the public water, and particularly if these benefits are life-saving, then there is nothing unreasonable about placing the burden not to drink upon the resistant minority. One person's right to drink lithium-free water is no greater than another's right to drink lithium-enhanced water. As long as the negative consequences or inconveniences are relatively minor, water fortification seems to be one of those cases where the majority's preference and interest should prevail.
Time will reveal whether lithium is indeed the next fluoride. Far more important is the revolutionary prospect of harnessing the common water supply to deliver life-saving and health-enhancing therapies to the public at low cost. The water belongs to the public, after all, and should be used for the collective good. As someone who treasures my freedom immensely -- including, I should emphasize, my inalienable right to commit suicide -- I look forward to the day when I can sacrifice whatever specious "liberty" claim I might have in consuming "natural" tap water in order to help save the lives of my neighbors and fellow human beings.
However, as discussed above, bottled water may contain the same pharmaceuticals as tap water, and many water filters do not effectively remove pharmaceuticals.

In addition, because a healthier lifestyle of exercise and a low-fat diet leads to less cardiac disease and less suicidal tendencies, those who are more responsible in their health habits would be penalized by being exposed to drugs they don't need, or incurring the extra cost of digging a well or buying an expensive filter to secure non-medicated drinking water.

Fluoride as Poster Child for Adding Chemicals to Water

Fluoride is - of course - the example everyone uses when discussing the safety of adding chemicals to drinking water. It should be the example everyone uses.

The U.S. government has itself now expressed concerns about fluoride's health effects and the possibility that it impairs brain function.

And as the president of Environmental Working Group - a highly-respected environmental group which has been quoted some 1,400 times by the New York Times - recently said:

For decades, people who raised concerns about fluoride being added to tap water or food were dismissed as crazy. All of a sudden we have two federal regulatory actions, announced just days apart, that tell us what was really crazy all those years: a government bureaucracy that ignored strong scientific evidence and clear warning signs of the threats fluoride has posed to public health all along.

And the Sierra Club and other leading environmental groups oppose mandatory fluoridation as well.

View Full Version: An Overwhelming Number of Scientific Studies

Title: An Overwhelming Number of Scientific Studies
Description: *Conclude That Cavity Levels are Falling*

TheUnhivedMind - January 24, 2011 01:18 AM (GMT)

An Overwhelming Number of Scientific Studies Conclude That Cavity Levels are Falling Worldwide ... Even In Countries Which Don't Fluoridate Water

Tuesday, January 11, 2011
http://georgewashington2.blogspot.com/2011...scientific.html

Everyone agrees that the number of cavities have plummeted in the U.S. over the last couple of decades, after water fluoridation was introduced (that is why health officials call water fluoridation "one of the ten greatest public health accomplishments of the last century").

That proves that water fluoridation fights cavities, right?

It would, of course, if the cavity levels have not also plummeted in countries which do not fluoridate their water.

Let's take a look at the scientific literature to get an unvarnished picture on the trends.

Cavity Levels Have Only Plummeted In the U.S. And Other Countries Which Fluoridate Water, Right?
Science magazine noted in 1982:
The decline in caries [the scientific term for "cavities"] prevalence in communities without fluoridated water in various countries is well documented. The cause or causes are, at this time, a matter of speculation.
The Journal of Public Health Dentistry noted in 1985:

Even the most cursory review of the dental literature since 1978 reveals a wealth of data documenting a secular, or long term, generalized decline in dental caries throughout the Western, industrialized world. Reports indicate that this decline has

occurred in both fluoridated and fluoride-deficient areas, and in the presence and absence of organized preventive programs.
